hican majority in the anticipation that it would forestall a less favorable measure by the succeeding Legislature, in which Democrats were to control the Assembly. Banking bills, to permit more rapid reorganization of closed banks, and a measure to expand the programme of State relief for the destitute were enacted.

**POLITICAL AND OTHER EVENTS.** Three important actions against New York were pressed during the year by the State of New Jersey. They were the suit against New York to prevent the diversion of water from the upper course of the Delaware River, in which New Jersey lost its case; the suit to prevent the dumping of New York City garbage at sea, in which New Jersey was successful; and the proceeding before the Interstate Commerce Commission to put an end to the practice of free lighterage between rail heads and points in New York harbor, which remained unsettled.

The Delaware River suit was brought before the United States Supreme Court, which appointed Charles N. Burch its Special Master to hear the facts. Mr. Burch after holding hearings reported to the Court against New Jersey's contentions. The Court rendered, on May 4, a decision written by Justice Holmes, in which the principle of rationing the water according to the respective needs of the riparian States was set forth. The decision permitted New York to divert from the upper river 440,000,000 gallons a day, which was about 73 per cent of the quantity that New York had sought to get. It required in return that proper disposal be made of sewage and industrial waste turned into the river at certain New York points, and that New York turn water back into the river if necessary, to maintain a specified minimum flow.

In the garbage dumping case New Jersey, after submitting its facts to a Special Master, Edward K. Campbell, won from the Supreme Court, on May 19, a decree enjoining New York City from dumping in the Atlantic Ocean the scow-loads of garbage that, it was complained, had polluted the New Jersey beaches. The Court's decision rejected the argument of New York that the dumping of the garbage, having been done outside the territorial limits of the United States, was therefore outside the Supreme Court's own jurisdiction. It granted "reasonable time" for the city to construct incinerators for garbage disposal.

In the lighterage case the representatives of New Jersey, after a series of hearings, filed briefs supporting the State's demand for the abolition of free lighterage and the consequence therein implied of lower freight rates to points within the New Jersey part of the port area.

The State Court of Errors and Appeals (court of last resort) held, in a decision of October 19, that the Hudson County "ripper" bill of 1930, replacing the county park and boulevard commissions with a board of State appointees, was unconstitutional. The working of the decision was to restore county control of boulevards and parks. The Delaware River Bridge at Camden was taken over on July 1 by a Delaware River Joint Commission of the States of New Jersey and Pennsylvania. The bridge was refinanced by the Commission and the proceeds of the new financing were used to reimburse the States for the cost of the bridge. Another bridge over the Delaware River, that between Burlington and Bristol, built by private capital at a cost of

\$2,000,000, was opened for highway traffic on May 2.

Newark and a large number of other municipalities in the same part of the State negotiated with a view to uniting in carrying on the Chimney Rock water development and connecting it with a reservoir to be built north of Bound Brook. A protracted strike in the silk mills of Paterson occurred in the latter part of the year. The township of North Bergen became involved in financial difficulties in June and invoked the help of the newly created State Receivership Commission.

**ELECTIONS.** Ex-Governor A. Harry Moore, Democrat, was elected Governor on November 3, defeating David Baird, Jr., by 735,713 votes to 503,387 according to unofficial count. The plurality was the largest ever given in the State for Governor and the total vote was the largest ever given for Governor save in the Presidential year 1928. The landslide was widely attributed to discontent with the Republican national administration.

The lower Legislative house passed into Democratic control by an accession of 20 seats, previously Republican, out of the Assembly's total of 60. The counties generally, with one or two exceptions rejected by referendum an option given them by enactment to transfer municipal charity work to county boards.

At a special election on December 1, in the Fifth Congress District, Percy H. Stewart, Democrat, was elected Representative, to fill the vacant seat of Representative Ackerman, deceased. The district had formerly been strongly Republican.

**OFFICERS.** Governor, Morgan F. Larson; Secretary of State, Thomas A. Mathis; Treasurer, Albert C. Middleton; Comptroller, John McCutcheon; Attorney-General, William A. Stevens; Commissioner of Education, Charles H. Elliott.

**JUDICIARY.** Chancellor, Edwin Robert Walker; Supreme Court, William S. Gummere (Chief Justice), Thomas W. Trenchard, Charles W. Parker, Luther A. Campbell, Frank T. Lloyd, Clarence E. Case, Joseph L. Bodine, Peter F. Daly, Ralph W. E. Donges.

**NEW JERUSALEM.** CHURCH OF THE. An organization which is also known as the New Church, and popularly called Swedenborgian because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it in the United States are the General Church of the New Jerusalem and the General Convention of the New Jerusalem, while in Great Britain the General Conference of the New Church corresponds to the General Convention in the United States.

THE GENERAL CHURCH OF THE NEW JERUSALEM. This body was organized in 1897 under episcopal government with headquarters in Bryn Athyn, Pa., where the church maintains: A cathedral church of unusual architectural interest; the Academy of the New Church, with departments from kindergarten to junior college; and theological and normal schools, with an enrollment of 308 in 1931. It had an adult membership in 1931 of 2045 with 3 bishops, 39 pastors, 3 ministers, and 24 societies, 15 of which were in the United States and Canada. Among the periodicals published by the General Church are *New Church Life*, its official monthly magazine, *New Church Sermons*, and *The Journal of Education*.

THE GENERAL CONVENTION OF THE NEW JERUSALEM IN THE UNITED STATES OF AMERICA. In 1931, the General Convention consisted of about 6000 communicant members. Educational institutions of General Convention included a theological school in Cambridge, Mass., a junior college in Urbana, Ohio, and the Waltham School for Girls, Waltham, Mass. Periodicals included the *New-Church Messenger*, weekly, Brooklyn, N. Y.; the *New-Church Review*, quarterly, Boston, Mass.; the *Swedenborg Student*, monthly, New York City; the *New-Church League Journal*, monthly, Boston, Mass.; *The Helper*, weekly, Philadelphia, Pa.; and *Sunday Afternoons*, weekly, Boston, Mass. In 1931 the Convention held its 110th annual meeting at its church in Cincinnati, Ohio, May 12-19. Officers elected were: President, the Rev. Paul Sperry, Washington, D. C., vice president, Ezra Hyde Alden, Philadelphia, Pa.; treasurer, Albert P. Carter, Boston, Mass.; and secretaries, B. W. Whittemore, Boston, and J. Woodruff Saul, Chicago.

**NEW LONDON, CONNECTICUT, ANNIVERSARY OF BURNING OF.** See CELEBRATIONS.

**NEW MEXICO. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 423,417, in 1920 it was 360,350. The native whites numbered 323,958 (1930), 305,596 (1920). The foreign-born (Mexicans excluded) numbered 7797 in 1930; in 1920, (Mexicans included) 29,077. Mexicans numbered 59,340 in 1930. There were also, in 1930, 2850 Negroes and 28,941 Indians. The urban population, living in communities of at least 2500, increased sharply in the decade, to 106,816, from 64,960, but remained inferior in number to the rural population, 316,501 (1930), 295,390 (1920). Of 142,866 persons reported as in gainful occupations in 1930, 58,971 were in agriculture, 15,948 in manufacturing and mechanical industries, 15,759 in transportation, 13,494 in trade, 11,620 in domestic and personal service and 9916 in professional service. Albuquerque had 26,570 inhabitants (1930), 15,157 (1920); Santa Fe, the capital, 11,173 (1930), 7236 (1920).

**AGRICULTURE.** The following table shows the acreage, production and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton .....	1931	114,000	98,000*	.....
	1930	127,000	99,000*	.....
Hay, tame ...	1931	162,000	336,000*	\$3,696,000
	1930	150,000	321,000*	4,173,000
Dry beans ...	1931	161,000	725,000*	1,522,000
	1930	169,000	456,000*	1,140,000
Corn .....	1931	283,000	5,660,000	2,434,000
	1930	257,000	3,598,000	2,770,000
Wheat .....	1931	264,000	5,112,000	2,325,000
	1930	211,000	1,904,000	1,163,000
Grain sorghums	1931	856,000	7,832,000	1,880,000
	1930	297,000	2,435,000	1,096,000

\* Bales.    † Tons.    ° 100-lb. bags.

**MINERAL PRODUCTION.** The State's production of copper, as reported by the U. S. Bureau of Mines, was 74,187,966 lbs. for 1930, as against 100,165,206 for 1929. That of zinc was approximately 68,277,000 lbs. for 1930 and 68,910,000 for 1929; that of lead 20,867,000 lbs. for 1930 and 22,260,811 for 1929. These quantities, plus some gold and a smaller value in silver, the two attaining about \$1,000,000, came in all to \$13,772,418 for 1930, as against \$24,473,675 for 1929, as the value of the production of all five metals. Next in order of importance, the coal

mines produced, in 1930, 1,924,000 short tons of coal, as against 2,622,769 in 1929, when the year's product had a value of \$8,314,000. While these chief products decreased, the yield of petroleum increased conspicuously to 10,172,000 barrels for 1930, from 1,830,000 for 1929, or more than five-fold, by quantity; by value, to \$9,300,000 for 1930 (estimated), from \$2,170,000 for 1929. Thus petroleum in 1930 rivaled copper as the most valuable of the mineral products. The total value of the State's mineral production was \$37,127,621 for 1929; for 1928, \$30,426,840.

The output of minerals from New Mexico ores and gravels in 1931 in terms of recovered and estimated recoverable metal was estimated at 32,228 ounces of gold, 1,042,000 ounces of silver, 20,822,000 pounds of lead, 63,192,000 pounds of copper, and 56,363,000 pounds of zinc, according to the U. S. Bureau of Mines. The gross value of the New Mexico metal production at average yearly prices of \$20.67 per ounce of gold, \$0.29 per ounce of silver, \$0.038 per pound of lead, \$0.083 per pound of copper, and \$0.038 per pound of zinc in 1931 was gold \$666,212, silver \$302,180, lead \$791,236, copper \$5,244,936, and zinc \$2,141,794, with a total of \$9,146,358, as compared with \$13,748,217 in 1930.

**MANUFACTURES.** Federal Census figures gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments at 251 (25 per cent more than for 1927). These establishments employed 4490 wage earners (somewhat fewer than for 1927), to whom were paid wages of \$5,639,557 (about 4 per cent more than for 1927). There were used in the process of manufacture materials, fuel and purchased electricity to a total of \$10,484,960 (4 per cent more than for 1927). The manufactured product was valued at \$21,760,361 (an excess of 7.8 per cent over the corresponding total for 1927). The value added by the process of manufacture was reckoned at \$11,275,401.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 2972.81. Additions of line under operation during the previous year had totaled 105.97 miles, while 7.8 miles had been abandoned. In 1931 were built 47.82 miles of new first track.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$6,800,558 (of which \$1,453,425 was for local education); for interest on debt, \$355,935; for permanent improvements, \$5,028,715; total, \$12,185,208 (of which \$6,446,977 was for highways, \$1,836,578 being for maintenance and \$4,610,399 for construction). Revenues were \$8,797,360. Of these, property and special taxes formed 29.5 per cent; departmental earnings and remuneration to the State for officers' services, 10.4; sale of licenses, 39.9 (including gasoline sale taxes amounting to \$2,550,907). The State's funded debt outstanding on June 30, 1930, was \$9,592,000. Of this amount, \$8,333,000 had been contracted for highways. Net of sinking-fund assets, debt was \$9,064,661. On a property valuation of \$344,671,212 were levied in the year taxes of \$2,087,663.

**EDUCATION.** For the school year ended in 1930, the number of persons of school age in the State was reported as 141,091. There were enrolled in the public schools, in that year, 102,084 pupils. Of these, 89,497 were in common schools or elementary grades, and 12,587 were in high

schools. The year's expenditures for public-school education totaled \$7,128,722. Salaries of teachers, by the year, averaged \$1102. In accordance with a permissive law passed by the Legislature, four counties, according to State Superintendent Lusk, in the *Journal of the National Education Association*, made budgetary provision in 1931 for rural-school supervisors. A training school was established at San Jose for teachers to instruct classes of Spanish-speaking pupils.

**LEGISLATION.** A regular session of the Legislature was held. It granted to certain towns and cities, but not to all in the State, the permission to assess and collect a local license tax of 1 per cent upon gasoline and oil sold within municipal limits. Similarly with that of Arizona, the Legislature passed an act for the State control of narcotics, but Governor Seligman vetoed the measure, holding the Federal narcotic act and the existing State act dealing with marijuana to be sufficient. The authority of the Motorbus Department of the State Corporation Commission was extended over carriers not operating over fixed routes, and over contract carriers.

**POLITICAL AND OTHER EVENTS.** Sympathy for Albert B. Fall, long an esteemed citizen of the State, who had held several of its chief offices, was widespread when he was sentenced to prison for his part in the Doheny oil deal. Senators Cutting and Bratton and Governor Seligman joined in urging a popular petition for his pardon.

**OFFICERS.** Governor, Arthur Seligman; Lieutenant-Governor, Andrew Hockenhull; Secretary of State, Mrs. Marguerite P. Baca; State Auditor, Arsenio Velarde; Treasurer, Warren R. Graham; Attorney-General, Ernest K. Neumann; Superintendent of Public Instruction, Mrs. Georgia L. Lusk.

**JUDICIARY.** Supreme Court: Chief Justice, Howard L. Bickley; Associate Justices, John C. Watson, Frank W. Parker, A. H. Hudspeth, Daniel K. Sadler.

**NEW SOUTH WALES.** One of the six original States of the Commonwealth of Australia, located in the southeastern part of the continent. Area, exclusive of the Federal Territory (q.v.), 309,432 square miles; population, excluding aborigines, according to the census of 1921, 2,100,371; estimated Jan. 1, 1931, 2,500,480. Sydney, the capital, had a population in 1921, of 905,047, including suburbs and shipping; estimated Jan. 1, 1931, at 1,253,560. Other towns with their populations in 1930 were: Newcastle and suburbs, 104,640; Broken Hill, 23,260; Auburn, 18,530. The movement of population in 1930 was: Births, 52,128; deaths, 21,235; marriages, 17,383. Although births exceeded deaths by 30,893, there was a net emigration of 7992, compared with a net immigration of 4216 in 1929. The total estimated increase of population was accordingly 22,901 for 1930, compared with 52,485 in 1927.

**PRODUCTION, ETC.** Wheat is the principal crop, the production in 1930-31 being estimated at 68,181,000 bushels from 5,121,400 acres, compared with 34,407,000 bushels from 3,974,064 acres in 1929-30. Other cereals, oranges and other citrus fruits, potatoes, tobacco, sugar cane, bananas, grapes, and apples are raised. Wool production from 49,870,000 sheep in 1930 was 461,852,890 lbs. (484,753,597 lbs. in 1929). Other livestock (1929) included 2,686,132 cattle, 534,945 horses, and 323,499 swine. Mineral production in 1930 was valued at \$8,437,465 (£10,155,164 in 1929). Industrial establishments in

1929-30 numbered 8208, with 162,939 employees, and the total value of output was \$167,250,618, (£86,847,610 representing the value added in process of manufacture).

The value of New South Wales direct overseas imports and exports in 1929-30 and 1930-31 is shown in the article on AUSTRALIA under *Commerce*. For the 1931-32 budget, see AUSTRALIA under *Finance*. For the year ended June 30, 1930, revenue amounted to \$46,904,889 (£50,447,100 in 1928-29) and expenditures to \$52,167,117 (£50,470,660 in 1928-29). The net State loan expenditure in 1929-30 totaled \$10,878,627 and the net State debt on June 30, 1930, was \$270,485,109, on which the annual interest payments aggregated \$13,586,794.

Executive power is vested in a governor assisted by a responsible cabinet, and legislative power in a bicameral legislature, consisting of a legislative council and a legislative assembly. The legislative council, which must not consist of less than 21 members, is appointed for life by the Crown, and consisted of 92 members in 1930. There are 90 members in the Legislative Assembly. Governor in 1931, Sir Philip Game. The Cabinet formed following the Labor party's victory in the State election of Oct. 25, 1930, was headed by J. T. Lang.

**HISTORY.** Developments in New South Wales during 1931 were intimately related to the political history of the Commonwealth as a whole and for the most part are discussed under AUSTRALIA. Within the State, interest centred largely on the bitter controversy between Premier Lang and the Legislative Council, which consistently blocked his efforts to enact radical economic and political legislation. As a result of long negotiation between the Governor and Premier Lang, the former in November, 1931, consented to the appointment of 25 additional members to the Legislative Council. The practical effect was to give the Lang government a majority in the Upper House. The question of the constitutionality of a bill abolishing the Legislative Council was pending on appeal before the Judicial Committee of the Privy Council in Great Britain. The bill was passed by both chambers of the State Legislature, but was declared unconstitutional by the Supreme Court of New South Wales and by the High Court of the Australian Commonwealth.

The Government Savings Bank of New South Wales, which closed on April 23, was reopened September 7 under a bill passed by the Legislative Assembly on August 25 and by the Legislative Council on August 26. The State government guaranteed the repayment of deposits under an act passed in 1906. The savings-bank bill of 1931 provided for a moratorium on the payment of old deposits until Dec. 31, 1933, and for the repayment of the \$7,122,565 owed the bank by the State government over a period of 40 years in equal half-yearly payments beginning July 1, 1934, with interest at 4 per cent. The great bridge 3770 feet in length, spanning Sydney harbor was completed early in 1931.

**NEW YORK. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 12,588,066; in 1920 it was 10,385,227. The native whites numbered 8,958,744 (1930), 7,385,915 (1920). Substantially half of them were of native parentage. The foreign-born whites numbered 3,191,549 (1930), 2,786,112 (1920). The number of Negroes rose to 412,814

(1930), from 198,483 (1920), and their percentage of the whole population rose to 3.3, from 1.9. Other groups in the population of 1930 were: Chinese, 9665; Indians, 6973; Japanese, 2930; Mexicans, 2898; Filipinos, 1982.

Of 5,523,085 persons listed as in gainful occupations, 1,982,564 (to include 406,382 in the building industry) were in the mechanical and manufacturing industries; in trade, 1,147,304; in transportation, 582,480; in professional service, 478,118; in domestic or personal service, 689,548; in agriculture, 267,979. New York City had 6,930,446 inhabitants (1930), 5,620,048 (1920); Buffalo, 573,076 (1930), 506,775 (1920); Rochester, 328,132 (1930), 295,750 (1920); Syracuse, 209,326 (1930), 171,717 (1920); Albany, the capital, 127,412 (1930), 113,344 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ..	1931	3,990,000	5,288,000*	\$46,534,000
	1930	3,955,000	4,542,000*	65,405,000
Potatoes ...	1931	202,000	28,684,000	11,474,000
	1930	198,000	23,364,000	21,028,000
Corn .....	1931	566,000	22,074,000	18,244,000
	1930	555,000	16,050,000	14,985,000
Oats .....	1931	863,000	24,596,000	8,117,000
	1930	872,000	34,880,000	15,347,000
Apples .....	1931	.....	19,100,000	12,415,000
	1930	.....	24,200,000	19,860,000
Wheat .....	1931	211,000	5,311,000	3,050,000
	1930	224,000	4,086,000	3,245,000
Barley .....	1931	173,000	4,325,000	1,946,000
	1930	168,000	5,208,000	3,229,000
Buckwheat ..	1931	158,000	2,844,000	1,166,000
	1930	186,000	2,883,000	2,306,000
Dry beans ..	1931	120,000	1,296,000*	8,838,000
	1930	124,000	692,000*	3,841,000

\* Tons. \* 100-lb. bags.

**MINERAL PRODUCTION.** Almost half of the mineral industry of the State normally consists of the treatment of minerals wholly or chiefly imported from outside its borders. Thus blast furnaces shipped, in 1930, 1,638,323 long tons of pig iron and, in 1929, 2,626,771; by value, \$29,160,894 for 1930 and \$46,960,186 for 1929. Largely in connection with this industry there were produced, in 1930, 3,849,563 short tons of coke, and in 1929, 4,299,470 tons; by value, \$24,657,090 for 1930 and \$25,305,915 for 1929. The production of ferro-alloys attained for 1929 the quantity of 214,826 long tons and the value of \$19,729,001.

Among the native products, the first place was held by clay products, which attained the total value of \$17,661,711 for 1929; for 1928, of \$22,474,405. Stone was quarried to the quantity of 11,693,640 short tons (1929), 10,743,470 tons (1928); and to the value of \$15,895,914 (1929), \$15,785,511 (1928). Cement mills' shipments totaled 10,256,086 barrels (1930), 10,742,992 (1929); by value \$15,380,703 (1930), \$15,597,868 (1929). The yield of petroleum increased to 3,802,000 barrels (1930) from 3,377,000 (1929); by value it was \$10,300,000 (1930, estimated), \$13,170,000 (1929). The gypsum produced attained 1,284,338 short tons, in value \$8,339,852, for 1929. The yield of salt was 2,009,280 short tons (1930), 2,194,590 (1929); in value, \$5,837,103 (1930), \$6,470,051 (1929). An increasing natural-gas production amounted to 8,387,000 M cubic feet, or \$5,538,000, for 1929. Mines in the State furnished 755,074 long tons of iron ore (1930), 875,564 (1929); in value, \$3,063,155 (1930), \$3,941,985 (1929). The total value of the State's production, of native minerals alone, was

\$109,361,349 for 1929; for 1928, \$108,025,720.

**MANUFACTURES.** Federal Census figures gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 39,300 (a reduction of less than 1 per cent below the number for 1927). These establishments employed 1,106,976 wage earners (3.2 per cent more than the number employed in 1927). Wages paid these earners totaled \$1,051,133,696 (3 per cent more than had been paid out in 1927 for such wages). There were used in the process of manufacture materials, fuel and purchased electricity to the value of \$5,018,231,694 (which exceeded the cost under this head for 1927 by about 2 per cent). The manufactured product was valued at \$9,979,958,958 (this being 0.2 per cent higher than the value of the manufactures of 1927). Value added by manufacture was \$4,961,727,264. New York City accounted as usual for the greater part of the State's manufacturing activity. Its 20,434 establishments employed 505,080 wage earners, whose wages totaled \$914,055,108, while its manufactured product was valued at \$5,987,817,097; Buffalo had 1398 establishments, 68,914 wage earners therein employed, a wage total of \$100,031,775, and a product of \$720,903,181; Rochester, 931 establishments, 58,359 wage earners, \$82,377,902 in wage payments, and \$380,102,233 of product; Syracuse, 441 establishments, 26,413 wage earners, \$39,070,091 in wage payments, and \$181,193,115 of product.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 8311.72. Additional line put under operation during the year preceding, 5.21 miles, had been exceeded by line abandoned, which totaled 24.27 miles. In 1931 the only reported additional construction was 3.3 miles of track, of which 1.6 miles were first track and 1 mile was second track.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$202,677,673 (of which \$88,023,308 was for local education); for interest on debt, \$15,528,309; for permanent improvements, \$73,609,838; total, \$291,875,820 (of which \$66,476,013 was for highways, \$31,110,385 being for maintenance and \$35,365,628 for construction). Revenues were \$296,508,837. Funded debt outstanding on June 30, 1930, totaled \$385,658,370, of which \$258,026,000 was for highways and a canal system. Net of sinking-fund assets, it was \$276,826,739. On an assessed valuation of \$27,034,695,261 the State collected in the year ad valorem taxes of \$2,279,907.

**EDUCATION.** For the academic year 1929-30, the number of persons of school age in the State was reported as 3,867,404. The number of those enrolled in the public schools was 2,141,479. Of this number, 1,716,645 were graded as elementary pupils and 424,834 as high-school pupils. The year's expenditures for public-school education totaled \$391,417,287. This sum was composed chiefly of \$259,483,424 for current expenses and \$78,441,054 for capital outlay. About \$53,000,000, or all but a slight part of the remainder, represented debt charges and redemption. The salaries of teachers, by the year, averaged \$2389.55. A study of the proposed revision of the curriculum of the secondary schools of the State was in progress during the course of the year.

**CHARITIES AND CORRECTIONS.** For the State agency having the central authority over a great part of the State's institutional work, the name "Department of Social Welfare," bestowed by a resolution of 1929, was ratified by popular vote in 1931 through an amendment of the State constitution, replacing the name "Department of Charities." A State Board of Social Welfare, composed of 12 appointees of the Governor, serving eight years at per-diem compensation, was the head of the department, which, however, had an executive chief, the Commissioner of Social Welfare, appointed by the board. The department controlled and administered the following institutions: New York State Training School for Girls, Hudson; State Agricultural and Industrial School (delinquent boys), Industry; the Thomas Indian School, Iroquois; State Women's Relief Corps Home (soldiers' and sailors' mothers, wives, widows, and daughters), Oxford; State Training School for Boys, under construction at Warwick. The board also supervised 1054 charitable, correctional, and reformatory institutions and agencies supported wholly or partly from taxation; supervised children placed out or boarded out; supervised local boards of child welfare; supervised State relief to the aged under the act of 1930, which went to 44,828 recipients (October, 1931); directed Indian affairs; and performed many other duties.

**LEGISLATION.** The regular annual session of the Legislature sat until April 10. It dealt with the issue of State hydro-electric construction on the St. Lawrence River and other public projects; with Congressional reapportionment; with measures to reduce the hardships of adverse times; with Prohibition; and with the demand for the investigation of the officials of New York City. It provided for a State budgetary expenditure of \$347,000,000 for the ensuing fiscal year, but made only minor change in the system of taxation.

The passage of the Cornaire water-power act was hailed as concluding the effort of some 20 years to create a State system for the development of electricity from water-power sites in the St. Lawrence River, along the northern border. The policy of developing this resource by the direct enterprise of the State had long been opposed by a strong Republican contingent, led by Senator Knight, favoring private development. Governor Roosevelt, leading the partisans of State development, gained strong Republican support in certain parts of the State, in addition to that of his own party, and was thus able to put through a measure embodying most of the recommendations of the commission that had been appointed to study the plan the year before.

The Cornaire act created a body of five trustees, to be appointed by the Governor, for the purpose of carrying on the hydro-electric project. This Power Authority, somewhat analogous in character to the Port of New York Authority, was to carry on the construction of dams and plants at the power sites, when and if the necessary international arrangements were made; bonds were to be issued to meet the costs of construction; they were to rest on the credit of the Power Authority, and before issuing them this body was to make such contracts, if possible, with private electric distributors for the sale of the resulting current as would assure the service of the debt to be incurred; the trustees were to have large powers in the negotiating of such contracts, in order to as-

sure favorable rates to the public. Both the Power Authority's bonds and its property were to be exempt from State taxation.

Other provisions made for public projects by the Legislature were: Permission to the Port of New York Authority to construct a midtown vehicular tunnel under the Hudson River at Thirty-fourth St.; creation of a commission to consider the plan of creating a State Bridge Authority; extension of the limits of the Adirondack State Park to include an additional 1,550,000 acres about its existing circumference, but in which the State owned actually only about 349,000 acres; second and concluding passage of the proposal for a State constitutional amendment to allow a bond issue of \$20,000,000 for reforestation work, the amendment to be submitted to popular vote for ratification.

The State was redistricted into 45 districts for the election of the 45 Representatives assigned to it, in place of the existing 43, in the new Federal reapportionment. The two additional districts were formed out of territory entirely outside of New York City. This was done by the Republican majority in both houses, with the aid of the Democratic delegation from the county of Queens. It was strongly opposed by the other Democrats in the Legislature and by the Governor. In order to circumvent the certainty of his veto the redistricting measure was in the form of a concurrent resolution of the two houses, not requiring to be sent to the Governor. The opposition impugned the constitutionality of this means of allotting Federal representation. See COURT DECISIONS AND LITIGATION, below.

The Legislature voted and Governor Roosevelt signed a measure to petition Congress to call a National constitutional convention to consider the repeal of the Eighteenth Amendment. By enactment was created a division of the Department of Education, charged with dispensing medicinal liquor to physicians, under regulations to be fixed by that department. A bill looking to the general State sale of alcoholic beverages was defeated by a close vote in the Senate, after passing the Assembly. While the Legislature cut some of the chief features from the Administration's health bill, it voted \$750,000 for the establishment of three State hospitals for tuberculosis. The maximum weekly hours of women and minors employed in mercantile establishments was made 48 hours, and they were required to have a weekly half-holiday. The State tax on savings banks was reduced to six-tenths of 1 per cent on surplus, from 1 per cent.

The speed of 40 miles an hour on public roads was made lawful. Actors, stage hands, and musicians were exempted from prosecution as participants in obscene plays, and authors and producers were made solely answerable. Life interest that had been retained by a decedent in property that he had transferred was rendered subject to State tax on decedents' estates. A recodification of the law on towns was vetoed as amending the law insufficiently. A bill to authorize insurance companies to write insurance of employment was vetoed also. Extensive amendment of the banking laws, sponsored by the Superintendent of Banks as a sequel of suspensions of State banking institutions in 1930, was laid over for a year, bankers' organizations having requested the postponement.

With regard to New York City, the chief legislative action was the voting of a concurrent resolution for a legislative investigation of the city's

administration. It was provided by resolution, for the purposes of this inquiry, that the investigating committee should have power to exempt witnesses from the consequences of self-incrimination in their testimony; the intention was that persons examined should thus be deprived of the opportunity to plead self-incrimination when they sought to avoid giving information of their own or their associates' prosecutable acts.

Two acts were passed to enable the city to bring into its own possession and to unify its privately conducted transit lines. The two provided alternative ways of proceeding. One of the measures permitted the city to set up a Board of Control, which might issue securities of its own and in exchange for these acquire the securities of transit companies. The other measure permitted the existing Transit Commission to effect unification and to lease the unified system to an operating company. The charter of New York City was amended to permit the city to issue \$10,000,000 in certificates of indebtedness so as to obtain means for the relief of unemployment.

The application of the Dwellings Law, previously postponed, was deferred for four years more, with regard to multiple dwellings for which plans had been filed before the passage of the law. With the approval of both parties was enacted a measure to provide 12 more justices for the Supreme Court, Second (Long Island) Judicial District. Seven distinct sinking funds of New York City were combined into one, in order that their combined resources might be applied to lower the net city debt and the tax rate as affected by sinking fund needs. The power was granted for one year to corporations, public utilities excepted, to contribute to relief funds.

*Special Session.* A special session was convened on August 25 for the purpose of investing the Hofstadter legislative committee with power that the Courts held it lacked, to grant immunity to witnesses and so to compel their testimony. The necessary measure was passed. Measures were also enacted, according to Governor Roosevelt's recommendations, to appropriate \$20,000,000 for relief of the destitute, to raise the money by an increase of 50 per cent in the State's personal income tax, and to create a special commission of three appointees of the Governor to administer the fund.

**POLITICAL AND OTHER EVENTS.** The year's receipts from the State income tax, one of its principal sources of revenue, fell to less than one-half of the corresponding receipts of the year before, and the previously very productive transfer tax, derived largely from transfers of stock shares, also slumped heavily. Losses of income were partly made up by surplus carried from the year previous and were partly corrected by vetoes of appropriations. In the late summer, however, it became necessary to make State provision for the relief of widespread want among the unemployed. The \$20,000,000 appropriated for this purpose was raised by short-term notes and was to be covered by receipts in 1932 from a special increase in the rate of personal income taxes. A contingent liability of \$25,000,000 against the State or its subdivisions was created by a decision of the U. S. Circuit Court of Appeals invalidating a tax imposed in the years 1923-26 at the rate of 1 per cent on capital, upon national banks.

Governor Roosevelt was successful in imposing on the Legislature, despite its Republican majorities in both houses, legislation along the lines of

his plans for electric development on the St. Lawrence and for the administration of special relief of the unemployed through a committee of his own appointment. He took in August the initiative of writing a letter to President Hoover on the subject of Federal negotiations with Canada on the development of a St. Lawrence waterway, as a means to preventing action that might leave the plans of New York out of consideration.

*New York City Transit.* No conclusive action was taken during the year with regard to the proposal of New York City to unify its three subway and allied transit systems under public ownership. The situation with regard to the private companies and particularly the Interborough was clarified by the termination of the Interborough's efforts to establish in the State courts a right to charge a fare in excess of five cents. A decision rendered in the Appellate Division on April 10 affirmed previous decisions of the Supreme Court (not in New York State the court of last resort) and of the Transit Commission that the 5-cent fare as fixed by contract was binding upon the company. The Court of Appeals, the State's highest court, decided unanimously on July 15 to the same effect. There remained to the company only the possibility of carrying its case back to the Federal courts, whence it had previously been referred to State tribunals. The effect of the decisions was to render the transit companies more amenable to proposals for public acquisition. The city authorities, however, facing the prospect of more favorable terms later on and likewise the impediments to large financing in a period of economic depression, refrained until December from active negotiations. On December 20, the Transit Commission issued a plan for the acquisition of transit facilities by a Board of Transit Control; but the plan was widely opposed as rendering the City liable in case the bonds of this body should fail to pay interest.

*Litigation with New Jersey.* A suit brought by the State of New Jersey in the Federal Supreme Court to prevent the diversion of water from the East Branch of the Delaware River for augmenting the water supply of New York City was decided mainly in favor of New York. The court ruled, however, that New York's diversion of water must be limited to 440,000,000 gallons a day. See NEW JERSEY; *Political and Other Events.*

New Jersey won in the United States Supreme Court a suit for a decree to stop the City of New York's practice of dumping garbage from scows into the Atlantic Ocean beyond the territorial waters. The court rejected the defense that the acts at issue had been performed outside its jurisdiction and forbade the practice, granting New York City, however, a respite in order that it might build plants for the disposal of the refuse. (See NEW JERSEY under *Political and Other Events.*) In the proceeding of New Jersey before the Interstate Commerce Commission hearings were held before examiners to consider the contentions of New York State and City and of New Jersey as to the practice of the railroads serving the port of New York to grant free lighterage to points on the port waterfront. New Jersey contended for the abolition of free lighterage on the ground that its communities along the waterfront were entitled to lower railroad rates, since they could be served by certain of the chief railroads without lighterage. Hearings were terminated, and the case awaited the submission of counsel's

briefs late in the year. See also *MASSACHUSETTS* under *Political and Other Events*.

**Water Pollution.** The Legislature having created a State commission on river and harbor pollution to act jointly with similar commissions created by the States of New Jersey and Connecticut, the three bodies met and organized as the Tri-State Anti-Pollution Commission. They promoted a programme by which the communities bordering on the waters of and adjacent to New York Harbor were to give up discharging sewage into the tidal waters and to make arrangements for its disposal by other means.

**City Investigations and Reforms.** The year was marked by an outburst of reformatory activity against the public officials and the Tammany organization of New York City. An inquiry into the conduct of the City Magistrates and their courts, which had been instituted by the Appellate Division and begun in the year previous, was continued under the direction of Samuel Seabury. It disclosed irregularities in the official behavior of magistrates, and led to the resignation of several. Information as to alleged abuses of magistrates in the arrangement of bail, in the examination of defendants, and similar matters was obtained. Policemen of the vice squad, according to testimony, had engaged in the practice of extorting money from women by raiding their premises and arresting them on charges of prostitution; a number of the accused policemen were discharged from the force and prosecuted.

Alleged laxity in prosecution on the part of District Attorney T. C. T. Crain, who had been elected in New York County on the Tammany ticket, led the City Club to formulate charges against him and to address to Governor Roosevelt a demand for an investigation. The Governor appointed Samuel Seabury a commissioner to investigate the charges. Seabury submitted in September a report criticizing Crain's record on the ground of inefficiency but finding against him no sufficient statutory cause for removal.

The investigation of the affairs of the city provided by the Legislature was undertaken by a legislative committee having as its head S. H. Hofstadter, a Republican State Senator from Manhattan. Samuel Seabury, already engaged in other investigations, was made counsel to the committee. He directed the inquiry into a great number of municipal activities, among which were the proceedings of the Board of Standards and Appeals, the authority for settling questions as to the application of the zoning law. Dr. William F. Doyle, a former veterinarian who had become a leading pleader before this board and who had admitted dividing large fees received in this practice, was called before the committee in the intention to learn whether any portion of his fees had gone to persons of predominating political influence. He refused to tell with whom he had split his fees, on the ground that it might incriminate him. The committee extended to him the immunity from self-incrimination that the Legislature, anticipating refusals of testimony on this ground, had empowered the committee to grant. Doyle still declined to give the information and was committed to jail for contempt. His was made a test case of the validity of refusals on the part of witnesses friendly to the city government to give testimony likely to prove damaging. His appeal from commitment for contempt was rapidly carried up to the Court of Appeals. This court affirmed the validity of his imprisonment for contempt, in a

decision of August 10, on the ground that he had refused to answer a question that might have revealed him as engaging in bribery; but it declared invalid the claim that Doyle could further rightfully be committed for refusal to answer a question that would have involved only the conspiracy to bribe. To grant amnesty in the latter case, the court held, a resolution of the Legislature was insufficient, and an act signed by the Governor would be required. In compliance with this decision the necessary act was passed by a special session of the Legislature called by Governor Roosevelt.

A body known as the City Affairs Committee preferred to Governor Roosevelt in March a set of charges against officials of the city government and demanded that he remove Mayor Walker. The Mayor responded with a detailed denial of the charges on April 20, and the Governor dismissed the charges, finding them lacking in supporting facts. The city administration itself made a defensive move by proceeding to the investigation of a number of officials and the removal of discredited members of the police force.

**Public Relief.** The support of destitute persons was a considerable burden on the city not only through the winter of 1930-31 but throughout the summer that followed. The expense of providing work and assistance to this class was met by the issue of city indebtedness, as provided by an act of the Legislature. A similar act provided for the granting of further relief during the winter of 1931-32. Through its Emergency Work Bureau, the City of New York thus expended some \$8,500,000 up to the middle of 1931, in addition to the expenditure of private funds through the Prosser Committee, which had been organized in the previous autumn to help the destitute through the winter.

For the winter of 1931-32 great funds for the relief of the destitute were provided. The chief of these was the Emergency Unemployment Relief Committee's fund, styled the Gibson Fund as the chairman of the committee was Harvey D. Gibson. By voluntary private contributions this fund was brought above \$18,000,000 in December. The city government appropriated \$15,000,000 for a "work-relief programme," to be available in 1932; also \$5,000,000 for a "home-relief programme." The city's share of the State's Temporary Emergency Relief Fund added \$3,250,000 to the total available. A fund raised by the Mayor brought another \$2,000,000 from city employees. The total of all these funds was about \$45,500,000; but the city government's \$20,000,000 share was merely appropriated, not disbursed into the hands of a distinct organization, and was therefore subject to the uncertainties attending municipal finances at the time.

**Building and Public Works.** Although private construction was hindered by economic depression it was by no means wholly checked in New York City. The city's tentative assessment roll issued on October 1 added to the assessed total of real estate the sum of \$437,482,588 on account of buildings constructed in the course of the year preceding. Work was started by the city on July 7, at Ward's Island on a \$30,000,000 plant for the disposal of sewage, to be the first unit of a set of such plants, designed to end the discharge of sewage into the harbor waters, in consonance with like efforts on the part of other harbor communities. (See *Water Pollution*, above.)

The city took title in July to the block bounded

by Vesey, Barclay, and Church streets, and West Broadway, under agreement to furnish to the Federal Government a site for a new post office, to replace the old edifice at Broadway and Park Row. The War Department approved in January a modification of the North River bulkhead line that would permit of the building of longer piers along part of the line, and the construction of four piers, each 1100 feet long, between Fifty-third and Fifty-ninth streets, was authorized by the Sinking Fund Commission, to provide Manhattan berths for great liners. Work was begun on April 30 on a \$16,000,000 structure, the first unit of a union freight terminal projected by the Port of New York Authority. The site of this unit was between Eighth and Ninth avenues and Fifteenth and Sixteenth streets, in Manhattan. The work of straightening the Hell Gate channel and deepening it to 36 feet was completed in April and passage thus supplied for large vessels between the East River and Long Island Sound. See ARCHITECTURE.

*Cessation of the New York World.* The heirs of Joseph Pulitzer, long proprietor of the *World* and the *Evening World*, obtained permission on February 26 to break the injunction in his will forbidding the sale of these newspapers. They immediately sold to the Scripps-Howard interests, owners of the *Telegram*, and the *World* newspapers ceased separate publication. Their distinctive name was preserved in the title *World-Telegram*.

*Bank of United States.* The suspension of the Bank of United States, which had taken place on December 11, 1930, had many consequences which were felt in 1931. An active campaign was waged against Superintendent of Banks Broderick for his alleged shortcoming in having failed to take earlier action to shut down the institution and conserve its resources for the depositors. Max D. Steuer, appointed special assistant district attorney for the purpose, conducted an investigation into the affairs of the bank and the conduct of its officials. He obtained indictments against several of the bank's officers. After a trial in the Court of General Sessions, lasting 12 weeks, Bernard K. Marcus, president; Saul Singer, executive vice president; and Herbert Singer, the latter's son, were found guilty of misappropriation of funds, and were sentenced to prison terms, which for the two elder men were to run from three to six years. The sentenced men took appeal.

Efforts to reorganize the failed bank were unavailing, and in September an initial dividend in liquidation, to some 400,000 depositors, at the rate of 30 per cent, was allowed by the court. As the law provided that stockholders in a failed State bank be assessed to the par value of their shares to make good its insolvency, and as many of the depositors had been induced to buy stock, great numbers had their dividends canceled or reduced by assessment. The suffering among depositors who had lost small savings was widespread and severe. Superintendent of Banks Broderick and 28 directors and others were indicted for neglect on October 9.

*Tyrone Natural Gas Field.* Important finds of natural gas were made in the Tyrone field, chiefly in Schuylcr County. This field was first tapped commercially on February 26, 1930, by a well giving a substantial flow at a depth of 2075 feet. Drilling in 1931 produced large flows in the neighborhood of Corning and Wayne. Large companies obtained leases of gas rights and started

the development of the natural gas discoveries on a systematic plan.

*Court Decisions and Litigation.* The State tax on estates was declared invalid, in a decision of Surrogate O'Brien, with regard to certain of the provisions of the law as it existed from Mar. 12, 1928, to Sept. 1, 1930, whereby the State had collected from collateral relatives of non-resident decedents in excess of the 2 per cent provided against the realty of such decedents. The decision rendered it possible that the State would have to make many refunds. Attorney General Bennett ruled that the redistricting of the State for Representatives by concurrent resolution of the Legislature was unconstitutional, and following this ruling the State officials refused to honor the mandate. Suit was accordingly brought to compel them and to test the constitutionality of the step. Justice Staley of the Supreme Court of Albany County ruled on November 7 that the resolution was invalid. Appeal was taken to the Appellate Division, Third District, which on December 30 sustained Staley.

*Emergency Relief Administration.* This body, created by the relief legislation of the special session, came into being at the end of September, when Governor Roosevelt appointed as its members Jesse I. Straus, Philip Wickser of Buffalo and John Sullivan of the State Federation of Labor. It held large independent powers over the expenditure of \$20,000,000 in State relief funds to be used in the ensuing winter.

*Interstate Bridges.* The Port of New York Authority completed and put into operation on October 24 the George Washington Bridge, a suspension bridge for vehicular and other traffic, spanning the Hudson River between 178th St., Manhattan, and Fort Lee, New Jersey. Another bridge built by the Port of New York Authority, a steel-arch structure described as the longest of its kind in the world, connecting Staten Island with Bayonne, N. J., was finished and opened on November 14. See BRIDGES.

*Niagara Power Controversy.* Governor Roosevelt put forward the claim of the State to be heard in connection with Federal negotiations with Canada on the subject of waterway and power development in the St. Lawrence River. His first communication on the subject not having been answered, he brought the matter to public attention. The Federal Administration then gave general assurance of intention to consider the claims of the State. Thereupon Governor Roosevelt charged Chairman Frank P. Walsh of the recently created State Power Authority to seek an understanding with the Federal Department of State. Secretary of State Stimson wrote Chairman Walsh on November 4 to the effect that negotiations with Canada would proceed without the granting of the prior conference sought by New York State.

*ELECTIONS.* In the elections for the Legislature the Republicans maintained undiminished their existing Assembly strength of 80 as against 70 Democrats. The possibility that the Democrats might gain power and stop the Hofstadter committee's inquiry into public affairs in New York City was thus removed. A popular vote was cast in the State on six proposed amendments to its constitution. The following were adopted: No. 1, to abolish the State census; No. 3, to permit the State to undertake its great project of reforestation; No. 5, to change the name of the Department of Charities to Department of Social Welfare.

Amendment No. 2, to allow members of the Legislature to take other office during their legislative terms, a privilege that had been abused and abolished a century before, was rejected; so also were No. 4, to create an additional judicial district, and No. 6, to permit a county system of property assessment in Westchester.

The 7th District (in New York City) elected J. J. Delaney, Democrat, to a vacancy in the Federal House of Representatives. Twelve new Supreme Court Justices for the Long Island District, created by statute, nominated by both major parties, but opposed on the ground that there had been a bipartisan judicial deal, were elected over No-Decal candidates by about 6 to 1. Democrats were elected mayors in some 16 cities up-State. Utica voted on November 3, by 12,500 to 10,915, in favor of a plan of municipal government by a limited council with a city manager.

**OFFICERS.** Governor, Franklin D. Roosevelt; Lieutenant-Governor, Herbert H. Lehman; Secretary of State, Edward J. Flynn; Comptroller, Morris S. Tremaine; Attorney-General, John J. Bennett, Jr.; Commissioner of Education, Frank P. Graves.

**JUDICIARY.** Court of Appeals: Chief Judge, Benjamin N. Cardozo; Associate Judges, Cuthbert W. Pound, Frederick E. Crane, Irving Lehman, Henry T. Kellogg, John F. O'Brien, Irving G. Hubbs.

**NEW YORK CITY.** See CRIME; UNEMPLOYMENT; NEW YORK under *Political and Other Events*.

**NEW YORK CITY REGIONAL PLAN.** See CITY AND REGIONAL PLANNING.

**NEW YORK UNIVERSITY.** A nonsectarian institution for the higher education of men and women in New York City, chartered in 1831. It comprises the following divisions: At University Heights, a college of arts and pure science, college of engineering, Guggenheim School of Aeronautics; at Washington Square, the graduate school, school of law, school of commerce, accounts, and finance, Washington Square college, school of education, school of retailing, university extension division, and the institute of education; at the Wall Street division, the graduate school of business administration and courses in the school of commerce, accounts, and finance. The Medical college is on East Twenty-sixth Street, the dental college on East Twenty-third Street, and the college of fine arts on East Forty-third Street.

The enrollment for the year 1930-31 in all divisions of the university, after deducting all duplications, was 40,665. The enrollment in the different degree-conferring units was as follows: University college of arts and pure science, 1094; school of law, 1467; University and Bellevue Hospital Medical College, 528; college of engineering, 877; graduate school, 881; school of education, including both graduate and under-graduate divisions, 7493; school of commerce, accounts, and finance, including the Wall Street division, 9146; Washington Square college, 6686; graduate school of business administration, 906; school of retailing, 884; college of fine arts, 1422; and college of dentistry, 448. In other divisions, the enrollment was as follows: Summer school, 4521; extension, 3572; institute of education, 2814; life-insurance training courses, 263; public health (correspondence) courses, 396; institute of fine arts, 356. The faculty of the university numbered 1814.

The productive funds for the year 1930-31

amounted to \$6,872,894, and the income was \$296,531. The total income of \$7,652,378 was derived as follows: Student fees, \$6,649,053; dormitory rents, \$20,701; gifts, \$303,116; other income, \$382,976; and income from endowments, \$296,531. The libraries contained 389,688 volumes. Chancellor, Elmer Ellsworth Brown, Ph.D., LL.D.

**NEW ZEALAND.** 28' land. A self-governing British dominion in the southern Pacific Ocean, about 1200 miles southeast of Australia; consisting mainly of two islands, North and South Islands. Capital, Wellington.

**AREA AND POPULATION.** New Zealand has an area of 103,415 square miles (104,015 square miles, including outlying and annexed islands). The population on Mar. 31, 1931, totaled 1,488,595, compared with 1,408,139 at the 1926 census. In 1926, there were 63,670 Maoris. Births for the years 1926 to 1930 inclusive averaged 27,420 annually and deaths 11,951. The average birth rate per 1000 inhabitants for the same period was 19.7 and the death rate 8.6. The population of the principal cities in 1926, with 1930 estimates in parentheses, was (excluding Maoris): Wellington, 98,661 (108,270); Auckland, 87,829 (102,800); Christchurch, 83,114 (88,390); Dunedin, 67,544 (67,270).

**EDUCATION.** In 1929, there were 254,449 pupils in primary schools, 29,941 in secondary schools, 11,187 in technical schools, and 4713 in the four universities at Dunedin, Christchurch, and Wellington (two).

**PRODUCTION.** Animal husbandry is the chief industry. In 1929, only 1,933,000 acres, or 3 per cent of the total area, was under cultivation, while there were 16,855,000 acres of permanent meadows and improved pastures, and about 13,000,000 acres of forests. Values of the leading crops for the 1929-30 crop year were: Wheat, \$11,127,000; oats, \$13,930,000; and hay, \$14,835,000. Barley, corn, potatoes, peas and beans, and flax are other products. Coal, gold, and silver are the principal minerals mined; coal production in 1930 was 2,542,000 tons. For the year ended Mar. 31, 1929, the factory output from 5136 establishments was valued at \$453,600,000, of which \$162,000,000 represented the value added in process of manufacture. Wages in all industries were reduced about 10 per cent in 1931 and in July of that year the registered unemployed numbered nearly 40,000.

**COMMERCE.** Exports in 1930 were valued at \$215,145,000, compared with \$263,648,000 in 1929, while imports were valued at \$209,386,000, compared with \$237,475,000 in 1929. The United Kingdom supplied 47.3 per cent of the total 1930 imports and took 80.2 per cent of the exports. The United States furnished 17.6 per cent of the imports and purchased 4.7 per cent of the exports, the respective values being \$36,847,000 and \$10,301,000. The value of the four leading export commodities in 1930 was: Butter, \$57,088,000; frozen meats, \$53,309,000; wool, \$37,299,000; cheese, \$31,333,000. In 1931 both imports and exports decreased more than 50 per cent from the 1930 levels.

**FINANCE.** For the fiscal year ended Mar. 31, 1931, budget estimates envisaged revenues of £25,210,000 and expenditures of £24,874,000. Closed accounts, however, showed a deficit of £1,639,000, due to a decline in revenue, and a deficit of £6,850,000 was forecast for 1931-32. In the 1931-32 budget, provision was made to

meet the deficit by £1,800,000 of additional taxation, by economics and salary reductions, and by the temporary use of Treasury reserves. For developments in 1931, see *History*. The public debt on Mar. 31, 1930, totaled £267,383,000 (\$1,301,219,000), of which £116,526,000 was internal and £150,857,000 external indebtedness.

**COMMUNICATIONS.** Railway lines in operation in 1930 totaled 3287 miles, all except 116 miles being state owned. Highways extended 48,433 miles, including 30,629 miles of macadam. A total of 599 vessels, of 2,297,000 net registered tons capacity, entered the ports in 1930 and 607, of 2,351,000 tons, cleared. About 34 per cent of the total imports and 25 per cent of the exports passed through Wellington.

**GOVERNMENT.** Executive power rests with a Governor-General appointed by the Crown on recommendation of the Dominion government, and legislative power in the Governor-General and a general assembly of two houses, namely, the Legislative Council of 41 members, appointed for seven years, and the House of Representatives of 80 members, elected for three years by direct suffrage. Governor-General in 1931, Lord Bledisloe (Charles Bathurst), appointed in 1929. The Cabinet formed by the United party on May 28, 1930, was composed in part as follows: Prime Minister, Minister of Finance, External Affairs, Customs and Stamp Duties, G. W. Forbes; Lands and State Forests, E. A. Ransom; Railways, W. A. Veitch; Public Works and Transport, W. B. Taverner; Internal Affairs and Industries and Commerce, P. A. de la Perrelle; Agriculture and Mines, A. J. Murdoch.

**HISTORY.** On Feb. 3, 1931, New Zealand experienced the most severe earthquake in its history, which partially destroyed the business sections of the towns of Napier and Hastings on the eastern shore of North Island. The loss of life on February 3 and in succeeding shocks in the same vicinity was 261 and the material damage was estimated at about £1,250,000, the sum which Parliament later appropriated for restoration purposes (see *EARTHQUAKES*).

In addition to the problem of earthquake reconstruction, the Forbes Government was faced with the increasingly severe repercussions of the world-wide depression upon the Dominion's economy. Controlling only 29 of the 80 seats in the House of Representatives, the Government was forced to rely upon the coöperation of the Reform party in dealing with its responsibilities. This coöperation at first took the form of an inter-party economic committee. On September 22, however, the Cabinet was reorganized on the basis of a coalition between the United and Reform parties, with Mr. Forbes as Prime Minister. The step was intended to prolong the life of Parliament in order to avoid the turmoil and uncertainty of an electoral campaign.

The Coalition Government's drastic programme of retrenchment encountered bitter opposition from the Labor party and the Government finally appealed to the country for an unequivocal mandate to take all the measures they considered necessary to stave off bankruptcy and restore prosperity. The general election, held December 2, gave the United-Reform coalition 51 seats out of the 80 in the lower House. The standing of the parties following the election, with the number of seats held previously in parentheses, was: Reform party, 29 (28); United party, 21 (20); Coalition Independent, 1; Labor

party, 24 (19); Independents, 5 (4). Two of the five Independents promised general support of the Government.

The Coalition Ministry confirmed by the election was composed in part as follows: Prime Minister, External Affairs, and Railways, G. W. Forbes (leader of the United party); Public Works, Transport and Unemployment, J. G. Coates (leader of the Reform party); Finance, Customs, and Attorney-General, W. D. Stewart (Reform party); Education, Industries, Commerce, and leader of the Legislative Council, R. Masters (United party); Lands, E. A. Ransom (United party); Native Affairs, Sir Apirana Ngata (United party); Justice and Defense, J. G. Cobbe (United); Postmaster-General, Labor and Internal Affairs, A. Hamilton (Reform); Health, J. A. Young (Reform). For the trade dispute with Canada, see CANADA under *Foreign Relations*.

**NICARAGUA**, nē'ká-rī'gwá. The largest of the Central American republics. It is bounded on the north by Honduras, on the east by the Caribbean Sea, on the south by Costa Rica, and on the west by the Pacific Ocean. Capital, Managua.

**AREA AND POPULATION.** The area is estimated at about 51,600 square miles, of which 4500 square miles are lake area. Population, according to the census of 1920, 638,118; estimated at 750,000 in 1929. The population of the chief cities in 1920, with latest estimates in parentheses, was: Managua, 27,839 (50,000 in 1929); León, 38,318 (50,000); Granada, 16,773 (25,000); Matagalpa, 10,271 (7000).

**EDUCATION.** About 62 per cent of the population is illiterate. Of approximately 50,000 children of school age (6 to 14 years) in 1929 a total of about 23,495 were enrolled in state elementary schools.

**PRODUCTION.** Agriculture is the principal source of wealth, lumbering, cattle raising, and mining constituting subsidiary industries. Banana growing is the predominant industry of the east coast, although coconuts, pineapples, and other fruits are cultivated. Important crops of the western region are coffee, sugar cane, cacao, corn, and beans. Some rice and tobacco is grown. Coffee normally accounts for about one-half the total value of exports and is the main factor in the national economy. The average coffee crop is about 36,000,000 pounds; in 1930 lack of rain reduced the coffee and sugar cane yields. Banana shipments in 1930 totaled 3,861,073 stems (4,092,388 in 1929).

**COMMERCE.** According to the report of the Collector General of Nicaragua Customs, the total foreign trade in 1930 declined to \$16,515,718 from \$22,669,966 in 1929. Exports amounted to \$8,343,358 (\$10,872,526 in 1929) and imports to \$8,172,360 (\$11,797,440 in 1929). The visible balance of trade, which had been unfavorable by \$925,114 in 1929, was favorable by \$170,998 in 1930. The United States in 1930 furnished \$5,023,615 worth of imports (\$7,389,738 in 1929) and purchased \$4,150,183 worth of Nicaraguan exports (\$5,754,038 in 1929). The chief exports, in order of value, were coffee, bananas, wood, gold, and sugar. Leading imports were cotton goods, iron and steel manufactures, flour, chemicals and medicines, and silk goods. The value of coffee shipments declined to \$3,792,217 in 1930 from \$5,902,754 in 1929 and \$6,792,464 in 1928.

**FINANCE.** Closed Government accounts for 1929 were reported to have balanced at 6,553,000 cordobas (1 cordoba equaled \$1 at par). In 1930,

according to preliminary figures, receipts and expenditures each totaled about 5,500,000 cordobas. To offset declining revenues, salary reductions and other economies were put into effect by the Government and additional taxes were levied. In the latter part of 1930, however, the financial position of the Government was reported to be difficult. The bonded debt on Jan. 1, 1931, was reported at 3,940,000 cordobas, compared with 4,470,375 cordobas on Mar. 31, 1930.

**COMMUNICATIONS.** The principal railway line is the state owned Pacific Railroad, with about 159 miles of track, which links the port of Corinto with Managua, León, Granada, and Diriamba. A new line from San Jorge to San Juan del Sur was opened in 1930, and construction was under way on 72 miles of new line from León to Sauce. In 1930 there were 350 miles of motor roads. In 1929, 2401 vessels of 959,817 tons entered Nicaraguan ports and 2384 vessels of 965,984 tons cleared.

**GOVERNMENT.** Executive power is vested in a president, acting through responsible ministry, and legislative power in a Congress with two chambers, the Senate of 24 members elected for six years and the Chamber of Deputies of 43 members elected for four years by universal male suffrage. In the 1930 elections, the Liberals secured control of both the Chamber of Deputies and the Senate. President in 1931, José María Moncada (Liberal), elected Nov. 4, 1928, for a four-year term.

#### HISTORY

**GUERRILLA WARFARE CONTINUES.** The guerrilla warfare carried on since 1927 by Augusto Sandino and other insurgent leaders against the Moncada Government and the American forces supporting it assumed more serious proportions in 1931. It took a heavy toll of American lives and furnished the occasion for the declaration by Secretary of State Henry L. Stimson of a new intervention policy on the part of the United States, which attracted wide attention in Latin America and Europe.

The ranks of the Sandinistas were swelled by recruits from the increasing numbers of unemployed plantation workers. They were reported to be well supplied with arms and ammunition. The killing of eight United States Marines from ambush on Dec. 31, 1930, was followed in January and February by repeated contacts between insurgents and patrols of Marines or of the *Guardia Nacional* (Nicaraguan constabulary), with a number of casualties on both sides. From the Tipitapa agreement of 1927 to the end of February, 1931, the campaign to force the surrender of armed bands operating in northwestern Nicaragua cost the lives of 108 American Marines and an estimated total of 3765 Nicaraguans.

Despite the increasing activity of outlaw bands, Secretary of State Stimson announced Feb. 13, 1931, that the United States would continue to withdraw American troops from Nicaragua as rapidly as they could be replaced by the *Guardia Nacional*. More than 700 Marines engaged in combat duty were ordered withdrawn by the following June. About 500 Marines were to remain to instruct the *Guardia* and as personnel of an aviation unit until after the local election scheduled for November, 1932. Mr. Stimson implied that the United States would then discontinue its policy of supervising Nicaraguan elections and of furnishing officers for the *Guardia*. At the time of his statement, all but 15 of the 200 *Guardia* officers

were Americans. Fear that civil warfare would again involve the country upon the withdrawal of American forces was expressed by former President Díaz and prominent Nicaraguans.

While stating that he was opposed to the immediate withdrawal of American forces from Nicaragua, President Moncada favored the establishment of an entirely native volunteer army to carry on the campaign against Sandino. He believed such a move would deprive the insurgent chief of his local prestige as an opponent of American imperialism. The State Department frowned on the suggestion, however, and instead it was arranged to increase the size of the *Guardia* by 500 men to a total of about 2200 and to build a network of roads and trails to facilitate the pacification of outlaw-ridden districts. To provide for the execution of this programme, Nicaragua obtained a credit of \$1,000,000 in New York.

**THE MANAGUA EARTHQUAKE.** The gradual evacuation of American forces was in progress when on March 31 a violent earthquake and fire virtually destroyed Managua, the capital of the republic. In the catastrophe, approximately 2000 persons, including a number of Americans, were killed, 7000 injured, 45,000 rendered homeless, and property valued at from \$15,000,000 to \$20,000,000 was destroyed. While Marines and members of the *Guardia* maintained order, aid was rushed to the stricken city by United States naval vessels and airplanes, by neighboring Central American countries, and by the American Red Cross. U. S. Army Engineers, taken from their work of surveying the proposed Nicaraguan canal, confined the fire to an area of 31 blocks and repaired the damaged water system. By the end of April about 21,000, or less than half of the population, remained in the city and 20,000 of these were dependent upon rations issued by the Red Cross. Some 1200 native workers were engaged in rebuilding the city. See EARTHQUAKES.

**EAST COAST RAIDED.** While Marine and *Guardia* forces were engaged in succoring the inhabitants of the stricken capital, Sandino's outlaws left the fastnesses of northwestern Nicaragua early in April and advanced in small groups along four rivers upon outlying camps of the Bragmans Bluff Lumber Company, an American concern operating in the vicinity of Puerto Cabezas on the northeast coast. Approximately 300 Americans in that region, with investments totaling about \$16,500,000, were guarded by 136 members of the *Guardia*, officered by 14 U. S. Marines. Surprising small settlements at Logtown, Moss Farm, and other points, the bandits captured and killed eight American civilian employees of the lumber company, four British subjects, one Colombian, one Guatemalan, and one German missionary. A Marine officer was killed in a subsequent armed clash. *Guardia* patrols, reinforced by new units rushed from western Nicaragua by airplane, drove back the bandits with equally heavy losses before they reached Puerto Cabezas, their avowed objective. In the meantime United States cruisers had arrived at Bluefields, Puerto Cabezas, and Gracias a Dios and bluejackets and Marines were landed to protect those points pending the arrival of *Guardia* forces.

**SANDINO OFFERS TERMS.** On May 4 Pedro José Zepeda, Sandino's representative in Mexico City, announced the conditions under which he said Sandino would lay down his arms. They were the immediate withdrawal of American forces and a pledge by the Nicaraguan Government to secure

the revision of the Bryan-Chamorro canal treaty of 1916 and to obtain the return to Nicaragua of banks, railways, and custom houses controlled by American interests. The proposal was ignored by the United States and Nicaraguan Governments.

Guerrilla warfare continued on a reduced scale throughout the summer, with repeated clashes between Sandinistas and *Guardia* patrols. On October 27, Sandino's representative in Mexico City reported that the rebel leader was about to launch another offensive and thereafter increasing insurgent operations were reported from northern Nicaragua and along the east coast. The town of Chichigalpa on the railroad between Chinandega and León was looted by insurgents November 23. A state of siege was declared in the Departments of León and Chinandega on November 25 and early in December the American Legation at Managua reported that 300 short-term auxiliaries had been added to the *Guardia* to aid in checking insurgent operations. Brig. Gen. R. C. Berkeley relieved Brig. Gen. Frederic L. Bradman as commander of the U. S. Marine forces in Nicaragua on November 25.

**STIMSON'S NEW POLICY.** Upon news of the outlaw attacks on the east coast, Secretary of State Stimson on April 17 instructed the American Minister at Managua as follows:

In view of outbreak of banditry in portions of Nicaragua hitherto free from such violence, you will advise American citizens that this government cannot undertake general protection of Americans throughout that country with American forces. To do so would lead to difficulties and commitments which this government does not propose to undertake. Therefore the department recommends to all Americans who do not feel secure under the protection afforded them by the Nicaraguan Government through the Nicaraguan National Guard to withdraw from the country or at least to the coast towns, whence they can be protected or evacuated in case of necessity. Those who remain do so at their own risk and must not expect American forces to be sent inland to their aid.

On the previous day the State Department announced that the withdrawal of Marines from combat duty was proceeding, despite the developments on the east coast, and would be completed by June 3, 1931. Generally speaking, the previous policy followed by successive American administrations had been to afford protection to both American and other foreign citizens in Nicaragua wherever disturbances occurred. The unfavorable reaction of a section of the American press to the new policy caused Secretary Stimson to amplify his previous message in a statement issued April 18. The situation in Nicaragua, he said, had wholly changed since the United States intervened in 1926 to protect its citizens and other neutrals from the consequences of the war then in progress between Liberals and Conservatives. Neutral zones were then established for the protection of foreigners with the consent of both the Liberal and Conservative commanders.

In 1931, Mr. Stimson pointed out, his problem was not one "of the protection of American citizens in Nicaragua from a war, but from murder and assassination . . . by small groups of confessed outlaws—treated as outlaws by the Nicaraguan Government." The dense jungle of the east coast made it impossible for regular troops to operate there effectively, even if it were attempted. Furthermore, in the interval since 1926 a Nicaraguan constabulary force of over 2100 had been created and trained by American officers for fighting under jungle conditions. The Secretary of

State indicated that henceforth the Nicaraguan Government would be held responsible for the safety of Americans and other foreigners in the country. He said:

By assisting the Government of Nicaragua in organizing and training a competent *Guardia* we are not only furnishing the most practical and effective method of meeting the bandit problem and the protection of Americans and foreigners in Nicaragua from its attendant perils, but we are at the same time recognizing that it is a problem with which the sovereign government of Nicaragua is primarily concerned, and a problem which it is primarily the right and duty of that government to solve.

Mr. Stimson's policy was vigorously supported by President Hoover in a statement issued April 21. The President denounced Sandino as a cold-blooded bandit "outside the civilized pale" and expressed confidence in the ability of the Nicaraguan Government to bring him to justice.

**OTHER EVENTS.** In preparation for American supervision of the Nicaraguan Presidential election scheduled for 1932, Major Charles F. P. Price of the Marine Corps officiated as "electoral observer" of the municipal elections held in Nicaragua in October, 1931. In an effort to balance its budget, the Nicaraguan Government during the year established government monopolies in the sale of petroleum products and matches. Establishment of the oil monopoly necessitated the ousting of the West India Oil Company, a subsidiary of the Standard Oil Company, which had been in business in Nicaragua for 15 years. Legislative decrees promulgated January 14 and February 25 provided, respectively, for the establishment of a new port at Nacascolo in the Gulf of Fonseca and that at least 75 per cent of the employees of every business concern must be citizens of Nicaragua. See CANALS for discussion of the proposed Nicaraguan Canal.

**BIBLIOGRAPHY.** An authoritative study of United States-Central American relations, with specific reference to Nicaragua, appeared in two *Foreign Policy Reports* by Dr. Raymond Leslie Buell—"The United States and Central American Stability," July 8, 1931 (vol. vii, no. 9) and "The United States and Central American Revolutions," July 22, 1931 (vol. vii, no. 10). See also Lawrence Dennis, "Nicaragua: In Again, Out Again," *Foreign Affairs*, April, 1931.

**NICHOLS MEDAL.** See CHEMISTRY, INDUSTRIAL.

**NICKEL.** The Dominion of Canada, principally from the ores mined at Sudbury, Ont., supplies approximately 90 per cent of the world's production of nickel, the only other producer of importance being New Caledonia. The nickel production of Canada in 1931 was estimated at 65,484,184 pounds, valued at \$14,500,000, a decrease of 36 per cent from 1930 when it amounted to 103,708,857 pounds valued at \$24,455,133. The United States, while an important consumer, produces but small amounts of nickel, mainly in the form of nickel salts and metallic nickel obtained as a by-product in the electrolytic refining of copper. This fell in 1930 to 308 short tons with a value of \$312,803, while secondary nickel recovered as metal, and the non-ferrous alloys and salts aggregated 2900 short tons valued at \$2,030,000.

The imports of nickel into the United States in all forms in 1931 were valued at \$7,078,699 as against \$12,872,163 in 1930, and ores and matte for refining amounted to 11,029,709 pounds valued at \$1,530,557 as against 20,593,361 pounds

valued at \$2,940,074 in 1930. See CHEMISTRY, INDUSTRIAL.

**NICOLAYITE.** See MINERALOGY.

**NIDAROS.** See NORWAY under *History*.

**NIGER, COLONY OF THE.** A colony in the interior of French West Africa, lying east of the upper Niger and north of British Nigeria; formerly a military territory. Area, about 463,200 square miles; population, 1,473,601 in 1929, including 349 Europeans. Capital, Niamey. The local budget for 1930 balanced at 23,650,000 francs (1 franc equals \$0.0392 at par). The colony is an administrative part of French West Africa (q.v.). Lieutenant-Governor in 1931, M. Choteau.

**NIGERIA, COLONY AND PROTECTORATE OF.** A West African territory, belonging to Great Britain; divided into the Northern and Southern Provinces. The area is approximately 335,700 square miles and the population, 19,409,001, of whom 11,037,275 were in the Northern Provinces (area, 275,724 square miles). Europeans in the country numbered 5939. For administrative purposes the British portion of the mandated territory of Cameroons is attached to Nigeria. The seat of government is at Lagos. Including Cameroons, the area at the census of Apr. 23, 1931, was 372,674 square miles and the population 20,762,083. In 1929, there were about 2985 primary and elementary schools, with 194,700 pupils, in addition to 30,203 Mohammedan schools with 300,500 pupils.

**PRODUCTION.** The chief products and exports are palm oil and kernels, cotton lint, cacao, and mahogany. Nigeria ranks sixth among tin-producing countries.

**COMMERCE.** Imports declined sharply in value in 1930 to £12,045,000 from £13,219,000 in 1929, while exports decreased to £15,134,000 from £17,757,000 in 1929. Cotton piece goods (£3,401,325) and fish were the principal 1929 imports. Trade was chiefly with the British Empire, which supplied £9,772,187 of imports in 1929.

**FINANCE.** Revenue of the entire colony and protectorate in 1929-30 totaled £6,045,621 and the total expenditure £6,986,500 (including £696,599 advanced for loan works). The public debt stood at £23,559,209 on Mar. 31, 1930.

**COMMUNICATIONS.** The two main railway lines, with their branches, aggregated 1743 miles of line in 1930. There is an extensive network of motor highways, but the numerous rivers and creeks form the principal routes of transportation.

**GOVERNMENT.** The Northern Provinces and Southern Provinces are each administered by a lieutenant-governor appointed by the King but subject to the authority of the Governor. The Governor is assisted by an executive council and by a partly elective legislative council, which legislates for the Southern Provinces only. Laws affecting the Northern Provinces are promulgated directly by the Governor. Governor in 1931, Sir Donald C. Cameron, appointed December, 1930.

**NILE DELTA RECLAMATION.** See RECLAMATION.

**NINEVEH.** See ARCHAEOLOGY.

**NITRATE.** See CHILE under *Production and History*.

**NITROGEN INDUSTRY.** See FERTILIZERS.

**NOBEL PRIZES.** The Nobel prizes for 1931 were presented in Stockholm and Oslo on December 10 to, or on behalf of, the following persons who, in accordance with the will of Alfred Bernhard Nobel, the Swedish inventor and philan-

thropist, were considered to have made the greatest contributions towards the progress of the world and the welfare of mankind: Karl Bosch and Friedrich Bergius (chemistry) Germans; Otto Heinrich Warburg (medicine) German; Erik Axel Karlfeldt (literature) Swede; and Nicholas Murray Butler and Jane Addams (peace) Americans. The award in physics for 1931 was not announced. The award in literature is made by the Swedish Academy; the awards in physics and chemistry by the Royal (Swedish) Academy of Sciences; the award in medicine by the Caroline Institute (the faculty of medicine in Stockholm); and the peace award by a committee of five, elected by the Norwegian Storting. Owing to the depreciation of Scandinavian currency, however, the prizes were worth in 1931 only about \$31,500.

The award of the prize in chemistry to Doctors Bosch and Bergius emphasized the contribution of science to industry. Doctor Bosch was honored for his process of large-scale production of ammonia through adaptation of the Haber process in the synthesis of nitrogen and hydrogen. After attending the University of Leipzig, he became associated in 1899 with the Badische Anilin und-Soda Fabrik. He was appointed director in 1914 and general director in 1919, developing this corporation into one of the greatest chemical manufacturing in the world and erecting the huge Oppau works near Ludwigshafen and the Leuna works near Merseburg, where application was made of his process of manufacturing ammonia, as well as fertilizers and other by-products. After 1925 he was also general director of the I. G. Farbenindustrie.

Doctor Bergius, co-recipient of the prize in chemistry, developed the Bergin process of the hydrogenation of coal by which methanol and certain substitutes for gasoline might be obtained. He had also devoted considerable research to combining coal and hydrogen so as to increase the efficiency of coal as a source of energy, and to producing sugar from wood.

The award of the prize in medicine to Dr. Otto Heinrich Warburg was in recognition of his researches in connection with enzymes, including the oxidation process in living cells. His researches in the field of cancer were outstanding, and he had also studied the fermentation process involved in respiration. He had been a member of the Kaiser Wilhelm Institute for Biology in Berlin since 1918.

The prize in literature was awarded posthumously to Erik Axel Karlfeldt (q.v.), the Swedish poet, who was permanent secretary of the Swedish Academy and chairman of the committee which annually awarded this prize.

Dr. Nicholas Murray Butler, president of Columbia University, the joint winner of the Nobel peace prize, had been for many years one of the world's active leaders in the advancement of the ideals of peace. In 1925 he became president of the Carnegie Endowment for International Peace. He was also president of the American board of the Federation of International Conciliation and was one of the most influential proponents of the Kellogg-Briand peace pact. His works on this subject include: *The International Mind* (1913) and *A World in Ferment* (1918). Jane Addams, head resident of Hull House, Chicago, since the founding of the settlement in 1889 and co-recipient of the Nobel peace prize, had served the cause of peace

not only as a writer and lecturer but as president since 1915 of the Women's International League for Peace and Freedom. She had presided over International Congresses of the League at The Hague (1915), Zurich (1919), Vienna (1921), The Hague (1922), Washington (1924), Dublin (1926), and Prague (1929). She was the author of *Newer Ideals of Peace* (1907) and *Peace and Bread in Time of War* (1922).

**NON-FEDERATED MALAY STATES.** A group of five Malay states under British protection but not included in the Federated Malay States (q.v.). They are divided in area and population as follows:

State	Capital	Area	Population (1921)
Johore	Johore Bharu	7,678	282,234
Kedah	Alor Star	3,648	338,554
Kelantan	Kota Bharu	5,713	286,863
Trengganu	Kuala Trengganu	5,500	153,765
Perlis	Kangar	816	40,091
Total		22,855	1,101,000

The population of Johore in 1929 was 336,829, including 200,780 Malays, 111,345 Chinese, and 21,245 Indians. The same racial mixture prevails in the other states. Rubber is the principal product and tin is mined in Trengganu and Perlis. Agriculture is similar to that in the Federated Malay States (q.v.). The states are each governed by a sultan, assisted by a state council and a British adviser, who exercises the actual power. The Governor of the Straits Settlements (q.v.) is *ex officio* High Commissioner for all the Malay states. A railway line connecting several of the States with Singapore was opened on Sept. 5, 1931.

See **BRITISH MALAYA**.

**NORTH AUSTRALIA.** See **NORTHERN TERRITORY**.

**NORTH CAROLINA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 3,170,276; in 1920 it was 2,559,123. The whites numbered 2,234,948 (1930), 1,783,779 (1920). The Negroes, 918,647 (1930), 763,407 (1920). The proportion of whites rose slightly to 70.5 per cent (1930), from 69.7 (1920). Whites were nearly all native—2,226,160 (1930), 1,776,680 (1920). The foreign-born whites numbered but 8788 (1930), 7099 (1920). The State contained, in 1930, 16,579 Indians.

Of the population, the urban portion (living in communities of at least 2500) totaled 809,487 (1930), as against only 490,370 (1920). The rural part numbered 2,360,429 (1930), 2,068,753 (1920). Of 1,141,129 persons reported as in gainful occupation in 1930, 499,923 were in agriculture, of whom 270,187 were farmers and 93,874 farm laborers for hire. Those in manufacture and the mechanical industries numbered 286,245, of whom 87,242 were in cotton mills and 22,501 in knitting mills; in trade there were 99,193; in professional service, 55,702; in transportation, 53,968; in domestic or personal service, 101,436.

Charlotte, the most populous city, had 82,675 inhabitants (1930), 46,338 (1920); Winston-Salem, 75,274 (1930), 48,395 (1920); Durham, 52,037 (1930), 21,719 (1920); Asheville, 50,193 (1930), 28,504 (1920); Greensboro, 53,569 (1930), 19,861 (1920); Raleigh, the capital, 37,379 (1930), 24,418 (1920).

**AGRICULTURE.** The accompanying table shows

the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Tobacco	1931	689,000	468,520,000	\$44,041,000
	1930	766,000	585,990,000	75,598,000
Cotton	1931	1,848,000	775,000	.....
	1930	1,643,000	775,000	.....
Corn	1931	2,345,000	48,072,000	20,671,000
	1930	2,238,000	40,194,000	87,380,000
Hay, tame	1931	715,000	877,000	8,801,000
	1930	623,000	532,000	10,268,000
Peanuts	1931	281,000	823,150,000	6,786,000
	1930	281,000	207,900,000	6,861,000
Potatoes	1931	79,000	8,532,000	5,119,000
	1930	76,000	7,220,000	8,664,000
Sweet potatoes	1931	80,000	6,560,000	3,608,000
	1930	75,000	6,750,000	6,075,000
Wheat	1931	339,000	4,407,000	3,173,000
	1930	265,000	2,862,000	3,120,000
Oats	1931	197,000	4,831,000	1,722,000
	1930	186,000	3,534,000	2,403,000

\* Pounds. \* Bales. \* Tons.

**MINERAL PRODUCTION.** Stone retained its lead among the mineral products in point of the value of the yearly product. The output nevertheless fell off, there being quarried 1,607,670 short tons in 1929, as against 2,126,560 in 1928; by value, \$3,880,113 in 1929 and \$4,690,949 in 1928. The yearly value of clay products diminished to \$3,196,830 for 1929, from \$3,826,493 for 1928. The total value of the State's mineral production was \$10,963,896 for 1929; for 1928, \$11,480,406.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 3792 (almost 27 per cent higher than the number for 1927). These employed 208,068 wage earners (or 1.7 per cent in excess of the number thus employed in 1927). To these earners were paid wages totaling \$159,794,761 (not quite 1 per cent above the figure for 1927). Materials, fuel, and purchased electricity, used in the process of manufacture, cost \$614,140,001 (which exceeded the corresponding cost for 1927 by nearly 10 per cent). The manufactured product was valued at \$1,301,319,152 (which exceeded the total for 1927 by 12.7 per cent). Value added by manufacture was estimated as \$687,179,151. Winston-Salem, the most important manufacturing centre, had 85 establishments, employed 15,895 wage earners, paid them wages of \$13,462,979 and produced manufactures of the value of \$291,161,279. Durham had 62 establishments, 7172 employed wage earners, \$5,974,348 of wage payments, and a product of \$137,645,909.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 5161.35. No additions had been made in the course of the year preceding, but a total of 27.44 miles of line had been abandoned. No building of additional line or main trackage in 1931 was reported.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$28,585,812 (of which \$6,450,840 was for local education); for interest on debt, \$8,065,039; for permanent improvements, \$13,756,272; total, \$50,429,025 (of which \$19,704,209 was for highways, \$8,771,825 being for maintenance and \$10,992,384 for construction). Revenues were \$46,573,844. Funded State debt outstanding on June 30, 1930, totaled \$173,282,400, of which \$108,399,600 was

for highways. Net of sinking-fund assets, it was \$164,931,691.

**EDUCATION.** For the academic year 1929-30, the number of persons of school age in the State was reported as 1,031,947. There were enrolled in the public schools 866,939 pupils. Of these, 750,002 were in the common schools or elementary grades, and 116,937 were in high schools. The year's expenditures for public school education were: current, \$28,616,603; total (including capital outlay) \$33,425,755. The salaries of teachers averaged \$849.56 by the year. The Legislature of 1931 gave much attention to the proposed plan to furnish sufficient State support to public schools to insure a minimum term of six months. It sought to do this without increasing the direct ad-valorem tax on property. While a direct tax of 15 cents on the \$100 was to provide part of the money, a number of indirect taxes were imposed, the design being to raise the total of State aid to schools to \$17,000,000, from \$6,500,000.

**CHARITIES AND CORRECTIONS.** The State's general administrative functions with regard to the care and custody of persons continued in 1931 to rest chiefly in the State Board of Charities and Public Welfare. This board of seven unpaid appointees had as its executive officer a Commissioner of Public Welfare. Under him were divisions administering child welfare, county organization matters, supervision of institutions, mental health and hygiene, and work among the Negroes. The State's practice of employing prisoners on highway labor continued, but was somewhat modified. An act of 1931, providing State maintenance for all public roads, gave the management and maintenance of all prisoners serving over 60 days but not committed to the State Prison into the charge of the State Highway Commission. That body thus came to control over 4000 prisoners. A new State's Prison was under construction.

**LEGISLATION.** Facing a severe drop in the collection of State taxes, the biennial session of the general assembly was obliged to restrict expenditure. It nevertheless enacted a measure to transfer the duty of road building, in so far as it had rested on counties, to the State Highway Commission. The cost of highway maintenance was also assumed by the State. On the other hand, the county commissioners lost the power to levy the one-cent tax for highway purposes, which in its aggregate had imposed on the inhabitants an ad valorem levy of about \$6,000,000.

A school law was enacted, under the terms of which the State became responsible for the operation of all public schools. To meet the resulting expense, there was enacted a State property tax of 15 cents on the \$100 of assessed valuation. The tax on sales of gasoline was increased to 6 cents, from 5 cents. The Legislature passed a resolution directing the State courts to impound ballots cast in the disputed Bailey-Pritchard Senatorial election, which the Federal marshals had been ordered to seize. A commission of nine was created to make a redraft of the State constitution, which had stood without radical alteration for 63 years. The redraft was to be submitted to the Legislature in 1933. The Governor was charged to name the members of the commission, which he later did, making Chief Justice W. P. Stacy its chairman.

**POLITICAL AND OTHER EVENTS.** Decreased public revenues and other adverse developments in-

cident to bad times caused considerable inconvenience in public finances. The biennium ended on June 30 left the State with a deficit of \$2,230,064, as against a surplus of \$2,121,079 remaining from the previous biennium. The revenue for the fiscal year 1930-31 was reported to have fallen by \$3,392,190 below the estimates that had been made in the preparation of the State budget.

At Asheville, Luke Lea, Luke Lea Jr., and Wallace B. Davis were found guilty, on August 25, of misapplication of funds in the management of the Central Bank and Trust Company, which had suspended in 1930, and were sentenced to prison terms. Asheville and Buncombe County defaulted on debt payments in June. The State Supreme Court ruled on July 2 that the counties of Durham and Duplin must not issue bonds for repayment of current indebtedness, such as would require for their service the levying of a special tax in excess of the 15 cents on the \$100 allowed the counties for a general levy.

At Duke University, a \$4,000,000 medical school and hospital were opened on April 20. Preparations for merging the University of North Carolina at Chapel Hill, the State College at Raleigh and North Carolina College for Women at Greensboro were made in accordance with a resolution passed by the General Assembly.

**OFFICIALS.** Governor, O. Max Gardner; Lieutenant-Governor, R. T. Fountain; Secretary of State, J. A. Hartness; Treasurer, Nathan O'Berry; Auditor, Baxter Durham; Attorney-General, Dennis G. Brummitt; Superintendent of Public Instruction, A. T. Allen.

**JUDICIARY.** Supreme Court: Chief Justice, Walter P. Stacy; Associate Justices, W. J. Adams, Heriot Clarkson, George W. Connor, W. J. Brogden.

**NORTH CAROLINA, THE UNIVERSITY.** A State institution for the higher education of men and, with restrictions as to admission, of women in Chapel Hill, N. C., founded in 1795. The enrollment in the autumn of 1931 was 2825 regular students, with 3736 in extension courses. There were 1865 registered for the 1931 summer session. The faculty had 215 members. The endowment amounted to \$2,000,000, and the total budget for the year was \$1,316,458. The Morehead-Patterson Memorial Tower, the \$100,000 gift of John Motley Morehead, '91, and Rufus Lenoir Patterson, '93, to perpetuate the memory of those members of their families who had been associated with the university, was dedicated on Nov. 26, 1931. The library contained 230,512 volumes. President, Frank Porter Graham, A.M.

**NORTH CENTRAL, formerly NORTHWESTERN, COLLEGE.** A coeducational institution of higher learning in Naperville, Ill., founded in 1861. In the autumn of 1931 there was an enrollment of 505 students, of whom 294 were men and 211 women. There were 39 members on the faculty. The productive funds of the college amounted to \$1,062,974, and the current income for the year was \$169,755. The library contained 20,000 volumes. The Merner Gymnasium and Field House, costing \$350,000, was dedicated in January, 1931. President, Edward Everett Rall, Ph.D.

**NORTH DAKOTA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 680,845; in 1920 it was 646,872. The native whites numbered 566,095

(1930), 568,451 (1920). Foreign-born whites, 105,148 (1930), 131,503 (1920). The State contained, in 1930, 8387 Indians, 608 Mexicans and 377 Negroes. Of 240,317 persons reported as in gainful occupation in 1930, 134,451 were in agriculture, whereof 78,653 were farmers and 38,888 were farm workers for hire. Persons in trade numbered 25,390; in manufacturing and mechanical industries 16,846; in transportation, 17,955; in professional service, 19,014. Fargo, the most populous city, had 28,619 inhabitants (1930), 21,961 (1920); Bismarck, the capital, had 11,090 (1930), 7122 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat ...	1931	6,204,000	82,717,000	\$16,345,000
	1930	9,896,000	108,471,000	55,654,000
Hay, tame .	1931	1,571,000	1,097,000 *	6,363,000
	1930	1,055,000	1,084,000 *	7,588,000
Flaxseed .	1931	1,006,000	3,521,000	4,120,000
	1930	1,677,000	7,882,000	10,956,000
Barley ...	1931	1,812,000	18,482,000	4,805,000
	1930	2,588,000	43,996,000	11,439,000
Corn ....	1931	1,159,000	21,442,000	7,934,000
	1930	1,035,000	18,112,000	9,599,000
Oats ....	1931	1,498,000	18,276,000	3,472,000
	1930	1,827,000	40,194,000	8,039,000
Rye .....	1931	189,000	4,914,000	1,876,000
	1930	1,223,000	14,064,000	3,375,000
Potatoes .	1931	114,000	8,436,000	2,531,000
	1930	97,000	6,305,000	5,044,000

\* Tons.

**MINERAL PRODUCTION.** Coal, the State's only important mineral product, was less actively mined in 1930, the production falling to 1,630,000 short tons, from 1,802,130 tons for 1929. The value of the coal mined in 1929 was \$3,157,000. The small yearly yield of clay products and of sand and gravel was maintained in 1929. The total value of the State's mineral production was \$3,465,563 for 1929; for 1928 it was \$3,082,621.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 374 (22 per cent more than the number recorded in 1927). The wage earners employed by these establishments numbered 4033 (exceeding the number so employed in 1927 by nearly 24 per cent). The manufacturing wages paid in the year came to \$5,688,308 (about 17 per cent above those of 1927). Materials used in manufacture, plus fuel and purchased electricity, cost \$39,692,399 (an excess of some 15 per cent over the figure for 1927). The manufactured product was valued at \$55,346,976 (or 17.8 per cent above total for 1927). Value added by manufacture was estimated at \$15,654,577.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$9,037,024 (of which \$1,443,533 was for local education); for conducting public service enterprises, \$3,876,578; for interest on debt, \$1,894,125; for permanent improvements, \$3,142,131; total, \$17,949,858 (of which \$3,813,435 was for highways, \$1,374,493 being for maintenance and \$2,438,942 for construction). Revenues were \$17,696,863. Of these, property and special taxes formed 20.7 per cent; departmental earnings and remuneration to the State for its officers' services, 9.7; sales of licenses, 19.7 (including taxes of

\$1,403,080 on sales of gasoline). The State's funded debt outstanding on June 30, 1930, was \$36,358,200. Net of sinking-fund assets, it was \$2,438,038. On property bearing an assessed valuation of \$997,701,484 were levied in the year State taxes of \$3,152,737.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 5275.55.

**EDUCATION.** The Legislature raised the requirements for the certification of teachers in 1931, according to State Superintendent Palmer, writing in the *Journal* of the National Education Association, by requiring at least one year of professional training as requisite to a certificate. The previous minimum had been attendance for 12 weeks in a normal course.

**CHARITIES AND CORRECTIONS.** The State Board of Administration, under the system in operation in 1931, held jurisdiction over the State's seven institutions of care and custody, which had over 3000 of aggregate population. This board was not peculiarly devoted to the care of dependent or delinquent individuals, but had general administrative powers, which extended also over the capitol and other State property and over the State's educational institutions.

**LEGISLATION.** The State Legislature held a regular biennial session, which adjourned on March 6. It made provision for the emergencies caused by the burning of the State capitol. An act was passed to liberalize the State compensation law, but this act was vetoed by Governor Shafer on the ground of indefinite wording. Intangible personal property in corporations in the State, owned by outsiders, was made no longer taxable through death duties on the estates of such possessors.

The Federal reapportionment having reduced the number of the State's seats in the House of Representatives to two, from three, the Legislature did not redistrict the State into Congress districts. Rejecting a plan to set up an eastern and a western district, it simply abolished the old districts and left both its Representatives to be elected by the State at large.

**POLITICAL AND OTHER EVENTS.** The Farmers' Union of North Dakota addressed to the State's delegation in Congress on August 3 a demand that the Federal Government provide a moratorium on debts owed to the farm loan banks and the intermediate credit system and that a special session of Congress be called to pass other measures of relief for the farmer class.

**OFFICERS.** Governor, George F. Shafer; Lieutenant-Governor, John W. Carr; Secretary of State, Robert Byrne; Treasurer, Berta E. Baker; Auditor, John Steen; Attorney-General, James Morris; Superintendent of Public Instruction, Bertha R. Palmer.

**JUDICIARY.** Supreme Court: Chief Justice, A. M. Christianson; Associate Justices, Luther E. Birdzell, A. G. Burr, W. L. Nuessle, John Burke.

**NORTH DAKOTA, UNIVERSITY OF.** A State institution of higher education at University Station, Grand Forks, N. D., founded in 1883. The enrollment for the autumn of 1931 was 1606, of whom 995 were men. The faculty numbered 142. The income for 1931 was derived as follows: State appropriations for maintenance, \$575,100; Federal land grant funds, \$62,000; student fees, \$60,000; other sources, \$22,000; income from dormitories, athletics, etc., \$170,000; extension work, \$4700. Grounds, buildings, and equipment were valued at \$3,978,356. The library contained

100,892 catalogued volumes. President, Thomas Franklin Kane, Ph.D., LL.D.

**NORTH EASTERN NEW GUINEA.** See NEW GUINEA, TERRITORY OF.

**NORTHERN AUSTRALIA.** See NORTHERN TERRITORY.

**NORTHERN RHODESIA.** See RHODESIA.

**NORTHERN TERRITORY.** A territory of the Commonwealth of Australia, situated in the central and northern part of the island continent; divided for administrative purposes into two territories, North Australia (287,220 square miles) and Central Australia (236,400 square miles). Area, 523,620 square miles; population, according to the census of 1921, exclusive of aborigines, 3867; estimated Jan. 1, 1931, at 4616, including about 700 Chinese. The aborigines are estimated to number about 20,000. Principal town and port, Darwin. See EXPLORATION under Australia.

**NORTHWESTERN UNIVERSITY.** A co-educational institution of higher learning in Evanston and Chicago, Ill., founded in 1851. It is composed of a college of liberal arts, a graduate school, and schools of engineering, commerce, journalism, music, education, and speech in Evanston; and schools of law, medicine, dentistry, commerce, and journalism in Chicago. For the autumn term of 1931 there was an enrollment of 11,800, of whom 5500 were registered in evening classes in Chicago. For the summer session of 1931, 2000 students were enrolled. The faculty numbered 673 members of the rank of instructor or above. The endowment as of June 30, 1931, was \$25,425,000, and the income from these funds for the fiscal year 1930-31 was \$1,000,000. In the various libraries of the university there were approximately 350,000 bound volumes and 175,000 pamphlets. President, Walter Dill Scott, Ph.D. LL.D.

**NORTHWEST PROVINCES.** See CANADA.

**NORTHWEST TERRITORIES.** A vast area in northern Canada, largely uninhabited and only partially explored, lying north and west of Hudson Bay and Strait, north of the Prairie Provinces, and east of Yukon Territory. Total area, 1,309,682 square miles (1,258,217 square miles of land and 51,465 of water). The population at the census of 1931 was 7133, compared with 7988 in 1921, or a decrease of 10.7 per cent. Most of the inhabitants were Eskimos and Indians. Furs purchased by traders in 1927-28 were valued at \$2,000,968. The Territories were divided in 1920 into three provisional districts, namely Mackenzie, Keewatin, and Franklin. They are administered by a commissioner, deputy commissioner, and five councilors appointed by the Governor General of Canada. The commissioner in 1931 was William W. Cory.

**NORWAY.** A constitutional monarchy, occupying the western and northern half of the Scandinavian Peninsula. Capital, Oslo; reigning king in 1931, Haakon VII.

**AREA AND POPULATION.** With an area of 125,086 square miles. Norway reported a census population of 2,809,564 on Dec. 31, 1930, as compared with 2,649,775 at the census of 1920. During the five years 1926 to 1930 inclusive, births averaged 50,412 annually and deaths 30,259, the excess of births being 20,153. In 1930 the birth rate per 1000 inhabitants was 17.3 and the death rate 10.4. Overseas emigrants for 1926-30 averaged 8349 annually. The chief cities, with the 1930 census populations, are; Oslo, 249,688; Bergen,

98,546; Trondheim (Nidaros), 54,134; and Stavanger, 46,353.

**EDUCATION.** For the 1927-28 school year, there were 398,600 pupils in elementary schools, and 25,374 in secondary schools. Enrollment in the University of Oslo in 1929 was 3495.

**PRODUCTION.** Norway is a largely barren and mountainous country, in which fishing, lumbering, and manufacturing vie with agriculture as the principal sources of national income. The cultivated area in 1930 was 1,933,000 acres, or 2.5 per cent of the total land area; there were 536,000 acres of meadows and 18,531,000 acres of forests. Cereals, potatoes, and hay are the chief crops. The fish catch in 1930 was valued at about \$20,502,000 (\$21,778,000 in 1929); whale oil production (1929-30) was 1,791,000 barrels, valued at \$34,250,000.

The value of mineral production in 1929 was 34,111,000 kroner (\$9,100,000) and that of smelted metals 96,371,000 kroner (\$25,712,000). The value of all industrial production in 1929 was estimated by the Central Statistical Bureau at 1,670,500,000 kroner (1 krone equaled \$0.2680 at par), or 8 per cent more than in 1928. The output, in metric tons, of the leading mineral and industrial products in 1929 (1930 figures given when available) was: pyrites, 725,000 in 1930; iron ore, 750,000 in 1930; silver ore, 13,992; pig iron, 19,883; ferro-alloys, 124,536; aluminum, 20,500 in 1930; zinc, 37,244; wood pulp (mechanical), 720,005; wood pulp (chemical), 332,245. Nearly one-fourth of Norway's shipping tonnage was idle throughout 1931, the fish catch was worth only about \$16,080,000, whaling operations were suspended because of overproduction, the cereal crop was below normal, and industrial output was lowered by a five-months' lockout of 70,000 workers.

**COMMERCE.** General imports in 1930 were valued at 1,067,102,000 kroner (\$285,983,000), compared with 1,072,638,000 kroner (\$287,467,000) in 1929. Exports amounted to 683,739,000 kroner (\$183,242,000), compared with 752,046,000 kroner (\$201,548,000) in the previous year, a 9 per cent decrease. Of the total imports in 1929, Germany supplied 21.2 per cent; the United Kingdom, 19.3; Denmark and Sweden, 15.1; and the United States, 10.5. Exports went chiefly to the United Kingdom, 27 per cent; Germany, 13; Denmark and Sweden, 9.8; and the United States, 9.8. Ships, iron and steel, machinery, coal and cotton textiles were the leading imports and fish, wood pulp, paper and newsprint, and aluminum were the chief exports.

**FINANCE.** The Government's closed accounts for the fiscal year ended June 30, 1931, showed expenditures of 389,700,000 kroner and revenues of 380,100,000 kroner, compared with 395,800,000 kroner and 410,500,000 kroner, respectively, during 1929-30. Unexpected appropriations included in the closed accounts were subsequently reduced by 3,400,000 kroner, making the final deficit 6,200,000 kroner. For the 1929-30 fiscal year, there was a surplus of 14,700,000 kroner. (One krone equaled \$0.268 at par). The budget estimates for 1931-32 balanced at 357,946,000 kroner. The public debt on June 30, 1930, stood at 1,565,037,000 kroner (about \$419,430,000), of which 782,325,000 kroner (\$209,663,000) was external.

**COMMUNICATIONS.** The Norwegian merchant marine on June 30, 1930, comprised 1916 vessels of 3,668,289 gross tons capacity. Gross earn-

ings for 1930 were estimated at 415,000,000 kroner (\$111,220,000). In 1929, 9647 vessels, of 6,148,000 net registered tons, entered Norwegian ports, and 9589 vessels, of 7,752,000 tons, cleared. There were 2383 miles of railway line on June 30, 1930, of which 2154 miles were state and 229 miles private lines. Highways extended 23,343 miles, mostly graded earth or gravel.

**GOVERNMENT.** Executive power is vested in the King, who acts through a cabinet or council of state, and legislative power in the Parliament or Storting of 150 members, elected for three years by universal suffrage without distinction as to sex. When assembled, the Storting divides itself into the Lagting and Odelsting, comprising one-fourth and three-fourths of the membership of the Storting, respectively. The two sections function much as the upper and lower houses of bicameral Parliaments. As a result of the elections held Oct. 20, 1930, the composition of the Storting was as follows: Labor, 47; Conservative, 41; Radical, 33; Agrarian, 25; Independent Liberal, 3; Radical People's party, 1. The Cabinet of Premier J. L. Mowinckel (Radical) represented a coalition of the bourgeois parties.

**HISTORY.** The significant developments in Norway during 1931 included the overthrow of the Mowinckel Cabinet on May 7, an industrial conflict which paralyzed most of the important branches of Norwegian industry for six months, and the dispute with Denmark over possession of the northeastern coast of Greenland. For details of the Greenland controversy, see *GREENLAND* under *History*.

The Mowinckel Ministry, after three years in office, was defeated, 57 to 55, in the Storting May 7 on a motion of censure. The issue involved was the Government's acquiescence in the entry of British capital into the Norwegian margarine and soap industry. Opposed on this issue by the Board of Trust Control, the Government introduced legislation to curtail the Board's powers. The Parliamentary committee appointed to consider the problem, upheld the Board's contention that the entry of foreign capital would jeopardize national interests and the vote of censure followed. The new Cabinet, which took office May 12, was headed by P. Kolstad (Agrarian). The other members were: Foreign Affairs, Birger Braadland; Social Affairs, M. Vik; Public Works, R. Langeland; Justice, M. Lindboe; Ecclesiastical Affairs, M. Traedal; Commerce, M. Larssen; Agriculture, M. Sundby; Defense, M. Quisling.

The Kolstad Government found itself confronted with a severe industrial struggle, which began on April 8 when employers locked out 40,000 workers, who had refused to accept drastic wage reductions. In March 12,500 laborers had been locked out in the paper industry. The struggle between capital and labor spread to almost every important industry, until nearly 80,000 workers were affected. In June, clashes between strikers and the police at Porsgrund reached serious proportions. Troops were sent to the district and conscripts in the Porsgrund area were called to the colors, while sympathy strikes were called in Oslo, Menstad, and other places. The strike was finally settled September 11 by Government mediation and the acceptance by the strikers of wage cuts averaging 6 to 7 per cent. The cost of the lockout was estimated at about \$120,000,000.

The swing to the Right evidenced in the na-

tional elections of 1930 continued in local elections held throughout the country on Oct. 20, 1931. Socialists and Communists lost heavily, the bourgeois parties electing about 2800 officials out of a total of 4200.

On September 27, Norway followed Great Britain's example and suspended the gold standard. A system of voluntary rationing of foreign exchange was placed in effect. The strong financial position of the Government and of industry in general enabled the country to ward off the worst effects of the financial crisis in Germany, Great Britain, and Central Europe. Methods of effective coöperation between the Scandinavian nations in matters of bankruptcy and other legislation were discussed at a meeting of representatives of Norway, Sweden, Denmark, Finland, and Iceland at Oslo on January 26. See *SVALBARD*.

**NORWEGIAN LITERATURE.** See *SCANDINAVIAN LITERATURE*.

**NOTRE DAME, UNIVERSITY OF.** A Roman Catholic institution at Notre Dame, Ind., founded in 1842 for the higher education of men. The university consists of the colleges of arts and letters, science, engineering, law, and commerce. The enrollment in the summer session of 1931 was 937, of which number 622 were religious, sisters of religious communities also being permitted to attend the summer session. The enrollment for the first semester of 1931-32 was 3172. The faculty numbered 210. The endowment amounted to \$1,000,000, while the income for 1930-31, including student fees and departmental income, was \$1,404,427. The construction of a new college of engineering, a new college of commerce, two large residence halls, and a power house was completed in the fall of 1931. The library contained 150,000 volumes. President, the Rev. Charles L. O'Donnell, C.S.C., Ph.D.

**NOVA SCOTIA**, nŏ'və skŏ'shə. The easternmost of the Maritime Provinces of Canada, Area, 21,428 square miles; population at the census of 1931, 512,846, compared with 523,837 in 1921. Halifax, the capital, had 58,939 inhabitants at the 1931 census (58,372 in 1921). Other leading cities are Sydney, with 22,319 residents in 1931 (22,545 in 1921) and Glace Bay, with 20,704 (17,007). In 1929, living births totaled 10,672; deaths, 6657; marriages, 3510. The Province has four universities, with 1923 students in 1928-29; pupils in elementary public schools in 1929 numbered 113,309.

Agriculture is the chief occupation, with fruit raising as the most profitable branch. The apple crop of 1930 was estimated at about 2,000,000 barrels. The area sown to the chief crops in the spring of 1931 was 505,078 acres, according to the 1931 census, as compared with 635,768 acres in 1921. Field crops harvested from 735,900 acres in 1930 were valued at \$16,646,500, compared with \$20,945,000 from 731,354 acres in 1929. The total value of agricultural production (1929) was \$43,412,000, with dairy products, valued at \$11,464,000, following field crops in importance. The 1930 wool clip was 1,638,000 lbs. Mineral production in 1930, including the small production from Prince Edward Island, was provisionally valued at \$26,771,300, compared with \$30,904,453 in the previous year. Coal production in 1930 totaled 6,252,552 short tons (7,056,133 in 1929); gold, gypsum, and salt are other products. The value of lumber and other sawmill products in 1929 was \$3,205,217. In the same year, there were 1195 manufacturing establish-

ments, with an invested capital of \$135,662,325, a total of 20,966 employees, and an output valued at \$94,292,816, of which \$42,786,293 represented the value added in process of production. The fish catch in 1930 declined in value to \$10,411,200 from \$11,427,491 in the previous year. About 16,000 men were engaged in the industry. There are approximately 1451 miles of railway and 18,000 miles of highway.

Executive power is vested in a lieutenant-governor appointed by the Dominion Government and a legislative assembly of 38 members elected for five years by popular vote. For the fiscal year ended Sept. 30, 1930, the ordinary provincial revenues were \$7,682,066 (\$7,390,410 in 1928-29) and ordinary expenditures \$7,900,987 (\$7,288,486). The bonded indebtedness in 1929 was \$50,072,847. Lieutenant-Governor in 1931, Frank Stanfield; Premier and Minister of Public Works, Col. G. S. Harrington (Conservative). Lieutenant-Governor Stanfield died on Sept. 24, 1931, and was succeeded by William H. Covert. See CANADA.

**NYASALAND**, nyá' sá-lánd', **PROTECTORATE.** A British protectorate in south central Africa, occupying the southern and western shores of Lake Nyasa. Land area, 37,596 square miles; population on Jan. 1, 1930, 1,356,945 natives, 1936 Europeans, and 1117 Asiatics. Zomba is the seat of government and Blantyre and Limbe in the Shire Highlands are the chief white settlements. In 1929, native schools numbered 2588, with an average attendance of 91,396. Coffee, tobacco, cotton, and tea are the chief crops. In 1929, imports and exports, excluding specie and goods in transit, were valued at £770,855 and £625,480, respectively. In the same year, Government revenue totaled £372,508 and expenditures £410,688. The public debt on Jan. 1, 1930, stood at £822,070. Governor and Commander-in-Chief in 1931, Sir T. S. W. Thomas.

**NYROP**, nyröp, KRISTOFFER. A Danish philologist, died Apr. 13, 1931, in Copenhagen where he was born Jan. 11, 1858. He was educated at the university of his native city, where he obtained the doctorate (1886) and where he became docent (1888). In 1894 he was appointed professor of Romance languages and literatures at the University of Copenhagen, which chair he held until 1928. His main work is *Grammaire historique de la langue française* (5 vols., 1899-1925), which brought him a reputation even in France, and in 1910 he lectured on this subject at the Collège de France.

**OAKES**, GEORGE WASHINGTON OCHS. An American journalist, died in New York City, Oct. 26, 1931. He was born in Cincinnati, Ohio, Oct. 27, 1861, and was graduated from the University of Tennessee in 1880. During the period 1880 to 1900 he was successively reporter, city editor, night editor, managing editor, and publisher of the *Chattanooga Times*, owned by his brother, Adolph S. Ochs. During this period he was also twice mayor of Chattanooga (1894-97). In 1901 he became manager of the *Philadelphia Times*, which had been purchased by his brother, and on the consolidation of this paper and the *Philadelphia Public Ledger* the following year

he was made editor-in-chief, serving in this capacity until the sale of the *Ledger* to Cyrus H. K. Curtis in 1913. After 1915 he was editor of *Current History Magazine* and an officer of the New York Times Company.

**OATS.** As reported by the International Institute of Agriculture the production of 30 countries exclusive of the Soviet Republics but including the 1931-32 crop of Argentina was estimated at 3,151,131,000 bushels, or 6.8 per cent below the yield in 1930 and 10.6 per cent below the annual average of the five years 1925-29. The total area in oats, 97,867,000 acres, was 1.9 per cent below the average of the year before and 2 per cent below the annual average of the five-year period. The production in 1931 of the leading countries reporting, not including the United States, was as follows: Germany 427,482,000 bushels, Canada 351,946,000 bushels, France 344,222,000 bushels, Poland 164,657,000 bushels, England and Wales 86,800,000 bushels and Czechoslovakia 82,893,000 bushels. For the Soviet Republics an average annual yield of 1,020,185,000 bushels for the five years 1925-29 was recorded. Argentina for the crop year 1931-32 reported an estimate of 65,449,000 bushels as compared with a yield of 49,604,000 bushels for crop year 1930-31, and an average annual yield of 66,493,000 bushels for the five-year period. The Canadian crop of 1931 was 21.7 per cent below that of 1930 and 15.5 per cent below the annual average yield of the five years 1925-29 while the acreage was only 3.3 per cent below that of the preceding year and about equal to the average of the five years.

For the United States the Department of Agriculture reported a considerable increase in plantings throughout the Southern States, where a shortage of feed had resulted from the severe drought of 1930, and a small increase in some of the North Central States. Drought caused a large acreage to be abandoned from North Dakota and South Dakota westward to the Pacific resulting in a marked reduction of the acreage harvested for grain in that region where at least a million acres sown for grain production were cut for hay. Estimates published by the Department of Agriculture placed the total yield of the country at 1,112,142,000 bushels as against 1,277,764,000 bushels in 1930. The area in oats in 1931, 39,722,000 acres, was about the same as of the preceding year. The average yield per acre, 28 bushels was the lowest recorded since 1921. The average farm price on Dec. 1, 1931 was only 23.1 cents per bushel making the total value of the crop \$256,483,000, the lowest since 1900. Studies by the Department of Agriculture indicated that the cost of producing a bushel of oats varied from 50 cents to 54 cents during the six years 1925-30.

Production of oats was reported by all the States, the leading ones and their yields being as follows: Iowa 186,106,000 bushels, Illinois 142,188,000 bushels, Minnesota 123,525,000 bushels, Wisconsin 68,852,000 bushels, Ohio 62,138,000 bushels, and Indiana 61,339,000 bushels.

The exports of oats and oat products of the United States for the fiscal year ended June 30, 1931, amounted to 907,000 bushels of grain, as compared with 4,035,000 bushels the year before, and 39,886,000 pounds of oatmeal of which 16,523,000 pounds was shipped in bulk and 23,363,000 pounds in packages, either cases or cartons. The exports of oatmeal also showed a marked reduction from the quantity sent abroad

the preceding fiscal year. The imports for the year amounted to 638,000 bushels of grain.

**OBERLAENDER TRUST.** See **UNIVERSITIES AND COLLEGES.**

**OBERLIN COLLEGE.** A nonsectarian institution for the higher education of men and women in Oberlin, Ohio, founded in 1833. The registration for the first semester of 1931-32 was 1626, while that for the summer session of 1931 was 164. The faculty had 197 members. The productive funds of the institution as of Aug. 31, 1931, amounted to \$18,179,915, and the income for the year was \$1,657,429. During 1930-31 the theological quadrangle, containing recitation rooms and office quarters as well as dormitory accommodations for the graduate school of theology, was erected at a total cost of \$600,000; the formal dedication of these buildings occurred Oct. 12, 1931. The library contained 332,866 bound and 209,675 unbound volumes. President, Ernest Hatch Wilkins, Ph.D., Litt.D., LL.D.

**OCEANIA, o'she-an'ia, FRENCH ESTABLISHMENTS IN.** A French colonial possession consisting of groups of small islands scattered throughout a wide area of the eastern Pacific. The total area of the Establishments is estimated at 1520 square miles: population in 1929, 35,782, of whom 29,600 were natives. The principal island is Tahiti, which contains the chief town, Papeete, with a population of 5569, of whom 2126 were French. Tahiti forms a part of the Society Islands. The other groups are the Marquesas Islands, Tuamotu Islands, Leeward Islands, the Gambier, Tubuai, and Rapa groups, and a number of outlying islands. Governor in 1931, Léonce Jorc.

**OHIO. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 6,646,697; in 1920 it was 5,759,394. The native whites numbered 5,886,985 (1930), 4,893,196 (1920). Foreign-born whites, 644,161 (1930), 678,697 (1920). Negroes, 309,304 (1930), 186,187 (1920). Among other groups separately listed in 1930 were 4037 Mexicans, 1425 Chinese, and 435 Indians. The urban population, living in communities of at least 2500, numbered 4,507,371 (1930), 3,877,136 (1920). It advanced greatly over the rural, which was 2,139,326 (1930), 2,082,258 (1920). Of 2,615,938 persons reported as in gainful occupation, 312,218 were engaged in agriculture (200,775 being farmers); in manufacturing and mechanical industries, were 1,048,169 (of whom 154,883 in the building industry and 321,923 in iron and steel industries); in trade, 419,575; in transportation, 259,780; in professional service, 182,907; in domestic and personal service, 232,605.

Cleveland, the most populous city, had 900,429 inhabitants (1930), 796,841 (1920); Cincinnati, 451,160 (1930), 401,247 (1920); Dayton, 200,982 (1930), 152,559 (1920); Toledo, 290,718 (1930), 243,164 (1920); Columbus, the capital, 290,564 (1930), 237,031 (1920); Akron, 255,040 (1930), 208,435 (1920); Youngstown, 170,002 (1930), 132,358 (1920); Canton, 104,906 (1930), 87,091 (1920); Lakewood 70,509 (1930), 41,732 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn ....	1931	3,576,000	160,920,000	\$54,718,000
	1930	3,438,000	87,669,000	58,738,000
Hay, tame .	1931	2,519,000	3,196,000*	21,094,000
	1930	2,455,000	1,839,000*	31,999,000
Wheat ...	1931	1,723,000	50,744,000	25,866,000
	1930	1,612,000	28,712,000	21,806,000
Oats ....	1931	1,657,000	62,138,000	14,292,000
	1930	1,726,000	62,136,000	21,748,000
Potatoes ..	1931	110,000	11,220,000	6,171,000
	1930	105,000	9,240,000	10,164,000
Tobacco ..	1931	54,000	53,622,000*	4,665,000
	1930	48,100	45,695,000*	5,072,000
Barley ...	1931	96,000	2,736,000	876,000
	1930	109,000	2,943,000	1,472,000

\* Tons. \* Pounds.

**MINERAL PRODUCTION.** A great part of the mineral industry of the State consisted of the treatment of materials obtained from outside its bounds. In particular, there were produced, from non-native ores, 6,541,212 long tons of pig iron (1930), and 9,446,984 tons (1929); in value, \$111,629,209 for 1930 and \$163,480,003 for 1929. Ferro-alloys were produced to the quantity of 85,237 long tons and the value of \$3,000,184 (1929). In the native mineral industry clay products held first place. Their value for 1929 attained \$81,797,405; for 1928, \$81,848,422. Brick and tile furnished over 60 per cent of the total in each year; pottery the rest. The production of coal in 1930, 23,551,978 short tons, nearly equaled that of 1929, 23,689,477 tons. By value it declined to \$31,643,000 (1930), from \$35,733,000 (1929). The yield of natural gas rose slightly to 57,936,000 M cubic feet for 1929, from 56,341,000 M for 1928; in value, to \$32,890,000 (1929), from \$32,090,000 (1928). Petroleum production, 6,519,000 barrels for 1930, was little changed as to quantity from the total of 6,743,000 barrels for 1929; as to value it fell to \$12,400,000 for 1930 (estimated), from \$15,770,000 for 1929. There was a heavy yield of stone, to the quantity of 14,771,030 short tons for 1930, averaging a little over \$1 a ton, and having a total value of \$14,957,234. Shipments of cement mills fell to 8,185,077 barrels for 1930, from 9,144,085 for 1929; by value, to \$11,956,038 (1930), from \$13,427,778 (1929). The State's lime production, the greatest in the Union, was 742,000 short tons for 1930 and 902,415 for 1929; by value, \$5,614,000 (1930) and \$7,935,656 (1929). There were produced 374,008 short tons of gypsum, in value \$3,301,440 (1929), and 1,311,440 short tons of salt (1930), in value \$3,015,206. The total value of the State's native mineral products was \$220,061,343 for 1929; for 1928, \$211,041,279.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 11,815 (8 per cent higher than the number for 1927). These establishments employed 737,469 wage earners (10.2 per cent more than the number employed in 1927). The manufacturing wages paid amounted to \$1,103,938,912. The cost of materials for manufacture and of fuel and purchased electricity was \$3,127,167,725 (more than 8 per cent of the corresponding cost of 1927). The manufactured product was valued at \$5,999,123,993 (exceeding that of 1927 by 14.7 per cent). Value added by manufacture was reckoned as \$2,871,966,268. In 1929 Cleve-

land, the chief manufacturing centre, had 2557 establishments, 140,679 wage earners there employed, \$230,074,181 of wage payments, and \$1,242,083,844 of products; Cincinnati had 1779 establishments, 63,904 wage earners, a wage total of \$92,429,918, and a product of \$522,096,853; Akron, 275 establishments, 59,977 wage earners, wage payments of \$96,619,360, and a product of \$544,581,694; Toledo, 586 establishments, 48,778 wage earners, \$72,174,242 of wage payments, and \$420,824,352 of product; Dayton, 475 establishments, 40,584 wage earners, \$61,976,432 of wages paid, and \$316,525,931 of product.

**FINANCE.** State expenditures in the year ended Dec. 31, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$55,826,089 (of which \$5,507,883 was for local education); for conducting public-service enterprises, \$94,930; for interest on debt, \$700,284; for permanent improvements, \$31,423,133; total, \$88,045,042 (of which \$43,503,008 was for highways, \$17,258,344 being for maintenance and \$26,244,664 for construction). Revenues were \$83,151,071. Of these, property and special taxes formed 19 per cent; departmental earnings and remuneration to the State for officers' services, 8.9; sale of licenses, 55.1 (including gasoline sale taxes amounting to \$23,064,393). The State's funded debt outstanding on Dec. 31, 1930, was \$10,539,495. Net of sinking-fund assets, debt was \$9,532,510. On a property valuation of \$13,453,208,156 were levied in the year taxes of \$5,381,282.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 8804.5. Additional line put under operation during the year preceding had totaled 3.14 miles, while line abandoned had totaled 8.78 miles. In 1931 were built 6 miles of new first track.

**EDUCATION.** For the academic year ending in 1930, the number of persons of school age in the State was reported as 1,552,573. There were enrolled, in 1931, 1,293,110 public school pupils. Of these, 845,107 were in common schools or elementary grades, and 283,109 were in high school grades. There were also 97,578 junior high school and 3062 miscellaneous high school pupils. For the year ending in 1930, the current expenditures for public-school education totaled \$112,075,860; and the salaries of teachers averaged \$1550 a year. According to a report in the *Journal of the National Education Association*, there was much retrenchment in school expenditures in the State in 1931. Teachers' salaries were reduced in a few localities. More commonly terms were shortened. In others, the pay of teachers was not met and could not be met until 1932. The trouble was ascribed largely to changes made in the law as to school taxation by the legislative session of 1931. It was charged that the changes had produced much uncertainty as to the proceeds that would be forthcoming.

**CHARITIES AND CORRECTIONS.** The Department of Welfare, under the system in operation in 1931, continued to exercise the strongly centralized direction of activities affecting the care and custody of persons. It had as its head a director (John McSweeney). Its functions included the administration of 22 State institutions with an aggregate population, on Dec. 1, 1931, of 34,839; administration of a pay-patient law; through its division of charities, extensive duties relating to the safeguarding of unpro-

tested children, the inspection of county jails, homes, and reformatories, and the hospitalization of crippled children; through a board of parole and a division of probation and parole, the handling of State pardons and paroles, and supervision of adult probation in counties and of paroled men released from State custody; examination and classification of prisoners and work of criminal identification and investigation; the conduct of prison industries supplying public departments and institutions; and duties in the prevention and care of blindness.

**LEGISLATION.** The regular biennial session of the State Legislature met in January and continued, save for a recess of two weeks in April, until July 1. It made important alterations in the tax law. By one of these, intangible personal property was specially classified for taxation in accordance with an amendment of 1929 to the State constitution. The license fees for motor vehicles were heavily increased, but at the same time such vehicles were removed from the general property tax. A tax on cigarettes at the rate of one cent for every ten was imposed; per contra, the license fees for wholesalers and retailers of tobacco were reduced by one-half. The State tax on the intra-state gross earnings of railroads was reduced to 3 per cent, from 4, the reduction to take effect in 1933. Methods for the collection of delinquent taxes and for the forfeiture of delinquent property were amended. A fourth member was added to the State Tax Commission, to provide a head for the administration of the new tax on intangibles. Tax levies made in November of each year were made presentable for collection in the succeeding June, instead of December.

There was submitted to popular vote, by the Legislature, a constitutional amendment to authorize the issuance of \$7,500,000 in State bonds for the purpose of institutional construction. Political subdivisions of the State were allowed by statute to issue bonds up to specified amounts for the purpose of making good any deficits occasioned by delinquencies in tax payments. Municipalities were empowered to issue short term bonds in amount not above 1-20 of 1 per cent of tax duplicate, for the purpose of poor relief, during the current year only.

The session's general appropriation bill carried about \$160,000,000 for the needs of the State's activities during the ensuing two years. Inspired partly by the situation of the dissenting stockholders of the Youngstown Sheet and Tube Company, as affected by merger with the Bethlehem Steel Company, a law was enacted to assure dissenting stockholders in similar cases payments equivalent to dividends that they would have received if not dissenting. The law as to the aged poor was amended to terminate the separation of aged husbands and wives entering county homes. In the Workmen's Compensation Act, certain allowances were increased and the list of occupational diseases was augmented. A State Park Board was created, to consist chiefly of ex-officio members. Measures were taken for the legal abandonment of the disused Miami and Erie Canal between Middleton and Cincinnati and the conversion of its bed into a highway.

The law on the observance of Sunday was modified by an act leaving the permission of Sunday motion picture exhibitions to local option. A five-day interim between the application and the issuance of a marriage license was re-

quired. An effort to repeal the much controverted Criminal Syndicalism law of the State was defeated.

**POLITICAL AND OTHER EVENTS.** The U. S. Supreme Court held in a decision rendered on May 18 that the excise taxes on public utilities, as levied on the East Ohio Gas Company, a native corporation purveying natural gas chiefly from outside the State, was valid with regard to the Constitutional provisions for the protection of interstate commerce. In the Court of Common Pleas at Akron the State's law against "criminal syndicalism" was held unconstitutional on April 28. Disappointment with the course of the legislation on Prohibition led to the formation of a State association for the circulation of petitions to gain the 290,000 signatures required for a special election to repeal the State prohibition laws. Mal S. Daugherty, brother of former U. S. Attorney General Harry M. Daugherty, was convicted on March 4 of having defrauded the Ohio State Bank, which had suspended in May, 1930, and received a term of 10 years of prison. He appealed and obtained a new trial on the ground of evidence against him admitted in error.

As in adjoining States, there occurred labor troubles in the coal mines. After weeks of intermittent disorder and of eviction of striking miners from company dwellings, Governor White undertook mediation, late in July. At Columbus, the cornerstone of a new State office building was laid on May 16. The work on a new union passenger station west of Lincoln Park in Cincinnati was started early in the year. Most of the public employees of Cincinnati were put on a city pension system becoming effective August 1.

At Toledo, on August 17, occurred four bank suspensions involving among them resources of \$136,000,000. All four institutions were of the combined savings-bank and trust-company type permitted under Ohio charter. The Security-Home Trust Company, the first to get into trouble, took advantage of the 60-day clause of the State's banking law on June 17 and closed temporarily, with some \$36,000,000 of resources. It could not reopen at the end of the period and the pressure of withdrawals by depositors caused the closing of the Ohio Savings Bank and Trust Company, with resources of some \$58,000,000, the Commerce-Guardian Trust and Savings Bank (resources about \$27,000,000) and the Commercial Savings Bank and Trust Company (resources about \$15,000,000). The circumstances of thousands of depositors were violently affected and trade and credit throughout the northwestern part of the State were much depressed. The building and loan associations of Toledo, Akron and some other localities were generally obliged to invoke the 60-day suspension. Financial security in Akron was increased in October by a merger of three chief banks with \$75,000,000 of resources and the creation of a \$15,000,000 credit pool by the city's rubber interests.

**ELECTIONS.** The vacant seat of Nicholas Longworth (q.v.) in the House of Representatives was won, on November 3, by a Republican, John B. Hollister, in spite of expectations that David Lorbach, Democratic candidate, would carry this 1st or Cincinnati District. Martin L. Sweeney, Democrat, was elected Representative to fill the vacancy in the 20th (Cleveland) District, defeating Hayden Parry, Republican. Cleveland voted by a majority of about 10,000 to give up the city-manager plan of government. A proposal for

a \$7,500,000 State Welfare bond issue to promote public building was defeated.

**OFFICERS.** Governor, George White; Lieutenant-Governor, William G. Pickeral; Secretary of State, Clarence J. Brown; Treasurer, Harry S. Day; Auditor, Joseph T. Tracy; Attorney-General, Gilbert Bettman; Director of Education, J. L. Clifton.

**JUDICIARY.** Supreme Court: Chief Justice, Carrington, T. Marshall; Associate Justices, Thomas A. Jones, Edward S. Matthias, Robert H. Day, Florence E. Allen, Reynolds R. Kinkade, James E. Robinson.

**OHIO NORTHERN UNIVERSITY.** An institution for the higher education of men and women in Ada, Ohio, founded in 1871, and under the direction of the Methodist Episcopal Church. There were 856 students in 1930-31, and in the summer quarter 417 students. The faculty consisted of 49 members. The productive endowment of the institution amounted to \$506,105, and the income for the year to \$260,629. The library consisted of 169,000 volumes. President, Robert Williams, A.M., D.D., LL.D.

**OHIO STATE UNIVERSITY.** A State institution for the higher education of men and women in Columbus, Ohio, founded in 1870. The enrollment for the autumn term of 1931 totaled 10,798, distributed as follows: Graduate school, 1277; agriculture, 886; applied optics, 62; arts and sciences, 2088; arts-education, 51; commerce and administration, 1893; dentistry, 201; education, 1765; engineering, 1606; law, 277; medicine, 356; nursing, 106; pharmacy, 143; veterinary medicine, 172. There were in addition 4845 students registered in the summer quarter of 1931. The faculty numbered 1000, an increase of 10 over 1930. The endowment amounted to \$1,153,656. The total income for the year was \$8,958,932, while the total expenditures were \$9,177,850. The buildings and equipment were valued at \$21,300,000. The library contained 380,000 volumes. President, George W. Rightmire, LL.D.

**OHIO UNIVERSITY.** A State university for the higher education of men and women, founded in Athens, Ohio, in 1804. The student enrollment for the first semester of 1931 was 2563, of whom 1322 were in the college of liberal arts, and 1236 were in the college of education. The enrollment for the 1931 summer session was 1344, of whom 278 were in the college of liberal arts, and 1066 were in the college of education. The income for 1930 was \$1,570,085. The faculty numbered 227. The library contained more than 75,000 bound volumes. President, Elmer Burritt Bryan, L.H.D., LL.D.

**OHIO WESLEYAN UNIVERSITY.** An institution for the higher education of men and women in Delaware, Ohio, under the control of the Methodist Episcopal Church, founded in 1844. For the autumn semester of 1931 the total enrollment was 1644. The faculty numbered 175. The productive endowment of the university amounted to \$3,300,000 and the income for the year 1930-31 for educational enterprises was \$619,003 and for auxiliary enterprises \$301,094. The library contained 131,843 volumes. President, Edmund D. Soper, D.D., LL.D.

**OIL.** See PETROLEUM.

**OIL ENGINE.** See INTERNAL COMBUSTION ENGINES.

**OKLAHOMA. POPULATION.** According to the Fifteenth Census the population of the State

on Apr. 1, 1930, was 2,396,040; in 1920 it was 2,028,283. Native whites numbered 2,096,671 (1930), 1,781,226 (1920). Foreign-born whites, 26,753 (1930), 39,968 (1920). Negroes, 172,188 (1930), 149,408 (1920). Indians, 92,725 (1930). Mexicans, 7354 (1930). The urban dwellers, those in communities of at least 2500, increased rapidly, to 821,681 (1930), from 539,480 (1920); but they were still outnumbered almost two to one by the rural population, which was 1,574,359 (1930), as against 1,488,803 (1920).

Of 828,029 persons reported as in gainful occupations in 1930, 306,140 were in agriculture (whereof 199,486 were farmers); 115,735 were in trade; 111,953, in manufacturing and mechanical industries, including building (32,377); 62,212 in transportation; 55,800 in professional service; 60,210 in mineral extraction, of whom the oil and gas wells occupied 49,113. Oklahoma City, the capital and most populous city, had 185,389 inhabitants (1930), 91,295 (1920); Tulsa, 141,258 (1930), 72,075 (1920); Muskogee, 32,026 (1930), 30,277 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton .....	1931	3,818,000	1,220,000*	.....
	1930	3,997,000	854,000*	.....
Corn .....	1931	3,321,000	51,808,000	15,542,000
	1930	3,193,000	35,762,000	23,245,000
Wheat ...	1931	4,407,000	74,919,000	28,469,000
	1930	3,935,000	37,382,000	22,055,000
Hay, tame ..	1931	445,000	568,000*	3,806,000
	1930	399,000	490,000*	5,096,000
Grain sorghum	1931	1,443,000	12,987,000	3,896,000
	1930	1,335,000	8,678,000	5,207,000
Oats .....	1931	1,516,000	43,206,000	8,209,000
	1930	1,053,000	25,798,000	9,803,000
Potatoes ....	1931	45,000	3,240,000	1,944,000
	1930	38,000	3,496,000	3,846,000
Sweet potatoes ..	1931	19,000	1,330,000	931,000
	1930	17,000	1,190,000	1,190,000

\* Bales.    ♢ Tons.

**MINERAL PRODUCTION.** The production of petroleum, though much reduced in 1930, remained in excess of the quantity regarded as desirable by many students of the industry. There were produced in 1930, 215,227,000 barrels of petroleum, as against 255,004,000 in 1929; by value \$277,000,000 (estimated, 1930), \$364,650,000 (1929). The production of natural gas rose to 357,893,000 M cubic feet for 1929, from 320,861,000 M for 1928; by value, to \$53,528,000 (1929), from \$47,476,000 (1928). In addition, there was recovered a great quantity of natural-gas gasoline—676,030,000 gallons in 1929 and, in 1930, 578,600,000 gallons; in value \$42,766,000 for 1929 and \$28,810,000 for 1930. The remainder of the State's mineral total was made up largely of its zinc production, 136,153 short tons for 1930 and 192,042 for 1929; by value, \$13,070,688 (1930), \$25,349,544 (1929). Production of lead was 23,052 short tons for 1930, and 46,513 for 1929; by value, \$2,305,200 (1930), \$5,860,638 (1929). Coal production, though restricted by the competing abundance of other mineral fuels, is normally substantial. It declined, however, to 2,546,000 short tons for 1930, from 3,774,080 for 1929, for which year the quantity had a value of \$11,481,000. The total value of the State's mineral production was \$516,685,232 for 1929; for 1928, \$486,634,347.

**MANUFACTURES.** Federal Census data gathered

in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 1651 (more than 20 per cent above the number for 1927). The wage earners employed numbered 31,279 (exceeding the total for 1927 by 12 per cent). Wages paid by manufacturing establishments amounted to \$40,721,920 (somewhat more than 14 per cent above the wage total of 1927). Materials used in manufacture, plus fuel and purchased electricity, cost \$306,990,041 (some 14 per cent more than the corresponding 1927 cost). The manufactured product was valued at \$452,161,249 (an excess of 21.6 per cent over the value of the 1927 product). The value added by manufacture was estimated at \$145,171,208. Oklahoma City, the leading manufacturing community, had 243 establishments, employing 5530 wage earners, who received wages of \$7,645,056, and its product was \$81,002,795.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$22,873,275 (of which \$3,556,799 was for local education); for interest on debt, \$202,616; for permanent improvements, \$18,908,613; total, \$41,984,504 (of which \$17,551,115 was for highways, \$1,632,764 being for maintenance and \$15,918,441 for construction). Revenues were \$39,434,850. Funded debt outstanding on June 30, 1930, totaled \$2,049,500. Net of sinking-fund assets, it was \$1,934,550. On an assessed valuation of \$1,829,674,641 the State levied in the year ad-valorem taxes of \$6,403,861.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 6678.15. There had been added 23.94 miles of line in the year preceding, but 27.46 miles of line had been abandoned. In 1931 were built 52.47 miles of new first track.

**EDUCATION.** Legislative provision was made, according to State Superintendent Vaughan, in the *Journal* of the National Education Association, for \$750,000 to supplement the equalization fund for the public schools; in order to relieve the population from what had been regarded as excessively heavy ad-valorem taxation, it was provided that one-half of the revenue from the State's income tax should be allotted to support of schools.

**CHARITIES AND CORRECTIONS.** A limited degree of central authority over State activities for the care and custody of persons was vested, under the system in force in 1931, in the Department of Charities and Corrections, which had as its head a Commissioner (Mabel Bassett).

**LEGISLATION.** The Legislative session of 1931 failed to carry out an extensive and idealistic programme offered to it by Governor Murray. It passed an act providing for a net-income tax on both corporations and individuals. The rate of this tax ran from 2 per cent on personal incomes within \$10,000 a year, up to 5 per cent on incomes of over \$100,000. An exemption of \$750 a year was allowed for each dependent on the person paying the tax. The first levy was to be made in 1932, on incomes of 1931. The gasoline tax was raised to five cents a gallon, from four cents.

A radical measure against propagation by criminals was taken in the enactment of a law providing for the sexual sterilization, by surgery, of any person in the State penitentiary, reform-

atory or other State institution, who had been convicted of a third criminal offense. As it appeared that many royalty owners escaped payment of the State's gross production tax on petroleum and gasoline, thus causing the State an estimated loss of \$500,000 a year in potential revenue, the obligation to pay this tax was transferred by law to the pipe-line companies, who were to charge payments to persons from whom they purchased.

**POLITICAL AND OTHER EVENTS.** Governor W. H. ("Alfalfa Bill") Murray, inaugurated January 12, played an active and striking part in the State's affairs. In issuing paroles to convicts he required them, in frequent instances, to leave the State. He inaugurated the practice of giving some of the appointments on the Governor's staff to women. With the aid of a State-wide relief association his administration made headway against destitution prevalent in some of the coal and petroleum areas.

The Governor had failed to obtain from the Legislature favorable consideration for some of his most cherished plans; among these a higher income tax on corporations and on large incomes, an escheat measure to forfeit certain corporations' lands to the State, a free distribution of school text books by the State, and a budget system requiring a budget officer and forbidding the Legislature to increase budget appropriations by less than three-fourths of each house. He therefore brought about a popular referendum, by initiative, on all these proposals. It was held December 18 and all were defeated by a vote about in the proportion of 3 to 2.

Governor Murray called a detachment of the National Guard into service in July in an effort to compel the opening of a free bridge that had been built over the Red River by Oklahoma and Texas jointly. A near-by toll bridge between Denison, Texas, and Durant, Oklahoma, failing to obtain from the State of Texas an agreed compensation for the loss of its business through the opening of the free bridge, had sued out a Federal injunction to prevent the opening of the Texas end of the latter. When Murray sought to compel it to open by the use of troops, Texas rangers were posted at the Texas end, which was thus blocked. Murray then retaliated by blocking the Oklahoma end of the old toll bridge. The trouble was finally settled by making arrangements for the payment of the sum due the toll bridge owners from Texas.

Later in July Governor Murray resorted to the use of the National Guard for a more serious purpose. On July 28 he served notice on producers in the petroleum fields of the State that unless the price of petroleum were immediately raised to one dollar a barrel he would summarily shut down operations in these fields. The product had been selling at something like half the price that he set, in consequence of a glut in production. His terms therefore could not be met, but many of the producers favored a shutdown as the alternative to unprofitable operations. The Governor ordered the shutdown on August 1, and called out troops to enforce it. He thus inaugurated the summary way of dealing with overproduction later adopted by Governor Sterling of Texas.

At Ardmore, on June 9, two deputy sheriffs, in seeking to arrest a party of young Mexicans traveling by automobile, shot and killed two of the party; one of those killed was Emilio Cortes

Rubio, a nephew of the President of Mexico. The occurrence led to diplomatic action on the part of Mexico. The men responsible for the killing were tried in Oklahoma and were acquitted, apparently on the theory that they had fired under the impression that the young Mexicans were resisting arrest. See MEXICO under *History*.

**OFFICERS.** Governor, William H. Murray; Lieutenant-Governor, Robert Burns; Secretary of State, R. A. Sneed; State Auditor, Frank C. Carter; Attorney-General, J. Berry King; State Treasurer, Ray O. Weems; Superintendent of Public Instruction, John Vaughan; State Examiner and Inspector, John Rogers.

**JUDICIARY.** Supreme Court: Chief Justice, E. F. Lester; Associate Justices, J. Howard Langley, James B. Cullison, Charles Swindall, Robert A. Hefner, Edwin R. McNeill, Thomas G. Andrews, J. W. Clark, Fletcher Riley.

**OKLAHOMA, UNIVERSITY OF.** A State institution for the higher education of men and women in Norman, Okla., founded in 1890. The enrollment for the autumn of 1931 totaled 5173. For the summer session of 1931, 2388 students were registered. There were 301 faculty members. The productive funds of the university amounted to \$3,200,000, and the income for 1931-32 was \$1,527,641. The library contained 132,000 volumes. President, William Bennett Bizzell, Ph.D., LL.D.

**OLD AGE PENSIONS.** The American Association for Old Age Security, whose president was Bishop Francis J. McConnell and whose executive secretary was Abraham Epstein, whose intelligent work in the cause of the enactment of old age security laws had been an important factor in the achievement of this desirable form of social insurance in the United States, was able to report that the year 1931 saw great advances in the enactment of old age security legislation. Its investigations indicated that in 38 legislatures meeting during the year, 100 bills were presented and that measures were passed by both houses of legislatures in 6 States and were enacted into laws in 5 States. Thus, the total of States possessing old age security laws was 17, covering fully 42,000,000 persons in the American population.

Bills establishing old age pension systems were passed by the legislatures of Delaware, Idaho, Indiana, West Virginia, New Jersey, and New Hampshire. The Governor of Indiana was the only State executive who failed to sign such a law. In addition, the State of Colorado changed its optional law of 1927 to a mandatory law and reduced the pensionable age from 70 to 65. The Wyoming law, too, was converted from an optional to a mandatory statute. The Pennsylvania legislature adopted a constitutional amendment to make possible the payment of pensions by the State and the counties. Maryland also amended its law to permit Baltimore to begin the payment of pensions under the State law of 1927. The States of Oregon, Maryland, Illinois, and Connecticut authorized the establishment of commissions for study and report to the legislatures in 1933. It is important to note that of the 5 new laws enacted in 1931 only West Virginia's contains the optional feature permitting the counties to inaugurate the system if they so desire.

Mr. Epstein, in summarizing the status of old age security in 1931, pointed out that of the

17 laws on the statute books at that time, only those of Kentucky, Nevada, and probably West Virginia were likely to remain inoperative for a time. In 1931, too, probably 75,000 persons were receiving pensions in the State of California, Montana, Utah, Minnesota, Wisconsin, and New York. It is significant to note that in the month of October, New York State alone was pensioning 43,206 of its citizens of whom 21,653 were residents of New York City. The average pension of New York City was \$32.37 a month; in the other cities of the State, it was \$22.56; and for the counties, \$20.90 a month. During September, the total number of pensioned persons in the State of California was 8750. The average pension in this State was \$23 a month. In Massachusetts, 6412 persons were receiving pensions, the average grant being \$24.24 per month.

**DELAWARE.** On Jan. 29, 1931, by sizable majorities in both houses, the Delaware legislature adopted the Old-Age Pension Bill recommended by a commission headed by Alfred I. du Pont. During the 14 months preceding the enactment of the new law, Mr. Du Pont himself had been furnishing pensions for more than 1300 aged persons in the State due to the failure of the 1929 legislature to furnish such relief. Delaware's old age pension law differed from acts already on the statute books of other States in the Union in that it provided that the complete cost for pensions be borne by the State without county contributions. The chief provisions of the new enactment were as follows: There was to be set up a State Old Age Welfare Commission appointed by the Governor and vested with the functions of adopting the necessary rules and regulations for the supervision of the act. Applicants for pensions were required to be 65 years of age; residents of the United States for 15 years and residents of the State for not less than five years; and without children or other means of support. The size of the pension was limited to \$300 annually (which was to include income from property or other sources); no amount in excess of \$25 was to be allowed, but no statutory pension was fixed.

**IDAHO.** On Feb. 12, 1931, the State of Idaho, the fourteenth State to join the company of those carrying old age pension statutes in their laws, enacted a measure for the relief of the aged. This law provided for the creation in each county of an Old Age Pension Commission responsible for the administration of the law. Applicants for pensions were required to have the following qualifications: To be 65 years of age; a citizen of the United States for 15 years; a resident of Idaho for not less than 10 years; and a resident of the county for three years. Persons ineligible for pensions were those who had been imprisoned during 10 years preceding the date of application, had deserted their husbands or wives, who had assigned property prior to the filing of application, who had children or other responsible persons able to support them and who had annual incomes (including the pension) exceeding \$300. The County Commissions were vested with the power of determining the size of the individual allotments, the statutory allotments being fixed, however, at \$25 a month. Pensions under the Idaho law were to be paid from the poor fund or current expense fund of each county.

**WEST VIRGINIA.** On Mar. 11, 1931, an old age pension law was passed by the State legislature to be effective three months after passage. The county courts in the State were authorized to

establish this system subject to the approval of the voters in each individual county. After two years' operation the county courts might, on their own motion, and were required to on the petition of 500 taxpayers, to submit the question again to a popular referendum. Applicants for pensions were required to have the following qualifications: Were 65 years of age or over; had been citizens of the United States for at least 15 years; had resided in the State of West Virginia and the county of application continuously for at least 10 years. Persons ineligible for pensions were the following: Those who at the time of application were inmates of public or private homes for the aged; those in need of institutional care; those who during 10 years preceding application had been imprisoned for felonies; those who had children or other persons responsible for their support and capable of support; those who had property, income or other means of support; those who had disposed or had assigned property preceding the filing of application. The statute fixed the maximum pension grant of one dollar a day. In the discretion of the county court relief might include medical and surgical care, including nursing. County courts maintaining a system of old age relief were required each year to levy a special tax on the property in the county.

**NEW JERSEY.** Without one dissenting vote, the New Jersey legislature on April 24 passed an old age pension bill making it the Sixteenth State with such legislation. The chief provisions of this bill were the following: There was created a Division of Old Age Relief in the State's Department of Institutions and Agencies. A director for old age relief was to be appointed in each county. Applicants to be eligible for pensions were required to be 70 years of age; unable to maintain themselves and having no children responsible for their support; citizens of the United States; a State resident for 15 years; and a resident of the county of application for one year. Persons who had been convicted of felonies or misdemeanors or who possessed property in excess of \$3000 were not eligible. County welfare boards were vested with authority to determine the size of the pension in each instance, a maximum of one dollar a day being set. As a condition of the granting of the pension the law empowered the county welfare boards to require the transference of any property the pensioner might possess to the county. The counties were required to appropriate funds necessary for the administration of the act; however, three-fourths of the amount expended was to be repaid by the State to each county. The State's share of old age relief was to be derived from the revenue produced by an inheritance tax.

**NEW HAMPSHIRE.** On May 6, both houses of the State legislature reenacted an old age pension law following the action of the State Supreme Court declaring a previously proposed old age pension law invalid. The law called for the creation in each county of a Board of Commissioners to administer the act, the counties paying the relief and being subsequently reimbursed by each city or town legally chargeable with the expense. Applicants for pensions were required to possess the following qualifications: Were 70 years of age; citizens of the United States for 15 years; a resident of the State and county of application for 15 years. The following types of persons were ineligible: those able to support themselves or having children or other persons responsible for their support; those possessing property in ex-

cess of \$2000; those who had assigned property immediately before application; inmates of charitable or correctional institutions; those in need of institutional care; those who had been imprisoned for 10 years preceding the date of application. County commissioners were charged with fixing the size of relief based on individual requirements, the maximum however to be \$7.50 a week from all sources. As a condition of the granting of relief, county commissioners might require the transfer of property from the pensioner to the county to be held in trust and on the pensioner's death the county, city, or town was to be reimbursed from this trust fund, moneys expended for relief.

**AMERICAN FEDERATION OF LABOR.** The executive council of the American Federation of Labor, in August, approved a model old age security bill which was to be referred to State federations throughout the United States and which was to act as a basis for a nationwide labor campaign. The model bill called for a pension to indigent citizens 65 years of age whose annual income did not exceed \$468 and who had no property in excess of \$3000. The bill fixed the maximum weekly pension at \$9 and proposed that the funds were to be supplied by the State.

**CANADA.** Previous issues of this YEAR BOOK have pointed out that as a result of a Dominion law in 1927, permitting the Provincial governments to pass old age legislation, there have been written on the statute books of five Canadian provinces laws calling for the granting of relief to aged citizens. On June 30, 1930, in these five provinces, as well as in the Northwest Territories, there

age pension grants were made in this country, bringing the total number of pensioners to 155,196.

**URUGUAY.** This country has had an old age pension law on its books since 1919, under which pensions are paid to all persons reaching 60 years of age or proving total incapacitation to work. The law also makes eligible for pension grants foreigners who have lived in the country for 15 years. See LABOR LEGISLATION; LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.

**OLD CATHOLICS.** A religious communion which owes its origin to the withdrawal from the Roman Catholic Church of certain members who refused to accept the dogma of papal infallibility, passed by the Vatican Council in 1870, and organized a separate ecclesiastical body, founded on the diocesan episcopate, at the first Old Catholic congress held in Munich, Germany, in 1871. It is found principally among the countries of Central Europe, whose churches are in communion with the See of Utrecht. In 1930 there were 33,000 members in Germany, 30,500 in Switzerland, 31,000 in Austria, 20,000 in Czechoslovakia, 12,000 in the Netherlands, 100,000 in Poland, and 41,460 in Yugoslavia. Small congregations also exist in France, Italy, Spain, Portugal, England, and the United States. In the last named country the church has been known, since its organization in 1914, as the Old Catholic Church in America; in 1926, according to the U. S. Census, it had nine parishes with 1888 members. Among some of the churches, especially in Germany, the doctrine of the Immaculate Conception, the obligation of confession, and priestly absolution are re-

TOTAL COST OF OLD AGE PENSIONS IN CANADA AND COST TO DOMINION GOVERNMENT, FOR SPECIFIED PERIODS

Province	April 1, to June 30, 1930		Since adoption of old age pension act	
	Total	Dominion's share	Total	Dominion's share
Alberta .....	\$152,475	\$76,288	\$419,895	\$209,948
British Columbia .....	279,320	139,660	2,328,995	1,164,478
Manitoba .....	321,263	160,631	1,970,559	985,279
Ontario .....	1,735,020	867,510	3,990,708	1,995,354
Saskatchewan .....	274,992	137,496	1,594,935	797,468
Northwest Territories .....	261	261	818	818
Total .....	2,763,331	1,381,796	10,305,910	5,153,345

were 47,291 pensioners who were receiving grants as indicated in the accompanying table.

**RUSSIA.** Under the Russian Five Year Plan provision was made for a complete system of social insurance to cover old age invalidity, sickness, and unemployment. A system of old age pensions was being introduced by stages. In 1927-28, it was applied to workers in the textile industry; in 1928-29, to workers in mines, metal industry, river transport and railways; in 1929-30 to workers in the dyeing industry, glass works, potteries, tobacco factories, and chemical, clothing, wood, and printing industries; in 1930-31 to workers in the mineral and food industries and to non-manual workers in those branches of the industries already covered. The Soviet scheme called for the granting of old age pensions equivalent to 50 per cent of the wage.

**NEW ZEALAND.** In this country a system of old age pensions had existed for 32 years and in 1930 some 27,000 citizens were receiving benefits under it.

**AUSTRALIA.** In 1930 an additional 22,575 old

jected. The mass is said in the vernacular; and priests are allowed to marry. Intercommunion with the Anglican communion was accomplished at a conference in Bonn, Germany, in July, 1931, the concordat being ratified later by the Vienna congress of the Old Catholic Church and by the convocations of Canterbury and York of the Church of England. See ENGLAND, CHURCH OF.

**OLDENBURG,** ol'den-böörk. A State of the German Republic. See GERMANY under Area and Population.

**OLDS, GEORGE DANIEL.** American mathematician and former president of Amherst College, died in Amherst, Mass., May 11, 1931. He was born in Middleport, N. Y., Oct. 14, 1853, and was graduated from the University of Rochester in 1873. After several years of graduate study at the universities of Heidelberg and Berlin, he became in 1884 professor of mathematics at the University of Rochester. In 1891 he was called to Amherst College in the same capacity, becoming dean in 1909 and president in 1924. He retired as president emeritus in the year 1927.

**OLEOMARGARINE.** See DAIRYING.

**OLYMPIC GAMES.** There was considerable activity in 1931 concerning the Olympic Games that were to be held in 1932 at Los Angeles, Calif. Preparations were made by all countries to send teams to California, and the Los Angeles authorities had arranged that nothing would be left undone to make these Olympic Games the best in history. The athletes were to be housed in specially-built bungalows and arrangements were completed for their transportation to the stadium, the lagoon, etc.

The winter Olympics were to be held at Lake Placid, N. Y., in February and elaborate arrangements were made for their success. A stadium for the ice hockey games was erected, and a new bobsled-run, as well as a ski jump. The bobsled-run down the side of Mt. Van Hoevenberg and the ski jump ranked with the best in the world.

**OLYTHUS.** See ARCHAEOLOGY.

**OMAN.** See ARABIA.

**ONTARIO,** on-tā'ri-ō. Second in size (after Quebec) among the Canadian Provinces, Ontario lies between Quebec on the east and Manitoba on the west. The area is 407,262 square miles; the population at the census of 1931 was 3,431,683, compared with 2,933,662 in 1921. Toronto, the capital, had 627,582 inhabitants in 1931 (521,893 in 1921). Other leading cities, with the 1931 census population, were: Ottawa, 124,988 (107,843 in 1921); Hamilton, 154,914 (114,151); London, 71,022 (60,959); and Windsor, 62,957 (38,591). Living births in 1929 numbered 68,411; deaths, 38,102; marriages, 27,605. Elementary schools in 1928 enrolled 708,081 pupils, secondary schools 97,833, and the seven universities (1928-29) 17,589.

Besides leading all the Canadian Provinces in manufacturing, Ontario is rich in agricultural, mineral, and forest resources. With 9910 manufacturing establishments, representing a capital investment of \$2,418,340,450, and 339,859 employees, the factories of the Province in 1929 produced goods valued at \$2,103,090,788, of which \$1,022,984,190 represented the value added in process of production. In the same year, the publicly owned Ontario Hydro-electric Power Commission distributed 1,136,689 electric horse power to 552,321 customers in 607 municipalities. In the fiscal year ended Oct. 31, 1930, the Commission earned a net surplus of \$1,163,660, as compared with \$1,575,225 in the previous year. The Commission increased its capital investment by \$37,000,000 during the year and its gross revenue by \$1,363,914. There are about 14,000,000 acres of cultivated land, of which 10,009,200 acres produced field crops valued at \$179,919,000 in 1930. In 1929, 10,020,294 acres yielded crops valued at \$241,778,000. Mineral production (1930) was provisionally reported at \$113,641,468 (\$95,272,332 in 1931). The chief minerals exploited are gold (\$43,117,688 in 1931), silver, copper, nickel, platinum, crude petroleum, and natural gas. From the forested area of about 240,000 square miles, lumber and other sawmill products valued at \$32,743,346, wood pulp valued at \$39,963,767, and paper and newsprint valued at \$66,822,230 were extracted in 1929. Fisheries yielded \$3,933,339 in 1929 (\$4,030,753 in 1928). Steam railways extend over 11,000 miles and highways over 52,000 miles. A railway extension to James Bay was completed in 1931. Construction or improvement of the On-

tario section of the trans-Canada highway was started in 1931 as an emergency unemployment relief project.

Ordinary provincial revenues for the fiscal year ended Oct. 31, 1930, totaled \$57,343,291 and expenditures \$57,989,353, according to preliminary figures. The bonded indebtedness in 1929 was \$350,563,845. The Province is administered by a lieutenant-governor, appointed by the Dominion, a responsible cabinet, and a single legislative chamber of 112 members elected by popular vote. The Legislature constituted in 1929 comprised 90 Conservatives, 2 Liberals, 5 Progressives, 4 Laborites, and 1 United Farmer. Lieutenant-Governor in 1931, W. D. Ross. Premier, President of the Council, and Minister of Education, G. S. Henry (Conservative). In the year ended Oct. 31, 1931, the Ontario Liquor Control Board sold liquor and permits valued at \$45,835,707 and earned a profit of \$8,491,653. See CANADA.

**OREGON.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 953,786; in 1920 it was 783,389. The native whites numbered 831,554 (1930), 666,995 (1920). Foreign-born whites, 105,475 (1930), 102,151 (1920). There were in the State, in 1930, 2234 Negroes, 1565 Mexicans, 4776 Indians, 2083 Chinese, 4958 Japanese, and 1061 Filipinos. The urban population (living in communities of at least 2500) predominated slightly in 1930, when it was 489,746, as against 391,019 in 1920; while the rural population was 464,040 (1930), 392,370 (1920).

Of 409,680 persons reported as in gainful occupations, 82,031 were in agriculture (49,917 being farmers and 26,650 paid farm workers); 99,481 were in the mechanical and manufacturing industries; 67,893 in trade; 44,670 in transportation; 34,175 in professional service; 37,029 in domestic or personal service; 19,277 in forestry. Portland, the most populous city, had 301,815 inhabitants (1930), 258,288 (1920); Salem, the capital, had 26,266 (1930), 17,679 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ..	1931	957,000	1,538,000*	\$13,073,000
	1930	929,000	1,768,000*	16,973,000
Wheat .....	1931	945,000	17,662,000	8,927,000
	1930	1,027,000	23,621,000	18,745,000
Oats .....	1931	223,000	7,186,000	2,355,000
	1930	240,000	8,880,000	3,108,000
Potatoes ...	1931	42,000	5,460,000	2,780,000
	1930	38,000	5,115,000	4,348,000
Apples .....	1931	.....	4,150,000	2,282,000
	1930	.....	8,200,000	4,650,000

	1930	60,000	1,980,000	1,648,000
Hops .....	1931	15,500	16,480,000*	2,800,000
	1930	14,000	14,850,000*	2,152,000
Barley .....	1931	74,000	2,072,000	932,000
	1930	76,000	2,280,000	1,140,000

\* Tons.    ♢ Pounds.

**MINERAL PRODUCTION.** The only important features of the mineral industry of the State in 1929 were the production of stone and of sand and gravel, which together made up about half of the year's mineral total by value. The State mined gold, silver, copper, lead, and zinc on a minor scale. The value of its combined product of these minerals was \$325,143 for 1930, as against \$486,000 for 1929, when higher prices had promoted greater activity. The chief part of the metal value lay in the yield of gold, 14,401 fine ounces for 1930 and 17,092 for 1929; by value, \$297,600 for 1930 and \$353,323 for 1929. The total value of the mineral products of the State was \$6,876,703 for 1929; for 1928, \$6,686,988.

The total value of the gold, silver, copper, and lead from lode and placer mines in Oregon in 1931 was estimated at \$314,100, compared with \$325,143 in 1930, a decrease of approximately \$11,000, by the U. S. Bureau of Mines. The value of the gold in 1931 was almost 99 per cent of the total value of all metals recorded. Compared with 1930 there were large decreases in the output and value of silver, copper, and lead, but gold increased about 5 per cent. The output in 1931 being estimated at 15,000 fine ounces, valued at about \$310,100, an increase of approximately 600 ounces in quantity and \$12,398 in value, compared with the production reported for the year 1930.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering 1929 placed the number of the State's manufacturing establishments at 2466 (about 40 per cent more than their number for 1927). These establishments employed 65,521 wage earners (an excess of 14.6 over 1927). The wages paid amounted to \$86,865,165 (nearly 15 per cent more than had been paid in 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$205,547,630 (more than in 1927 by 9 per cent). The manufactured product was valued at \$412,330,623 (exceeding that of 1927 by 20.3 per cent). Net of material, fuel, and electrical costs, the value added by manufacture was \$206,782,993. Portland provided roughly one-third of the manufacturing activity; its 1042 establishments employed 21,901 wage earners, paid them wages of \$29,047,403, and turned out a manufactured product with a total value of \$172,433,230.

**FINANCE.** State expenditures in the year ended Sept. 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$13,667,161 (of which \$480,008 was for local education); for conducting public-service enterprises, \$57,841; for interest on debt, \$2,771,497; for permanent improvements, \$12,011,288; total, \$28,507,787 (of which \$14,222,367 was for highways, \$3,296,079 being for maintenance and \$10,925,388 for construction). Revenues were \$30,368,961. Funded State debt outstanding on Sept. 30, 1930, totaled \$59,996,901, of which \$28,966,750 was for highways. Net of sinking-fund assets, it was \$29,975,281. On an assessed valuation of \$1,124,988,692 the State levied in the year ad-valorem taxes of \$4,633,068.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 3456.13. Additions to total line under operation had totaled 17.24 miles during the year preceding, but line abandoned had totaled 48.65 miles. In 1931 were built 28.4 miles of new track.

**EDUCATION.** Efforts were made during the year to increase the amount of educational service rendered by the public schools in proportion to the amounts expended. These efforts, according to State Superintendent Rice, took the form of research activities, the issue of standard texts, and revision of curriculum.

For the academic year 1930-31 the number of the State's inhabitants of school age (4 to 19 years) was stated as 260,052. There were enrolled in the public schools 201,732 pupils. Of these, 152,950 were in common schools or elementary grades, and 48,782 were in high schools. The year's expenditures for public-school education totaled \$17,814,445.

**LEGISLATION.** The regular biennial session of the 36th Legislative Assembly, continuing until March 5, produced an exceptionally large output of laws, of which, however, a considerable proportion were vetoed by Governor Meier. The State Public Service Commission of three was abolished and in its place was created a Department of Public Utilities, headed by a single commissioner, who was to hold by the Governor's appointment and to be removable at the Governor's discretion. This official was specifically charged to represent the public in controversies with utilities. At the same time the right was granted to cities and towns to make their own arrangements with utilities serving them, by the issue of franchises or otherwise, subject to the approval of the Commissioner of Public Utilities. If he should in such case disapprove, he might still be reversed by the electorate of the municipality. The old act establishing for utilities the requirement of a certificate of convenience and necessity and thus removing competition from the utility field was repealed.

The Legislature created also a Hydro-electric Commission, to be composed of the State Engineer and two appointees of the Governor. In this body was vested jurisdiction over the development of hydro-electric resources, somewhat after the model of the Federal Water Power Act. The Commission was to issue to developers of such resources licenses to terminate in not more than 50 years; also to require them to set up reserves to retire invested capital during term of license. Reversion to the State was stipulated to take place at the expiry of a license, in controversion of the doctrine of ultimate Federal jurisdiction over waters. Localities obtained power to set up utility districts for public developments.

A State Department of Agriculture was created, in which were merged divers supervisory agencies. A State Police patterned on the forces of Pennsylvania and New Jersey was brought into existence. A reform in the method of judiciary election, patterned on the system of the State of Washington, was adopted. It provided a separate ballot for judicial candidates and from that ballot it banished party labels, with the object of securing a non-partisan bench. The Legislature also submitted to popular vote for ratification three constitutional amendments. These, respectively, were: To restrict voting on bond issues and special tax levies to taxpayers; to offer tax-levying bodies an option of three years from which to choose the base-year in increasing a tax; to permit defendants in other than capital crimes to waive trial by jury.

In addition to the income tax ratified by popular vote in 1930, there was enacted a special income tax on the revenue from such intangibles

as bonds and shares of stock. The rate of this tax was set at 8 per cent, as against a sliding rate of not over 5 per cent on the general State income tax; but income paying the intangible-income tax was exempted from paying the general income tax. A peculiar feature of the measure granted exemptions to small incomes but withdrew them progressively from larger incomes. A uniform traffic code was adopted conforming mainly with those of Washington, California, and several other States. For the benefit of the dairies, a tax of 10 cents a pound was laid on oleomargarine. The one-mill tax for market roads was abolished and a system of secondary roads was created, to remove the burden of such roads from the direct taxpayer. The 2 per cent penalty on delinquent taxes was abolished and interest rates on delinquent taxes were reduced retroactively. The banking law was recodified and made to provide a separate code for building and loan companies. A State Probation Commission, to be appointed by the Governor and to serve without pay, was provided.

**POLITICAL AND OTHER EVENTS.** Governor Meier became involved in a conflict with State Treasurer Kay and Secretary of State Hoss, members of the State Board of Control, over his demand that they vote for the dismissal of the Superintendent of the State Penitentiary. The death of State Treasurer Kay in May gave the Governor the control of the Board and put an end to effective opposition to his plans of reform. He appointed Maj.-Gen. S. D. Butler, Retired, to be chief of the newly created State police force. The City and County of Portland each voted in April a bond issue of \$1,000,000 to give work to the unemployed.

**OFFICERS.** Governor, Julius L. Meier; Secretary of State, and State Auditor, Hal E. Hoss; Treasurer, Rufus C. Holman; Attorney-General, I. H. Van Winkle; Superintendent of Public Instruction, Charles A. Howard.

**JUDICIARY.** Supreme Court: Chief Justice, Henry J. Bean; Associate Justices, Harry H. Bell, George M. Brown, John L. Rand, George Rossman, Percy R. Kelly, J. U. Campbell.

**OREGON, UNIVERSITY OF.** A State institution of higher education in Eugene, Ore., founded in 1872. It consists of a college of literature, science, and the arts, graduate school, and schools of architecture, business, education, journalism, law, music, physical education, medicine, and social work, the latter two being located in Portland. The enrollment for the autumn term of 1931 was 3117. The faculty for the autumn term numbered 226. The total income for the year July 1, 1930, to June 30, 1931, was \$1,663,688. The endowment amounted to \$235,510, with a productive income of \$11,775. The main library contained 230,371 volumes, and the medical school library more than 11,000 volumes.

During 1931 the out-patient clinic building, located on the Portland medical school campus, was completed at a cost of \$400,000, made possible through a gift from the General Education Board. President, Arnold Bennett Hall, J.D., LL.D.

**OREGON STATE AGRICULTURAL COLLEGE.** The Federal land-grant college of Oregon, established under Federal and State support in 1868 in Corvallis. The enrollment for the autumn term of 1931 was 3036, of whom 2076 were men and 960 were women. The 1931 summer session enrollment was 1636. The total resident enrollment for the full year 1930-31 was 5570.

There were 328 members on the teaching faculty.

Beginning with July 1, 1931, all the State institutions of higher learning in Oregon were to be administered by the State Board of Higher Education on the basis of a unified budget. There were 100,530 catalogued volumes in the library. The Charles Lathrop Pack forestry prize, the Lee scholarship in home economics, the E. D. Ressler memorial award in vocational education, and the College Folk Club scholarship were established during the year. The J. G. Crawford collection from prehistoric burial mounds was added to the college museum. President, William Jasper Kerr, Sc.D., LL.D.

**ORPEN, SIR WILLIAM.** An Irish painter, died in London, Sept. 29, 1931. He was born in Stillorgan, County Dublin, Nov. 27, 1878, and attended the Dublin Metropolitan School of Art but owed his chief training to the radical Slade School in London. In 1899 he first exhibited at the New English Art Club, in which a powerful portrait of the painter, Augustus John, brought him membership in 1900. In 1904 he was elected to the Royal Hibernian Academy, and in 1910 became an Associate of the Royal Academy. Orpen was a versatile painter, brilliant in technique and facile in execution. His color was bright and strong, his treatment of light especially successful, his design striking, sometimes bizarre. He was thoroughly Irish in spirit, often whimsical and satiric, and delighted in Irish figure subjects, such as "The Irish Volunteer," "The Irish Wedding," "On the Irish Shore," "Young Ireland," and "In the Wicklow Mountains." One of his specialties was "portrait interiors," in which the sitter was represented in the intimate surroundings of his home. His portraits painted to order were more conventional in style, though vigorously characterized; among the distinguished persons who sat for him were Woodrow Wilson, Viscount Bryce, Marshal Foch, and Field Marshal Sir Henry Wilson.

During the World War Orpen was appointed an official artist by the government and commissioned a major in the British Army. Typical of his war pictures are "The Warwicks Entering Peronne: March, 1917," "Changing Billets," "Bombing at Night," and "The Great Mine, La Boisselle"; but there was about them an artificiality which to critics made them appear too theatrical. His "Signing of Peace in the Hall of Mirrors, Versailles" and "A Peace Conference at the Quai d'Orsay," which were exhibited at the Academy in 1920, were more successful; but he lost the commission he had received from the British Imperial War Museum on account of his unconventional "To the Unknown British Soldier in France," a satire on war. He became a Royal Academician in 1919. In 1929 he was elected a corresponding member of the American Academy of Arts and Letters. He wrote *An Onlooker in France* (1921) and *Stories of Old Ireland and Myself* (1924) and edited *The Outline of Art* (2 vols., 1923-24).

**OSBORN, H. F.** See ZOÖLOGY.

**OULAHAN, RICHARD VICTOR.** An American journalist, died Dec. 30, 1931, in Washington, D. C., where he was born May 23, 1867. He began his newspaper career in 1886 on the Washington

*Critic* and was subsequently news editor and associate editor of the Roanoke (Va.) *Daily Telegram* (later the *Roanoke Times*). Returning to Washington in 1889, he was with the Washington bureau of the United Press until 1897, when he became assistant and then chief Washington correspondent of the *New York Sun*. After 1912 he was chief Washington correspondent of the *New York Times*, and at the time of his death was dean of the capital corps of correspondents. He also served during 1913-17 as chairman of the standing committee of congressional correspondents. He was head of the *Sun* staff which reported the Russian-Japanese Peace Conference at Portsmouth, N. H. (1905) and the *Times* staff which reported the American-Mexican Peace Conference at Niagara Falls, Ont., Canada (1914), the Paris Peace Conference (1918-19), and the Washington Conference on the Limitation of Armament (1921).

**PACIFIC RELATIONS, INSTITUTE OF.** An organization formed in Honolulu in 1925 to serve as an unofficial body in studying the conditions of the Pacific peoples, with a view to the improvement of their mutual relations. It holds biennial conferences, promotes and coordinates research by other agencies, conducts research through its own secretariat, and endeavors to stimulate the mood of inquiry regarding Pacific problems on the part of the public generally. It is governed by a Pacific council, consisting of one representative from a recognized affiliated body of similar purposes in each country, including Australia, Great Britain, Canada, China, Japan, New Zealand, and the United States.

The 1931 conference, the fourth biennial conference of the institute, was held from October 21 to November 2. The original plan had been to hold the meeting in Hangchow, and elaborate preparations had been made toward that end by the Chinese hosts; but just before the conference convened the international situation was such that the Pacific council moved the seat of the conference to Shanghai. The discussions dealt with questions of trade and economic development of China, labor problems, diplomatic machinery, foreign relations of China, migration and race problems, and education. An important feature of this conference was the admission to full membership, by a vote of the Pacific Council, of two cooperating groups in the Philippine Islands and in the Union of Socialist Soviet Republics. The Philippine group sent a delegation to the China conference, and it was expected that members from the Union of Socialist Soviet Republics would attend the 1933 meeting.

During 1931 the American council of the institute, adhering to its policy of working as far as possible through existing organizations, stimulated a number of studies, in addition to those which it personally conducted through its education and research committees. It made a study of the status of the Chinese and Japanese languages for entrance credit for Occidental students in colleges in the United States, and published a report of its findings. It also made a preliminary investigation of the fellowships that have been granted in the past ten years to American scholars for study and research in the Far East and in the Pacific area generally.

Books published by the American council in preparation for the China conference included: Philip G. Wright, *The American Tariff and Oriental Trade*; Frederick V. Field, *American Participation in the China Consortium*; A. D. A. De Kat Angelino, *Colonial Policy*; and Bruno Lasker, *Filipino Immigration*. Also the following pamphlets: *Foreign Flags in China's Internal Navigation*; W. H. Mallory, *Matrateritoriality in China*; Robert E. Park, *The Problem of Cultural Differences*; E. S. C. Handy, *Cultural Revolution in Hawaii*; P. C. Kuo, *Some Oriental Influences on Western Culture* (Part iii, Canton and Salem); Harold S. Quigley, *A Syllabus on Diplomatic Relations in the Far East*; H. L. Shapiro, *Chinese Population in Hawaii*; A. Goldensweiser, *Race and Race Relations*; Joseph P. Chamberlain, *Aliens in the United States*; and Lewis L. Lorwin, *The Need for World Planning*. Many other studies were published by the other national councils of the institute, such as: Sophia Zen (editor), *A Symposium on Chinese Culture*; Inazo Nitobe, *Japan's Public Economy and Finance*; and R. H. Tawney, *A Memorandum on Agriculture and Industry in China*. The institute continued to publish its monthly magazine, *Pacific Affairs*, under the editorship of Miss Elizabeth Green.

Officers of the Pacific council elected at the China conference in 1931 were: Chairman, Jerome D. Greene of Lee, Higginson & Co., New York City; first vice chairman, Inazo Nitobe of Japan; second vice chairman, Newton Rowell of Toronto, Canada; honorary treasurer, Frank C. Atherton of Honolulu; chairman of the international programme committee, Dr. Hu Shih; chairman of the international research committee, Charles P. Howland of New York City. Charles F. Loomis was the acting general secretary. Headquarters of the institute are in Honolulu, and of the American council at 129 East Fifty-second Street, New York City. Jerome D. Greene was chairman of the American council and Edward C. Carter, secretary and treasurer.

**PAINTING.** Two distinct and seemingly contradictory trends marked the year's events in painting. The exhibitions of modern French work have, if possible, increased. From New York, where they have been continuous at various galleries, to the Middle West, the Pacific Coast, and the South these paintings have been carried by loan exhibitions in local museums or by dealers until the larger cities throughout the United States have been able to see concretely both the roots of modern American painting in nineteenth-century French work and the influences now at work upon contemporary American artists. From the mid-nineteenth century when American painters began to discover French masters and to discard for these their earlier British-Flemish tradition, this Franco-American style has been growing in strength, but never has the general public had so great an opportunity to see the models on which it was formed.

The other trend, which may not, at its root,

**NOTABLE PAINTING OF 1931**

be so contradictory as it seems, has been the awakening interest in so-called "American primitives." The Exhibition of American Primitive Painting at the Newark Museum in 1930-1931 was an early indication as well as a contributing cause. Since then stiff, solemn-eyed paintings of children on their Sunday behavior or portraits of men and women recorded by local men of small American towns and communities have found themselves news overnight, at least in art publications. The Exhibition of American Folk Sculpture at Newark in 1931 cast a retrospective glamour over the paintings of the period and carried the interest into a new field of art. The establishment of the American Folk Art Gallery in New York in the fall of 1931 (although this gallery is not open to the public and includes sculpture and various crafts as well) has emphasized the interest in this field in its more commercial aspects.

Yet the two movements, contradictory as they may seem, have a strong element in common—the direct expression of objects as the painter sees them which is an important principle in one strain of French work represented by the customs-clerk, Henri Rousseau, whose sharp, naïve representations, filled with an almost child-like wealth of entertaining detail, have become more and more popular. This same unsophisticated, direct quality, which has also attracted many in the Exhibition of Modern Hungarian Art assembled by the College Art Association, is, of course, the essential element in the work done by the early American sign-painters and craftsmen who set down literally what they saw, with an equal delight in faces, ruffles, bonnet trimmings, and details of trees and animals.

An outstanding example of modern decorative painting is to be found in the murals of the New School for Social Research in New York, opened early in the year, which presents an interesting application of art to community purposes. The New School forms a cultural centre for the arts as well as for economics, and, with its thronged classes and varied activities, draws within its walls many who would not consciously go to art museums or galleries. The series of "America Today," by Thomas Benton, representing various phases of industrial activity, is, perhaps, a little harsh and over-dramatic, with a distracting emphasis upon the details of machinery and other indications of the age; the series of "Revolutionary Movements Throughout the World," by José Clemente Orozco, represents the more simplified and imaginative "primitive" type of work.

In connection with these decorations of the New School, which have attracted public interest to a large degree, it may be well to consider that a great amount of modern work is, from time to time, being devoted to the decoration of various buildings, industrial and civic, where it attracts little attention unless some change transforms it into news. It is not impossible that, should these buildings by some miracle remain long enough, another generation may discover among them excellent examples of that art-in-the-making which may be recorded as characteristic of the present day.

It is interesting to note that the Guggenheim Fellowships awarded for painting during the year indicate a strong interest in Mexican art. Marsden Hartley and Doris Rosenthal both received fellowships to work in Mexico, and the

award to Ione Robinson was for work with Rivera, who has already been her teacher. Other Guggenheim Fellowships in painting were awarded to Alexander Brook, winner of the Temple Gold Medal at the Pennsylvania Academy show in 1931, Harry Gottlieb, and Emil J. Bistram. The outstanding exhibitions and awards during the year are discussed under the heading ART EXHIBITIONS.

A bequest of interest to American painters was that of Mrs. Mary Gertrude Abbey, widow of Edwin A. Abbey. Mrs. Abbey, who died June 20, 1931, left the sum of \$100,000 and eight-elevenths of the residue of her estate to the National Academy of Design to be used to form the Edwin Austin Abbey Memorial Trust Fund for Mural Painting in the United States, the income to be expended for "the advancement of the fine arts in the United States of America." An indication of the form of such advancement, as stated in the will, directs that "highly gifted, trained artists shall be commissioned to execute mural paintings," while another specification is the "foundation and maintenance of professorships and classes in decorative design and mural painting." Mrs. Abbey's London house and its contents, including a number of paintings, drawings, studies, and sketches by Edwin Abbey, were left to the Royal Academy of Arts in London as "a museum for the people of Great Britain."

**BIBLIOGRAPHY.** Among the publications of the year may be noted the following: *An Outline History of Painting*, by S. C. Kaines Smith; *Greek and Syrian Miniatures in Jerusalem*, by W. H. Hatch; *Men of Art*, by Thomas Craven; *The Russian Icon*, by N. R. Kondakov; *French Painting*, by R. N. Wilenski; *El Greco*, by Frank Rutter; *Whistler the Friend*, by Elizabeth Robbins Pennell; *The Sharples*, by Katharine McCook Knox; *The Life and Art of Dwight William Tryon*, by Henry C. White; *North Italian Painting of the Quattrocento*, by Adolfo Venturi; *Rembrandt Paintings in America*, by Wilhelm R. Valentiner. Attention should be called to the series of publications dealing with contemporary American artists issued by the Whitney Museum of American Art, although not all of them belong to 1931. Those already published include monographs upon John Twachtman, Maurice Prendergast, Arthur B. Davies, Robert Henri, George Bellows, Kenneth Hayes Miller, Guy Pène Du Bois, William Glackens, George Luks, John Sloan, Edward Hopper, Eugene Speicher, Henry Lee McFee, Bernard Karfiol, Charles Demuth, H. E. Schnakenberg, and Alexander Brook.

**NECROLOGY.** Among the painters who died during 1931 were the following: Jean Boldini, French; Axel Callela, Finnish; Fernando Carter, American; John da Costa, British; Maurice Fromkes, American; Thomas Cooper Gotch, British; William Steward MacGeorge, British; Sir Bertram MacKenna, British; Thomas May, British; Sir William Orpen, Irish; Charles Ricketts, British; Edward Simmons, American; Robert Spencer, American; Clementina Tompkins, American; Bayard H. Tyler, American; James Tyler, American; Lesser Ury, German; Harry A. Vincent, American; William L. Wyllie, British. These are discussed under the appropriate biographies.

See ART EXHIBITIONS; ART MUSEUMS; ART SALES; LITERATURE, ENGLISH AND AMERICAN,

under *Fine Arts*; and for bibliography, *PHILOLOGY, MODERN*.

**PALEONTOLOGY.** See *GEOLOGY*; *ZOOLOGY*.

**PALESTINE.** A territory comprising that part of historic Palestine which lies to the west of Trans-Jordan; administered since Sept. 29, 1923, by Great Britain under a mandate of the League of Nations. Capital, Jerusalem.

**AREA AND POPULATION.** The area under British mandate is about 10,000 square miles. The population, according to the census of Oct. 23, 1922, was 757,182, of whom 590,890 were Moslems; 83,794 Jews; 73,024 Christians; 7028 Druses; 163 Samaritans; 265 Bahais; and the remainder Sikhs, Hindus, and Metawilehs. At the census of Nov. 18, 1931, the population was 1,035,154, of whom 526,078 were males and 509,076 females. On racial and religious lines, the population was divided as follows: 759,952 Moslems, including about 100,000 nomad Bedouins; 175,006 Jews; and 90,607 Christians. A total of 6433 immigrants, mostly Jews, entered Palestine in 1930 and 3003 left the country permanently, compared with 6506 and 2835, respectively, in 1929. The leading cities, with their populations at the 1931 and 1922 censuses (1922 in parentheses), are: Jerusalem, 90,526 (62,678); Jaffa, 51,876 (47,709); Tel-Aviv, 46,109 (36,754); and Haifa, 50,869 (24,634).

**EDUCATION.** In 1930, there were 310 Government elementary schools, with 21,636 pupils (mostly Moslem); 328 Jewish schools, with 29,789 pupils; 62 Christian schools, with 15,139 pupils; and 75 private Moslem schools, with about 4710 pupils. The Hebrew University in Jerusalem had 131 students. The Kadoorie Agricultural School for Arabs was opened in 1930.

**PRODUCTION.** Essentially an agricultural country, Palestine in 1929 produced the following chief crops, in tons: Wheat, 85,064; barley, 51,972; durra (millet), 31,000; olives, 224; olive oil, 3178; and lentils, 1397.

The industrial census of 1928 showed 3505 manufacturing establishments (mostly small), with 18,000 employees and a capital investment of £3,500,000. Limestone, sandstone, gypsum, rock salt, sulphur, and potash are the principal minerals found. Active exploitation of the potash, carnallite, bromide, and cooking salt deposits in the Dead Sea was under way in 1931, with over 300 workers employed.

**COMMERCE.** According to preliminary data, exports in 1930 increased 22 per cent in value over the previous year, while imports declined 2.5 per cent. Domestic exports in Palestine pounds (equivalent to the pound sterling, or \$4.86) amounted to 1,896,095 in 1930, 1,554,260 in 1929, and 1,487,200 in 1928. Imports for consumption in 1930 were valued at £P6,985,260, compared with £P7,166,590 in 1929 and £P6,770,820 in 1928.

The increase in exports was due mainly to larger shipments of oranges, which totaled 2,857,041 cases valued at £P857,220, as against 1,722,078 cases valued at £P516,620 in 1929.

**FINANCE.** Revenues in 1930 totaled £P2,389,550, or 2.8 per cent more than the £P2,323,570 collected in 1929, while expenditures increased 13.3 per cent to £P2,423,970 from £P2,140,030 in 1929, according to preliminary returns. The deficit for the year was £P34,420. Notes in circulation at the end of March, 1931, amounted to £P2,085,328 and coins to £P284,336. The public debt at the beginning of 1930 was equivalent to

about \$18,561,000, including \$3,961,000 on account of the Ottoman public debt.

**COMMUNICATIONS.** Palestine in 1930 had 774 miles of railway, providing direct communication with Egypt, 423 miles of macadam highways, and approximately 833 miles of unimproved dirt roads. Vessels in the foreign trade entering the ports in 1930 numbered 2607 of 1,936,000 registered tons, as against 2663 of 1,976,000 tons in 1929. In the coasting trade in 1930, 807 vessels of 864,465 tons entered, compared with 803 of 846,712 tons in the previous year. Construction of a new harbor at Haifa was under way during 1931. Jaffa is the other chief port. From the airdrome at Gaza there is a weekly passenger and mail service to Egypt and Iraq and a weekly service links Haifa with Alexandria and Cyprus.

**GOVERNMENT.** A Constitution promulgated Sept. 1, 1922, provided for the appointment of the High Commissioner and Commander-in-Chief and of an executive council. It provided also for a legislative council, consisting of the High Commissioner, 10 officials, and 12 unofficial members, the latter to be elected and to include not less than two Christians and two Jews. The legislative council had not yet been instituted in 1931. In the meantime its functions were performed by an advisory council appointed by the High Commissioner. The Jewish community enjoys complete autonomy in the management of their internal religious, cultural, and communal affairs, having a Chief Rabbinate, an elected Assembly, and a General Council elected by the Assembly, which represents the community in its dealings with the Government. Moslem religious affairs are controlled by the Moslem Supreme Council. English, Arabic, and Hebrew are the official languages. High Commissioner in 1931, Lieut.-Col. Sir John Robert Chancellor, who was succeeded Nov. 1, 1931, by Lieut.-Gen. Arthur Grenfell Wauchope.

## HISTORY

The year 1931 was marked by a continuance of intense Arab-Jewish hostility and by fruitless efforts on the part of the British Government to placate both sides and to fulfill in some measure the apparently contradictory terms of the mandate. In an attempt to still the world-wide Jewish protests against the Passfield White Paper of October, 1930 (see 1930 YEAR BOOK), Prime Minister MacDonald on Feb. 13, 1931, made public in the House of Commons a letter which he had written to the Zionist leader, Dr. Chaim Weizmann. The letter explicitly reaffirmed the Balfour Declaration, reasserted the principle that the absorptive capacity of the country as a whole, rather than the economic position of individuals, would determine the rate of immigration, and denied that there had been any intention to prohibit the acquisition of land by Jews. He promised an early inquiry as to the state lands available for close settlement by Jews and an increase in the proportion of Jews employed on public works.

The letter satisfied only Dr. Weizmann and a moderate section of the Zionists, who asserted that it reestablished a basis of coöperation with Great Britain. The Revisionist section of the Zionist movement opposed any negotiation with the British Government until their interpretation of the Jewish National Home clauses of the mandate was accepted. The Arabs, on the other hand, were infuriated by what they termed Prime

Minister MacDonald's "black interpretation" of the Passfield White Paper. On March 12, the Executive of the Palestine Arab Congress proclaimed an anti-Jewish boycott in protest and an Arab National Fund was launched to buy up waste land for Arab settlement.

Meanwhile the London Government had dispatched another commission, headed by Sir Samuel O'Donnell, to Palestine to study the financial and administrative organization of the Palestine Government. The British Cabinet also elaborated a scheme for a Palestinian loan of about \$12,500,000 with which to reclaim waste areas and provide land for landless Arabs and Jews. Though it promised to relieve temporarily a basic cause of dispute, the plan was retarded by the refusal of both Arabs and Jews to cooperate. The Arabs held that to do so would imply their acceptance of the Balfour Declaration, while the Jews demanded that half of the loan be used to assist Jewish settlers. A third step proposed by the British was the election of the legislative assembly envisaged in the Constitution of 1922. Despite the opposition of the extreme Nationalists, the moderate majority of the Arab Executive on March 2 voted to participate in the proposed elections. Toward the end of the month, however, Dr. Weizmann stated that the Jews were opposed to a legislative assembly until such time as they had a majority in Palestine. The British authorities undertook a census to determine the number of voters.

**WAILING WALL REPORT.** Another source of Arab-Jewish difference was the report of the Wailing Wall Commission of the League of Nations, published June 8. Failing to reconcile the Moslem and Jewish claims directly, the commission submitted its own recommendations for the control of the Wailing Wall and these were put into effect by the British authorities immediately upon publication of the report. The commissioners found that the Moslems were the rightful owners of the Wailing Wall and the adjoining pavement, but allowed the Jews free access to the Wall, with certain restrictions. Political demonstrations and speeches in the area were prohibited. The Supreme Moslem Council had formally denied the commission's competence and now it rejected the report. The Jews, on the other hand, had admitted the commission's competence and the majority of them reluctantly accepted its findings.

**RENEWAL OF RIOTING.** In August, the Arab agitation against the Jews grew to dangerous proportions, as a result of the provision of sealed armories to outlying Jewish communities by the Palestine Government. The armories were provided for defense purposes in accordance with Inspector-General H. L. Dowbiggin's report on public security. Originally sponsored by youthful extremists and the Grand Mufti's followers, the Arab agitation spread throughout the country, the speakers asserting that the Government was arming the Jews for an offensive against the Arabs. The Government on August 5 banned further utterances of this nature by public speakers or the press. The Arab newspapers protested against the Government's orders by ceasing publication for a week and on August 23, the second anniversary of the beginning of the 1929 outbreaks, the Arab Executive called a one-day general strike. The strike was generally observed and in Nablus, where there had been repeated riots, the police fired on menacing crowds, wound-

ing six Arabs. The British authorities took every precaution to avert a repetition of the 1929 attacks upon the Jewish population and the agitation subsequently died down.

**THE JEWISH ELECTIONS.** The 71 seats in the Jewish National Assembly were distributed principally as follows by the elections of Jan. 5, 1931: Labor, 32; Revisionists, 14; Oriental Jews, 15; United Women, 2. About 40 per cent of the Jewish voters participated. In the Assembly, which convened in Jerusalem February 9, the parties were aligned in two opposing blocs—the Zionists, including the Labor members, with 35 seats, and the Revisionists, with 28 seats. There were eight Independents. Sixteen Revisionists walked out on February 12 in protest against the vote approving the continuance of negotiations with the British Government in connection with the Passfield White Paper. Labor members dominated the Jewish National Council elected by the Assembly. For developments in the Zionist movement, see **JEWS**.

**THE MOSLEM CONGRESS.** The third Moslem congress to convene since the abolition of the Caliphate by the Turkish Republic in 1924 was held in Jerusalem, Dec. 6-16, 1931, with 154 delegates in attendance, 88 of whom were from Palestine and Trans-Jordan. The Congress was called by Haj Amin el Husseini, Grand Mufti of Jerusalem, ostensibly to deal with the purely religious problems of Mohammedanism, but political issues came to the fore. The Opposition Moslem faction in Palestine, headed by Raghib Bey Nashashibi, Mayor of Jerusalem, denounced the congress as a political move to insure the Grand Mufti's supremacy among Palestine Moslems. Suspicion of political motives prevented the attendance of representatives from the Moslem states of Albania, Turkey, Persia, Afghanistan, and the Hejaz. The Egyptian government consented to be represented only after the Grand Mufti promised that neither the Caliphate question, the political situation in Egypt, nor the establishment of a Moslem religious university in Jerusalem would be discussed. Delegates were present on behalf of Moslem groups in India, Iraq, Yemen, Syria, Tripoli, and Morocco.

Interest in the possible restoration of the Caliphate had been aroused by the announcement on Oct. 30, 1931, that the former Caliph, Abdul Medjid Effendi, would establish the Caliphate in Jerusalem, provided the Moslem world and Great Britain approved. Support for Abdul Medjid's restoration by the Nizam of Hyderabad, wealthy Indian Moslem ruler, was insured through the marriage of the latter's two sons to the daughter and niece of the former Caliph at Nice, France, on Nov. 12, 1931.

The congress adjourned without definite accomplishment, after adopting resolutions protesting against the Jewish National Home in Palestine, rejecting the findings of the Wailing Wall Commission, proposing the creation of a \$5,000,000 fund to oppose Zionist activities in Palestine, and recommending a boycott of goods produced in Palestine by Jews. Establishment of a Moslem university at Jerusalem was contemplated. It was agreed that another congress would be convened in two years and a permanent executive committee of 25, with the Grand Mufti as president, was appointed to conserve Moslem interests in the interval. The Grand Mufti was also made head of an administrative bureau of seven members, to be established in Jerusalem.

**PALESTINE ARCHAEOLOGY.** See ARCHAEOLOGY.

**PANAMA.** A republic of Central America, lying between Costa Rica and Colombia and bisected by the Panama Canal Zone. Capital, Panama.

**AREA AND POPULATION.** Excluding the Canal Zone (q.v.), Panama has an area of 32,388 square miles and a population (census of 1930) of 467,459, as compared with 446,098 in 1920. The natives are for the most part a mixture of Spanish, Indian, and Negro blood. The population of the principal cities in 1930 was: Panama, 74,409 (59,458 in 1920); Colón, 29,765 (31,206). During the five years 1925 to 1929, annual births and deaths averaged 12,536 and 5389, respectively.

**EDUCATION.** Of about 100,000 children of school age in 1929-30, 65,459, or 65 per cent, were attending school. The university (Instituto Nacional) had 626 students in 1929-30.

**PRODUCTION.** Agriculture is the principal support of the population; the main subsidiary industries are cattle raising and the production of mahogany and other hardwoods. The chief agricultural products are bananas, cacao, coconuts, coffee, sugar, rubber, tobacco, and sarsaparilla. Gold and manganese are produced in small quantities. Sugar, liquors, hats, furniture, shoes, soap, etc., are manufactured for domestic consumption.

**COMMERCE.** Imports during 1930 for consumption were valued at \$18,295,000, compared with \$19,278,000 in 1929. Export figures for Panama products were not available, but were estimated to be slightly lower than in 1929, when they were valued at \$4,144,000. Approximately one-half the total imports represented purchases by employees, tourists, and travelers in the Canal Zone. Banana exports in 1929 were 4,678,000 bunches, valued at \$2,941,000, or more than 70 per cent of the total export value. Other exports were cacao, coconuts, ivory nuts, cattle hides, cabinet woods, and mother-of-pearl shells. The United States supplied 60 per cent of the total imports in 1930.

**FINANCE.** According to the Finance Minister's report, Government receipts, exclusive of special funds, for the fiscal year ended June 30, 1930, totaled 8,192,116 balboas, or 786,162 balboas more than budget estimates. Expenditures exceeded estimates by an even greater sum, and a deficit of unannounced proportions resulted (1 balboa equals \$1). The approved budget for the two-year period beginning Mar. 1, 1931 (the fiscal year was changed in 1930), estimated revenues at 19,961,353 balboas and expenditures at 18,500,934 balboas. For the service of the public debt of about \$20,000,000, there was appropriated 3,840,000 balboas, or 20 per cent of the 1931-33 budget.

**COMMUNICATIONS.** Including the Canal Zone, there were 295 miles of railway line in 1930, the principal system being the Panama Railroad, 154 miles long, owned by an American corporation. Highways extended 679 miles in 1930. A national highway from Panama City to David, capital of the Province of Chiriqui, was officially opened

to traffic on Mar. 1, 1931. It was 315 miles long and formed an important link in the projected inter-continental highway.

**GOVERNMENT.** The Constitution of Feb. 13, 1904, as amended in 1918 and 1928, vested executive power in a President elected by a direct vote for four years and ineligible for a succeeding term and legislative power in a national assembly of 46 members, elected for four years. The National Assembly meets biennially on September 1. Three Vice Presidents are chosen by the National Assembly and a cabinet of five is appointed by the President. President at the beginning of 1931, Florencio Harmodio Arosemena, who assumed office Oct. 1, 1928.

## HISTORY

**THE REVOLUTION.** A sudden and dramatic revolution, in which 10 persons were killed and 24 wounded, swept the administration of President Florencio Harmodio Arosemena from power in the early morning of Jan. 2, 1931. Without the slightest warning a band of 100 revolutionaries successfully stormed the headquarters of the National Police in Panama City. At the same time another group attacked the National Palace, capturing President Arosemena and other government officials.

Within seven hours President Arosemena had resigned, after appointing Dr. Harmodio Arias Premier of his Cabinet, and a provisional régime headed by Dr. Arias had been established. On the same day, the Panaman Supreme Court declared illegal the election of the first, second, and third designates to the Presidency held in October, 1930. The Court named Dr. Ricardo J. Alfaro, Panaman Minister to the United States, as legal successor to President Arosemena, Alfaro having been elected first designate for the term ended Oct. 1, 1930. The provisional régime ended with the formal inauguration of Dr. Alfaro in Panama City January 16. The presence of the United States Minister, Roy T. Davis, at the ceremony constituted formal recognition of the new administration by the United States.

The revolution was notable for two reasons. It marked a definite reversal of the policy of the United States toward revolutionary disturbances in the Isthmian republic, and it was the result of a nonpartisan political reform movement rare in Latin American history.

**THE PRESIDENTIAL CAMPAIGN.** While Dr. Alfaro during the remainder of 1931 devoted himself to weeding out useless office holders, eliminating entrenched corruption, and balancing the budget, the political parties commenced a heated campaign in preparation for the election of the new President in June, 1932. Rivalry between Dr. Harmodio Arias, newly appointed Minister to the United States, and Francisco Arias Paredes, Secretary of Government in the Cabinet, for the nomination of the Liberal faction controlling the Government led to the resignation of the Cabinet on October 5. By the end of the month, Dr. Arias, Don Arias Paredes, and Dr. Augusto Boyd had announced their candidacies on the Doctrinal Liberal, Reform Liberal, and National Liberal tickets, respectively. The platforms of both Dr. Harmodio Arias and Don Arias Paredes called for a new treaty with the United States which would restrict the operations of the U. S. Government commissaries operated in the Canal Zone.

**OTHER DEVELOPMENTS.** A clash between U. S. military police and Panama police at Colón on

May 9, 1931, aroused much hostile feeling. Maj. Gen. Preston Brown, commander of the U. S. forces in the Canal Zone, ordered American enlisted personnel to stay out of the city thereafter, but the order was rescinded May 20 following complaints of Colón merchants that their business was being seriously affected. Announcement in July that Costa Ricans had appointed several minor officials in border territory claimed by Panama revived the long standing border dispute between the two countries. To forestall alienation of any of the territory claimed by Panama, President Alfaro in December issued a decree restricting title to lands on the Panama side of the border to natives of the Republic and prohibiting the transfer of such titles to foreign corporations or individuals. The boundary had been fixed several times by arbitration, but the awards had never been accepted by both countries. By a decree issued May 28, 1931, immigration of Hindus into Panama was forbidden except with the consent of the Ministry of Foreign Affairs.

Consult Raymond Leslie Buell, "Panama and the United States," *Foreign Policy Reports*, vol. vii, No. 23, Jan. 20, 1932. See PANAMA CANAL ZONE.

**PANAMA CANAL.** The total number of commercial vessels transiting the Panama Canal during the calendar year ended Dec. 31, 1931, aggregated 4972, and the total tolls collection was \$22,530,820.84. The number of transits declined 913, or 15.51 per cent, in comparison with the calendar year 1930, while tolls collections decreased \$3,615,204.12, or 13.83 per cent. The percentage loss in tolls was less than the percentage decline in transits owing to the greater average tonnage of vessels transiting in 1931. Traffic in 1931 was the lowest for any year since 1925, when transits totaled 4774 and tolls collections \$21,380,759.70. The decrease was attributed to the continued adverse business conditions throughout the world.

The daily average number of commercial transits during the year was 13.62, as compared with 16.12 in the calendar year 1930, and 17.62 for the calendar year 1929. The daily average tolls collection in 1931 was \$61,728.28, as compared with \$71,632.95 in 1930 and \$75,596.48 in 1929.

In the accompanying tabulation the number of commercial transits and the amount of tolls collected are shown for the calendar year 1931, with comparative totals for the calendar years 1930 and 1929, and fiscal year ended June 30, 1931.

PANAMA CANAL TRANSITS AND TOLLS

Month	Transits	Total for month Tolls
January .....	476	\$2,108,140.42
February .....	431	1,915,902.78
March .....	439	1,964,434.22
April .....	453	2,014,349.13
May .....	428	1,923,452.18
June .....	400	1,821,408.73
July .....	408	1,848,638.45
August .....	390	1,770,202.71
September .....	396	1,820,735.75
October .....	390	1,823,650.74
November .....	376	1,762,036.19
December .....	387	1,757,869.54
Total, calendar year, 1931 ..	4,972	22,530,820.84
Total, calendar year, 1930 ..	5,885	26,146,024.96
Total, calendar year, 1929 ..	6,480	27,592,715.84
Total fiscal year, 1931 .....	5,529	24,645,456.57

See CANALS.

**PANAMA CANAL ZONE.** The strip of land 5 miles wide on each side of the Panama Canal ceded to the United States by Panama in the treaty of Nov. 18, 1903. Area, 554 square miles, of which 163½ are taken up by Gatun Lake. The civil population in June, 1931, numbered 30,745, compared with 29,587 at the census of April, 1930. There were 8337 American citizens in the Canal Zone population in 1931, exclusive of the Army and Naval personnel, which numbered 9820 (Army, 9020; Navy, 800). The birth rate in the Canal Zone in 1930 was 13.28 per 1000 inhabitants, or about half what it was in 1921. The death rate was 7.14 per 1000 inhabitants. Of the total 1930 population, 18,783 were whites, 19,492 Negroes, and 1194 mixed or other races. The treaty of 1903 gave the United States control over sanitation and quarantine in the cities and harbors of Panama and Colón, although they remained within the jurisdiction of Panama. The status of the Canal Zone is that of a military reservation under the Governor of the Panama Canal, appointed by the President of the United States. The number of commercial airlines operating in or through the Canal Zone was reduced from four to three on June 15, 1931, when the Scadta Company discontinued its services between the Canal Zone and various points in Colombia. Governor in 1931, Col. H. Burgess, U. S. Army. See PANAMA CANAL.

**PAN AMERICAN UNION.** An official international organization maintained and supported by the 21 American republics for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a governing board composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a director general and assistant director chosen by this board.

The services rendered by the union may be broadly summarized under the following heads:

**ECONOMIC.** The office of the trade adviser provides a general commercial information service on all phases of Latin American trade. The division of finance supplies current information on developments in public and private inter-American finance. The division prepares an annual study on Latin American revenues, expenditures, and public debts. The statistical division prepares reports on the trade of the Pan American nations, as well as a general survey of the commerce of all Latin America. These reports are issued annually. The division of agricultural coöperation is active in promoting the exchange of information relating to new and improved agricultural methods throughout the American Continent, the elimination of plant and animal diseases, and so forth.

**CULTURAL AND INTELLECTUAL.** The division of intellectual coöperation offers a valuable contribution to the development of cultural and intellectual relations among the Pan American nations by promoting the exchange of professors and students, the establishment of scholarships, and the fostering of contacts and exchange relations among scientific, literary, professional, and artistic organizations. The Columbus Memorial Library of the Pan American Union offers a wide collection of books and periodicals on Pan American affairs, and its facilities are in constant demand by scholars, research workers, and others.

**PUBLICATIONS.** The Pan American Union publishes monthly *Bulletins* in English, Spanish,

and Portuguese, which are chronicles of all phases of Pan American activities. In addition, it issues a large number of miscellaneous publications on a wide variety of topics. During 1931 four special series in Spanish and Portuguese were issued monthly on agriculture, education, social welfare, and on finance, industry, and commerce.

**CONFERENCES.** One of the important functions of the Pan American Union is that of giving effect to the resolutions and conclusions of the international conferences of American States. These activities consist in conducting investigations and preparing reports on the various subjects entrusted to the union by the conferences, and in arranging for the many special or technical conferences which are the outgrowth of the international conferences. During 1931 committees of the governing board were appointed to prepare the programme and regulations of the Seventh International Conference of American States, which was scheduled to meet at Montevideo, Uruguay, in December, 1932.

Among the special or technical conferences held during 1931 were the following:

The Fourth Pan American Commercial Conference met at the Pan American Union Oct. 5-13, 1931, with delegates in attendance representing the governments, chambers of commerce, and other commercial associations of the 21 republics, members of the union.

The Second Pan American Congress of National Directors of Public Health was held at the Pan American Union under the auspices of the Pan American Sanitary Bureau Apr. 20-28, 1931.

The Third Pan American Postal Conference met at Madrid, Spain, Oct. 10-Nov. 9, 1931, and considered questions affecting the mail and parcel post services between the nations of the continent.

**PAN AMERICAN DAY.** The year 1931 was marked by the first observance of Pan American Day on April 14, the date on which the resolution creating the Pan American Union was adopted at the First International Conference of American States, held at Washington in 1889. The day was observed with appropriate ceremonies in all the countries, members of the Union.

**PAN AMERICAN SANITARY BUREAU.** This is an official organization of the American republics which concerns itself with the collection and dissemination of information on all phases of questions relating to public health and sanitation in the republics. A monthly bulletin is issued. The bureau is headed by Dr. Hugh S. Cumming, Surgeon General of the United States Public Health Service, assisted by a directing council.

**OTHER DEVELOPMENTS.** The Inter-American Highway Commission met at Panama, Mar. 16-21, 1931, to discuss the survey and construction of the Inter-American Highway from Panama to the United States (see PANAMA under *Communications*). Intellectual coöperation among the American states was advanced by the organization of the executive committee of the American Council of Intellectual Coöperation, with Secretary of Interior Wilbur as Chairman and Dr. James Brown Scott as Secretary. The architectural competition in designs for the Columbus Memorial Lighthouse, to be erected at Santo Domingo by the American states, was won by J. L. Gleave of England (see *ARCHITECTURE*).

The director general of the Pan American Union in 1931 was Dr. Leo S. Rowe; the assistant

director, Dr. Esteban Gil Borges. Headquarters are in the Pan American Union Building in Washington.

**PAN-EUROPEAN COMMITTEE.** See LEAGUE OF NATIONS; UNITED STATES OF EUROPE.

**PAN-PACIFIC UNION.** An organization established for the purpose of bettering relations among Pacific peoples, chiefly through the calling of frequent conferences in all lines of thought and action in the Pacific area. The fifth Science Conference was to be held in Canada in 1933.

Local work consists chiefly in the Monday Luncheon Forum in Honolulu, at which men and women of international standing are the speakers as they pass to and from the Orient, Australasia, etc. These meetings are attended by friends of the Pan-Pacific of all races. There is a similar club which meets every Friday in Tokyo which Alexander Hume Ford, founder and director of the Union, helped to organize in 1923.

**PAPER AND PULP.** The production of wood pulp and paper in the United States in 1931 again suffered a decrease from the previous year, and the same was true in Canada. For all of North America, including Newfoundland and Mexico, the production in 1931 of news print was estimated at 3,688,450 tons as against 4,088,064 tons in 1930. The accompanying tabulation from the American Paper and Pulp Association gives the estimate of pulp production in the United States, indicating a total for 1931 of 3,880,000 short tons as against 4,630,308 tons in 1930. Likewise there were reduced imports of pulp. The production was 14.3 per cent in 1931 below that of 1930, while the total shipments of wood pulp to the outside market were 31.4 per cent below the level of 1930. Wood pulp inventories at the end of the year were 9.6 per cent above the level of December, 1930.

U. S. PULP PRODUCTION BY GRADES  
[In tons of 2,000 pounds]

Grade	1931*	1930	1929
Mechanical	1,415,000	1,560,221	1,637,653
Sulphite Total	1,217,000	1,534,295	1,681,511
Bleached	620,000	751,166	839,953
Unbleached	597,000	783,129	841,558
Sulphate Total	805,000	952,282	918,084
Bleached	59,000	69,488	66,993
Unbleached	746,000	882,794	851,091
Soda	378,000	504,229	520,729
Semichemical		30,213	40,481
and Screenings	65,000	49,068	64,427
Total	3,880,000	4,630,308	4,862,885

\* 1931 estimate of the American Paper and Pulp Association.

PULP IMPORTS INTO THE UNITED STATES, 1931\*  
[In tons of 2,000 pounds]

Country of origin	Mechanical	Sulphite unbleached	Sulphite bleached	Sulphate unbleached
Canada	181,038	99,237	207,409	36,080

The output of pulp in Canada in 1931 was estimated by the Canadian Pulp and Paper As-

sociation at 3,285,000 tons compared with 3,619,345 tons in 1930, as shown in the accompanying tabulation.

	1930 Tons	1931 Estimated tons
Groundwood .....	2,283,130	2,100,000
Sulphite .....	1,076,804	960,000
Sulphate .....	188,253	165,000
<b>Total .....</b>	<b>3,619,345</b>	<b>3,285,000</b>

The estimates for paper production in the United States during 1931 also were below those of 1930 and 1929 and are indicated in the accompanying tables. The year's total of production was 9.2 per cent below 1930, while shipments were 8.6 per cent smaller than in the previous year. In the case of newsprint the 1931 production, 1,157,497 tons, was 65.5 per cent of capacity, as against 1,282,372 tons or 76 per cent of capacity in 1930. Before the close of the year there was a total of 86 paper and pulp mills in the United States idle. As further evidence of the declining consumption of paper in the United States during 1931, the per capita consumption of 181 pounds may be mentioned, which was 20 pounds less than in 1930 and 40 pounds less than in 1929.

#### U. S. PAPER PRODUCTION BY GRADES [In tons of 2,000 pounds]

Grade	1931 <sup>a</sup>	1930	1929
Newsprint .....	1,157,500	1,226,086	1,409,169

<sup>a</sup> 1931 estimate of the American Paper and Pulp Association.

<sup>b</sup> Writing Paper Manufacturers Association's estimate.

The following were the largest paper-producing States in the United States in 1930, with 1929 production figures in parentheses: New York, 1,347,764 tons (1,512,855 tons); Maine, 1,029,203 tons (1,061,384 tons); Michigan, 990,820 tons (1,092,111 tons); Ohio, 860,461 tons (936,572 tons); Wisconsin, 835,162 tons (886,146 tons); and Pennsylvania, 665,562 tons (748,960 tons).

The manufacturers of newsprint in the United States and Canada during the year 1931 suffered from low prices, and it was stated that with but few exceptions fixed charges were not being earned in the industry. Accordingly there were proposed during the year various mergers, and one proposed combination in particular was discussed where 85 per cent of the newsprint capacity of Canada and nearly 33 per cent of the newsprint capacity of the world would be combined in a merger of six of the larger Canadian corporations. For the greater part of the year the price of newsprint held at \$57 a ton, but in December a reduction of \$4 per ton in the price of newsprint delivered in New York was announced to become effective in January, 1932.

The year 1931 witnessed a substantial de-

crease in the total world consumption of American paper and paper production, and the exports, which in 1930 totaled \$30,301,750, declined in 1931 to \$22,419,743, with the heaviest decrease in shipments of fancy writing paper and book paper. American exports of paper base stock in 1931 were valued at \$3,714,499, as compared with \$4,728,138 in 1930, there being an increase of 34 per cent in sulphite wood pulp which totaled \$2,251,130, other paper base stocks exported showing marked decline.

The imports of paper and paper products into the United States in 1931 amounted to \$125,623,138 or a 15 per cent decrease as compared with 1930. Newsprint imports amounted to \$112,169,627; imports of paper base stock amounted to \$75,193,286 or a decline of 30 per cent from the previous year, with an increase of 84 per cent over the 1930 record shown in imports of bleached sulphate pulp from Canada which amounted to \$1,891,099.

The output of paper in Canada was considerably below that of 1930, the statistics as compiled by the Canadian Pulp and Paper Association being as follows:

	1930 Tons	1931 Estimated tons
Newsprint .....	2,497,952	2,220,775
Book and writing paper .....	69,468	62,000
Wrapping paper .....	78,320	72,000
Paperboard .....	233,217	200,000
Other grades .....	47,830	44,000

**PAPUA**, pā'pū-ā. A territory of the Australian Commonwealth, comprising the southeastern part of the island of New Guinea and all the groups of small islands between 8° and 12° S. latitude and 141° and 155° E. longitude; formerly known as British New Guinea; transferred to the Australian Government Sept. 1, 1906. Area, 90,540 square miles, of which about 87,786 are on the island of New Guinea. On June 30, 1930, there were 1525 Europeans and about 275,000 natives. Port Moresby is the capital and a port of entry. Lieutenant-Governor and chief judicial officer in 1931, Sir J. H. P. Murray. See **NEW GUINEA**.

**PARAGUAY**, pār'ā-gwā. An inland republic of South America, bounded by Argentina, Bolivia, and Brazil. Capital, Asunción.

**AREA AND POPULATION.** Including that part of the Gran Chaco under dispute with Bolivia, the area is estimated at 176,000 square miles; the estimated population in 1929 was 843,900 (excluding about 30,000 Chaco Indians). Populations of the leading cities, with suburbs, in 1926 were: Asunción, 113,684; Villarrica, 20,000; Luque, 13,000; Carapeguá, 12,000. Excluding suburbs, the population of Asunción in 1930 was 89,571. Births in 1930 numbered 3699, or 41.1 per 1000 inhabitants; registered deaths, 1497, or 10.6 per 1000.

**EDUCATION.** Of 170,350 children of school age in 1930, 108,222 were enrolled in schools and the average attendance was 89,824. The university of Asunción had 432 students in 1929.

**PRODUCTION.** Stock raising, lumbering, and agriculture are the leading industries. Two-thirds of the area is covered with hard- and soft-wood forests, which produce yerba maté (native tea), quebracho extract, and lumber. Production of the chief crops were: Tobacco, 33,000,000 pounds (estimated) in 1930-31; ginned cotton,

9,560,000 pounds (estimated) in 1930-31; sugar, 7617 metric tons in 1929-30. Rice, corn, and beans are other leading crops. Iron, manganese, copper, and other known mineral deposits remain virtually unexploited. Meat packing and the production of animal by-products, flour, quebracho extract, beverages, and shoes are the chief industries.

**COMMERCE.** Imports in 1930 were valued at the equivalent of \$12,643,000 (\$13,176,000 in 1929) and exports at \$11,839,000 (\$12,804,000 in 1929). Argentina was the chief source of 1930 imports, with 28.8 per cent of the total, followed by the United States and Great Britain, with 15.9 and 13.7 per cent, respectively. Exports went chiefly to Argentina. The leading exports in 1930, in order of value, were quebracho extract, meat extract, cattle hides, and yerba maté.

**FINANCE.** According to the President's message of April, 1931, revenues in the fiscal year ended Aug. 31, 1930, totaled 268,656,072 paper pesos and expenditures 286,548,698 paper pesos, leaving a deficit for the year of 17,892,626 paper pesos. It was stated that the surplus from 1928-29 reduced the deficit carried over into 1930-31 to 5,640,860 paper pesos. The external debt decreased from 4,219,388 gold pesos on Nov. 30, 1929, to 3,878,934 gold pesos on Nov. 30, 1930. The internal consolidated and floating debt was placed at 2,798,530 gold pesos and 37,644,328 paper pesos on Nov. 30, 1930. The average exchange value of the paper peso was \$0.0223 in 1929 and \$0.0196 in 1930. The gold peso, with a par value of \$0.9048, exchanged at \$0.8351 in 1930.

**COMMUNICATIONS.** Paraguay had 632 miles of railway line in 1929, 3684 miles of highway (mostly unimproved or graded earth roads) in 1930, and 2220 miles of telegraph and 6006 miles of telephone wire. Ninety per cent of the country's imports passed through the port of Asunción, on the Paraguay River, which was in process of modernization in 1931.

**GOVERNMENT.** Executive power is vested in a president elected for four years, who acts through a ministry of five members; and legislative power in a congress of two houses: a senate of 20 members and a chamber of deputies of 40 members elected directly by the people. President at the beginning of 1931, Dr. José P. Guggiari, who assumed office Aug. 15, 1928.

**HISTORY.** President Guggiari of Paraguay was forced to resign on Oct. 26, 1931, following rioting and a demonstration in the capital by students, workers, and radicals for representation of the Left elements in the government and for a firmer policy toward Bolivia in the Chaco boundary dispute. However, the Liberal party, which had controlled Paraguay since 1912, remained in power. The retiring President was succeeded by Vice President Emiliano González Navero (Liberal), who on October 27 formed a new Liberal Cabinet in which Foreign Minister Jeronimo Zubizarreta and Finance Minister Rodolfo Gonzalez were retained.

Unrest under the Guggiari régime had been continuous for several years, and in 1931 was aggravated by the intensification of the economic depression and by the renewal of the boundary crisis with Bolivia (see *BOLIVIA* under *History*). In the latter controversy, the Guggiari administration had pursued a conciliatory policy, despite student opposition, while taking the precaution to engage an Argentine military mission

to reorganize the army (January, 1931). In the same month, two modern gunboats, built in Italian shipyards, were delivered to the Paraguayan navy (see *NAVAL PROGRESS*).

Labor and radical unrest, however, were attributable primarily to the continuance of the state of siege (martial law) since September, 1929. The state of siege expired on Mar. 31, 1931, but was extended to August 31 by a Presidential decree of April 22. The extension of martial law followed the suppression of two abortive revolts, which broke out at Villa Encarnación on February 2 and at the towns of Luque and San Lorenzo on April 20. On February 23, Labor unions called a general strike in support of their demands for the abolition of the state of siege, the release of political prisoners, and freedom of assembly. The strike was broken the following day when the Government arrested the ringleaders, who were charged with conducting subversive Communist propaganda. During the April revolt, a number of prominent politicians and newspaper editors opposed to President Guggiari were arrested and former President Schearer, who was charged with complicity, was deported. New arrests followed the rioting which accompanied President Guggiari's resignation, and martial law was again proclaimed.

In the elections of March, 1931, in which one-half of the Chamber of Deputies and one-third of the Senate were renewed, the Liberals polled 50,070 votes, against 27,050 for the Colorado (National Republican) party, giving the Liberals a total of 15 seats in the Senate and 31 in the Chamber. A total of 17,924 blank ballots were cast by Liberal and Colorado factions which had broken with their respective parties. Paraguay was one of the few South American republics which did not default on its foreign bond payments during 1931.

**PARK COLLEGE.** A nonsectarian institution for the higher education of men and women in Parkville, Mo., founded in 1875 and coöperating with the Presbyterian Church in the United States of America. The enrollment for 1931-32 totaled 527. The faculty numbered 39. The endowment funds amounted to \$1,710,000, from which the income was \$79,000. Tuition and fees amounted to \$98,000 and donations to \$14,000; \$46,000 was yielded from other sources. The library contained 38,000 volumes. President, Frederick W. Hawley, D.D., LL.D.

**PARKS, NATIONAL.** The Director of the U. S. National Park Service, Horace M. Albright, in his annual report to the Secretary of the Interior for the fiscal year ended June 30, referred particularly to the determined efforts made to relieve local unemployment, and the importance of acquiring the few additional lands needed for national parks and monuments before the next boom period, which in all probability would inflate land values beyond all possibility of governmental acquisition.

While no new national parks were established during the year, boundary adjustments were made at Bryce Canyon (Utah), and Wind Cave (S. Dak.) National Parks, and also at the Petrified Forest (Ariz.), Aztec Ruins (N. Mex.), Pinnacles (Calif.), and Katmai (Alaska) National Monu-

ments. Through the addition of the new monuments and the various boundary changes, the total area of the national park and monument system was increased by 1,750,013.09 acres, making a total of 12,119,579.64 acres. Director Albright stated that important adjustments in the boundaries of several national parks should be made promptly, in order to insure proper development and to preserve important areas. He especially stressed the addition to the Grand Teton National Park, in Wyoming, of important lands held in trust for this purpose by the Snake River Land Co., organized by John D. Rockefeller, Jr. Over 30,000 acres of land were so held for transfer to the United States for park and game-preserve purposes when Congress should enact the necessary legislation.

Two new national monuments were established during the year, one on the eastern seaboard and the other in the Far West. The Colonial National Monument, in Virginia, was established by presidential proclamation on December 30, 1930, in accordance with previous authorization of Congress. Its boundaries as outlined include Jamestown Island, the old town of Williamsburg, portions of the Yorktown battlefield, and a connecting parkway. Upon the establishment of the monument the National Park Service devoted its efforts to obtaining lands in Yorktown and making such developments as were needed in connection with the celebration of the Sesquicentennial anniversary of the surrender of Cornwallis at Yorktown, which was held Oct. 18 to 19, 1931. A total of 1,960.76 acres of land in the monument area was secured, most of it in the Yorktown battlefield area. The National Park Service cooperated with the United States Yorktown Sesquicentennial Commission by handling all of the construction work at Yorktown and taking over the details of purchasing, disbursing, and accounting for funds and certain details of printing.

On Apr. 1, 1931, the Canyon de Chelly National Monument in Arizona was established, with an area of 83,840 acres. In addition to containing important cliff dweller ruins, this monument also is remarkable from a scenic standpoint.

The Great Smoky Mountains area, the newest of the national parks, located in Tennessee and North Carolina, was reported as having an area of 158,876.50 acres, with an additional gift of lands transferred to the United States Government on November 2 which about doubled its size. This left only about 100,000 acres additional to bring the park to a point where its full development could be undertaken in accordance with the organic act of Congress which provided a minimum area of 427,000 acres for full park development. Meanwhile the National Park Service was administering and protecting the area, with special emphasis on the protection of its wild life and other natural features.

Several other eastern park projects under way promised a comprehensive eastern park system in the future. In the case of the Shenandoah project, the State of Virginia, after securing a decision from the courts that the special law for acquiring lands within the proposed park boundaries was constitutional, had about completed the work of mapping and valuing the lands, and it was expected that by the early part of the year 1932 the commission would be in a position accurately to estimate the amount of acreage that could be purchased with available funds.

An interesting highway development was the

designation of the Eastern Park-to-Park Highway, to connect the Great Smoky Mountains National Park, the Shenandoah and Mammoth Cave projects, and the Colonial National Monument. It was hoped that this highway later might be extended to take in the existing Acadia National Park in Maine and the new eastern park projects.

The Mammoth Cave National Park Association reported late in the year that clear title to Mammoth Cave (Kentucky) itself, as part of 20,000 acres of land in the proposed park area, had been acquired, and that anticipated revenues of \$900,000 would, it was believed, be sufficient to purchase the remaining lands necessary for the establishment of the Mammoth Cave National Park.

The newest eastern national park project approved by Congress was the Isle Royale, in Michigan. This project, like the other eastern park projects already mentioned, was dependent upon the lands within the proposed borders being deeded to the United States for park purposes. During the summer Governor Brucker of Michigan appointed a commission to supervise the acquisition of the necessary acreage for transfer to the Federal Government. A bill to establish the Everglades (Florida) project, as a national park passed the U. S. Senate, following favorable report by the Secretary of the Interior. Unfortunately it did not pass the House of Representatives before the termination of the session.

Excellent progress was made in bringing the highway systems within the national parks and in some of the national monuments to a standard commensurate with the importance of these areas as focal points of concentrated travel and with conditions on the main approach roads. Outstanding among the major road projects under construction were the Wawona Road and tunnel in Yosemite National Park and the Generals Highway between Sequoia and General Grant National Parks, all in California; the Trail Ridge Road in Rocky Mountain National Park, Colo.; the Transmountain or Going-to-the-Sun Highway in Glacier National Park, Mont.; the Rim Drive in Crater Lake Park, Oregon; and, in Virginia, the Colonial Parkway between Williamsburg and Yorktown in the Colonial National Monument and the Summit Drive along the crest of the Blue Ridge in the proposed Shenandoah National Park. In connection with the latter project, deeds from the Virginia State Commission on Conservation and Development, covering the conveyance without cost of a right of way 100 feet wide and approximately 35.41 miles long, were accepted by the Secretary of the Interior on behalf of the United States for the construction of the new highway. Work on this project was financed from the emergency relief appropriation.

Travel to the national parks and monuments in 1931 increased greatly, amounting to 3,544,856, as against 3,240,656 for the travel year ended Sept. 30, 1930. This was a net increase of 9.18 per cent. Travel to the national parks alone reached the total of 3,152,845, a gain of 14 per cent over the previous year.

Appropriations for national park and monument work for the 1931 fiscal year amounted to \$12,113,435, including \$2,078,800 allocated to the National Park Service for emergency employment work. For the fiscal year 1932, under which the Service is now operating, the appropriations total \$12,754,250. In addition to the 1932 appropriation of \$7,500,000 for road work, included

in the total appropriations recorded above, authorization was granted to incur contractual obligations for road construction up to an additional sum of \$2,850,000. Cash donations for park and monument development purposes during 1931 amounted to \$65,157.12.

**PARR, SAMUEL WILSON.** An American chemist, died in Urbana, Ill., May 16, 1931. He was born in Granville, Ill., Jan. 21, 1857, and was graduated from the University of Illinois in 1884, later studying at the University of Berlin and at the Polytechnikum in Zurich. After acting as instructor in general science at Illinois College during 1885-86 and as professor from 1886 to 1891, he was made professor of applied chemistry at the University of Illinois in 1891, retiring in 1930. A leading authority on coal chemistry, he devised a valuable *Classification of Coal* and developed a low-temperature coking process. Among his other discoveries are the Parr calorimeter for determining and recording the heat value of coal and other hydrocarbons, and a new type of calorimeter for measuring and recording the heat value of combustible gases. He also made an extensive study of alloys, especially those with acid-resisting properties, and developed one in particular, illium, which may be substituted for platinum in many types of equipment. The Chandler medal was awarded him in 1920 in recognition of his many discoveries, and in 1928 he was elected president of the American Chemical Society. He was the author of *The Chemical Examination of Water, Fuel, Flue-gases, and Lubricants* (2d ed., 1916).

**PARSONS, SIR CHARLES ALGERNON.** A British engineer and inventor, died at sea Feb. 12, 1931. He was born in London, June 13, 1854, and was educated at St. John's College, Cambridge. He was founder and chairman of the engineering and electrical corporation, C. A. Parsons & Co., and of the Parsons Marine Steam Turbine Company at Heaton, Newcastle-upon-Tyne. His principal invention was the compound steam turbine known by his name, which was introduced about 1884, improved by a condenser in 1891, and adapted for ships, being used on the *Turbinia* in 1897. In 1905 it was adopted by the Admiralty in battleships, and in 1907 for such passenger liners as the *Lusitania* and *Mauretania*. He published *The Steam Turbine* (1912).

**PAVEMENTS.** See ROADS AND STREETS.

**PAVLOVA, päv'lo-vä, ANNA.** A Russian dancer, died at The Hague, the Netherlands, Jan. 23, 1931. Born in St. Petersburg, Russia, Jan. 31, 1885, she entered the Imperial Ballet School at the age of 10 and was graduated in six years. She then became prima ballerina at the Marianski Theatre, the home of the Imperial Ballet, where her success was immediate. In 1907 she resigned to make a continental tour, visiting Munich, Berlin, Stockholm, and Paris and finally reaching London in 1910, where she was proclaimed the most remarkable dancer since the days of Giulia Grisi and Fanny Elssler. After her London triumph she went to America, making her debut at the Metropolitan Opera House, New York City, Mar. 1, 1910, in Delibes's *Coppelia*. The same season she appeared with Diaghileff's Russian Ballet in Paris, adding to her fame

in *Les Sylphides*, *Pavillon d'Armide*, and *La Nuit Egyptienne*.

During the World War she organized an opera company which toured the United States and achieved a signal success with such presentations as Auber's *La Muette de Portici* in which the principal character, the deaf-and-dumb Fenella, was mimed by the dancer. After the War she resumed her tours in Europe and also visited the Orient and Latin America. Her last appearance in the United States was in 1924-25, at which time she was married to her accompanist, Victor d'André. Pavlova's great contribution was in making the dance a more natural and spiritual interpretation of the music to which it was set; she revived its era of romanticism. Among the best-known and most spectacular of her dances were *Automne Bacchanale*; *Le Cygne*; *Les Papillons*; *Chopiana*; *Valse Caprice*; an interpretation of Liszt's *Les Préludes*.

**PEACE.** The twenty-eighth Universal Peace Congress was held in Brussels from July 5 to the 10th, with M. H. La Fontaine as President and under the patronage of an honorary committee composed of a large number of eminent men belonging to the political world and the University, such as M. Magnette, President of the Senate, M. Poncelet, President of the Chamber of Deputies, M. Paul Hymans, Foreign Minister, Count Carton de Wiart, Minister of State, Senator de Brouckere, Senator Vinck, Director of the International Towns Union, M. Max, Burgomaster of the Town of Brussels. The Congress opened with an impressive ceremony on Sunday, July 5, in the Festivals Hall of the Academy.

From the outset it was apparent that the forthcoming Disarmament Conference was arousing keen interest in pacifist circles. The committee whose task it was to examine the seven reports presented to the International Peace Bureau attracted to its ranks all those who believed that the existing state of affairs constituted a serious threat to all that had been done in the previous ten years to organize peace.

The resolution presented to the Congress by the committee drew attention both to the final aim, total disarmament, and to the immediate possibilities, or rather necessities. The Brussels Congress declared in unequivocal terms that neither the peoples nor those who govern them will consent to a total suppression of armies so long as the security of the nations is not completely assured and before the League of Nations possesses the necessary means of obtaining compensation for countries which, in spite of the strict undertakings in the treaties, might be attacked.

The organization of peace then, it was pointed out, was the work that must be untiringly pursued. It is not enough to define an aim; advance must be made toward it. The Congress recommended both a reduction in the effectives and a reduction of military expenditure. Both are necessities and one should produce the other. The question of reduction by budgetary means gave rise to a rather serious debate. Some, and in particular Herr Dr. Ludwig Quidde, of Germany, wished the Congress to support the resolution passed at Budapest by the Conference of the Federation of League of Nations Unions, which demands a 25 per cent reduction at least, a figure which originated in Lord Cecil's circles, whereas others opposed the suggestion on the ground

that since the figures for military expenditure amount, according to the Secretariat of the League of Nations, to 21 milliards 569 million gold francs (as against 11 milliards in 1914) a 25 per cent reduction would be entirely illusory owing to the fact that the cost of war materials and of maintenance of the effectives have decreased and are still decreasing in a way which would more than compensate for the proposed 25 per cent reduction. The result would be that with the amount left after the 25 per cent reduction the states would be able, not only to maintain their armaments at the same level but even to increase them. The conclusion was that by supporting that figure for reduction the Congress would play into the hands of the war-party.

On the basis of the foregoing arguments the President, M. La Fontaine, wished the Congress to demand, not a 25 per cent but a considerably greater reduction. The Congress, for whom the question of the "fall in prices" where military equipment was concerned was an unfamiliar one, avoided the difficulty by demanding that the reduction should in any case be sufficient to lower effectives, material, and expenditure to a level below that of 1914. The following is the complete text of the resolution:

The XXVIIIth Universal Peace Congress, profoundly convinced that if armaments are not the only cause of war, they are in fact and essential means,

Adjuces the Disarmament Conference solemnly to declare that its ultimate object is total universal simultaneous disarmament, rigorously controlled.

Conscious nevertheless, that in the present state of development of nations, total disarmament will not be accepted by states and peoples without collective mutual guarantees of security supported by an international executive force of public world order, the Congress requests the Conference to invite the League of Nations to organize these guarantees.

But until this great scheme has been organized, the Congress believes that the immediate task of the Disarmament Conference consists,

(1) In reducing military forces and war material, including trained reserves and stocks of war material, together with military budgets, account being taken of the fall in the cost of material and upkeep of the men, in the level lower than that which existed in 1914;

(2) In affirming the principle of equality in disarmament not by increasing the armaments of the Powers disarmed by the Peace Treaties, but by a progressive reduction of the other Powers;

(3) In effecting the limitation of armaments of all the Powers both by direct and indirect, or budgetary means;

(4) In prohibiting for all nations those means of war already forbidden by the Peace Treaties and in effecting the internationalization of all aviation which to-day is national or private, as aeroplanes constitute in time of war the most dangerous instruments for diffusion of gas;

(5) In abolishing immediately private manufacture and trade in war material and in nationalizing its manufacture until the time when in as near a future as possible, the monopoly of the manufacture of means of coercion still allowed shall be solely in the hands of the League of Nations;

(6) In creating an international commission already contemplated in the draft Convention which shall be given special powers to control the carrying out of the obligations which have been undertaken and to adjudicate upon all differences arising from interpretations of the Treaty. For the members of this Commission, guarantees of independence and impartiality are indispensable.

The Congress urged the Conference emphatically, to remember the passionate hope with which the peoples will follow its deliberations and to recognise that it will be criminal to deceive this hope and take responsibility for the violent reactions which failure of the Conference cannot fail to arouse.

The Disarmament Committee also presented two resolutions which were adopted almost without discussion. One asked that states should

introduce into their legislation preventive and repressive measures providing for penalties against any persons who by speeches, by writings, or by any other similar means are guilty of inciting to war. The second resolution asked that the governments should not send to the Disarmament Conference persons directly interested in the maintenance of armaments but that they should include in their delegations persons who, as members of pacifist organizations, had occupied themselves with the problem of disarmament, certain aspects of which appear not to have been sufficiently studied.

The Committee on the European Union had as President M. A. Papanastasiou, former Foreign Minister of Greece.

The resolution adopted by the Congress drew attention, in the first place, to the fact that, although the World War was the chief cause of the present crisis, the latter can also partly be attributed to the lack of balance between production and consumption and to the egoism of certain industrial and financial concerns; it further declares that military nationalism is supplemented and extended by economic nationalism, customs barriers and the tariff war; that, in particular, international cartels have not so much in view the normal organization of economic life in general as a concentration of economic forces with the object of keeping up or raising prices to an unjustifiable extent. In conclusion, the resolution read:

I. Resolved that the establishment of a normal economic order requires equilibrium between consumption, which is the end, and production, which constitutes the means, and that in the economic sphere, as in the political, democratic authority represented, when necessary, by the State, must take the place of autonomous dictatorship of finance; and called for the realisation of a European Tariff Union (pending the establishment of world freedom of trade) on the basis of a common tariff fixed as near as possible to the lowest existing national tariff, the reduction of customs barriers, including the modification and stabilisation of tariffs, in particular the free circulation of raw material, and draws attention to certain consequences resulting from the most-favoured-nation clause in the commercial treaties, which, instead of leading to a generalization of reduced tariffs, ends by paralyzing even the conclusions of agreements.

The Congress adopted a second resolution congratulating the national groups of the six states which took part in the Balkan Conference organized at the instigation of the twenty-seventh Peace Congress on their will to come to an understanding.

In addition to the Congress of the International Peace Bureau at Brussels three other international conferences were held during the summer: the Conference of the War Registers' International at Lyons from August 1 to 4; the Congress of the International Fellowship of Reconciliation at Lunteren (Holland) from August 22 to 29; the International Democratic Congress for Peace at Constance from August 7 to 9, afterward out on a "Crusade of Youth" in the valley of the Rhine.

A School of Peace was opened in Paris, organized under the directorate of *l'Europe Nouvelle*, sponsored by M. Briand, dedicated by M. Painlevé. The course covers two years; the first, a general study of current international problems; the second more detailed study of policies and institutions.

For many years the Federal Council of Churches' (q.v.) Commission on International Justice and Goodwill had been bending its ener-

gies toward the development of definite educational understanding and world peace. The fruition of such efforts was beginning to be seen. An important evidence of this new interest was the incorporation of the peace ideal into the regular programme of Christian education in the Sunday school and allied agencies. In connection with the annual meeting of the International Council of Religious Education there was an all-day conference, attended in the main by religious educators and specialists in the field of curriculum-making, who concerned themselves with concrete questions as to how education for peace most effectively can be carried out in each of the three great age-groups, children, young people, and adults.

The Catholic Association for International Peace (1312 Massachusetts Avenue N. W., Washington, D. C.) is made up of about four hundred Roman Catholic men and women familiar with and interested in international problems. The various committees reported with supplementary study outlines that were widely used in Roman Catholic colleges and among men's and women's clubs. Annual meetings and regional conferences were being held throughout the United States where the committee reports were presented and discussed before they were published.

The *Peace Year Book* is a recognized handbook of information on peace and international affairs. The 1931 edition contains special articles by Wickham Steed on the "Contribution of 1930 to Peace," and by W. Arnold-Foster on the Amendments to the Covenant of the League of Nations, as well as articles on the Draft Disarmament Convention, the London Naval Conference, and sections dealing with the League of Nations, the International Labor Office, and Reparations. In the appendices are to be found an exhaustive directory of peace organizations in all parts of the world, and a mass of important statistics relating to armaments.

A spectacular "Peace Caravan" which, under the auspices of the pacifist organization, the Women's International League for Peace and Freedom, crossed the United States from the Pacific to the Atlantic and visited the capitals of 25 States as well as 125 other cities, and presented to President Hoover a petition for disarmament "to the limit," said to bear the names of 150,000 men and women including most of the governors and mayors visited. In responding, however, the President spoke not of disarmament but of limitation.

The executive committee of the World Conference for International Peace through Religion met at Geneva from August 12 to 14, with 60 members present and Dr. Shailer Mathews of Chicago presiding.

Dr. Atkinson, the Secretary, reported that the coöperation of all the eleven great religions of the world has been assured and that six joint presidents have been appointed, each representing a religious constituency. The Moslem group was the only important group thus far unrepresented, and it was expected that a Moslem president would be named very shortly. Dr. S. Parkes Cadman, of New York, represented the American Protestant Churches; Dr. Albert Einstein, of Berlin, the Jewish group; Mgr. Ignaz Seipel, Minister of Foreign Affairs and formerly Chancellor of Austria, the Roman Catholic group; the Lord Bishop of Liverpool, the Anglicans; Dr. Rabindranath Tagore was president for India; and

Baron Y. Sakatani, member of the Japanese House of Peers, president for Japan. The world conference was tentatively scheduled for November, 1932, in Washington.

The International Peace Bureau was believed by its supporters to have paved the way for the League of Nations. It challenges any one who might doubt the exactitude of this statement to glance through the collection of resolutions of the Universal Peace Congress, where he will see that it was in these congresses and later in the Inter-Parliamentary Conferences that the foundations of the League were laid. The year 1930 was epoch-making in the annals of the organization of which the International Peace Bureau is the centre, as a result of two events which, in different directions, will certainly bear fruit. The first was the Balkan Conference, the second, the General Conference of Peace Societies. For the first Balkan Conference, see *GREECE under History* (1930 YEAR BOOK); for the second in 1931, see *TURKEY under History*.

The second question which received the attention of the International Peace Bureau during the year 1930, the coördination of pacific forces, had been the object of attention for a long time. The idea of creating an organism capable of establishing contact between the different peace societies was discussed for the first time at a meeting held for this purpose in Basel on June 2, 1923, in which delegates from five or six important associations took part. The committee then formed met several times between 1923 and 1930 in Paris at the headquarters of the European Centre of the Carnegie Endowment. At one of these meetings, when M. Nicolas Politis and Professor Gidel were present, draft statutes were prepared, on the basis of which was formed on June 7, 1927, the International Committee for the Coördination of Pacific Forces. This committee, composed of delegates (three at the most) sent by the different international associations, arranged to commemorate the Tenth anniversary of the League of Nations by organizing a manifestation at Geneva. In this all the associations whose aim is to make known over the whole world the ideas which are at the basis of the Geneva institution might coöperate. This was most successful, 15 international associations taking part in the manifestation.

On December 9, the Nobel Peace Award was made to President Nicholas Murray Butler of Columbia and Miss Jane Addams, of Hull House, Chicago. See NOBEL PRIZES.

THE UNIVERSAL CHRISTIAN COUNCIL FOR LIFE AND WORK: AMERICAN SECTION. Consisting of the Commission on Relations and Churches Abroad of the Federal Council of the Churches of Christ in America, this Council during the year sought to advance the cause of world peace by directing particular attention to the Disarmament Conference, to the study of unemployment, and to the strengthening of the underlying spiritual ties between the nations. A council executive committee meeting in Paris in February received suggestions from several of the sections that led to the adoption of a joint programme with the World Alliance for Friendship through the Churches. Each country was encouraged to circulate petitions, to seek the expression of conviction on the part of official church bodies, and to coöperate in plans for a universal day of prayer and a joint Christian delegation to wait upon the Disarmament Conference when it met.

The educational aspects of the programme were particularly stressed; likewise the need of showing Christian people that their wishes in the matter of world peace should find practical expression and should result in strengthening the hands of the statesmen committed to progressive multilateral disarmament.

At Cambridge in August and September the Executive Committee met again and there were reports from the different countries with respect to the degree of success attained in following up this programme. A renewed stress was placed upon the so-called Eisenach Resolution which was initiated by the Life and Work Council and which formed the basis for the action of the Lambeth Conference and other important world Christian bodies acting in the matter of war. This policy had been outlined by the Bishop of Chichester, Dr. Bell.

There were a great many meetings in the different lands under the auspices of the Council, and the various interdenominational church movement in its wide constituency carried on an educational campaign which was more or less definitely related to the recommendations of the Council.

The most elusive part of the programme, and yet perhaps the most important of all, relates to the process of bringing to birth a new state of mind. The personal confidence which had been established as between the most influential leaders of the churches in the different lands had increased as a result of the meetings held under the auspices of the movement and to a degree at least this confidence is communicated to the church groups influenced by these leaders. Further than that the press service of the movement had been supplying to the papers on the Continent the sort of facts which aid the development of understanding and good will. The bulletins and other publications of the central office were a help in the same direction. See ARBITRATION, INTERNATIONAL; DISARMAMENT.

**PENFIELD, WALTER SCOTT.** An American lawyer and expert on Latin-American affairs, died in Washington, D. C., Apr. 11, 1931. He was born in Auburn, Ind., Feb. 13, 1879, and was graduated from the University of Michigan in 1900 and with the LL.B. degree from George Washington University in 1903. During 1901-04 he was an attorney with the Department of State at Washington. He was later counsel for Mexico in the Sanchez Azcona case (1911), for the Panama Legation in arbitration as to the boundary dispute between Costa Rica and Panama (1912), and for Germany in the *Appam* case (1918).

During 1909-12 he was professor of international law at the Washington College of Law. In 1919 he was delegate and technical adviser in international law to the Paris Peace Conference. He retired in 1929.

**PENNSYLVANIA.** POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 9,631,350, in 1920 it

was 8,720,017. The native whites numbered 7,959,551 (1930), 7,044,876 (1920). The foreign-born whites, 1,233,051 (1930), 1,387,850 (1920). The Negroes, 431,257 (1930), 284,568 (1920). There was, in 1930, a small population of other races, chiefly Mexicans, 3405; Chinese, 2557; Filipinos, 614; Indians, 523.

Of 3,722,428 persons reported in 1930 as in gainful employments, 1,469,468 were in manufacturing industries, these including 213,743 in the building industry and 406,884 in iron and steel industries; 562,040 were in trade; 359,095, in transportation; 322,245, in domestic or personal service; 251,443, in agriculture; 327,476, in mineral extraction, of whom 296,094 were in coal mining; 247,293, in professional service.

Philadelphia, the most populous city, had 1,950,961 inhabitants (1930), 1,823,779 (1920); Pittsburgh, 669,817 (1930), 588,343 (1920); Scranton, 143,433 (1930), 137,783 (1920); Erie, 115,967 (1930), 93,372 (1920); Reading, 111,171 (1930), 107,784 (1920); Harrisburg, the capital, 80,339 (1930), 75,917 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ..	1931	2,455,000	3,154,000*	\$38,163,000
	1930	2,496,000	3,001,000*	59,120,000
Corn .....	1931	1,268,000	62,766,000	28,872,000
	1930	1,219,000	26,818,000	25,477,000
Potatoes ...	1931	191,000	26,549,000	11,947,000
	1930	189,000	17,955,000	20,648,000
Wheat .....	1931	909,000	19,987,000	11,202,000
	1930	986,000	21,682,000	17,367,000
Oats .....	1931	954,000	28,143,000	9,006,000
	1930	945,000	32,602,000	15,649,000
Apples .....	1931	.....	14,000,000	7,700,000
	1930	.....	9,936,000	9,439,000
Tobacco ...	1931	40,900	58,487,000*	5,849,000
	1930	41,300	39,854,000*	2,551,000
Buckwheat .	1931	162,000	3,488,000	1,393,000
	1930	167,000	1,754,000	1,561,000
Rye .....	1931	135,000	2,025,000	1,033,000
	1930	127,000	1,842,000	1,455,000

\* Tons.    † Pounds.

**MINERAL PRODUCTION.** The value of the State's coal production, the chief part of its mineral total, declined for 1930 to \$568,158,000, from \$644,250,000 for 1929, or by about 12 per cent. Lower prices were averaged to the ton, and less coal was shipped from mines. This held true both of the bituminous and of the anthracite fields. The total quantity of anthracite produced was 69,384,837 net tons for 1930, as against 73,828,195 for 1929; its value, \$354,574,000 for 1930 and \$385,643,000 for 1929. The quantity of bituminous coal mined fell to 124,462,787 net tons for 1930, from 143,516,241 for 1929; the value, to \$213,584,000 (1930), from \$258,607,000 (1929). The production of coke was more sharply reduced, to 14,540,579 short tons for 1930, from 19,856,968 for 1929; and in value, to \$54,098,236 (1930), from \$72,913,229 (1929). Though the State continued to import iron ore much in excess of its own production, its own mines produced less ore, 894,039 long tons for 1930, as against 1,151,130 for 1929; in value, \$1,850,661 (1930) and \$2,382,839 (1929). The production of pig iron, chiefly from imported ore, fell more sharply, to 9,734,591 long tons for 1930, from 14,058,194 for 1929; in value, to \$176,521,843 (1930), from \$257,154,608 (1929). There was a heavy production of ferro-alloys, attaining \$42,361,076 for 1929.

For the State's important industries in nat-

ural gas and in clay products, the latest totals of the U. S. Bureau of Mines dealt with 1929. The clay products of 1929 attained the value of \$49,674,492; for 1928, their total was \$47,928,803. There were produced in 1929, 101,951,000 M cubic feet of natural gas; in 1928, 99,466,000 M cubic feet. In value, the totals were \$48,821,000 for 1929, and \$48,432,000 for 1928.

The quantity of petroleum obtained in the State rose to 12,797,000 barrels for 1930, from 11,820,000 for 1929, but the yearly value of the product fell to \$33,500,000 (1930, estimated), from \$44,800,000 (1929). The Portland cement industry was somewhat less active in 1930, the mills shipping 37,968,647 barrels (1930), as against 39,309,662 (1929); in value, \$52,712,176 (1930) and \$55,600,953 (1929). Stone production attained 18,169,270 short tons for 1929 and 16,546,850 for 1928; in value, \$19,956,410 (1929) and \$18,871,736 (1928). Sand and gravel were dug in 1929 to the value of \$13,658,328. Slate, of which the State was the Union's leading producer, was quarried to the value of \$3,634,258 in 1930; in 1929, of \$4,798,200. The output of lime was 617,000 short tons for 1930 and 782,915 for 1929; in value, \$4,468,000 (1930) and \$5,896,752 (1929). The total value of the native mineral products of the State, exclusive of duplications, was \$892,913,833 for 1929; for 1928, \$881,490,033. For both years the totals were the largest attained by any State of the Union.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering 1929 showed the number of the State's manufacturing establishments as 16,870 (slightly below their number for 1927). These establishments employed 1,006,946 wage earners (more by 2 per cent than the number that had been employed in 1927). The wages paid them amounted to \$1,390,782,260 (exceeding the wage total of 1927 by 5.6 per cent). Materials for manufacture, plus fuel and purchased electricity, cost \$4,000,673,484 (more than 7 per cent in excess of this cost for 1927). The manufactured product was valued at \$7,387,856,808 (exceeding the value of the product of 1927 by 10 per cent). Value added by manufacture was estimated at \$3,387,183,324. Philadelphia, the chief manufacturing centre, accounted for about one-fourth of the State's manufacturing industry. It had 5565 establishments, which employed 244,655 wage earners, paying them wages of \$335,231,822, and attaining an aggregate production of the value of \$1,984,760,404. Pittsburgh had 1374 establishments, which employed 61,525 wage earners, paid them wages of \$91,171,773, and produced manufactured goods to the value of \$545,318,655. Reading's 323 establishments employed 25,978 wage earners, paid them \$31,766,291, and produced \$120,939,332. Johnstown, Allentown, Chester and Erie each produced manufactures in excess of \$100,000,000.

**FINANCE.** State expenditures in the year ended May 31, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$111,183,938 (of which \$30,411,743 was for local education); for interest on debt, \$4,046,154; for permanent improvements, \$41,223,573; total, \$156,578,815 (of which \$55,075,044 was for highways, \$27,167,459 being for maintenance and \$27,907,585 for construction). Revenues were \$169,097,295. Of these special property and other special taxes formed 35.9 per cent; departmental earnings and remuneration of the State for its offi-

cers' services, 7.1; sales of licenses, 40.5 (including taxes of \$29,304,075 on sales of gasoline). The State's funded debt outstanding on May 31, 1930, was \$89,646,070; of this, \$89,221,000 was for highways. Net of sinking-fund assets, it was \$81,575,342. On property there were levied in the year no general State taxes.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 11,141.01. Additional line totaling 17.82 miles had been put under operation in the course of the year preceding, while 30.58 miles had been abandoned. In 1931 were built 53.57 additional miles of first and 11.5 of second track.

**EDUCATION.** For the academic year 1929-30 the number of persons of school age in the State was reported as 2,002,201. There were enrolled in the public schools 1,913,456 pupils. Of these, 1,507,002 were in common schools or elementary grades, and 406,454 were in high schools. The expenditures for public school education totaled \$212,113,813. Teachers' salaries, by the year, averaged \$1258 for elementary and \$1900 for high-school positions.

A State commission was organized in 1931 to study the State's problems of school education. It was the intention to submit to a subsequent Legislature a 10-year programme to be based on the result of such study. The Legislature of 1931 rendered it necessary to give notice to teachers 60 days in advance of the end of a school term if their services were not to continue.

**CHARITIES AND CORRECTIONS.** The function of supervising the penal, reformatory and charitable institutions of the State resided in 1931 with the Department of Welfare, created by an act of 1921. This department has as its head a Secretary of Welfare (Mrs. I. Albert Liveright), holding by appointment for a term of four years.

The State institutions of care and custody, with their populations in December, 1931, included: Eastern State Penitentiary, Philadelphia and Graterford, 2734; Western State Penitentiary, Pittsburgh, 1076; Western State Penitentiary, Rockview, 982; Pennsylvania Industrial School, Huntingdon, 1323; State Industrial Home for Women, Muncy, 120; Pennsylvania Training School, Morgantown, 818; eight State hospitals (mental), at Allentown (1420), Danville (1829), Waymart (618), Harrisburg (1689), Norris-town (3033), Torrance (881), Warren (1790), and Wernersville (1190); for the feeble-minded and epileptics, Pennhurst State School at Pennhurst (1332), Polk State School at Polk (2702), Laurelton State Village (654), and State Colony for Epileptics at Selinsgrove (154).

**LEGISLATION.** The regular session of the General Assembly was protracted by a struggle between Governor Pinchot and his supporters on the one side and the opposing Republican faction on the other, as to the Governor's programme of legislation. As a feature of his campaign against the State Bank Service Commission he recommended the passage of a bill to abolish the Commission and to erect in its place a so-called Fair Rate Board, of members from seven districts of the Commonwealth, having power to confiscate utilities' earnings in excess of the rate of 8 per cent. The members of the Board were to be removable by the Governor. Concurrently an investigating committee of the House inquired into the record of the Public Service Commission and later recommended the abolition of this body. A

separate investigating committee of the Senate on the contrary reported in favor of the Commission. The House voted the Pinchot utility programme with amendments, but the Senate let the measure die in committee. Neither would the House in its turn agree upon substitute measures from the Senate. Consequently the Public Service Commission remained in power.

Two important tax measures were enacted. One subjected motorbus and truck operators to a tax at the rate of eight mills, and the other revised the method for collecting the capital-stock tax in a manner designed to increase the yield. The resulting increase in revenue was to be devoted to higher appropriations for hospitals, to the Mothers' Assistance Fund and to having the State assume the care of county-owned bridges on State highway routes. The Governor's adherents were unable to put through a measure to carry out his undertaking to abolish the Coal and Iron Police, a body of privately maintained guardians in the industrial and mining areas which had become unpopular among the masses. The Legislature voted the submission to popular vote of a proposal to amend the State constitution so as to permit old age pensions; it was necessary, however, that this measure be repassed by the next succeeding Legislature before it could be ratified at the polls. The election law, against the abuses of which there had been much agitation, was altered, but only in minor respects, while a more sweeping election code was defeated in the House.

The proposed State constitutional amendment to allow an issue of \$50,000,000 of bonds for a bonus to former soldiers and sailors was voted for the second and conclusive time, and was submitted to the people for approval. There was enacted a statute redistricting the State into 34 districts, in place of the previous 36, for the election of Federal Representatives. The City Council of Philadelphia was authorized to borrow \$3,000,000 for the relief of the unemployed. The banking law was amended to simplify the efforts of the Secretary of Banking to reopen closed banks. The right was granted to Philadelphia to build hospitals beyond the city limits. The carrying of firearms was prohibited, save by license, and those convicted of committing crimes of violence while carrying firearms without license were subjected to heavy additional penalty.

*Special Session.* Governor Pinchot called the Legislature to convene in special session on November 9, primarily to deal with the need of public relief for the unemployed. His proposals were introduced by his supporters in the form of a group of 19 bills, which required the State and its localities to raise a total of \$136,700,000. The central agency for relief of the unemployed, according to the administration's plan, was to be a State Commission on Unemployment Relief. A wide variety of public activities were to be undertaken. An emergency tax of 2 cents a gallon on gasoline was to produce an estimated \$40,000,000; a tax on cigarettes, \$10,000,000; billboards and advertising agencies were to be subjected to taxes to yield \$2,000,000; a "prosperity bond" issue, reportedly "designed to reimburse contributors to a general relief fund to be raised by the Commission on Unemployment Relief," was to produce \$35,000,000; and communities were to be allowed to borrow some \$40,000,000 against unpaid delinquent taxes. The opponents of the administration prevented the early passage of

any of the major measures embodying the Pinchot plan.

**POLITICAL AND OTHER EVENTS.** Economic depression during the year was severely felt in the western coal and steel area, in the anthracite region and in the manufacturing industries and banking world of Philadelphia. Several banks having deposits running from \$20,000,000 to upward of \$50,000,000 failed in the Philadelphia district. The City of Philadelphia borrowed \$1,500,000 in July, with which to build up its fund for the assistance of the needy unemployed among the population. Judge Harry S. McDevitt in the Court of Common Pleas ordered a receivership of the Philadelphia Rapid Transit Company on April 11. After a delay accorded them, the attorneys for Mitten Management, Inc., operators of the rapid transit system, proposed a reorganization under which the control should pass into the hands of the court, which was to choose six directors, while certain large financial charges made against the transit company and questioned by the court were to be canceled. This offer, made on May 13, was accepted and put into force. Dr. A. A. Mitten, son of the late Thomas E. Mitten of Mitten Management, Inc., offered \$1,000,000 of his father's estate to the new board of directors by way of aiding the reorganization.

A severe let-down in its revenues, due largely to slow payment of taxes, caused financial embarrassment to the city of Philadelphia in December. It was necessary to meet the city's pay disbursements of December 15 with warrants on the city treasury, for lack of cash, and money received by the city had to be set apart to meet interest charges of some \$11,700,000 due on the first of the ensuing year. Several previous payrolls had been met by the expedient of temporary loans, but bankers had refused to continue the process. Failing to place its bonds by the usual means, the city resorted in October to sale of an issue of \$15,000,000 of its bonds directly to investors. About one-half of the issue had been sold, according to a report of mid-December.

Under the administration of Mayor Mackey of Philadelphia, Director of Public Safety Schofield conducted in the spring a series of raids upon alleged vendors of liquor, and thereby became involved in conflict with the regular Republican organization of the city, which asserted that raids were conducted without proper authority of law. The Regional Planning Federation, a body formed to consider plans for the development of Philadelphia and its environs, reported in January, expressing anticipation that the area, inclusive of territory in New Jersey and Delaware, would attain a population of 7,000,000 within six years.

Extensive strikes in the coal fields of western Pennsylvania occurred early in the summer. Their settlement was made more difficult by a rivalry of union organizations, the district organization of the United Mine Workers of America and the National Miners' Union both claiming to represent the strikers. Some of the companies signed agreements with the United organization in June, while the strike at the plants of other companies continued into August, accompanied with evictions of strikers, bombing of non-union miners and reports of much suffering among strikers' families. The American Red Cross was asked to furnish assistance to these people, but Chairman John Barton Payne denied that such work was within the scope of the society. In Pitts-

burgh the city's tallest building, the Gulf Building, 680 feet high, was virtually completed during the year.

**ELECTIONS.** In the 2nd (Philadelphia) District Edward L. Stokes, Republican, was elected on November 3 to fill a vacancy in the House of Representatives. Ex-Mayor J. Hampton Moore, Republican, was elected Mayor of Philadelphia. Charles C. McGovern and C. M. Barr, Pinchot Independents, were elected county commissioners in Allegheny County, against Republican opposition. In Reading the Socialist candidate for Mayor, J. Henry Stump, was defeated by Heber Ermentrout, Fusion candidate.

**OFFICERS.** Governor, Gifford Pinchot; Lieutenant-Governor, Edward C. Shannon; Secretary of the Commonwealth, Richard J. Beamish; Treasurer, Edward Martin; Auditor-General, Charles A. Waters; Attorney-General, William A. Schnader; Superintendent of Public Instruction, James N. Rule.

**JUDICIARY.** Supreme Court: Chief Justice, Robert S. Frazer; Judges, Emory A. Walling, Alexander Simpson, Jr., John W. Kephart, William I. Schaffer, George W. Maxey, James B. Drew.

**PENNSYLVANIA, UNIVERSITY OF.** A non-sectarian institution of higher education in Philadelphia, primarily for men but with certain courses open for women, founded in 1740. It is composed of the college of arts and sciences, the Towne Scientific School (engineering and chemistry), the Moore School of Electrical Engineering, the Wharton School of Finance and Commerce, the school of fine arts (architecture, fine arts, music), the school of education, the graduate school, and the professional schools of medicine, graduate medicine, law, dentistry, veterinary medicine, hygiene, and public health. The 1931 autumn enrollment was 14,051, including all schools and departments. Of those enrolled, 8230 were candidates for degrees; 2711 were candidates for certificates; and 3100 were partial students and auditors. The enrollment for the 1931 summer session was 2162. The faculty numbered 1448. The productive funds amounted to \$19,486,378. The income for the year from all sources, exclusive of hospitals and museums, was \$5,701,849.

The important gifts and subscriptions received during the year included \$1,180,000 from Cyrus H. K. Curtis for the special endowment campaign. The library contained 740,294 bound volumes and 70,000 pamphlets. President, Thomas S. Gates, LL.D. Provost, Josiah H. Penniman, Ph.D., Litt.D., LL.D., L.H.D. See **UNIVERSITIES AND COLLEGES**.

**PENNSYLVANIA ACADEMY OF FINE ARTS.** See **ART EXHIBITIONS**.

**PENNSYLVANIA STATE COLLEGE.** A nonsectarian institution for the higher education of men and women at State College, Pa., founded in 1855. On Nov. 1, 1931, the undergraduate enrollment totaled 4320, distributed in seven schools. The resident faculty numbered 641, including agriculture and home economics extension staff. The productive funds of the college amounted to approximately \$517,000, and the income for operation for the year to \$4,294,311. The library contained 126,784 volumes. A home economics building, at an estimated cost, equipped, of \$400,000, and a dairy building, at an estimated cost of \$500,000, were under construction during 1931. The school of mineral industries also established

an experiment station with Dr. A. W. Gauger as director, an extension division, and an option in fuel technology. President, Ralph D. Hetzel, L.D.

**PENROSE, RICHARD ALEXANDER FULLERTON, JR.** An American geologist, died July 31, 1931, in Philadelphia, Pa., where he was born Dec. 17, 1863. He was graduated from Harvard University with the A.B. degree in 1884 and took the Ph.D. degree in 1886. In 1888 he was geologist in charge of the survey of eastern Texas for the Texas Geological Survey, and the following year was appointed by the Geological Survey of Arkansas to report on the manganese and iron ore regions of that State. In 1894 he was special geologist for the U. S. Geological Survey to examine and report on the gold districts of Cripple Creek, Colo.

He held the chair of economic geology at the University of Chicago from 1895 to 1911. He was a member of the National Research Council. His publications include *The Nature and Origin of Deposits of Phosphate of Lime* (1888); *Geology of the Gulf Tertiary of Texas* (1890); *What a Geologist Can Do in War* (1917); and *The Last Stand of the Old Siberia* (1922). See **GEOLOGY**.

**PENROSE MEDAL.** See **GEOLOGY**.

**PENSIONS.** See **MATERNITY PROTECTION**; **OLD AGE PENSIONS**; **UNITED STATES under Veterans' Administration**.

**PERAK, pa'rik'.** The most northern of the Federated Malay States. See **FEDERATED MALAY STATES**.

**PERITONITIS.** See **SURGERY, PROGRESS OF**.

**PERKIN MEDAL.** See **CHEMISTRY, INDUSTRIAL**.

**PERLIS.** See **NON-FEDERATED MALAY STATES**.

**PERMANENT COURT OF INTERNATIONAL JUSTICE.** See **ARBITRATION, INTERNATIONAL**; **LEAGUE OF NATIONS**; **WORLD COURT**.

**PERSIA.** A monarchy of southwestern Asia, extending north from the Persian Gulf and the Gulf of Oman to the Caspian Sea. Capital, Tehran (Teheran); reigning Shah in 1931, Riza Khan Pahlevi.

**AREA AND POPULATION.** The area is estimated at about 628,000 square miles; the population at from 8,000,000 to 10,000,000, about 2,000,000 of whom are nomads. Europeans in the country were estimated at from 1000 to 6000. The chief cities, with their approximate populations, are: Tehran, 250,000; Tabriz, 200,000; Isfahan, 80,000; Meshed, 70,000; Kermān, Shirāz, and Kermānshāh, with 45,000 each; and Resht and Yezd, 40,000 each. The bulk of the population are Moslems of the Shiite sect.

**EDUCATION.** About 90 per cent of the population can neither read nor write. In 1930, the number of pupils enrolled in the schools was about 146,870; more than 750 students were studying in Europe, about half of them on Government pensions. There were a number of foreign missionary schools.

**PRODUCTION.** Persia is a predominantly agricultural country, producing chiefly wheat, barley, rice, tobacco, fruits, wool, opium, gums, cotton, and silk. Government estimates of 1930 crop yields, in pounds, were: Cotton, 65,464,000; tobacco, 32,732,000; tea, 196,000. Wool production (in grease) was 39,278,000 pounds. Petroleum is the chief mineral product, the output in 1930 totaling 45,420,000 barrels (42,145,000 barrels in 1929). The Anglo-Persian Oil Company controls the bulk of the Persian production. Iron, coal, copper, lead, manganese, marble, cobalt, and nickel are also found, but there is

little production. Rug making is the only important manufacturing enterprise. Construction was started on a modern spinning mill at Aliabad.

**COMMERCE.** In the fiscal year ended Mar. 20, 1930, imports were valued at 919,854,000 krans (\$77,176,000) and exports at 1,574,838,000 krans (\$132,129,000), compared with imports of 819,865,000 krans (\$82,560,000) and exports of 1,517,601,000 krans (\$152,822,000) in the previous fiscal year. The Union of Soviet Socialist Republics furnished 31.3 per cent of the total imports; the United Kingdom, 20.8 per cent; British India, 16.2; and the United States, 7.6. Of the total exports (excluding mineral oils, bullion, and coins sent chiefly to the United Kingdom), the U. S. S. R. took 30.8 per cent; the United States, 17.9; the United Kingdom, 12.9; and British India, 7.6. The leading exports in 1929-30 were: Mineral oils, \$91,250,000; wool rugs, \$12,316,000; and opium, \$5,891,000.

**FINANCE.** The budget as voted for the fiscal year ended Mar. 20, 1931, estimated revenues at 353,374,827 krans and expenditures at 352,987,776 krans. Actual results were not available at the end of 1931, but revenues were believed to be lower than the estimate. The budget for 1931-32, as presented to Parliament, estimated receipts (excluding royalties from the Anglo-Persian Oil Company) at 320,610,399 krans and 822,611 pahlavis, and expenditures at 321,925,258 krans and 800,684 pahlavis. The figures in pahlavis (the new currency unit intended to equal the pound sterling in value) covered the last two months of the fiscal year, during which the pahlavi was expected to be placed in circulation. The kran exchanged at \$0.0839 in 1930 and at \$0.1007 in 1929.

On Mar. 20, 1929, the funded debt was £1,626,480 (\$7,915,260) and the floating debt amounted to 11,676,660 krans (\$1,144,000).

**COMMUNICATIONS.** In 1930, Persia had 230 miles of railway line in operation and 7953 miles of highways (including 186 miles of macadam and 5903 miles of graded dirt roads). Air lines, operated by the Junkers Company of Germany, extended 2050 miles and linked Tehran with Meshed, Bagdad, Bushire, and Baku. The Indo-European Telegraph Company, which for 60 years had operated a telegraph line between Tehran and London, turned over its control of all lines in Persia to the Persian government on Feb. 28, 1931. In 1929-30, Persian Gulf ports were entered by 10,259 vessels, of 7,829,000 net registered tons; Caspian Sea ports were entered by 4952 vessels, of 697,000 tons.

**GOVERNMENT.** Executive power is vested in the Shah, an absolute ruler down to 1906, when he consented to a constitutional form of government with a parliament or Mejlis. The actual running of the government is in the hands of a cabinet. Prime Minister in 1931, Mehdi Quli Kahn Hedayat, appointed March, 1929.

**HISTORY.** Unrest continued among the Kurdish tribes of northwestern Persia, as well as among the Kurds of northern Iraq and eastern Turkey (see KURDISTAN). A correspondent of the London *Times* reported that in April, 1931, he witnessed a seven-mile column of Kurds, with their livestock and belongings, being deported by Persian government forces to new lands south of Tabriz from their haunts near Mount Ararat. Evidences of recent fighting abounded in the Kurdish districts near Mount Ararat, the correspondent stated, confirming earlier news reports.

Shah Riza Khan Pahlevi proceeded with his nationalistic programme of modernization on Western lines. Foreign trade became a government monopoly on Feb. 25, 1931. In June, Lord Parmoor of the British Cabinet stated in the House of Commons that the Persian government had restricted the importation of certain articles and that foreign, and particularly British, merchants had suffered severely. Lord Parmoor's statement provoked a nationalistic outburst in Persia, where it was regarded as an intrusion into the country's internal affairs. To end child marriages, a law which became effective Sept. 24, 1931, fixed the marriageable age at 16 years for women and 18 years for men; the law also permitted women to divorce their husbands under certain conditions. The main buildings of the Persian Parliament House at Tehran were destroyed by fire on Dec. 10, 1931. See IRAQ under *History*.

**PERSIAN ARCHAEOLOGY.** See ARCHAEOLOGY.

**PERSIAN ART EXHIBITIONS.** See ART EXHIBITIONS.

**PERSIAN LITERATURE.** See PHILOLOGY, MODERN.

**PERU, pè-rōō.** A republic on the Pacific coast of South America; bounded on the north by Ecuador and Colombia; on the east by Brazil and Bolivia; and on the south by Chile. Capital, Lima.

**AREA AND POPULATION.** The area of Peru is about 524,800 square miles. The population in 1930 was estimated at 6,237,000, as compared with 4,574,000 in 1896. Over one half of the population were native Indians. For the period 1925 to 1929 annual births and deaths averaged 143,605 and 60,637, respectively. The estimated population of the principal cities in 1930 was: Lima, 300,000 (205,000, including suburbs, in 1920); Callao, 75,000 (52,843 in 1920); Arequipa, 70,000; Cusco (Cuzco), 40,000; Chiclayo, 35,000; Trujillo, 30,000; Iquitos, 25,000.

**EDUCATION.** For the school year 1929-30, there were 318,735 pupils enrolled in 3567 primary schools, with an average attendance of 65 per cent; 11,078 pupils were in public high schools, 1397 in normal schools (1928), and 2138 in the four universities (1928).

**PRODUCTION.** Agriculture is the principal industry and cotton is the basic crop, upon which the prosperity of the country largely depends. For the crop year April, 1931-March, 1932, cotton production was estimated at 185,000 bales, compared with the normal crop of 210,000 to 220,000 bales. Production of other leading crops in 1929-30 was: Sugar, 428,000 metric tons; wheat, 4,453,000 bushels; rice, 5,103,000 bushels. Coffee and cacao also are important. Wool production (1930) was about 10,300,000 pounds.

Low prices, labor difficulties, and restrictive legislation curtailed mineral production to a point 60 per cent below normal by the end of 1931. The value of mineral output in 1929 was \$147,321,000 (\$121,604,000 in 1928). Petroleum production in 1930 was 12,773,000 barrels (13,034,000 in 1929); copper, 58,276 metric tons; silver, 15,501,000 troy ounces; gold, 90,054 troy ounces; lead, 19,586 metric tons; zinc, 11,276 metric tons; coal, 200,000 metric tons; and vanadium, 479 metric tons. Manufacturing is confined chiefly to the production of smelted ores, petroleum products, cotton and wool textiles, flour, beer, leather, shoes, etc., for local consumption.

**COMMERCE.** Foreign trade declined drastically in 1930, according to preliminary returns. Imports and exports were valued at 13,327,000 Peruvian pounds (\$48,749,000), and £24,113,000 (\$88,207,000), respectively, compared with £18,985,000 (\$75,937,000) and £33,508,000 (\$134,026,000) for 1929. The United States supplied 38.2 per cent of all Peru's imports in 1930 and purchased 39.3 per cent of her exports. Great Britain and Germany supplied 16.9 and 11.5 per cent of the imports, respectively, and took 18.5 and 7.6 per cent of the exports. The chief imports, in order of value in 1929, were foodstuffs, machinery and tools, and cotton manufactures. The principal exports (1929) were metals and ores, gasoline, raw cotton, crude petroleum, and sugar. During 1931, imports were estimated to have declined about 32 per cent below 1930 levels and exports about 39 per cent below.

**FINANCE.** The budget for 1930 estimated revenues and expenditures at £14,098,719 (140,987,190 soles). In December, 1930, the Minister of Finance estimated that closed accounts would show a deficit of at least 20,000,000 soles. The 1930 budget was carried over to 1931 and another heavy deficit resulted. On June 30, 1930, the external debt of the National Government totaled \$89,215,141 and £3,551,900 and the internal funded debt was £426,400 and 49,639,235 soles, while the internal floating debt totaled 32,478,215 soles. Under a new monetary law passed Apr. 18, 1931, the par value of the gold sol was reduced from the equivalent of \$0.40 United States currency to \$0.28. Exchange was effectively stabilized on this basis during the remainder of the year.

**COMMUNICATIONS.** Railway lines in 1929 extended 2810 miles, of which 642 miles were state owned. There were 12,002 miles of highways in 1930, including 1140 miles of macadam and 4805 miles of graded and drained earth or gravel roads. A government air line was operated between San Ramon and Iquitos in 1930, while American and French international lines connected the principal cities with leading points in North and South America. Capacity of vessels entering Peruvian ports, including Lake Titicaca and the Amazon River, in 1929 aggregated 17,728,000 net registered tons.

**GOVERNMENT.** The Constitution of Jan. 18, 1920, vested executive power in a president, elected for five years, and legislative power in a congress, consisting of a senate of 35 members and a house of representatives of 110 members, all elected by direct vote for five years. Following the overthrow of President Leguia (see 1930 YEAR BOOK) Congress was dissolved in August, 1930. By a decree of Sept. 2, 1930, a temporary junta assumed all functions conferred on the executive and legislative powers by the Constitution. Constitutional government was restored on Dec. 8, 1931 (see *History*).

### HISTORY

**THE GENERAL SITUATION.** Peru in 1931 experienced one of the most trying and discouraging periods in its political, industrial, and economic history. The economic depression, which commenced in the latter part of 1929, steadily increased in intensity. As a result of low prices received for their products, many farmers ended the year with a net loss and mining companies were forced to close down completely or operate at greatly reduced levels. A succession of tempo-

rary juntas governed the country throughout most of the year. The influence of the laboring classes continued to increase after the August, 1930, revolution. Despite increasing unemployment, hundreds of trade unions were formed and strikes were frequent. These factors combined to further the demoralizing effect of the economic depression upon business and industry. The financial condition of the Provisional government became steadily worse and on Mar. 1, 1931, it was announced that the Government could no longer meet interest and sinking fund payments on the external debt.

**POLITICAL DEVELOPMENTS.** The state of political instability inaugurated by the fall of President Leguia in August, 1930, continued throughout 1931. The beginning of the year found Provisional President Luis M. Sánchez Cerro's prestige seriously impaired. Hero of the anti-Leguia revolution, he had promised that a constitutional assembly would be called in November, 1930. When the assembly was postponed and Sánchez Cerro on Feb. 12, 1931, announced his candidacy for the office of Constitutional President, the conviction spread that he was planning to continue in power indefinitely. Moreover, the military junta which Sánchez Cerro headed was at odds over the distribution of Cabinet posts. His support among the laboring masses was weakened by the suppression of workers' unions and deportation of their leaders, following the strikes of November, 1930, at Cerro de Pasco and Talara. In the middle of February, troops of the Provisional government occupied the University of San Marcos at Lima, as a result of student unrest.

The Government put down a military revolt at Lima on Feb. 20, 1931, after considerable fighting. The following day the garrison at Arequipa revolted against Sánchez Cerro and the Cusco (Cuzco) garrison followed suit. Troops from Iquitos, and a warship, sent to Mollendo to stamp out the Arequipa revolt, joined the rebels. Another revolt broke out at Piura in the north and on March 1 Sánchez Cerro accepted an ultimatum from naval officers and resigned. He surrendered the government to a civilian junta headed by Dr. Ricardo Leoncio Elías, Chief Justice of the Supreme Court. Five days later troops loyal to Sánchez Cerro ousted the civil government and established another military junta headed by Lieut. Col. Gustavo Jimenez. Colonel Sánchez Cerro immediately left the country for a trip to Europe and Colonel Jimenez induced Lieut. Col. David Samanez Ocampo, leader of the Arequipa rebels, to accept the Provisional Presidency. This the latter did on March 10, establishing a civilian cabinet, except for the Ministers of War and the Navy. Another military revolt against the Ocampo government by troops in Lima and Callao on March 23 was put down with considerable loss of life. Despite repeated minor outbreaks, and serious labor disorders, the Ocampo régime remained in control until the resumption of constitutional government in December.

**THE PRESIDENTIAL ELECTION.** Colonel Ocampo announced at the end of May that Presidential, congressional, departmental, and municipal elections would be held September 13; on August 15 the date was postponed to October 11. The electoral decree made voting compulsory for all literate males between the ages of 21 and 60, prohibited clergymen and persons bearing arms from voting, and removed control of the voting

machinery from the municipal political factions to insure authentic secret balloting. However, only 373,000 electors were inscribed on the voting register when it was closed August 31.

With the permission of the Provisional government, Colonel Sánchez Cerro returned to Peru July 1 to begin his campaign for the Presidency. Popular among the rank and file of the army and supported for political reasons by the land-owning classes, he also had a strong following among the mestizos and other groups forming the laboring classes. The other leading candidates were Victor Haya de la Torre, leader of the "Apra" (American Popular Revolutionary Alliance), Dr. José de la Jara y Ureta, Minister to Brazil and candidate of so-called National Alliance, and Dr. Arturo Osóres, a leader supported by a "personalista" organization. Colonel Sánchez Cerro's platform called for a moral and economic regeneration of the country and a constitutional government along lines followed in the United States. Haya de la Torre ran on a radical platform, including progressive nationalization of mines and railways, prohibition of trusts and monopolies, a protective tariff for national industries, the division of large estates, and "internationalization" of the Panama Canal. All the candidates professed to be in sympathy with Peru's growing nationalism.

Considering widespread evidences of economic and political disintegration, the campaign and the election of October 11 were fairly orderly. The National Election Board on November 28 announced that Colonel Sánchez Cerro had won the election, with a majority over the three opposing candidates. Official results gave the total vote as follows: Sánchez Cerro, 155,378; Haya de la Torre, 106,551; Jara y Ureta, 21,756; and Dr. Osóres, 12,082. Sánchez Cerro's supporters also secured a plurality in the Assembly. The Constituent Assembly convened November 28 to commence the task of revising the Constitution and on December 8 Colonel Sánchez Cerro was inaugurated as Constitutional President. Rioting and street fighting in Lima immediately afterward and an Opposition conspiracy to prevent his inauguration indicated that his régime as regularly elected President was to be no less trying than his term as Provisional President.

The year ended with the Constituent Assembly engaged in partisan and largely sterile debate upon the proposed constitutional changes. On December 20, the Assembly unanimously approved a resolution calling for the trial of former President Leguía for treason. Meanwhile Leguía, an aged and stricken man after 16 months' imprisonment, was moved from the penitentiary at Lima to the naval hospital near Callao on November 16 for treatment for bronchial pneumonia.

**OTHER DEVELOPMENTS.** Important legislation was placed in effect by the Provisional government during the year. A decree of March 18 authorized the revision of the import tariff to facilitate entry of vital products not produced locally, to protect local industries, and to restrict importation of superfluous and luxury articles. A decree-law of May 18 created a Central Reserve Bank, which was formally opened on September 3. Banking reforms, including the establishment of the office of Superintendent of Banks, were decreed on May 23. To aid the agricultural and cattle industries, the Government in August created the Agricultural Bank, with a capital of 20,000,000 soles, of which 8,500,000

soles were immediately available in cash. These laws followed in the main the recommendations of an American financial commission, headed by Prof. Edwin W. Kemmerer, which was engaged early in the year to reorganize the financial structure of the government.

Representatives of the central banks of Peru, Chile, Bolivia, Ecuador, and Colombia met in Lima December 2 to discuss mutual financial problems arising from the economic depression. Professor Kemmerer and several observers from the Federal Reserve Bank of the United States were present. The questions of central bank credits and of securing foreign credits of intermediate length to finance trade were considered of primary importance, according to the resolutions adopted. The central bankers affirmed their faith in the gold standard.

Consult Ernest Galarza, "Debts, Dictatorship and Revolution in Bolivia and Peru," *Foreign Policy Reports*, vol. vii, No. 5, May 13, 1931.

**PETROLEUM.** The world's production of crude petroleum during 1931 amounted to 1,370,299,000 barrels, a decrease of nearly 40,000,000 barrels, or 2.8 per cent, from the total of 1,410,037,000 barrels recorded for 1930, according to estimates of E. B. Swanson, chief petroleum economist of the U. S. Bureau of Mines. United States production dropped from 898,011,000 barrels in 1930 to 850,275,000 barrels in 1931, a decline of nearly 48,000,000 barrels, or 5.3 per cent. Production in other countries, however, increased from 512,026,000 barrels in 1930 to 520,024,000 barrels in 1931, a gain of approximately 8,000,000 barrels, or 1.5 per cent. United States production, consequently, accounted for 62 per cent of the 1931 world total. In 20 of the previous 21 years, United States production had exceeded the 1931 ratio. The production of crude petroleum in the Dominion of Canada in 1931 was

<sup>a</sup> 1931 figures subject to slight revision.

<sup>b</sup> 1931 figures represent calendar year; preceding year on basis fiscal year ended September 30. Calendar year estimate, 1930, 135,165,000 barrels.

1,584,000 barrels, making a record. This was due to the development of the Alberta field, which had an output in 1930 of 1,522,220 barrels.

According to preliminary estimates of the U. S. Bureau of Mines, the output of natural gasoline and benzol in the United States also declined in 1930, imports of crude and refined products fell off, and the total new supply of all oils fell to below 1,000,000,000 barrels for the first time since 1926. The downward trend in stocks of all oils, which began in the first half of 1930, was continued up to November, 1931. The net withdrawal from stocks of all oils in 1931 amounted to 44,245,000 barrels, the largest annual decrease ever made. Exports of crude oil increased in 1931 to 25,546,000 barrels from 23,705,000 barrels in 1930, but exports of refined products declined from 132,794,000 barrels in 1930 to 98,969,000 barrels in 1931. The indicated domestic demand for all oils in 1931 amounted to 900,982,000 barrels, a decline of 25,478,000 barrels from the previous year. This decrease reflected principally the reduced consumption of fuel oil.

The daily average output of crude petroleum increased steadily during the first seven months of the year but fell off drastically in August and September, due to enforced shut-downs in Texas and Oklahoma (see these articles). Upon the removal of these restrictions, daily average production increased in October and November but never reached the levels of the period April-July. Drilling activity in 1931 was at the lowest point in more than thirty years. Completions in 1931 totaled 12,432, compared with 21,240 in 1930. The number of oil wells completed amounted to 6788, a decrease of 42 per cent from 11,640 in 1930. The percentage of dry holes fell from 32 in 1930 to 29 in 1931, a reflection of the drilling of "inside" wells in the East Texas field.

Texas and New Mexico alone showed a gain in output in 1931. Production in Texas, the leading State, amounted to 331,544,000 barrels, an increase of 41,087,000 barrels over 1930. Production in both California and Oklahoma, which ranked second and third, respectively, fell off materially. The output in California in 1931 amounted to 188,830,000 barrels, a decline of about 40,000,000 barrels and the lowest output since the ascendancy of the Los Angeles Basin fields in 1923. The total production in Oklahoma totaled 180,809,000 barrels, or more than 35,000,000 barrels below the total in 1930. This brought the output in Oklahoma down to the levels of the years just prior to the discovery of the prolific Seminole pools. The output in New Mexico increased approximately 50 per cent over 1930 and that State became the sixth-ranking producing State, ahead of both Arkansas and Wyoming.

The development of the East Texas field, discovered in October, 1930, overshadowed all other field activities in 1931. It became evident early in 1931 that the East Texas field was to be one of exceptional size—the proven acreage as of the close of 1930 aggregated approximately 175 square miles. The total wells drilled in the field during 1931 amounted to about 3500, of which about 95 per cent were producers. The majority of the wells were of the gusher type and production rose rapidly after February. The peak production—about 1,000,000 barrels daily—and the low point in prices—5 to 15 cents per barrel—

were reached in August and were instrumental in causing the field to be shut-in under military order on August 17. It was reopened September 5, when the wells were restricted to 225 barrels daily. As more wells were completed, the allowable per well was gradually reduced. The total output for the year amounted to 107,990,000 barrels, which, despite the restrictions imposed during the last five months of the year, constituted one of the very few occasions in which any district has yielded more than 100,000,000 barrels in a year.

The Oklahoma City field, despite the fact that it was almost completely shut in from about August 3 to October 10, and was materially curtailed, showed a gain in output from 34,603,000 barrels in 1930 to 47,306,000 barrels in 1931. Practically all of the fields in California declined in output in 1931, a notable exception being the Kettleman Hills field which produced 17,544,000 barrels, compared with 6,209,000 barrels in 1930. Several important discoveries were made in Kansas in 1931, but the output of the State declined to 36,885,000 barrels from 41,638,000 barrels in 1930.

Imports of crude petroleum again declined; the total brought in during 1931 amounted to 47,250,000 barrels, 24 per cent below 1930. The major portion of this decrease was recorded in receipts of Venezuelan crude, as the following table indicates:

[Thousands of barrels of 42 U. S. gallons]

Source	1930	1931
Venezuela .....	35,080	25,222
Mexico .....	10,093	8,208
Colombia .....	14,204	12,329
Other countries .....	2,752	1,491
<b>Total imports .....</b>	<b>62,129</b>	<b>47,250</b>

REFINED PRODUCTS. Runs to stills of crude petroleum amounted to 894,608,000 barrels, a decline of 32,839,000 barrels, or 4 per cent, from 1930. Quantitatively, the decline in runs of domestic crude exceeded the decrease in the amount of foreign oil processed, but on a percentage basis the latter was the more important. Practically the only district that showed a substantial decline in runs of domestic crude was California; on the other hand, practically all of the decline in foreign crude runs occurred in the East coast area. The production of motor fuel showed little change for the second successive year; the total produced in 1931 amounted to 437,888,000 barrels, compared with 440,728,000 barrels in 1930 and 439,393,000 barrels in 1929. The percentage yield of gasoline at refineries continued to increase, the result largely of increased cracking. Imports of gasoline, which had been increasing rapidly, fell off 20 per cent—from 16,927,000 barrels in 1930 to 13,621,000 barrels in 1931. On the other hand, exports of motor fuel suffered their first decline since 1921; the total exported in 1931 was 45,832,000 barrels, compared with 65,575,000 barrels in 1930. The indicated domestic demand for motor fuel exceeded the expectation of many in 1931 by showing a gain of 2 per cent over 1930. Stocks of motor fuel increased from 40,098,000 barrels on January 1 to 42,320,000 barrels on December 31, an increase of 2,222,000 barrels. This was largely due to material additions to the oil in storage in December.

The trade in kerosene in 1931 was generally below the standards of 1930. Production and consumption both declined, but stocks decreased—about the only encouraging feature. The trend of the statistics of lubricating oils and wax in 1931 resembled closely that for kerosene. The output of lubricating oils in 1931 was 22 per cent below 1930, a reflection of declining use. The output of gas oil and fuel oil again declined and indications pointed to a substantial decrease in use by most agencies.

**NATURAL GASOLINE.** The output of natural gasoline declined for the second successive year; the total in 1931 was 1,804,800,000 gallons, compared with 2,210,500,000 gallons in 1930, a decrease of 18 per cent. This material decline resulted mainly from the curb placed on drilling. The trend in stocks of natural gasoline held at plants in 1931 was quite similar to that in 1930; the total on hand Dec. 31, 1931, amounted to 27,100,000 gallons, compared with 24,300,000 gallons on hand January 1. The practice of blending natural gasoline to produce finished motor fuel at the plants continued to decline.

See COLOMBIA and IRAQ under *History*; also OKLAHOMA and TEXAS.

**PEYTON, GEN. SIR WILLIAM ELIOT.** A British soldier, died in London, Nov. 14, 1931. Born May 7, 1866, he attended Brighton College and in 1885 joined the 7th Dragoon Guards. Becoming a captain in the 15th Hussars in 1896, he was advanced through the grades to major general in 1914, lieutenant general in 1921, and general in 1927. His early service was in the Sudan (1897-98), South Africa (1899-1900), and India (1908-12). In the World War he led the 2nd Mounted Division at Gallipoli, and was then sent to Egypt as commander of the Western Frontier Force in the expedition against the Senussi. He commanded the 40th Division during operations in France and Flanders from June, 1918, to March, 1919, after which he returned to India. He was military secretary to the Secretary of State for War during 1922-26, and commander-in-chief of the Scottish Command from 1926 until his retirement in 1930.

**PHENOMENOLOGY.** See PHILOSOPHY.

**PHILADELPHIA.** See MUNICIPAL GOVERNMENT.

**PHILADELPHIA MUSEUM.** See ART MUSEUMS.

**PHILADELPHIA TRI-STATE DISTRICT.** See CITY AND REGIONAL PLANNING.

**PHILHARMONIC-SYMPHONY ORCHESTRA.** See MUSIC.

**PHILIPPINES,** fil'p-ins, -pens -pins. The largest island group of the Malay Archipelago; a possession of the United States, ceded by Spain in the treaty of Apr. 11, 1899. Capital, Manila.

**AREA AND POPULATION.** Only 466 of the 7000 islands which make up the group have an area of one square mile or more. The most important islands with their area in square miles are as follows: Luzon, 40,814; Mindanao, 36,906; Samar, 5123; Negroses, 4902; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799; Cebu, 1695; Bohol, 1534; and Masbate, 1255. Total area, 114,400 square miles; population, according to the census of 1918, 10,314,310. In 1931, the population was estimated at 12,420,927. The population of Manila was 285,306 in 1918; estimated at 370,160 in 1929. Other cities, with the population in 1918, were Cebu, 65,502; Legaspi, 52,756; Iloilo, 49,114. For the years 1924-28,

annual births averaged 395,499 and deaths 217,034, the rates per 1000 of population being 33.2 and 17.9, respectively. From 1926 to 1930, an average of 12,608 immigrants entered annually, compared with 1232 emigrants. More than 80 per cent of the retail business of the islands was in the hands of Chinese. About 1,000,000 of the population in 1930 spoke English. The three principal native dialects are Tagalog, Ilocano, and Visayan.

**EDUCATION.** Education is free, secular, and co-educational, and schools are conducted in English. The insular government in 1930 appropriated nearly \$10,500,000 for educational purposes, or over 25 per cent of the total revenues. Of the 3,224,104 children of school age in 1930, 37.64 per cent, or 1,213,711, were enrolled in public schools. There were 7642 students attending the University of the Philippines at Manila in 1929.

**PRODUCTION.** Agriculture is the main support of the population. In 1930, about 9,900,000 acres, or 13.5 per cent of the total area, was under cultivation; there were 13,100,000 acres of grass and open land, and 46,500,000 acres of forests. Crops produced in 1929 were valued at \$248,926,000 (\$238,991,000 in 1928). Production of the chief crops in 1930 was: Rice (rough), 113,267,000 bushels; corn, 14,024,000 bushels in 1929; maguay, 39,416,000 pounds; Manila hemp (abaca), 430,858,000 pounds; tobacco, 101,634,000 pounds; coconuts, 2,042,943,000 coconuts; coffee, 3,013,000 pounds; cacao, 2,683,000 pounds; sugar, 1,962,207,000 pounds. In 1931, there were 45 sugar centrals, with a total grinding capacity of about 43,000 tons daily, and representing an investment of about \$82,500,000.

Production of other leading products (1930) was: Cigarettes, 4,744,000,000; cigars, 286,000,000; copra, 1,014,000,000 pounds (year ended June 30, 1930); coconut oil, 358,000,000 pounds; gold, 161,000 troy ounces in 1929; timber (cut), 619,290,000 board feet; split rattan, 3,137,000 pounds. Locally caught fish to the value of about \$50,000,000 are consumed annually.

**COMMERCE.** According to preliminary figures, exports in 1931 were valued at 205,000,000 pesos, compared with 266,334,000 pesos in 1930 and 328,893,000 in 1929 (1 peso equals \$0.50). Imports were valued at 193,000,000 pesos, as against 246,186,000 pesos in 1930 and 294,321,000 in 1929. The 1931 exports and imports represented decreases of 15 and 22 per cent, respectively, from the 1930 levels, while the 1930 figures were 19 and 16 per cent, respectively, lower than in 1929. Exports to the United States accounted for 80 per cent of the 1931 total and in value were 14 per cent below those of the previous year. Imports into the Philippines from the United States in 1931 declined 23 per cent and amounted to 63 per cent of the total, compared with 64 per cent in 1930.

The leading exports, in order of value, in 1930 were, Sugar, \$52,240,000; coconut oil, \$19,159,000; abaca, \$18,426,500; and copra, \$13,433,500.

**FINANCE.** The annual report of the Governor General for the calendar year 1930 showed ordinary revenues of \$40,819,405 and ordinary expenditures of \$39,939,396. The revenues represented a decrease of \$2,815,883 from the 1929 figure and the expenditures an increase of \$1,022,477. The unappropriated cash surplus at the end of 1930 was \$6,366,010. The 1931 budget estimates, as approved by the Governor General,

balanced at 77,347,000 pesos (\$38,673,000). Government financial collections in 1931 were about 20 per cent below normal, but through strict economy and the use of previous surpluses the closed budget was made to balance at approximately 76,000,000 pesos (\$38,000,000). Preliminary budget estimates for 1932 were reduced to 50,000,000 pesos (\$25,000,000). The outstanding bonded indebtedness of the insular government on June 30, 1931, totaled \$68,400,500 and that of the Provinces and municipalities \$9,456,500.

**COMMUNICATIONS.** The addition of about 15 miles of line to the railways during 1930 brought the total mileage to over 800, of which the government-owned Manila Railroad, operating in Luzon, had about 675 miles. The first regular commercial air service in the islands was opened between Manila and Baguio (the summer capital) on Dec. 24, 1931. Highways open to traffic in June, 1930, comprised 4366 miles of first-class roads, 2310 miles of second-class, and 1395 miles of third-class. Inter-island shipping was improved in 1930 by the addition of a new steamship on a weekly service from Manila to Cebu, Zamboanga, and Iloilo. In 1930, 1548 vessels, of 5,949,000 net tons, entered Philippine ports and 1565, of 6,052,000 tons, cleared.

**GOVERNMENT.** Executive power rests in a governor general, appointed by the President of the United States; and in six departmental secretaries, all Filipinos except the vice governor, who is also secretary of public instruction. A senate of 24 members and a house of 93 members are elected by popular vote (except for nine representatives and two senators appointed by the Governor General). A council of state, headed by the Governor General, serves as a link between the executive and legislative branches. Governor General in 1931, Dwight Filley Davis, who assumed office July 8, 1929.

### HISTORY

**INDEPENDENCE MOVEMENT.** With independence for the Philippines apparently almost within their grasp, the native political leaders during 1931 modified their demand for immediate and complete sovereignty over Philippine affairs. Throughout 1930 and 1931 public opinion in the United States appeared to be swinging in the direction of an immediate grant of independence. Reinforcing this sentiment was the demand of farming and dairying interest for a tariff on competitive products from the Philippines and the agitation on the Pacific coast for the curtailment of Filipino immigration. Apprehensive of the economic consequences of the early severance of the free trade relationship with the United States, the majority (Nacionalista) party in November, 1931, abandoned its programme of "complete, immediate, and absolute independence," which had proved a winning slogan in Philippine politics for 19 years. Instead the party adopted the proposal of its leader, Manuel Quezon, President of the Philippine Senate, for a period of 10 years or more of advanced autonomy, to be followed by a plebiscite.

Senator Quezon's autonomy proposal was approved by the lower house of the Philippine Legislature on November 9, the closing day of the session. The Senate indirectly approved the project by voting full confidence in its author. When a new independence mission sailed for the United States Dec. 5, 1931, indications were that it

would oppose a too precipitous severance of the ties with America.

A similar policy had been advocated in important native newspapers earlier in the year, particularly after Senator Arthur H. Vandenberg of Michigan declared during a visit to the islands (May 13) that the foreclosure of the American market "would be nothing short of a calamity, impairing the livelihood of every person on the island." Governor General Davis, in his annual report, emphasized that free trade with the United States had saved the islands from "a major economic disaster" during the world-wide financial depression. However, the "immediate independence" agitation was revived during a visit to the islands in June and July of Senator Harry B. Hawes of Missouri, co-author of the Hawes-Cutting bill for the gradual relinquishment of American control (see 1930 YEAR BOOK). Senator Hawes announced that he was visiting the Philippines to determine whether the people really desired independence. This and the Senator's speeches attacking those who advised caution in the extension of independence were reported to have aroused a ferment of nationalism. The ferment found expression in a huge parade held in Manila July 12 in honor of Mr. Hawes, which turned into the greatest independence demonstration in the history of the islands. Of the 40,000 marchers, some 200 turned aside to invade the premises of the Army and Navy Club, where they stoned American Army officers and their families, before being driven off.

Toward the end of August, Secretary of War Hurlley arrived in Manila to study the situation on behalf of President Hoover. He remained until September 26 and following his return to Washington he announced (December 21) that his forthcoming report would not recommend immediate independence. Meanwhile President Hoover, in a statement issued October 27, made it clear that his administration was opposed to immediate independence for the islands. The President declared that the stability of the insular government must be assured and economic freedom attained before political independence could be successful. Despite the administration's stand, a bill extending complete independence to the Philippines on July 4, 1933, was introduced at Washington December 11. However, the prospect for favorable action by Congress was diminished by the development of the Sino-Japanese conflict in Manchuria and at Shanghai.

**OTHER DEVELOPMENTS.** Governor General Davis sailed from Manila on an indefinite leave of absence Nov. 21, 1931, amid the acclamation of thousands and requests for his return. There had been frequent rumors of his impending resignation. Vice Governor George C. Butte, assumed the direction of the Government in his absence.

Evidence of widespread unrest among the poorer classes of the population was seen in a number of outbreaks during the year, which appeared to be partly religious, partly nationalistic, and partly communistic in origin. Discontent was furthered by the economic depression, grave abuses by landlords, usury, political terrorism by the ruling political parties, and the agitation of Communists and others. In his annual report of July 12, 1931, Governor General Davis said that Communist agitators, financed by Moscow, were active in the islands, and that the situation in the rural districts "required careful watch-

ing." According to the American Civil Liberties Union, local Filipino authorities had outlawed the Communist movement.

A band of about 200 Colorums, or religious fanatics, captured the town of Tayug in January, but were driven out by the constabulary January 12. On March 1, U. S. Army officials in the Philippines reported the discovery of a Colorum plot for the capture of Corregidor Island, the fortress in Manila Bay. Forty-one participants in the January rising received long prison sentences on April 25. In connection with the electoral campaign of May, over 300 alleged Communists were arrested in Manila May 31 on charges of unlawful assemblage and sedition. Of numerous other plots reported during the year, the most important was an alleged Colorum-Communist conspiracy of December to capture Manila and overthrow the government. Numerous arrests were made and on December 17 formal charges of sedition and incitement to insurrection were filed against 154 members of the Tugulan Society.

The Moro outbreak of 1930 in Lanao was brought to an end Oct. 17, 1931, with the surrender of Sultan Mamur, leader of the revolt.

The Philippine elections of June 2 resulted in the extension of the Nacionalistas' control over all branches of the government. The voting was marked by numerous brawls, the killing of two persons, and widespread charges of fraud. The newly formed Radical party made little headway. The Governor General during the year suspended a number of officials on charges of graft and bribery.

**BIBLIOGRAPHY.** Bruno Lasker, *Filipino Immigration to Continental United States and to Hawaii* (Chicago University Press, 1931); Maximo M. Kalaw, "Why the Filipinos Expect Independence," *Foreign Affairs*, January, 1932.

**PHILLIPS UNIVERSITY.** A coeducational institution of higher learning at University Station, Enid, Okla., founded in 1907. The enrollment for 1930-31 in all departments was 901. The faculty numbered 39. The productive endowment amounted to \$648,830. The library contained 20,321 volumes, exclusive of public documents. President, Isaac Newton McCash, D.D., LL.D.

**PHILOLOGY, CLASSICAL.** The best way to gain a fair conception of the more important contributions to classical philology is to examine lists of articles and books, or abstracts of them, or both, given in certain periodicals—*The American Historical Review*, *The American Journal of Philology*, *Antiquity*, *The Classical Journal*, *The Classical Quarterly*, *The Classical Review*, *The Classical Weekly*, *Historical Outlook*, *History*, *Athenaeum* (published at Pavia, Italy), *Bulletin Bibliographique et Pédagogique du Musée Belge* (a companion to *Le Musée Belge*, *Revue de Philologie Classique*), *Philologische Wochenschrift*, *Gnomon*, and *Revue de Philologie*. The reviews, too, in these periodicals are very helpful. Especially valuable is *Bibliotheca Philologica Classica*, *Beiblatt zum Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft*, whose aim is to cover all publications, both articles and books (except such as are definitely pedagogical in character), in the whole field of classical philology. No attempt is made, however, to indicate the relative importance of items listed. A very valuable feature of this work is the "Namenverzeichnis," which gives in alphabetical order the names of the

scholars whose articles or books are named in the body of the work, with references back to the numbered items which describe articles or books. For a notice, by C. Knapp, of vols. liii-lv, covering the years 1928, 1927, 1928, see *The Classical Weekly*, xxiii, pp. 158-159.

*The Year's Work in Classical Studies*, published in England, lists material that appears between July 1 and June 30, under such captions as "Greek Literature," "Latin Literature," "Greek History," "Roman History," "Greek and Roman Religion," "Ancient Philosophy," "Greek Archaeology and Excavation," "Italian Archaeology and Excavation," "Papyri," and "Roman Britain."

To *The Loeb Classical Library* (see *YEAR BOOKS*, 1911-1930) additions were made, on the Greek side, of versions of Demosthenes, *Olynthiacs*, *Philippics*, *Minor Public Speeches*, *Speech Against Leptines*, J. H. Vince; Hippocrates, and Heracleitus, *On the Universe* (in one volume: the translation of Hippocrates is now complete), W. H. S. Jones; Lysias, W. R. M. Lamb; Philo, F. H. Colson and G. H. Whitaker (the third of ten volumes); Plutarch, *Moralia*, F. C. Babbitt (the third of fourteen volumes); Saint Basil, *The Letters*, R. J. Deferrari (the third of four volumes). On the Latin side there were added versions of Bede, *Opera Historica* (complete, in two volumes), J. E. King; Cicero, *Pro Milone*, *In Pisonem*, *Pro Scauro*, *Pro Fonteio*, *Pro Rabirio*, *Pro Marcello*, *Pro Ligario*, *Pro Deiotaro*, N. H. Watts; St. Augustine, *Select Letters*, J. H. Baxter; Tacitus, *The Histories*, Books iv-v, C. H. Moore, and *The Annals*, Books i-iii, T. Jackson (in one volume); Tertullian, *Apology*, and *De Spectaculis*, T. R. Glover, and Minucius Felix, G. H. Rendall (in one volume); Vitruvius, *On Architecture*, F. Granger (the first of two volumes).

The great *Lexicon Plautinum*, by G. Lodge, was very greatly advanced by the publication of vol. ii, parts viii and ix, pages 673-864. These parts contain the articles "Sto (completed) . . . Video (to be completed)." Nearly 1800 pages of this monumental work have appeared; it is highly gratifying to know that the work by the close of 1931 was all in type. This work, the fruit of over 40 years of devoted labor, is the most extensive undertaking that any American classical scholar has thus far, single-handed, essayed and accomplished. By this work Professor Lodge has made the facts concerning Plautus's vocabulary and syntax accessible to all, in convenient form; in so doing he has rendered a service of the highest importance not only to students of Plautus but also to all students of early Latin. Since Plautus is the first Latin author whose writings have come down to us in anything like complete form, the facts about his usage of words and his syntax bulk large in any view of the vocabulary and the syntax of early Latin.

During the last year or so progress was made on two other lexicographical projects of the very highest importance. Of the tenth edition of Liddell and Scott, *A Greek-English Lexicon*, five parts (out of ten) have appeared (1020 pages). The *Lexicon* has been carried through the letter Kappa. Of the *Thesaurus Linguae Latinae* three parts have appeared recently: volume v, fascicle ix (*dolor . . . doneo*), in 1930, volume v, 2, fascicle 1 (*e . . . efficaa*), in 1931, and

volume vi, fascicle 10 (*germen . . . gloria*), also in 1931.

Progress has been made also with *Paulys Realencyklopädie der Klassischen Altertumswissenschaft*. To speed the completion of the work the publication of a second series of volumes ("Zweite Reihe") was begun in 1914. By September, 1931, of the first series fourteen and a half volumes (*Aal . . . Mesyros*) had been published; of the Zweite Reihe three and a half volumes (*Ra . . . Symposion*) had appeared. There have been published also five supplementary volumes (*Aba . . . Demokratia*, *Herodes and Herodotos*, *Aachen . . . ad Iuglanden*, *Abacus . . . Ledon*, *Agamemnon . . . Statilius*).

In 1931 another important dictionary was completed, Dr. F. Preisigke's *Wörterbuch der Griechischen Papyrusurkunden mit Einschluss der Griechischen Inschriften, Aufschriften, Ostraka, Mumienbilder usw. aus Ägypten*. The third volume, in three parts (1929, 1929, 1931) was done by E. Reissling. For a review of vols. i-ii of this work see *The Classical Weekly*, xxiv, pp. 149-151, 175-176.

In 1930-1931 four parts (320 pages, covering *ā, ah to cynus*) were issued of the third edition of A. Walde, *Lateinisches Etymologisches Wörterbuch der Lateinischen Sprache*. The revision is most thorough; the work has been highly praised by competent reviewers. Two other works in this field appeared in 1931: *Dictionnaire Étymologique de la Langue Latine: Histoire des Mots* (1108 large pages), by E. Ernout and A. Meillet, and *A Concise Etymological Dictionary of Latin*, by T. G. Tucker.

In *The American Journal of Philology*, lii, appeared "Gratitude to Parents in Greek and Roman Literature," J. W. Hewitt; "Notes on Lucan," H. C. Nutting; "On the Authenticity of the Letters Attributed to Saint Basil in the So-Called Basil-Apollinarius Correspondence," Sister Agnes Clare Way (on the basis of unfamiliar usages in the language of both letters and of statements by Saint Basil in his authentic letters the author holds that the letters she discusses were not written by Saint Basil, but were clever forgeries done by some of his enemies); "On Seneca's Apocolocyntosis," K. S. Scott; "Prothetic Vowels in Sanskrit, Greek, Latin and Germanic," F. A. Wood; "Was the Capitoline Triad Etruscan or Italic?," Inez Scott Ryberg (the author maintains that the Capitoline Triad—Jupiter, Juno, and Minerva—was in the strictest sense an Etruscan invention); "The Date of Manilius," R. B. Steele (the author assigns Manilius to the last years of Augustus); "Spenser's Hesiod," Josephine W. Bennett (the author maintains that Spenser, in his account of the Nereids in the *Faerie Queene*, depended on a Latin verse translation of Hesiod, *Theogony*, which was made by Boninus Mombricitus, and was published in 1474); "Hapax Legomena in Plato," A. Fossum (by the study of words that occur once only the author seeks to determine the order in which Plato's dialogues were composed); "Latin Words in the Greek Inscriptions of Asia Minor," A. Cameron; "Syntaximon and Laographia in the Arsinoite Nome," C. W. Keyes (a study of certain taxes levied in Egypt); "Euripides' Alceastis," D. L. Drew; "ἸΠΟΛΙΠΟΦΩΝΗΣΙΣ in the Scholia to Homer," G. W. Duckworth (a discussion of the passages in the scholia to Homer in which statements are made to the effect that Homer uses foreshadow-

ing or forecasting to give his hearers an anticipation of a fulfillment pleasing to them); "Euripides' Artistic Development," H. E. Mierow; "Digressio in the Orations of Cicero," H. V. Canter; "Problems in Aristophanes' 'Vespae' 818-823," H. Comfort.

From *Classical Philology*, xxvi, may be mentioned "The First Publication of Horace's Odes," G. L. Hendrickson (an attempt to fix the possibilities in the way of the publication by Horace of various collections of his Odes prior to the publication of Books i-iii together, which, scholars in general believe, took place in 23 B.C.); "The Status of Actors in Rome," T. Frank; "Valerius Flaccus in the Mediaeval Florilegia," B. L. Ullman; "Lucius Arruntius," R. S. Rogers; "The Historical Tenses and their Functions in Latin," J. J. Schlicher; "The Lupercalia in the Fifth Century <A.D.>," W. M. Green; "The Spartan Gymnopaedia," B. D. Meritt (a study of the calendar at Sparta); "The Place of the Final Defeat of the Helvetians," J. E. Dunlap; "Materials for the History of a Popular Classical Theme," J. G. Fucilla (the theme is that of the First Idyl of Moschus); "The Place and Date of the First Performance of the Persians of Timotheus," S. E. Bassett (the author thinks that the Persians was composed for presentation at Athens between 412 and 408 B.C. Wilamowitz had assigned the first performance to Miletus); "The Removal of Bonds from Prisoners and Slaves in Times of Stress," E. S. McCartney; "Studies in Greek Noun-Formation: Dental Terminations iv.i," C. H. Carruthers; "Lucan and his Roman Critics," Eva M. Sanford; "Horace and Octavian," J. Elmore (a study of Horace, *Carmina* 1.2); "The Character Treatment of Inorganic Roles in Roman Comedy," Ortha L. Wilner; "Two Unreported Persius Manuscripts," Dorothy M. Robathan; "The Cleitophon of Plato," G. M. A. Grube; "Arithmetic in Philo Judaeus," F. E. Robbins; "Octavianus Puer," J. H. McCarthy (the author argues that the contempt shown to Octavian on his first appearance in Italy, contempt based on his youth, "changed his allegiance and with it the course of history . . ."); "The Vatican Terence," C. R. Morey; "The Evidence of Early Latin on the Subjunctive in *Cum*-Clauses," W. Petersen (the author takes issue sharply with the theories of the late Professor W. G. Hale. He holds that "there is no truth in the distinction <made by Professor Hale> between descriptive *cum*-clauses with the subjunctive and temporal clauses with the indicative. . . . The subjunctive with *cum* temporal was due to a mechanical extension of its use <i.e. extension of the use of *cum* with the subjunctive> in causal (perhaps also adversative) clauses, and never had any tangible meaning whatsoever"); "Was the Commentary on Virgil by Aelius Donatus Extant in the Ninth Century?," J. J. Savage (the author answers his question in the affirmative; he thinks the commentary was to be found at Liège); "Epilogomena to 'The Wooden Horse,'" W. F. J. Knight.

In *The Classical Journal*, xxv, xxvi, appeared "Obdura—A Dramatic Monologue," H. F. Rebert (a discussion of Catullus's eighth poem); "Venusia and the Native Country of Horace," H. V. Canter; "Cicero the Poet," J. W. Spaeth, Jr.; "Caesar's Clemency," Cornelia C. Coulter (the author argues that Caesar's magnanimity was genuine); "Literary Criticism in Ovid," R. E. K.

Pemberton (in two cases, at least, the author thinks, "Ovid's views are of permanent value, in addition to being definite advances beyond the thought of his age"); "Cicero's Poetic Interests," J. W. Spaeth, Jr.; "Dramatic Technique and the Originality of Terence," Helen R. Clifford (the author thinks that Terence's "technical ability is weak in comparison with that of his Greek prototypes. . . . The parts which he himself has created reveal weakness in characterization and aimlessness of movement. . . . The author disputes Norwood's view that Terence's plays, if studied in chronological order, "exhibit a steady advance in technical excellence"); "Vergil—His Philosophic Background and his Relation to Christianity," C. N. Smiley; "Terence and Menander," R. C. Flickinger (this author, too, holds that Terence has little "architectonic power . . ." and believes that Terence's "command of the minutiae of dramatic technique" is slight); "Julius Caesar's Luck," Elizabeth Tappan; "Roman Beauty Culture," Orthla L. Wilner; "Texture in Vergil's Rhythms," W. F. J. Knight.

*The Classical Weekly*, xxiv, xxv, contained the following articles; "Vergil and the Roman Forum," H. E. Robert; "Human Elements in Vitruvius, De Architectura," E. LeV. Crum; "Dr. Walter Leaf's Homer and History and the Catalogue of the Ships in Iliad 2," A. Shewan; "Five Campaigns of Excavation at Corinth: Summary of the Results," T. L. Shear; "Cicero, In Catilinam 3.14," C. Knapp; "The Treatment of Catiline in the Latin Literature of the Early Empire," E. T. Sage; "Ancient Greece as Depicted in a Medieval Outline of History," C. C. Mierow (the outline the author had in mind is the work by Otto, Bishop of Freising, entitled 'The Two Cities,' or 'The Chronicle'); "Ancient Jeux D'Esprit and Poetical Eccentricities," W. B. Sedgwick; "A Note on Gaius Memmius," J. B. Stearns (an attempt to clear up the difficult problem of the relation of the Roman poet Lucretius to Memmius, to whom he dedicated his great poem, *De Rerum Natura*). "Self-Revelation in Vergil: The Heart of a Poet," W. C. Greene; "Reflections on Rereading Vergil," Emily H. Dutton; "The Effect of Foreign Language Study Upon Habits of Thinking," B. W. Bradley; "Pietas Versus Violentia in the Aeneid," E. Adelaide Hahn; "Gadarenes in Pagan Literature," M. Hadas (a discussion of the influence exercised on Roman thought and culture by three men of Semitic extraction, or at any rate born in a Semitic town, Gadara; the men are Menippus, Meleager, and Philodemus); "Merlin and Macaroni," B. W. Mitchell (a study of the macaronies written by Teofilo Folengo, 1491-1544, who wrote under the name Merlinus); "Caesar, De Bello Gallico 1.10: The Effects of Climate on Roman History," T. W. Valentine; "The Younger Pliny Discloses the Social Life of his Day," Sister M. Aloysius Blakely; "The Medieval Church and Vergil," T. W. Valentine (the author holds that "the Aeneid, to an extraordinary extent, lends itself to a Christian interpretation and would seem like home territory to a medieval Christian . . . this fact goes a long way toward explaining the esteem in which Vergil was held by the medieval Church").

In *Transactions and Proceedings of the American Philological Association*, lxi, which contains the papers read before the Association at

its meeting of December, 1930, the following articles appeared: "Sacer Esto," H. Bennett (a study of the infliction by the Romans of the death penalty); "Martial and Vergil," J. W. Spaeth, Jr. (the author seeks to show that in numerous instances Martial "has skilfully and artistically employed Vergilian diction and rhythm, one or both, in his own verses. Oftentimes he reproduces Vergil's words in the same metrical position as they occupy in the original, showing that both language and music have lingered in his memory . . ."); "Some Emendations of Plato's Laws," L. A. Post; "Emperor Worship in Ovid," K. Scott; "Perses versus Hesiod," J. F. Latimer (a fresh study of Hesiod's poem, *Works and Days*); "The Theater of Aeschylus," R. C. Flickinger; "The Location of the Palace of the Atridae in Greek Tragedy," C. P. Bill; "The Pursuit of Hector," S. E. Bassett (a discussion of Iliad, v, 131-207); "The Venerable Bede and the Colosseum," H. V. Canter (a discussion of Bede's famous words, "Quamdiu stat Colisaeus, stat et Roma," etc.; Professor Canter holds that Bede is referring to the Colosseum, not, as some scholars have thought, to the Colossus, a statue of Nero; he maintains also that the name Colosseum, which has nothing directly to do with Colossus, but denotes rather a giant structure, was first used about 975 A.D.); "The Dates of the Megalesia," G. D. Hadzsits; "Lavinia; An Interpretation," Dorothea C. Woodworth, a study of Vergil's portrayal of Lavinia, the Latin woman whom Aeneas was to marry after his arrival in Italy. The author's conclusion may be quoted in full:

As Lavinia then represents the ideal Roman woman, and as Aeneas is universally recognized to be Vergil's portrait of the ideal Roman man, their marriage, not in spite of but because of its unromantic quality, forms the inevitable and satisfying conclusion to the plot. At the same time, it represents, I believe, not symbolically but as a precedent having a general though incomplete parallelism, Vergil's view that Augustus' act in taking Livia from her husband, like that of Aeneas in taking Lavinia from Turnus, was justified by the fact that he, like Aeneas, had for his sole motive no personal passion or infatuation, but a lofty and worthy dynastic purpose.

In this volume appeared also "The Authorship of the Moretum," R. B. Steele (the author inclines to regard Vergil as the author of this poem, which forms part of the Appendix Vergiliana); "Cleon's Assessment and the Athenian Budget," A. B. West (the assessment in question is that of 425-424 B.C., made by Cleon during the Peloponnesian War).

From the *Philological Quarterly*, x, we mention "Some Renaissance References to *Sic vos non vobis*," Emma M. Denkinger (a discussion of references in Renaissance writings to the four famous verses, ascribed by ancient biographers to Vergil, each of which began with *Sic vos non vobis*. The story goes that Vergil published these verses at first anonymously, with a challenge to any one who could do so to complete the verses); "Repeated Verses in Classical Poetry With Particular Reference to the Theognidea," E. L. Highbarger.

In England the more accessible depositories of the results of classical study are *The Year's Work in Classical Studies* (see the second paragraph of this article), *The Classical Quarterly*, and *The Classical Review*. The articles in *The Classical Review* are very numerous, and are in consequence very short. Their combined value,

however, is great. From *The Classical Quarterly*, xxiv, we mention "Eupatridae, Archons, and Areopagus," H. T. Wade-Gery; "Prose-Rhythm and the Comparative Method," W. H. Shewring; "Anaxagoras: Predication as a Problem in Physics," A. L. Peck; "Livy and the *Lexica*," W. B. Anderson; "Studies in the Structure of Attic Society: Demotionidae," H. T. Wade-Gery; "Further Considerations on the Site of Vergil's Farm," R. S. Conway; "The Boy, The Grapes, and the Foxes," A. Y. Campbell; "The Plotinian Logos and its Stoic Basis," R. S. Witt; "Terence Quotations in Servius Auctus," J. D. Craig; "The Geography of the Orphic Argonautica," J. R. Bacon; "The Fox and the Grapes," A. D. Knox (this paper was called forth by that of A. Y. Campbell, mentioned above); "Homodyne in the Fourth Foot of the Vergilian Hexameter," W. F. J. Knight (by *homodyne* the author means coincidence of stress, or word-accent, and ictus, or metrical accent); "The Hellenism of Clement of Alexandria," R. E. Witt.

There remains only space enough to mention a few of the books that have come to the writer's attention. Since it is, in general, clear from its title to which field of classical philology each book belongs, the books are listed in the alphabetical order of their author's names:

Allen, P. S., *Medieval Latin Lyrics*; Baker, G. P., *Justinian*; Bérard, V., *Did Homer Live?* (translated by Brian Rhys); Buckland, M. W., *The Main Institutions of Roman Private Law*; Burris, E. E., *Taboo, Magic, Spirits, A Study of Primitive Elements in Roman Religion*; Cambridge *Ancient History*, volume viii, and volume iii of Plates; Conway, R. S., *The Makers of Europe*; D'Alton, J. F., *Roman Literary Theory and Criticism: A Study in Tendencies*; Dinsmoor, W. B., *The Archons of Athens in the Hellenistic Age*; Duckett, Eleanor S., *Latin Writers of the Fifth Century*;

Edgar, C. C., *Zenon Papyri in the University of Michigan Collection*; Field, G. C., *Plato and his Contemporaries*; Franke, O., *Euripides bei den Deutschen Dramatikern des Achtzehnten Jahrhunderts*; Fraser, H. M., *Beekeeping in Antiquity*; Haerhoff, T. J., *Vergil in the Experience of South Africa*; Hack, R. K., *God in Greek Philosophy to the Time of Socrates*; Hadzsitz, G. D. (Editor), *Classical Studies in Honor of John C. Rolfe*; Harmon, A. M. (Editor), *Yale Classical Studies*, Volume Two; Havers, W., *Ein Versuch zur Erforschung der Bedingungen und Triebkräfte in Syntax und Stilistik*; Herzog, R., *Die Wunderheilungen von Epidauros, Ein Beitrag zur Geschichte der Medizin und der Religion*; Holmes, T. Rice, *The Architect of the Roman Empire*, 27 B.C.-14 A.D.; Hubeaux, J., *Les Thèmes Bucoliques dans la Poésie Latine*;

Jachmann, G., *Plautinisches und Attisches*; Johnson, A. C., and Van Hoesen, H. B., *Papyri in the Princeton University Collections*; Kieckers, E., *Die Sprachstämme der Erde*; Laing, G. J., *Survivals of Roman Religion*; Laistner, M. L. W., *Thought and Letters in Western Europe*, A.D. 500-900; Leifer, F., *Studien zum Antiken Aemterwesen. I. Zur Vorgeschichte des Römischen Führeramts*; Marsh, F. B., *The Reign of Tiberius*; Milne, J. G., *Greek Coinage*; Mooney, G. W., *C. Suetoni Tranquilli De Vita Caesarum Libri VII-VIII: Galba, Otho, Vitellius, Divus Vespasianus, Domitianus*, with Introduction, Translation, and Commentary; Moore, O. H., *Ancient Beliefs in the Immortality of the Soul*;

Naylor, L. H., *Chateaubriand and Virgil*; Pedersen, H., *Linguistic Science in the Nineteenth Century* (translated from the Danish by J. W. Spargo); Pike, J. G., *Classical Sketches and Studies*; Rand, E. K., *The Magical Art of Virgil*; Randall-MacIver, D., *Greek Cities in Italy and Sicily*; Rick, H., *Neue Untersuchungen zu Platonischen Dialogen*; Showerman, G., *Rome and the Romans, A Survey and Interpretation*; Smith, Nellie A., *The Latin Element in Shakespeare and the Bible*; Sparrow, J., *Half-lines and Repetitions in Virgil*; Suhr, E. G., *Sculptured Portraits of Greek Statesmen*;

Wells, J., and Barrow, R. H., *A Short History of the Roman Empire to the Death of Marcus Aurelius*; Whibley, L. (Editor), *A Companion to Greek Studies*, fourth edition; Willamowitz-Moellendorf, U. von, *Der Glaube der Hellenen*, vol. i; Witte, K., *Horazens Sermonendichtung*; Wright, F. W., *Cicero and the Theater*.

**PHILOLOGY, MODERN.** In the survey of Philology for the YEAR BOOK in 1930, the growth of the nationalistic spirit in countries the world over and its possible effects on the future of languages and their growth was considered. During 1931 the discussion regarding precedence of languages continued in all parts of the world. Thus, as recorded in the *Romanic Review* (New York), it was reported from Manila on April 23 that "the Spanish language is definitely disappearing from the Philippine Islands." In support of this assertion it was pointed out that two Spanish daily papers of Manila had ceased publication and the three still published had declined in circulation, whereas the English newspapers of the same city reported a steady growth in numbers of readers. The *New York Times* concluded that "within a very few years it is believed that the use of Spanish will be either the mark of mixed Spanish blood, or an affectation of culture."

It was reported from Brussels on May 17 that legislation was passed by the Belgian Parliament compelling all State officials to be bilingual. Previous thereto Flemish officials were obliged to speak French, but Walloon officials were not forced to speak Flemish (see BELGIUM under History).

The Provisional government of the Spanish Republic was also struggling with the language problem, with the Catalans, Basques, and Majorquese (inhabitants of the Balearic Islands) demanding the right of compelling their schools to give instruction in their respective languages. Provision was made in the new Spanish Constitution for instruction in Castilian in all primary and secondary schools, but permitting autonomous regions to teach the regional language in addition to the official tongue (see SPAIN under History). What was taking place in the above-mentioned countries was characteristic of many other nations.

Another question perplexing educators, especially in countries little troubled by the problem of linguistic minorities, was: What foreign language shall take precedence in the educational programmes of their schools and colleges? Germany, above all, appeared to be torn asunder by the problem since the Prussian Minister of Education made French the chief non-classical language in the upper school curriculum, basing his action "on the belief that French was of greater cultural significance." To this the German teachers replied that it was impossible to make French a universal major language requirement in the

face of popular opposition which was evident from the fact that more than one-half of the Prussian schools affected had gone over to English.

In the United States the action taken in 1930 by the Columbia College Faculty when it decided that the French and German languages "stood by themselves as the most important of the modern languages" and that, therefore, Spanish and Italian rank with other modern languages as of inferior cultural significance, wrought havoc with the registration in the courses of the latter two languages. Indeed colleges all over the United States adopted the stand taken by Columbia with the result that, unless there should be a decided change in the trend of educational requirements, Spanish and Italian henceforth were to be doomed to the rank of languages of minor cultural importance.

The progress of English toward becoming the world's language has been steady and sure. Efforts of enthusiasts toward substituting an artificial language in its stead appear not only vain but almost absurd. The results of the 23rd International Esperanto Congress, held in Cracow, Poland, in August, 1931, revealed that, notwithstanding the vigorous propaganda carried on by its adherents, it had made little or no progress. On the other hand, it was announced from Bonn, Germany, on October 25, that the distinguished German scientist, Prof. Erich Hoffmann, of Bonn University, was engaged in an active propaganda for the adoption of English as the international language on the ground, says the *New York Times*, of "facilitating communication and promoting the cause of international peace." He held that English is most suitable for such use "because of its brevity and relative simplicity, facilitating the learning process, especially for students of Germanic or Romance speech."

The Committee of Experts for the Coördination of Linguistic Bibliography, organized under the auspices of the International Institute of Intellectual Coöperation—to which attention was called in the 1929 YEAR BOOK made satisfactory progress during the year under the direction of the philologist, Antoine Meillet, Professor in the Collège de France. National centres were established in Italy, Spain, Belgium, Switzerland, Holland, and Portugal.

The fourth session of the Linguistic Institute, created and directed by the Linguistic Society, of America, was held at the College of the City of New York from June 29 to August 7. Of the 29 courses offered only three failed to draw any registrants. Discouraged by the generally low registration in all courses, the Executive Committee of the Society decided that no session of the Institute be held in 1932 and that "decision about holding a session in 1933 had better be postponed."

Since the Linguistic Institute was projecting a Linguistic Atlas of the United States and Canada, emphasis in the 1931 session was placed on courses designed especially for workers on the Atlas.

On August 17 a group of scholars, under the direction of Hans Kurath, Professor of German and Linguistics in Ohio State University, began the preliminary work on the Atlas in the New England area. The investigation was started by Dr. Kurath and Prof. Miles L. Hanley, of the University of Wisconsin, in Connecticut. Their

co-workers included Dr. Guy Lowman of Yale, who gathered material in Vermont; Cassil Reynard, formerly of the Case School of Applied Science, Cleveland, and Martin Joos, of the University of Wisconsin, who worked respectively in eastern and western Massachusetts. The survey, which ultimately was to spread from New England to all parts of the United States, received financial support from the American Council of Learned Societies.

While the field work in New England was to require only about 15 months, it was not expected that the Atlas for the entire country would be completed before the end of ten years. One thousand tentative questions, which had been prepared with a view to determine the habits and forms of speech of persons in every stratum of society, were to be tried out on 1000 New Englanders during 1932. Thus, to the question: "What would you call a deep, narrow valley?" the answer might be a "ravine, glen, valley, gulch, gorge, hollow, gully, dingle, dale, vale, or dell," depending on local usage.

Other parts of the questionnaire were to deal with pronunciation, special or set phrases and expressions, the use of singular and plural verbs, the peculiarities of sentence structure, etc. In American English there are in some words from 1500 to 2000 variable features which may be shown in inflection, vocabulary, spelling, or a common use in a set phrasing. By comparing American dialects with one another as well as with foreign ones in sections of England, Ireland, France and other nations, the editors of the Atlas hoped to be able to present a panorama of the genesis and growth of American speech.

What the Committee of Experts for the Coördination of Linguistic Bibliography and the Linguistic Society of America were trying to do for philology and linguistics, the International Commission of Modern Literary History was seeking to do for the history of literature.

The Commission, which has its headquarters at 47 Boulevard Garibaldi, Paris, engaged upon three important undertakings during 1931. The first had for its aim a survey of the international literary relations of the countries where the Slavic, Finno-Ugrian or Baltic languages were spoken. The second related to the preparation of manuals and reference works containing data, theories and opinions relating to the history of national literatures. This material was to be supplied in the form of biographies, bibliographies, analyses, and general judgments concerning an author and his work. The third undertaking related to the preparation of a *Répertoire littéraire chronologique international*, which will include the following categories of data: (1) historical facts dealing with patrons of letters and literary events; (2) literary facts, such as founding of Academies and literary societies, reviews, theatres and salons; (3) biographical data of authors; (4) publications, with prefaces, important revisions, principal translations; (5) dramatic presentations, including dates, places and number of times the play was acted; and, (6) oral manifestations: addresses, sermons, lectures, courses, etc., which have exercised a profound influence. The meeting of the commission held at Budapest, May 20-24, 1931, was devoted to the methodology of historians of literature.

ANTHROPOLOGY AND ARCHÆOLOGY. A few works on the subject of anthropology, which is discussed in full elsewhere (see ANTHROPOLOGY) in this

volume, should be mentioned here as of importance to students of linguistics. Thus, Sir Arthur Keith's *New Discoveries Relating to the Antiquity of Man* (New York) is a popular account of the most recent researches and theories, while George S. Duncan's *Prehistoric Man* (Boston) supplies a useful introduction to the subject. Other works include *Early Man: His Origin, Development and Culture* (London), containing contributions by Sir Arthur Keith, Prof. Elliott Smith and Prof. J. L. Myres; W. Cosby Bell's *The Making of Man* (*ib.*), being the Bishop Paddock Lectures for 1929-30; James G. Leyburn's *Handbook of Ethnography* (New Haven, Conn.), a reference work supplying the names and locations of more than 12,000 primitive tribes and peoples, designed to aid the serious reader of such works as Frazer's *The Golden Bough* or Sumner and Keller's *The Science of Society*.

Contributions to the history and study of archaeology in Europe and Asia include the following: Firth Scott, *This Reeling World* (London), in which the author maintains that such vestiges of the past as Stonehenge are many thousand years older than generally believed; Sir Flinders Petrie, *Decorative Patterns of the Ancient World* (London), a study drawn from his archaeological lore; and V. Gordon Childe, *The Bronze Age* (London), a study of prehistoric industrial development in Northwestern Europe in the period subsequent to the new Stone Age.

American archaeology, now most enthusiastically studied, is represented by Emily C. Davis, *Ancient Americans: The Archaeological Story of Two Continents* (New York), an illustrated account of the ancient peoples that inhabited North and South America; Thomas Gann and Eric Thompson, *The History of the Maya* (*ib.*), a brief study of the Maya people from the earliest times to the present day; Wm. Gates, *An Outline Dictionary of the Maya Glyphs* (Baltimore), containing a concordance and analysis of the glyphs; Lewis Spence, *The Magic and Mysteries of Mexico* (Philadelphia), being an account of the Arcane secrets and occult lore of the ancient Mexicans and Mayas; Philip A. Means, *Ancient Civilizations of the Andes* (New York), a reconstruction not only of the Incas and their empire, but also of the still earlier civilizations of the Andes; Mr. and Mrs. G. A. Gardner, *Rock-Paintings of Northwest Cordoba* (Oxford), a beautifully and carefully prepared monograph; J. Eric Thompson, *Archaeological Investigations in the Southern Cayo District of British Honduras* (Chicago), a report of the first and second expeditions to British Honduras, conducted by the Field Museum of Natural History; and Irving Crump, *Mog, the Mound Builder* (New York), a history of the prehistoric Indians of the Mississippi Valley, containing illustrations by Remington Schuyler (see ARCHÆOLOGY).

FOLKLORE. In folklore and kindred subjects there is Sir James G. Frazer, *Garnered Sheaves* (London), a volume of essays, addresses and reviews; Stanley D. Porteus, *The Psychology of a Primitive People* (New York), a study of some Australian aborigines; and Rodney Gallop, *A Book of the Basques* (*ib.*), an illustrated account of the people and a study of their character and folklore.

Superstitions, magic, witchcraft, etc., are studied in Arturo Graf, *The Story of the Devil* (New York), a collection of unusual material, translated from the Italian, dealing with the

idea of the devil, its origin, growth and manifestations from the beginning of the Christian era to the present; Grillet de Givry, *Witchcraft, Magic and Alchemy* (Boston), an account of different branches of magic, translated from the French by J. Courtenay Locke; M. Oldfield Howey, *The Cat in the Mysteries of Religion and Magic* (London), a study of the rôle and symbolism of the cat in mythology and magic; Sir E. A. Wallis Budge, *Amulets and Superstitions* (Oxford), containing a list of ancient and modern amulets together with their meaning; C. J. S. Thompson, *The Mystery and Lore of Monsters* (London), dealing with the monstrous beasts and men of Babylon, Greece, Rome and the Middle Ages and giants, dwarfs and prodigies in mythology and tradition, and containing a foreword by Sir D'Arcy Power; and Wm. M. Auld, *Christmas Traditions* (New York), a history of Christmas and the customs associated with it.

HISTORY. Contributions to ancient and medieval history that are of importance to the philologist include the following: Eugen Georg, *The Adventure of Mankind* (New York), a general account of the human race from the paleological period to the possible man of the future; Prof. L. W. Lyde, *Peninsular Europe* (London), supplying an original interpretation of the influence of geographical factors on human activities and movements; Dr. Muller-Lyer, *The Family* (New York), a study of the evolution of the human family, translated from the German; René Grousset, *The Civilizations of the East* (New York), a general history, containing 313 illustrations, of the arts of Near and Middle Asia, translated from the French by Catherine A. Phillips; Julius Lippert, *The Evolution of Culture* (*ib.*), a history of culture, translated from the German by George P. Murdock; *The Cambridge Ancient History, Volume of Plates III* (Cambridge), edited by S. A. Cook, and containing the illustrations for volumes 7 and 8; Hermann Schneider, *The History of World Civilization: From Prehistoric Times to the Middle Ages* (New York, 2 vols.), a study of the great cultures of the world and their permanent achievements, translated from the German by Margaret M. Green; Ferdinand Lot, *The End of the Ancient World and the Beginnings of the Middle Ages* (*ib.*), a volume in the History of Civilization Series, translated from the French by Philip and Mariette Leon; James W. Thompson, *History of the Middle Ages, 300-1500* (*ib.*), a one-volume edition, condensed from the author's *The Middle Ages*, but containing certain new chapters; Egon Friedell, *A Cultural History of the Modern Age* (*ib.*, Volumes II and III), a survey of the intellectual and social foundations of European civilization from the Black Death (1348) to the World War; M. L. W. Laistner, *Thoughts and Letters in Western Europe, A.D. 500-900* (*ib.*), a study of monastic education, literature and thought, with special emphasis on the Carolingian period; Louis J. Paetow, *A Guide to the Study of Medieval History* (*ib.*), a revised edition prepared under the auspices of the Medieval Academy of America; and Wm. W. Lawrence, *Mediaeval Story* (*ib.*), a second edition of a series of lectures on medieval literature.

RELIGION. The origin and development of religious beliefs are treated in the following works: W. Schmidt, *The Origin and Growth of Religion* (New York), a translation from the German; Clifford H. Moore, *Ancient Beliefs in the Im-*

*mortality of the Soul* (ib.), a discussion of such early beliefs and their influence on later thought; Carl Clemen and others, *Religions of the World* (ib.), a study of their nature and their history, translated from the German; *Gods; A Dictionary of the Deities of All Lands* (ib.), compiled and edited by Bessie G. Redfield, and including supernatural beings, mythical heroes and kings, sacred books of principal religions, etc.; Margaret Smith, *Studies in Early Mysticism in the Near and Middle East* (ib.), a history of early Christian mysticism up to the seventh century and its subsequent development in Islam; Norman T. Boggs, *The Christian Saga* (ib., 2 vols.), a history of Christianity as a phase of European civilization; A. Hyatt Verrill, *The Inquisition* (ib.), an account of its rise and spread in Europe and the Americas; Fernand Hayward, *A History of the Popes* (ib.), the first general history of the pontiffs from St. Peter to Pius XI; Donald Attwater, *The Catholic Encyclopaedic Dictionary* (ib.), containing the meaning of the words, names and phrases in common use in the philosophy and liturgy of the Catholic Church; Rose Macaulay, *The Religious Element in Literature* (London), a survey extending from the eighth century to the present day; St. Augustine, *Select Letters* (New York), translated by J. H. Baxter for the Loeb Classical Library; as well as Bede, *Opera Historica* (ib., 2 vols.), translated by J. E. King, and St. Basil, *The Letters* (ib.), translated by Roy J. Deferrari, both for the same series.

EDUCATION. Important additions to this field of research include Percival R. Cole, *A History of Educational Thought* (Oxford), a survey extending from ancient Athens to modern England and America; Valentine Davis, *The School Idea, Ancient and Modern* (London), beginning with the clay tablets containing schoolboys' grammar exercises, discovered recently at Ur; Prof. W. J. McCallister, *The Growth of Freedom in Education* (London), a history of this phase of educational development from the time of the Greeks; *Teaching in Practice* (ib.), the initial installment of a six-volume encyclopedia, edited by E. J. S. Lay; Prof. Frank Smith, *A History of Elementary Education, 1760-1902* (ib.), a standard work of reference issued by the University of London; and Ernest Caulfield, *The Infant Welfare Movement in the Eighteenth Century* (New York).

LITERATURE AND DRAMA. Among the few select general works that deserve to be mentioned here are: Edwin Greenlaw, *The Province of Literary History* (Baltimore), an introduction to this study; Paul Van Tighem, *Outline of the Literary History of Europe Since the Renaissance* (New York), translated from the French by Aimee L. McKenzie; *Studies in European Literature, Being the Taylorian Lectures* (Oxford, 2d series, 1920-1930), by J. G. Robertson, Edmund Gosse, Emile Legouis, Abraham Flexner, H. A. L. Fisher, and others; Humbert Wolfe, *Gradus ad Parnasum* (London), an introduction to the study of poetry; Jean Stewart, *Poetry in France and England* (New York), a survey of its history; Henry Lanz, *The Physical Basis of Rime* (Stanford, Calif.), an essay on the æsthetics of sound; Archer Taylor, *The Proverb* (Cambridge, Mass.), a study of its origin and dissemination; Philo M. Buck, *The Golden Thread* (New York), a study of the romance of tradition in literature; Professor Alardyce Nicoll, *The Theory of Drama* (ib.), an historical survey, containing a study of its various forms; the same author's *Masks, Mimes and*

*Miracles* (London), a history of the popular theatre from its beginning to the *commedia dell'arte* in the seventeenth century.

LINGUISTICS. Holger Pedersen, *Linguistic Science in the Nineteenth Century* (Cambridge, Mass.), a study of its methods and results, translated from the Danish; and *A Summary of Reports on the Modern Foreign Languages* (New York), compiled by Prof. R. H. Fife and issued by the Modern Foreign Language Study and the Canadian Committee on Modern Languages, with an index to the reports.

ART, ARCHITECTURE, MUSIC, ETC. A few important works dealing with art include Robert Byron and David T. Rice, *The Birth of Western Painting* (London), a monograph on Byzantine art; S. C. Kaines Smith, *An Outline History of Painting in Europe to the End of the Nineteenth Century* (ib.), an important work by the director of the Birmingham Gallery; *Art Studies: Medieval, Renaissance and Modern* (Cambridge, Mass., 2 vols.), edited by members of the Departments of Fine Arts at Harvard and Princeton Universities; R. H. Wilenski, *French Painting* (Boston), beginning with the primitives of the fourteenth century and extending to the present day; Dr. Maximilian Toch, *Paint, Paintings and Restoration* (New York), a study of methods used in identifying works of old masters; Kineton Parkes, *The Art of Carved Sculpture* (ib., 2 vols.) of which Vol. I deals with Western Europe, America and Japan, and Vol. II with Central and Northern Europe; Sir Charles Holmes, *A Grammar of the Arts* (London), intended as a guide to the appreciation of beauty; John Glog's *Men and Buildings* (ib.), which traces the effects of wars, religion, commerce and science upon the character of architecture from the earliest days; Arthur Stratton, *The Orders of Architecture* (Philadelphia), containing a detailed study of Greek, Roman and Renaissance orders and their derivatives, illustrated with 80 plates; Banister Fletcher, *A History of Architecture on the Comparative Method* (New York), ninth edition, revised and enlarged; Sir Henry Wood, *The Gentle Art of Singing* (Oxford), an abridgment of the author's great four-volume work.

MISCELLANEOUS. Special works include S. G. B. Stubbs and E. W. Bligh, *Sixty Centuries of Health and Physick* (London), tracing the progress of ideas from primitive magic to modern medicine; Anna Montgomery, *The Black Death and Men of Learning* (New York), a study of the influence of the Black Death in the field of intellectual history; W. A. Robson, *The Development of Local Government* (London), a survey based on original research; *International Adjudications, Ancient and Modern* (New York, Vol. 3 of the Modern Series), containing both history and documents, together with mediatorial reports and decisions of domestic commissions on international claims, edited by John Bassett Moore; Walter Simons, *The Evolution of International Public Law in Europe since Grotius* (New Haven, Conn.), a translation of a study by the former Chief Justice of the Supreme Federal Court of Germany; and Dr. Paschal Larkin, *Property in the Eighteenth Century* (London), dealing with the economic rather than the legal aspects of the subject.

CHINESE AND JAPANESE. Among the works of a general nature we may note the following: Thos. F. Carter, *The Invention of Printing in China* (New York), a new and revised edition of

this important history; Richard Wilhelm, *Confucius and Confucianism* (ib.), a brief account of the Chinese philosopher's life and a study of his teachings; *The Secret of the Golden Flower* (ib.), a translation, with explanations, of an ancient Chinese philosophical treatise by Richard Wilhelm, with a foreword by C. G. Jung; Georges S. Coulie de Morant, *A History of Chinese Art* (ib.), translated from the French by G. C. Wheeler; and George H. Danton, *The Culture Contacts of the United States and China* (ib.), a study of these relations from 1784 to 1844.

As Japan and Korea are now attracting much attention, the following works should be of interest to the student: Tosoburo Takekoshi, *The Economic Aspects of the History of the Civilization of Japan* (New York, 3 vols.), a history beginning a thousand years before the arrival of Commodore Perry; Elie Faure, *The Soul of Japan* (Berkeley Heights, N. J.), translated from the original French manuscript by Rose Freeman Ishill; Ralph Adams Cram, *Impressions of Japanese Architecture* (Boston), a revised edition of a work first published in 1905; *The Sandman: His Japanese Stories* (ib.), collected and arranged by Mae V. Le Bert.

AFRICAN. As a consequence of the wealth of archaeological discoveries still being made there, Egypt and her mysteries continue to hold the interest of the reading public. Among the works of importance devoted to this country the following deserve mention: Sir E. Denison Ross, *The Art of Egypt Through the Ages* (New York), consisting of a survey of Egyptian art from the beginning to the conquest of Egypt by the Turks in the sixteenth century, illustrated with numerous plates; T. Eric Peet, *A Comparative Study of the Literatures of Egypt, Palestine, and Mesopotamia* (Oxford), the Schweich lectures of the British Academy, 1929, containing emphasis on Egypt's contribution to the literature of the ancient world; Cyril P. Bryan, *The Papyrus Ebers* (New York), a first translation into English of an ancient Egyptian encyclopedia of medieval knowledge; Auguste Couat, *Alexandrian Poetry Under the First Three Ptolemies* (ib.), translated from the French by James Loeb, with a supplementary chapter by Emile Cahen; Wilfrid D. Hamby, *Serpent Worship in Africa* (Chicago), a study of the nature, distribution, origin and migration of serpent worship in Africa, published by the Field Museum of Natural History; Wm. F. Edgerton, *Notes on Egyptian Marriage, Chiefly in the Ptolemaic Period* (ib.), forming Vol. I, Part L, in a series of monographs dealing with phases of ancient Oriental civilization, published by the University of Chicago; C. G. Seligman, *Races of Africa* (New York), a new volume in the Home University Library of Modern Knowledge; M. Delafosse, *The Negroes of Africa* (Washington, D. C.), a study of their history and culture, translated from the French; A. W. Cardinall, *Tales Told in Togoland* (Oxford), containing folk-lore of the African Gold Coast.

INDO-IRANIAN. Attention was called in the 1930 YEAR BOOK to the founding of the India Academy of America, Inc., the purpose of which is to encourage intellectual and cultural relations between India and the United States. Besides conducting lectures and courses on Sanskrit and Hindu philosophy, art, psychology, etc., the Academy has published the following studies: J. C. Chatterji, *India's Outlook on Life*, with an

introduction by John Dewey; *India and America, East and West in Cultural Cooperation*, by officers of the Academy; K. F. Leidecker, *Josiah Royce and Indian Thought*; and *Religious Liberty in India and the West*, by Prof. Carlo Formicchi of the University of Rome, member of the Italian Academy.

Studies on Indian literature and philosophy, issued during 1931, include: Prof. H. H. Gowen, *A History of Indian Literature* (New York), a splendid survey extending from Vedic times to the present day; René Grousset, *The Civilizations of the East: India* (ib.), a history of Hindu and Indo-Chinese art, translated from the French by Catharine A. Phillips; Dhan Gopal Mukerji, *The Song of God: Translation of the Bhagavadgita* (ib.), a new rendering of the Hindu epic which has been the foundation of the spiritual life of India for many centuries; Prof. Robert E. Hume, *The Thirteen Principal Upanishads* (Oxford), a revised edition of a translation from the Sanskrit, with an outline of the philosophy of the Upanishads and an annotated bibliography; J. M. MacFie, *The Ramayan of Tulsidas* (Edinburgh), a study of the Bible of Northern India; D. C. Muthu, *The Antiquity of Hindu Medicine and Civilization* (New York), a third edition, enlarged; *The Elephant-Lore of the Hindus* (New Haven, Conn.), translated by Prof. Franklin Edgerton from the original Sanskrit of "The Elephant Sport of Nilakantha," with introduction, notes and glossary; Rudolf Otto, *India's Religion of Grace and Christianity Compared and Contrasted* (New York), a study of Indian religion, translated from the German.

As the political situation, with its roots extending far back into the life and customs of India, still continues to hold the attention of the world, a few works, presenting both British and Hindu reactions to this vexing question, deserve mention here: G. T. Garratt, *An Indian Commentary* (London), a study urging Britain to place the responsibility for the defense of India primarily on Indian shoulders; *The First Englishmen in India* (ib.), which consists of autobiographical accounts of these pioneers; L. S. S. O'Malley, *The Indian Civil Service, 1601-1930* (ib.), a history of British administration in India; Lord Meston, *India and Nationalism* (New Haven, Conn.); Edward H. James, *I Tell Everything: The Brown Man's Burden* (Geneva, Switzerland), a study of India; John Dellbridge, *Revolution in India?* (Boston), a discussion of the present situation; Katharine Mayo, *Volume Two* (New York), in which the author supplements her attacks on Indian child marriages; Miss M. L. Christlieb, *Uphill Steps in India* (Boston), a protest by a lover of India against the two supreme forces in that land, caste and custom; Dr. R. K. Das, *The Industrial Efficiency of India* (London), in which the author claims that two-thirds of the land, labor and capital resources of India are wasted; Margaret Read, *The Indian Peasant Uprooted* (New York), a study based on the Report of the Royal Commission of Labor.

Persia, its literature, art and culture, is studied in the following: Sir E. Denison Ross, *The Persians* (Oxford), a short comprehensive work on Persia's history and culture; *The Rubaiyat of Omar Khayyam* (Chicago), a new verse-translation by George Roe; *The Shah-Namah of Firdausi* (Oxford), edited by J. V. S. Wilkinson; Miles M. Dawson, *The Ethical Religion of Zoroaster* (New York), a study of the Persian reli-

gion, stressing its application to the social order; Dr. Arthur U. Pope, *A Survey of Persian Art from Prehistoric Times to the Present* (Oxford, 3 vols.), containing contributions of forty specialists; two studies on *Persian Painting* (London), one by Basil Gray and the other by Mulk Raj Anand; *Persian Art* (ib.), a manual containing contributions of Roger Fry, Laurence Binyon, Bernard Rackham and others; *Tales of Mystic Meaning* (New York), fifty-one selections from the Persian mystic poem, "The Mathnawi of Jalalu'ddin Rumi," translated by R. A. Nicholson, Professor of Arabic at Cambridge; and Wm. M. Miller, *Baha'ism* (ib.), containing the origin, history, and teachings of the Persian cult.

ENGLISH. That the current business depression, combined with uncertain political conditions, has dampened somewhat the ardor of British scholars is evident from the fact that the year 1931 was marked by no important undertakings either in philology or in its closely allied study, literature. Nevertheless there were many sound contributions to these fields as the following list will show. General works include G. P. Baker, *The Fighting Kings of Wessex* (New York), a history of the period between the Roman invasion and the beginning of the Dark Ages; Helen M. Camin, *The Hundred and the Hundred Rolls* (London), an outline of local government in the Middle Ages; Dr. H. W. Sanders, *The Rolls of Norwich Cathedral Priory* (ib.), a valuable contribution to the study of medieval economics; Dr. C. R. Haines, *Dover Priory* (Cambridge), a study in monastic history; A. L. Palmer, *English Monasteries of the Middle Ages* (London), which deals primarily with their architecture and domestic arrangements; Wm. E. Mead, *The English Medieval Feast* (Boston), an account of the astonishing eating habits and customs of Englishmen in the late Middle Ages; L. F. Salzman, *English Trade in the Middle Ages* (Oxford), a supplement to his *English Industries in the Middle Ages*; Frederic R. Sanborn, *Origins of the Early English Maritime and Commercial Law* (New York), revealing the continuity of its development from Roman days; W. L. Hanchant, *King's English* (London), an anthology of extracts from the original writings of English sovereigns from Alfred to the present day; Dr. George Kitchin, *Survey of Burlesque and Parody in English* (ib.), revealing that parodies were directed against established institutions in the Middle Ages whereas in later times they were in favor of them and against reformers; Walter H. Godfrey, *The Story of Architecture in England* (New York) of which Part I goes from Roman times to the Reformation, and Part II from Tudor times to the end of the Georgian period; Edmund K. Broadus, *The Story of English Literature* (ib.), beginning with Celtic and Anglo-Saxon times and extending to the present day; Prof. W. M. Dixon, *The Englishman* (London), a study of the various aspects of English character and genius and their reflection in literature; Charlotte A. Simpson, *Rediscovering England* (ib.), a study of the growth of English villages as determined by geological and geographical conditions; Iris Brooke, *English Children's Costume* (ib.), an account extending from 1775 to the present day; the 14th volume of the great survey of the *Royal Commission on Historical Monuments* (ib.), being the first of three volumes covering Herefordshire.

English poetry is studied in John M. Gibbon, *Melody and the Lyric* (London), tracing the in-

fluence of music, especially dance tunes, on English poets from Chaucer to the Cavaliers; Guy Richardson, *Animals as Seen by the Poets* (Boston); F. E. Budd, *Lullabies* (London), an anthology of sleep songs extending from the fourteenth to the nineteenth centuries; and Prof. S. Banerjee, *Critical Theories and Poetic Practice in the "Lyrical Ballads"* (ib.).

Drama is the subject of A. Wigfall Green, *The Inns of Court and Early English Drama* (New Haven, Conn.), a history covering the sixteenth and seventeenth centuries; Henry W. Lanier, *The First English Actresses* (New York), an account extending from the initial appearance of women on the stage in 1660 to 1700.

Education is represented by Dr. H. McLachlan, *English Education under the Test Acts* (Manchester), a history of the Nonconformist academies which flourished from 1602 to 1820; Prof. Ernest Barker, *Universities in Great Britain: Their Position and Their Problems* (London), a survey; and *The Government of Oxford* (Oxford), an authoritative description of the administrative system and institutions of the University.

Studies on Anglo-Saxon and Middle English literature include *The Exeter Book of Anglo-Saxon Poetry* (London), a full-size facsimile reproduction of the 262 pages of one of the four great British codices which contain a small fragment of the vast oral vernacular poetry of the twelfth century; Milton H. Turk, *An Anglo-Saxon Reader* (New York), a revised edition, with a chapter on word formation by Prof. F. P. Magoun, Jr.; *The Junius Manuscript* (ib.), the first volume of a series, edited by Prof. Geo. P. Krapp, which will include all the surviving records of Anglo-Saxon poetry; Tom B. Haber, *A Comparative Study of the Beowulf and the Aeneid* (Princeton, N. J.), discussing the possible influence of the *Aeneid* on the Anglo-Saxon poem; Helen P. South, *The Proverbs of Alfred* (New York), a study of the Early Middle English poem, based on the recently discovered Maidstone manuscript; and John Masefield, *Chaucer* (London), the Leslie Stephen lecture delivered at Cambridge University.

The Elizabethan period, as usual, called forth some of the most important contributions of the year. Among those that should not be overlooked are F. O. Matthiessen, *Translation* (Cambridge, Mass.), in which the author analyzes the work of four of the leading Elizabethan translators, Hoby, North, Florio and Philemon Holland, for the purpose of showing how, through them, the great foreign classics influenced the literature and thought of the period; *A Poetical Rhapsody* (ib.), a reprint of the first edition of 1602 of this Elizabethan miscellany, with additional poems, edited by Prof. Hyder E. Rollins; *The Phoenix Nest, 1598* (ib.), a reprint of another well-known Elizabethan poetical miscellany, edited, with introduction, etc., by the same scholar; G. R. Taylor, *Tudor Geography, 1485-1583* (London), providing the intellectual background of an age of invention and discovery; *The English Works of Sir Thomas More* (ib., 2 vols.), the first two volumes of a seven-volume edition, reproduced in facsimile from William Rastell's edition of 1557, and edited, with a modern version of the same, by W. E. Campbell, with an introduction and philological notes by A. W. Reed; and *De Maisse* (London), the journal of this French Ambassador to the Court of Queen Elizabeth, which was translated and edited by George Bagshawe Harrison.

Shakespeare, as a consequence of recent discoveries made in regard to him, continues to hold the attention of scholars in such a manner that, with the possible exception of Dante, he is almost without a rival in any country. Among the numerous works devoted to him only a few of the most important may be mentioned here. Thus, Professors Wm. A. Neilson and Ashley H. Thorndike, *The Facts About Shakespeare* (New York) appears in a new edition revised according to the recent discoveries. Prof. Wm. W. Lawrence, *Shakespeare's Problem Comedies* (ib.) is a remarkable work, described by the *London Times* as "a volume of notable sanity," in which the author attempts to interpret these comedies through the cultural background of the period. Other works include: Percy Allan, *The Life Story of Edward Devere as William Shakespeare* (London), a biography of the seventeenth Earl of Oxford to whom the author attributes Shakespeare's plays; Prof. Henry W. Farnum, *Shakespeare's Economics* (New Haven, Conn.), a reconstruction of the economic background of Shakespeare's plays; Guy C. Rothery, *The Heraldry of Shakespeare* (London), an elaborate contribution; Lily B. Campbell, *Shakespeare's Tragic Heroes* (Cambridge), a study of the passions and of the purposes of tragedy in Shakespeare's day; Prof. Leslie Hotson, *Shakespeare Versus Shallow* (Boston), containing recently discovered facts about the poet's life; Robert W. Babcock, *The Shakespeare Idolatry* (Chapel Hill, N. C.), a study in English criticism of the late eighteenth century; J. W. Mackail, *The Approach to Shakespeare* (Oxford), studies of his plays and poems; Walther Ebisch and Levin L. Schucking, *A Shakespeare Bibliography* (Oxford), a selected list of editions, translations, criticism, etc.; Edwin E. Willoughby, *Jaggard: Shakespeare's Printer* (London), an illustrated account of literary conditions and book production in late Elizabethan times; Prof. John Dover Wilson, *Six Tragedies of Shakespeare* (London); *Shakespeare's Hamlet* (Cambridge, Mass.), a facsimile reproduction of the First Quarto (1603) copy in the Henry E. Huntington Library; and G. A. Jellicoe, *The New Shakespeare Memorial Theatre, Stratford-on-Avon* (London), an edition *de luxe*.

Studies on other British seventeenth century writers include Helen Darbishire, *Early Lives of Milton* (London), all written within 60 years of his death; *The Works of John Milton* (New York), the first two volumes of the Columbia University edition; Phyllis B. Tillyard, *Milton's Private Correspondence and Academic Exercises* (Cambridge), the first translation into English from the Latin; Paul Jordan-Smith, *Bibliographia Burtoniana* (Stanford University, Calif.), a study of *The Anatomy of Melancholy* with a bibliography of Robert Burton's writings; Izaak Walton, *The Compleat Angler*; or, *The Contemplative Man's Recreation* (New York), a reprint *de luxe* of this classic; Arthur H. Nethercot, *Abraham Cowley* (Oxford), a biography of the poet; Roswell G. Ham, *Otway and Lee* (New Haven, Conn.), a biographical study of two Restoration dramatists; *Broadside Ballads of the Restoration Period* (London), a limited edition of a collection of them; Jack Lindsay, *John Donne: His Life and Poetry* (ib.) said to be "one of the fullest and most delicately analytic studies ever written of an English poet"; *The Poems of Sidney Godolphin* (Oxford), a fine edition of the Cavalier poet which was prepared by William Dighton.

On the eighteenth century we have Mark Longaker, *English Biography in the Eighteenth Century* (Philadelphia); the development of the art during the century; Prof. A. E. Richardson, *Georgian England* (London), an account, drawn from contemporary sources, of social life, industry and the arts from 1700 to 1820; F. S. Oliver, *The Endless Adventure* (ib., 2 vols.) a history of England in the eighteenth century extending to the general election of 1734; *The Journal of James Boswell* (New York; Vol. 10, 1774-5; Vol. 11, 1775-6; Vol. 12, 1776-7), the Malahide papers, privately printed by Wm. E. Rudge; *Verney Letters of the 18th Century From the MSS. at Claydon House* (London), supplementary edition by Margaret Maria Lady Verney, of letters first published forty years ago.

Among dictionaries and works on our current speech, we may note Henry Cokeram, *The English Dictionary of 1623* (New York), being a reprint of Part I of what is believed by many to be the first English dictionary; C. O. Sylvester Mawson, *The Roget Dictionary of Synonyms and Antonyms* (ib.), a modernized and more complete edition of Roget's famous *Thesaurus* of English words and phrases, and also containing an appendix of foreign words and expressions; Burges Johnson, *New Rhyming Dictionary and Poet's Handbook* (ib.), containing illustrations of every fixed form of lyric poetry; Professor Geo. O. Curme, *Syntax* (ib.), being the third volume of *A Grammar of the English Language*; B. L. K. Henderson, *A Mirror of English* (London), in which the author assails many common faults in grammar and style; Professor Ernest Weekley, *Cruelty to Words* (New York), which pillories the errors of present-day writers; S. P. E. Tract No. XXV, *Robert Bridges* (Oxford), a brief memoir of the founder of the Society of Pure English, by Logan P. Smith and Elizabeth Daryush; C. L'Estrange Ewen, *A History of Surnames of the British Isles* (New York), a concise account of their origin, evolution, terminology and legal status; and Wm. D. Bowman, *The Story of Surnames* (ib.), a scientific study of the origin and growth of surnames, both British and American. Colloquial speech and slang are represented by *The Bible: An American Translation* (Chicago), a translation into current American speech, prepared by Profs. J. M. Powis Smith and Edgar J. Goodspeed for the University of Chicago Press; *Slang From Shakespeare* (Dallas, Texas), a dictionary of phrases from Shakespeare which are still in use, compiled by Anderson M. Baten; and *American Tramp and Underworld Slang* (New York), a glossary edited by Godfrey Irwin, with essays on slang by the editor and Eric Partridge. See LITERATURE, ENGLISH AND AMERICAN.

GERMANIC. German history and literature are discussed in the following: Ernst Kantorowicz, *Frederick II, 1194-1250* (New York), a biography, translated from the German by E. O. Lorimer; Clair H. Bell, *Peasant Life in Old German Epics* (ib.), translations and a critical study of two epics of 13th century German literature; J. G. Robertson, *A History of German Literature* (ib.), a new and revised edition of this comprehensive history; Norman MacLeod, *German Lyric Poetry* (ib.), a study of its development from the twelfth century to modern times; Professor L. A. Willoughby, *The Romantic Movement in Germany* (London), its history in the 18th and 19th centuries; W. Tudor Jones, *Con-*

*temporary Thought of Germany* (New York), a new volume in the Library of Contemporary Thought; *Jahrbuch der deutsch-amerikanischen Historischen Gesellschaft von Illinois* (Chicago), edited by Max Baum for the University of Chicago and published under the auspices of the German-American Historical Society of Illinois; *Works of Martin Luther* (Philadelphia, Vols. 3 and 4), translated with introduction and notes; Hastings Eels, *Martin Bucer* (New Haven, Conn.), a biography of an important leader in the history of the Reformation; H. W. Nevins, *Goethe: The Poet of Faust* (London), a critical biography; Otto Heller, *Faust and Faustus* (St. Louis, Mo.), a study of Goethe's relation to Marlowe; Romain Rolland, *Goethe and Beethoven* (New York), a study of the relationship between these two contemporaries, translated from the French. See GERMAN LITERATURE.

As for Dutch works, they included Albert Hyma, *The Youth of Erasmus* (Ann Arbor, Mich.), an account of the early years of the greatest scholar of the sixteenth century. Switzerland produced the following works of general literary and historical interest: J. E. Tyler, *The Alpine Passes in the Middle Ages* (London), a survey of their economic and political importance in that period; and G. R. De Beer, *Early Travelers in the Alps* (ib.), which deals with contemporary accounts from the sixteenth century to the end of the eighteenth.

Scandinavian literature and history was studied in Halvdan Koht, *Old Norse Sagas* (New York), a series of lectures delivered at the Lowell Institute, Boston, and published by the American-Scandinavian Foundation; A. and E. Keary, *The Heroes of Asgard* (ib.) a collection of tales from Scandinavian mythology; H. Koht, *Ibsen* (ib.) a biography of the Norwegian dramatist; A. A. Strömberg, *History of Sweden* (ib.), its entire history from the earliest times to the present; Lieut. Gen. Sir Geo. MacMunn, *Gustafus Adolphus* (ib.), a biography of the Swedish hero-king, *Hans Andersen* (Philadelphia), 40 stories translated from the Danish by M. R. James; Matthias Thordarson, *The Vinland Voyages* (New York), No. 18 of the American Geographical Society Research Series, edited by Prof. Halldor Hermannsson and translated by Thorstina J. Walters; Theodore C. Blegen, *Norwegian Migration to America, 1825-1860* (Northfield, Minn.), a history published by the Norwegian-American Historical Association; Florence E. Janson, *The Background of Swedish Immigration, 1840-1930* (Chicago), studies of the causes of Swedish immigration to the United States. See SCANDINAVIAN LITERATURE.

SLAVIC. General works include *The Slav Anthology* (Portland, Me.), a selection of representative poems, translated from the Russian, Polish, Bohemian, Serbian and Croatian by Edna W. Underwood; and Hebe Spaul, *The Baltic States: Latvia, Lithuania and Estonia* (New York).

Russia, notwithstanding the extraordinary transformation that she was undergoing, had heretofore failed to make a strong appeal to the learned world. Now there were multiple evidences of a great change in taste. On the history of Russia there was the fifth and last volume of V. O. Kluhevsky, *History of Russia* (New York) which traces the course of the Empire from the time of Catherine II to the end of the

Russo-Japanese War, with an appendix on the theory of historical study; Prince Mirsky, *Russia* (London), the first volume in the Cresset Historical Series, edited by Prof. C. G. Selincourt, whose purpose is to supply the sociological, religious and political backgrounds of the country; M. N. Pokrovsky, *History of Russia* (New York), a study, treated from the Marxian viewpoint, going from the earliest times to the rise of commercial capitalism; Avrahm Yarmolinsky, *Russian Literature* (Chicago), a scholarly and interesting bibliographical outline, forming No. 61 of the American Library Association's Reading with a Purpose Series; Nicolas Brian-Chaniouov, *The Russian Church* (New York), a lucid and satisfactory account extending from the date of the official establishment of Christianity in Russia in 988-991 to the present time; M. A. O'Brien, *New English-Russian and Russian-English Dictionary* (Philadelphia, 2 vols.), a timely work using the new official Russian spelling; R. Fulop-Miller, *Unknown Tolstoy* (New York), containing new information, drawn from sources hitherto unavailable, on the great writer's life and genius; and E. H. Carr, *The Life of Dostoevsky* (Boston).

The other Slavic countries are represented by the following: *Polish Romantic Literature* (New York), by Julian Krzyzanowski, lecturer in Polish at King's College, London; Clive Holland, *Czechoslovakia: The Land and Its People* (ib.), containing its history and development, as well as a description of the country as it is today.

CELTIC. In Celtic the Irish were especially active during the year 1931. First, the Irish Manuscripts Commission began publication, under the auspices of the Irish Government, of all the ancient Irish MSS that were to be found in the libraries of Ireland. All of these important literary monuments were being reproduced in beautiful facsimile editions. Next, a number of Irish and American students, including Dr. Eoin MacNeill, former Minister of Education of Ireland, Provost E. J. Gwynn of Trinity College, Dublin, J. L. Gerig and others organized the Society of Friends of the Universities of Ireland, the purpose of which was to stimulate interest in Irish studies both in America and Ireland. Finally, the Irish Stationery Office issued the first *Official Handbook of the Irish Free State* (Dublin).

Other works include Arthur K. Porter, *The Crosses and Culture of Ireland* (New Haven, Conn.), a study illustrating the relationship of the Irish crosses to the ancient culture of Ireland; R. A. S. Macalister, *Tara: A Pagan Sanctuary of Ancient Ireland* (New York), a history of the ruins; Rev. James A. Geary, *An Irish Version of Innocent III's 'De Contemptu Mundi'* (Washington, D. C.), a scholarly dissertation presented at the Catholic University; Daniel Corkery, *Synge and Anglo-Irish Literature* (New York), a biographical and critical study of the dramatist; *The Journal of the American Irish Historical Society, 1930-31* (ib. XXIX), a collection of studies dealing with Irish-American history; Edward F. Roberts, *Ireland in America* (ib.), a study of the influence of Irish immigration on the history of the United States during the first 150 years.

The American Iona Society issued during the year a splendid work entitled *The Distribution of University Centres in Britain* (Glasgow), by the late Hugh Gunn. Among other works re-

lating to Scotland may be mentioned the first part of the first volume of *The Scottish National Dictionary* (Glasgow, A-Aggle), edited by Wm. Grant; Prof. R. S. Rait, *Scotland* (London), a volume in the Modern World Series; *Mine Eyes to the Hills* (New York), an anthology of prose and poetry dealing with the Scottish Highland forest, compiled by Patrick Chalmers; and J. De Lancey Ferguson, *The Letters of Robert Burns, 1780-1796* (Oxford, 2 vols.), containing many new ones, all edited from the original manuscripts. Welsh is represented by J. E. Lloyd, *Owen Glendower* (Oxford), an account of the famous Welsh hero who figures in Shakespeare's *Henry the Fourth*.

ROMANCE: FRENCH. An indispensable work for all students of the Old French language and literature is Karl Voretzsch, *Introduction to the Study of Old French Literature* (New York), of which an authorized translation of the third and last German edition was prepared by Dr. Francis M. Du Mont. This unique survey goes from the earliest times through the fourteenth century and contains much new bibliographical material and certain revisions of text. A truly monumental work is Edmond Buron, *'Ymago Mundi' de Pierre d'Ailly, 1350-1420* (Paris, 3 vols.) an edition of a work from which Christopher Columbus got his inspiration to venture on unknown seas. The work contains the Latin text and French translation of the four cosmographical treatises of d'Ailly, including the marginal notes of Columbus, as well as a study on the sources of the author. Another unusual contribution is Gustave Cohen, *Chrétien de Troyes et son œuvre* (ib.), a brilliantly written study of the great "romancier d'amour et d'aventure" of the twelfth century, by one of the leading scholars of the present day. The same author's *Le Théâtre en France au Moyen Age* (ib.) provides a most interesting survey of religious and lay drama during the period when the popular drama was unexcelled for its wealth and inspiration.

Other works that deserve special mention are Eugène Anitchkof, *Joachim de Flore et les milieux courtois* (ib.), a well prepared biography and critical study of the great churchman of the twelfth century who is famous as the founder of Joachimism; Thomas Walton, *Le Doctrinal du Temps Présent de Pierre Michault, 1466* (ib.), a very useful critical edition of a work that represents the moralizing spirit of the Middle Ages at its best.

The fifteenth century is represented by Guy Endore, *The Sword of God: Jeanne d'Arc* (New York), an excellent critical biography based on the most recent material available; W. Barrett, *The Trial of Joan of Arc* (London), containing the first unabridged English translation of the official documents; and *The Complete Works of François Villon* (New York), including the poems long attributed to him, translated by J. U. Nicholson.

Among the large number of works devoted to the French Renaissance we may mention Jean Plattard, *The Life of François Rabelais* (ib.), translated from the French by Louise B. Roche; *The Works of François Rabelais* (ib., 2 vols.), edited by Albert J. Nock and Catherine R. Wilson; Georgia Harkness, *John Calvin: The Man and His Ethics* (ib.), a biography containing new material.

Contributions on the seventeenth and eight-

eenth centuries include Howard Robinson, *Bayle, The Sceptic* (New York), a study of the philosopher and critic, Pierre Bayle; Molière, *Tartuffe; or, the Hypocrite* (Leipzig, Germany), a new edition of Curtis Hidden Page's verse translation, with an introduction by Brander Matthews; Frederick C. Green, *Eighteenth Century France* (New York), essays on the social and intellectual life of the period.

Studies on the French language and syntax include Newton S. Bement, *The Conditional Sentence From Comynes to Malherbe* (New York), a supplementary contribution to the *Romanic Review*; Félix Boillot, *Psychologie de la Construction dans la phrase française moderne* (Paris), an excellent study on French syntax; M. A. Robert-Juret, *Les Patois de la Région de Tournus* (ib.), a contribution to dialectology; J. Llermet, *Contribution à la Lexicologie du Dialecte aurlillais* (ib.), a dialectical dictionary; and P. O. Crowhurst, *Cassell's Dictionary of French Synonyms* (New York), arranged in groups for the convenience of English students. See FRENCH LITERATURE.

ITALIAN. Francesco De Sanctis' famous *History of Italian Literature*, which was first published in Italy in 1870, was translated by Joan Redfern (New York, 2 vols.), with an introduction by Benedetto Croce. Contributions to Italian dialectology include Gerhard Rohlf, *Dizionario dialettale delle tre Calabrie* (Halle), consisting of a Calabrian-Italian and Italian-Calabrian dictionary of more than 40,000 words; and *I Nomi dialettali* (Trento), a word-list.

Dante, of course, received much attention. We should not fail to mention, however, Jefferson B. Fletcher, *The Divine Comedy of Dante Alighieri* (ib.), which is probably the best verse-translation of the poet yet made. Other translations include Lock Lockert, *The Inferno of Dante* (Princeton, N. J.), a new terza rima version; and Rev. Albert R. Bandini, *Dante's Paradiso* (New York), a lineal and rhymed translation.

Among the works on the later writers are Giovanni Boccaccio, *The Decameron* (ib., 2 vols.), translated by J. M. Rigg; Charles G. Osgood, *Boccaccio on Poetry* (Princeton, N. J.), being the preface and the fourteenth and fifteenth books of Boccaccio's *Genealogia Deorum Gentilium*, in an English version, with introductory essay and commentary; Prof. J. P. McMurrieh, *Leonardo da Vinci* (London), a masterly work dealing with his achievements as an anatomist; *A Translation of the Orpheus of Angelo Politian and the Aminta of Torquato Tasso* (Oxford), by Louis E. Lord, with an introductory essay on the pastoral; and Emile Namers, *Galileo* (New York), a biography, translated from the French. Excellent studies on modern Italian literature are Lionello Fiumi, *Sopravvivenze* (Milan), a really noteworthy contribution; and Federico Nardelli and Arthur Livingston, *Gabriel The Archangel* (New York), a biography of Gabriele D'Annunzio. See ITALIAN LITERATURE.

PORTUGUESE AND RUMANIAN. Both the *Revista Lusitana* (Lisbon), edited by Dr. Leite de Vasconcellos, and *Biblos*, the official review of the University of Coimbra, contained in 1931 useful contributions to the study of the Portuguese language and literature. A really noteworthy contribution is Dr. João da Providência Sousa Costa, *O Trocadiño em Camoës e a sua interpretação por G. Storck* (published at Coimbra).

In Rumanian we may note Marcu Beza, *Shakespeare in Rumania* (London) which deals with the poet's influence in that country as well as with parallels to his plays in the native folklore and fairy tales; and T. W. Riker, *The Making of Roumania* (Oxford), a study of an international problem.

SPANISH. The Hispanic Society of America continued to enhance its reputation of being probably the only organization in the United States that was seriously interested in encouraging Spanish scholarship. During the year 1931 its main contribution consisted of the publication of a large number of beautifully printed and illustrated leaflets dealing with art objects of all sorts now in the very extensive collection of the Society.

Among the more important works devoted to Spain the following deserve mention: Catherine Moran, *Spain* (Boston), a brief account, with an introduction by G. K. Chesterton; Havelock Ellis, *The Soul of Spain* (ib.), a new edition of this study of Spanish character and art; the second installment of Prof. E. Allison Peers, *Studies of the Spanish Mystics* (London); Eugenio D'Ors, *Ferdinand and Isabella* (New York), a study by a leading Spanish historian; Barbara Matulka, *The Novels of Juan de Flores and their European Diffusion* (New York), a very important and far-reaching study in comparative literature, issued by the Institute of French Studies; Christopher Hollis, *Saint Ignatius* (ib.), a biographical study of the founder of the Jesuit Order; Prof. J. D. M. Ford and Ruth Lansing, *Cervantes* (Cambridge, Mass.), a tentative bibliography of his works and of the biographical and critical material concerning him; Max A. Luria, *A Study of the Monastir Dialect of Judaco—Spanish Based on Oral Material Collected in Monastir* (ib.), a useful contribution to dialectology. See SPANISH LITERATURE.

On South America we should note first a series of useful bibliographies prepared under the auspices of the Department of Romance Languages at Harvard University. Thus, Profs. J. D. M. Ford, Arthur F. Whitten and M. I. Raphael, *A Tentative Bibliography of Brazilian Belles-Lettres*; G. Rivera, *A Tentative Bibliography of the Belles-Lettres of Porto Rico*; Prof. S. M. Waxman, *A Bibliography of the Belles-Lettres of Santo Domingo*; and Prof. Alfred Coester, *A Tentative Bibliography of the Belles-Lettres of Uruguay*, all of which contain descriptive notes in Spanish and are published at Cambridge, Mass. A very important bibliography is *Spain and Spanish America in the Libraries of the University of California* (Berkeley), being the second volume of the catalogue of the famous Bancroft Library.

The archaeological and other discoveries made in recent years in Mexico have resulted in centring attention on that country. Among the numerous works devoted to Mexico the following may be mentioned: Stuart Chase and Marian Tyler, *Mexico* (ib.), a comparison of our machine system with the handicraft system of Mexico; Mme. Calderon de la Barca, *Life in Mexico* (ib.), a new edition of a volume of letters published more than 90 years ago; and Wilfrid H. Callcott, *Liberalism in Mexico, 1857-1929* (Stanford University, Calif.), a history of the struggle for self-government in Mexico. Finally, a few works on other countries of South

America deserve mention: C. Farra-Perez, *Bolivar* (Pittsburgh, Pa.), a study of his political ideas, translated by N. A. N. Cleven; Francis R. Hart, *The Siege of Havana* (Boston), a history of the British siege of Havana during the Seven Years' War in America; R. J. and E. K. Van Deusen, *Porto Rico* (New York), a history from the earliest times to the present; F. A. Kirkpatrick, *A History of the Argentine Republic* (Cambridge), prepared for the celebration of the centenary of that republic; and Philip A. Means, *Peruvian Textiles* (New York), an illustrated monograph on examples of the pre-Incaic period, issued by the Metropolitan Museum of Art. See SPANISH-AMERICAN LITERATURES.

PHONETICS AND BIBLIOGRAPHY. Lee E. Travis, *Speech Pathology* (New York), a reference work on the causes, diagnosis and treatment of speech disorders; Prof. J. L. Barker, *Rate, Direction and Continuity of Movement in French and English Speech* (Salt Lake City), a study by one of our foremost phoneticians; Elsie Fogerty, *Speech Craft* (New York), a manual of practice in English speech; Thorleif Larsen and Francis C. Walker, *Pronunciation* (Oxford), a practical guide to American standards of speech; and Jean G. Demonbynes, *Abrégé de phonétique française* (Paris), intended for the use of students and teachers.

In bibliography, Prof. Wm. J. Entwistle, *The Year's Work in Modern Language Studies* (Oxford, Vol. I), a résumé of the year 1930 prepared for the Modern Humanities Research Association of Great Britain; *Handbuch der Literaturwissenschaft* (Potsdam), a survey of the year's work in literary criticism; *Summary of Reports* (New York), issued by the Committee on Modern Language Teaching; John Marshall, *Publication of Books and Monographs by Learned Societies* (Washington, D. C.), a survey made for the American Council of Learned Societies; Magdalen Casey, *Catalogue of Pamphlets in the Public Archives of Canada* (Ottawa), with brief descriptions and index of authors; A. Esdaile, *A Student's Manual of Bibliography* (New York), a handbook for librarians; Canon B. H. Streeter, *The Chained Library* (London), a survey of four centuries in the evolution of the English library; Wm. Targ, *American First Editions and their Prices* (Chicago, Ill.), a checklist of the foremost American first editions from 1640 to the present day; Maurice S. Sheehy, *A Decade of Research at the Catholic University of America, 1921-1930* (Washington, D. C.), a list of research projects and publications of the Catholic University; Ralph C. Williams, *Bibliography of the Seventeenth Century Novel in France* (New York), a poorly prepared but nevertheless useful list of over 1200 novels written in France in that period; and J. O. Kettridge, *Dictionary of Commercial and Financial Terms, Phrases and Practice* (ib.), a French-English and English-French dictionary for commercial use.

PHILOSOPHY. The outstanding philosophical works of the year illustrate the creditable tendency in contemporary philosophy toward greater specialization both in method and subject-matter. But the correlative process, the synthesis of opposing schools and the sifting of their diverse conclusions, is also in evidence.

The latter tendency is illustrated in Professor Stout's *Mind and Matter* (the first of two volumes based on the Gifford Lectures delivered in the University of Edinburgh in 1919 and 1921).

The volume begins with a brief but competent defense of animism, that is, "the tendency to seek and find in nature a correlate of our own mental life." Common sense believes that the ordered matter of the universe excludes teleology and infers that the teleology manifest in the world must result from the activity of Mind. Animism need not involve the anthropomorphic fallacy, says Stout. Aesthetic, causal, and teleological factors in nature all support the view of common sense which no arguments have discredited. Stout, however, is not willing to accept the interaction of mind and body, but inclines to a special type of parallelism in which mind and body are intimately united and act together within one whole. But though mind does not act on body, as the interactionists maintain, the laws of matter are not sufficient to explain the nature of mind. Metaphysical materialism, which makes this claim, is inadmissible and shows itself incompatible with the general order of nature, with the structure of the causal process, and with the teleological order of the world.

Having made so many assertions about Nature and Mind, Stout is obliged to explain the possibility of this knowledge. He begins with our knowledge of Nature. Many philosophers, he says, have denied the independent existence of the physical world, but all such systems refute themselves, the author thinks, since they assume at the beginning what they deny in conclusion—the independently real, physical world. The physical world, however, is infused with Mind which is analogous to our own finite minds and hence intelligible. "Mind, as I maintain, must be fundamental in the Universe of Being and not derivative from anything that is not mind—we are bound to posit one universal and eternal Mind developing and expressing itself in the world of finite and changeable beings which we call Nature." In his next volume, *God and Nature*, Stout promises to consider ethical and religious developments of human nature.

Another book, which sifts and appraises the conclusions of various schools, C. D. Broad's *Five Types of Ethical Theory*, is distinguished by the intensiveness of its criticism. "It appears to me," says Broad, "that the best preparation for original work on any philosophic problem is to study the solutions which have been proposed for it by men of genius whose views differ from each other as much as possible." Such a method will enable us to avoid their mistakes, and to discover the direction in which progress is possible. Accordingly he chooses for his study the ethical works of Spinoza, Butler, Hume, Kant, and Sidgwick, devoting by far the most attention to Sidgwick, whose *Methods of Ethics* he considers the greatest ethical work ever written.

Broad's criticism of Spinoza is directed mainly against his psychological egoism, which makes acts of self-sacrifice impossible. Here Spinoza forgets that even on the pre-rational level individuals have emotions and perform actions which are directly against their own interest. For example, an individual sacrifices himself for the species or acts in sympathy with his group or loves or hates to the point at which his own advantage is forfeited. Broad finds egoism on the rational level equally inadmissible.

The faults in Spinoza's ethics are corrected in Butler, whose "sweet reasonableness" is very attractive to Broad. According to Butler human propensities are arranged in a hierarchy, and

none of them are bad in themselves, but only excessively or inappropriately exercised. The good man is one who approximates to the ideal of human nature which, though it is inferred from the actual series of good and better men, is never really actualized. Broad, who sees some analogy between the perfect circle, the perfect gas, and the perfect man, upholds Butler's "ideal" as a useful notion. With many of Butler's conclusions Broad is in agreement. That there is too little self-love in the world, that self-love is not opposed to benevolence except in exceptional cases, that psychological egoism is impossible, that conscience is a rational faculty correcting, in crucial cases, both self-love and benevolence, Broad is willing to admit.

His attitude toward Hume is more critical, though he applauds the great skeptic's attack on psychological hedonism. Moreover, Hume's definition of a right act as one which is generally approved is not open to the charge of subjectivism, says Broad, since acts of approval can be ascertained and counted. But the definition is unacceptable, none the less, since we admit many acts to be right which are not generally approved, and conversely. The essay on Kant is the least satisfactory and it is doubtful whether Broad has considered many of the alternative interpretations of the Kantian ethics.

His criticism of Sidgwick, unlike his treatment of the other philosophers in the volume, is expanded into a very useful commentary. On basic matters Broad is usually in agreement with Sidgwick, viz: they agree upon a non-naturalistic definition of the right act and "ought," and both of them believe that there is such a thing as free will while admitting that its proof and even its definition are lacking. Similarly they both hold that whether one is a determinist or indeterminist can make very little difference to actual conduct. Broad's disagreements with Sidgwick are confined, for the most part, to fine points of analysis or proof.

Another book combining breadth with incisiveness, makes a brilliant tour through the sober but sensational developments of modern science. Unlike other books presenting brief analyses of modern scientific theories F. S. C. Northrop's *Science and First Principles* begins with Greek science, demonstrates the continuity of its development and its relevance to present problems, and attempts to show that forgetfulness of Zeno's reasonings may well have caused errors on the part of Einstein and others. Thus he argues that Zeno's contention that motion cannot exist without there being some other referent than the stuff which moves, since the stuff must move to a *where-it-is-not*, is certainly true and so important that no exponent of the Relativity Theory can reasonably neglect it.

It is partly on this argument, dating from the fifth century B.C., that Northrop supports his own theory of the macroscopic atom or egg, which, as he says, "is spherical in shape and hollow in its interior except for its inner field, which surrounds and congests them (i.e., the microscopic particles)." Thus to give the moving microscopic particles or atoms a reference beyond themselves, we must have, the author claims, a macroscopic atom, an egg-shaped universe, having properties satisfying experience, the physical evidence for the General Theory of Relativity, and the tensor variables.

Northrop's theory which generalizes beyond

the General Theory and differs, as he says, from the parallel developments of Weyl and Eddington is certainly more difficult to understand than Einstein himself, and perhaps for a different reason. Evidently the original and revolutionary system of Whitehead, on which Northrop throws a much needed light, is the main foundation and inspiration of his theory, and Whitehead himself in *Process and Reality* recognizes the kinship of Northrop's theory with his, though he rejects it.

Northrop's account of the theory of Relativity in his second chapter is, however, one of the best that has ever been written and compares favorably with Einstein's own brief exposition in *The Special and the General Theory of Relativity*. His principal contention throughout is that mathematical theory should be guided by physical evidence at every point, and that no brilliant constructions of the imagination should be admitted which do not have counterparts in the physical world. Naturally he criticizes Eddington who makes Relativity a mathematical system and regards only the pattern of relations as real, and naturally he commends Einstein who insists upon the physical basis and criticizes both Weyl and Eddington for their free constructions. The General Theory, according to Northrop, is the greatest triumph of *physical* theory in the history of physics. Neither time nor space, nor space-time exist any longer, he says.

After a chapter on *Quantum and Wave Mechanics*, Northrop gives his attention to *The Living Organism* and expounds the carbohydrate balance involved in the physiology of breathing as worked out by Haldane and Henderson at Yale. Four equations were discovered determining such substances as hæmoglobin, oxygen, carbon dioxide, etc., and only six chemical substances were involved. Thus it was known that 20 possible relationships were involved between these substances. Twenty laws were therefore predicted, and then discovered experimentally and then it was found that if the quantity of any two were known, that of the remaining four could be inferred. Thus the whole complicated relationship could be represented in a two-dimensional graph called a monogram. The physiology of breathing which seemed to require "norms" and a teleological principle is explicable, therefore, in purely physico-chemical terms. It is the peculiar complex substance, hæmoglobin, which preserves the equilibrium and stability characteristic of the organism. But the "intimacy" of the relation between these substances cannot be explained by chemical affinities or by the chance distribution of matter. We must have a new principle—"the constancy of the average density of nature" which is, as Northrop says, precisely the same idea that was involved in Einstein's theory of the finite universe. In his last chapter which brings biology and physics together we discover that the macroscopic atom (the universe) which is a counterpart of microscopic atom, has at least some of the attributes of divinity.

Husserl's *Ideen zu einer reinen Phänomenologie und phänomenologischen Philosophie* also appeared this year in an English translation with the unfortunate title, *Ideas*. It is not only the first English translation of Husserl's works, it is the most important. Unlike the *Logische Untersuchungen*, Husserl's earlier work, the present volume is concerned not so much to apply the phenomenological method as to define and generalize it. After the reader has grown accustomed to the deft and

hair-splitting analyses of the "*Untersuchungen*," he must in the present work, turn the phenomenological method back upon these analyses themselves. He is therefore privileged to master the phenomenology of phenomenology, to learn what is requisite to a phenomenologist, and even to become one himself if he understands what it is all about.

Bertrand Russell's new volume, *The Scientific Outlook*, is as witty and clear and informative as most of his popular books. It is a survey of modern science with its implications for human life and contains the same melancholy forecast of the future that we read in *Icarus*. Naturally Russell is amused at the optimism which Eddington derives from the Second Law of Thermodynamics. "This law states, generally speaking, that the universe tends toward democracy, and that when it has achieved that state, it will be incapable of doing anything more." Eddington, it will be remembered, declared that he is no phoenix-worshiper and would hate to think that the world winds itself up again for new cycles. "He prefers to think," says Russell, "that the world drama is only to be performed once, in spite of the fact that it must end in æons of boredom, in the course of which the whole audience will gradually go to sleep." Russell says it speaks well for Eddington's constitutional cheerfulness that he is able to derive optimism from modern physics. The forecast, to his mind, is rather dark.

Houston Peterson, in his *Melody of Chaos*, exhibits in a brilliant kaleidoscopic picture the collapse of basic religious, moral, and scientific standards as reflected in modern literature. He shows us an increasing mood of wildness and melancholy and traces in particular the literary consequences of Hume's destructive criticism of the self.

The appearance this year of two important books expounding the older formal logic and the new symbolic logic and showing their relation to one another, is almost more than our hopes could have bargained for. L. S. Stebbing's *A Modern Introduction to Logic* and R. M. Eaton's *General Logic* are the first books in English to cover this field, and they fill a need which has been felt in many universities. Although the two books cover the same ground, there are individual differences of treatment affording interesting comparisons.

Another evidence of the increased interest in logic, and the rich opportunities of applying it to new fields, is a new book by Jerome Michael and Mortimer J. Adler called *The Nature of Judicial Proof, An Inquiry into the Logical, Legal, and Empirical Aspects of the Law of Evidence*. This is a rigorous and praiseworthy attempt to reduce the concrete data of the theory of evidence to a strict logical system.

**BIBLIOGRAPHY.** The following summary includes the more notable books of the year under the general head of philosophy: Ernst Barthel, *Vorstellung und Denken*; C. D. Broad, *Five Types of Ethical Theory*; R. W. Church, *A Study in the Philosophy of Malebranche*; John Dewey, *Philosophy and Civilization*; R. M. Eaton, *General Logic*; Irwin Ldman, *The Contemporary and his Soul*; W. R. Boyce Gibson, English Translation of Husserl's *Ideen*; Paul Hutchinson, *World Revolution and Religion*; Régis Jolivet, *Essai sur le Bergsonisme*; Cassius Jackson Keyser, *Humanism and Science*; Maxime Leroy, *Descartes Social*; Alfred Loisy, *Mémoires*, vol. ii and iii; Douglas Clyde Macintosh, *The Pil-*

*grimage of Faith*; J. S. Mackenzie, *Cosmic Problems*; James Mackinnon, *The Historic Jesus*; Siegfried Marck, *Die Dialektik in der Philosophie der Gegenwart*; C. R. Morris, *Locke, Berkeley, Hume*; Jerome Michael and Mortimer J. Adler, *The Nature of Judicial Proof, an Inquiry into the Logical and Empirical Aspects of the Law of Evidence*; V. J. McGill, *Schopenhauer, Pessimist and Pagan*; F. S. C. Northrop, *Science and First Principles*; B. J. H. Ovinck, *Philosophische Erklärung der Platonischen Dialoge Meno und Hippias Minor*; Houston Peterson, *The Melody of Chaos*; S. Rawidowicz, *Ludwig Feuerbachs Philosophie*; Hubert Rick, *Neue Untersuchungen zu Platonischen Dialogen*; Bertrand Russell, *The Scientific Outlook*; Harold R. Smart, *The Logic of Science*; Suzanne Stebbing, *An Introduction to Modern Logic*; G. F. Stout, *Mind and Matter*; M. R. Cohen, *Reason and Nature*.

**PHONETICS.** See PHONOLOGY, MODERN.

**PHOSPHATE ROCK.** The raw phosphate rock industry in the United States in 1931 suffered substantial declines in both mine production and shipments. Preliminary figures compiled by the U. S. Bureau of Mines showed a decrease of 35 per cent in mine production, as compared with 1930, while shipments showed decreases of about 36 per cent in quantity and 35 per cent in value. The quantity of phosphate rock mined in the United States in 1931 was approximately 2,563,300 long tons, compared with 3,951,353 tons in 1930. Total shipments of phosphate rock in 1931 were approximately 2,492,500 long tons, valued at \$9,085,643, as compared with 3,926,392 long tons, valued at \$13,996,830 in 1930. Total stocks on hand Dec. 31, 1931, amounted to about 1,229,100 long tons, an increase of some 27 per cent compared with 968,745 tons on hand Dec. 31, 1930. Of the 1931 production, Florida furnished 2,080,956 tons and shipped 2,026,769 tons valued at \$7,032,250, or an average price of \$3.47 a ton. Tennessee produced 363,453 tons and shipped 344,677 tons valued at \$1,558,858, or an average price of \$4.52.

The world output of phosphate rock in 1930 was estimated at about 11,700,000 metric tons. French Morocco produced 1,779,008 metric tons; Tunisia 3,326,000 tons; and Nauru and Ocean Islands in the Pacific produced 512,265 tons. French Morocco and Tunisia in 1930 both showed a marked increase in production over 1929.

**PHOTO-ELECTRIC CELL.** See ELECTRIC LIGHTING; ELECTRICAL INDUSTRIES.

**PHOTOGRAPHY.** A significant advance was noted during the year in connection with the manufacture of sensitized photographic materials when emulsions of greatly increased speed and improved color sensitiveness were made available. Introduced at first in connection with panchromatic plates late in 1930, the improved characteristics were incorporated gradually into emulsions used in all other important branches of the industry serving amateur, professional, motion picture, aerial, and ciné amateur fields. These improvements permitted exposures with much less light than was necessary heretofore and insured more pleasing picture quality.

Steady but less sensational was the growth observed in various applications of photography, particularly in the use of sound motion pictures for educational and business purposes, as well as for entertainment. Besides the technical improvement in photographic quality, a distinct advance was made in the electrical and mechanical de-

vices utilized in the recording and reproduction of sound, thereby enhancing greatly the realism of the sound picture.

Two international congresses assembled during the summer, one at Dresden, Germany, and the other at Paris, France. The former city was host to the delegates attending the Eighth International Congress of Photography at which over 80 technical papers were presented. The Third International Congress of Radiology met at the latter city. At Rochester, N. Y., Kodak Research Laboratories occupied a new seven-story building.

**APPLICATIONS OF PHOTOGRAPHY.** More extensive use was being made of photography each year in connection with photo-engraving processes. New sensitized materials were made available in 1931, namely, films of very high contrast and sensitized tracing cloth; and wider application was given to existing materials. According to Gamble (*Penrose's Ann.* 34, 1932, p. 1) color rotogravure was no longer an experiment but had become quite standardized. Over 50 American and Canadian newspapers were printed in two or more colors. Half-tones were actually engraved by a new phototelegraphy process, whereby electrical impulses created by a scanning beam are transmitted to the engraving tool. Cartwright, Haigh, and Turner reviewed existing processes for making photo-litho plates and suggested various improvements (*Phot. J.* 71, July 1931, p. 266).

So called methods of "noiseless" recording of sound photographically, resulted in almost complete elimination of extraneous surface noise in conjunction with pictures. During the latter part of the year equally significant improvements were made in disk recording of sound. A conscientious effort was made to stabilize existing equipment and make available in the theatre the quality of sound and picture which existed in master prints at the producing centres.

Further progress, of theoretical interest, was made in solving the problem of stereoscopic projection of pictures (*J. Opt. Soc. Amer.* 21, Feb. and July, 1931, pp. 109 and 397) but most authorities believed that the problem was still far from a practical solution.

Many valuable applications of photography were made in studying natural phenomena. Withow and Boyd made simultaneous flame and pressure studies of the explosions within a gasoline engine cylinder with various fuel mixtures (*Ind. Eng. Chem.* 23, May, 1931, p. 539). (Plate II.) Two rolls of photographic paper were used by Jasper and Walker to record horizontal and vertical movements of the eyes of different individuals (*Science* 74, Sept. 18, 1931, p. 291) which studies are of pathological as well as psychological value. At the autumn meeting of the Society of Motion Picture Engineers, McClintock showed time-motion studies of plant growth which gave new evidence that characteristic growth movements exist for various plants. Edgerton described the use of a mercury-arc thyatron tube as an illuminant for making stroboscopic motion pictures of synchronous motors (*Elect. Eng.* 50, May, 1931, p. 327).

Additional refinements were discussed by Quayle and Erwin in the method devised by the former for photographing the flight of bullets (*Bull. Phot.* 48, Mar. 25, 1931, p. 355). The Library of Congress was using motion picture film to make a record of all documents in its archives, absolute accuracy being insured thereby

# PHOTOGRAPHS ON NEW HIGH SPEED MATERIALS

1. Photograph exposed on infrared plate in darkness. Infrared radiation supplied by fifteen 1000-watt incandescent lamps filtered to transmit only infrared. Exposure—1 second at F/3.5. Reproduced by courtesy of the Eastman Kodak Co., Rochester, N. Y.
2. Photograph on High Speed Panchromatic Plate. Exposure—1/150 second at F/2. No illumination other than that normally used in Madison Square Garden, New York, N. Y. Reproduced by courtesy of the International News Photos Inc.

AERIAL MOSAIC PHOTOGRAPH

Exposed, Developed, Printed, and Assembled in Laboratory Plane by Lieut. George W. Goddard during a single flight

over hand written copies (*U. S. Daily* 6, May 25, 1931, p. 1). An Indianapolis doctor devised a camera for photographing the inner ear (*Science News Letter* 19, May 9, 1931, p. 293).

A three-color additive screen process of color cinematography on 35 mm. film known as the Spicer-Dufay method was exhibited before the Royal Photographic Society, London, in May 1931. The film base is covered with a mosaic of red, blue, and green areas over which a panchromatic emulsion is coated. The Autochrome color screen, so popular for many years but only available on plates, was marketed on a film support (*Bull. soc. franc. phot.* 73, May 1931, p. 115). Fundamental problems facing experimenters in three-color photography were discussed by Oliver and by Spencer (*Phot. J.* 71, Jan. 1931, pp. 6 and 9). The latter investigator also described a new single exposure camera, using semi-transparent mirrors made from very thin collodion membranes (*Brit. J. Phot.* 78, Nov. 13, 1931, p. 685). A simple color print process called Collochrome was described by Wheeler, which consisted in preparing two dyed tissue images and superposing these in register on a blue toned bromide print (*Brit. J. Color Supp.* 25, Dec. 4, 1931, p. 45).

The photographic corps of the U. S. Army continued their experimentation with different types of photography. During the air manœuvres in June, flashlight pictures were made by Stevens over New York, using flash bombs electrically ignited from the plane, and creating three billion candle power of illumination. Under the direction of Lieutenant Goddard a laboratory was built inside a cabin plane. It was equipped so that plates could be developed and prints made during the duration of a flight of a few hours. Aerial mosaics were made with this equipment over the city of Chicago, and over sections of Ohio. (Plate II.)

Trivelli developed an achromatic lens system, permitting photomicrography in the edge of the ultra-violet spectral region at 365 mμ, for which visual focusing could be done with green light at 546 mμ. Improved resolution was possible with this technic (*Scientific Monthly* 33, August, 1931, p. 175). Results of further photomicrographic studies using ultra-violet radiation at 275 mμ were published by Lucas who had developed a precise method of photographing successively different layers, or cross sections of various organisms. By means of an extremely delicate focusing scale, the plane of focus could be varied by one-quarter micron (about  $\frac{1}{400,000}$  in.) (*J. Soc. Mot. Pict. Eng.* 16, April, 1931, p. 445).

PHYSICAL MEASUREMENTS. Some confusion has prevailed for several years in the methods used by investigators in different parts of the world to express the values for various constants describing the characteristics of photographic emulsions. Much of this confusion will be eliminated in future measurements, it is hoped, providing manufacturers and laboratories put into practice the light standard and filter adopted in August by the Eighth International Congress of Photography. Although this standard gives a precise specification of the light source, certain members of the assembly believed the apparatus for making the measurements to be too complex and too expensive for many investigators. A simpler equipment was suggested but decision as to its approval was withheld to permit of care-

ful testing of the proposal. The congress also discussed a specification for the testing of the safety of amateur ciné film.

Increasingly greater use was being made each year of sensitometry in the various fields of photographic endeavor, more especially in connection with both sound and pictures in motion picture work. A laboratory sensitometer was designed especially for use in this field, having a constant light source and a means of varying the time of exposure over a wide range (*J. Soc. Mot. Pict. Eng.* 17, October, 1931, p. 536). Moore discussed several precautions to be observed in practical sensitometry (*Phot. J.* 71, November, 1931, p. 403), and Lobel and Dubois published the results of a study of the measurement of the sensitivity of photographic emulsions (*Kino-technik* 13, April 20, 1931, p. 142).

A projection method of testing photographic lenses was described by Rayton which consists in photographing the projected images of a small aperture placed at selected points in the image plane under test. Two instruments for the measurement of the density of silver deposits were made available, one of German manufacture (*Phot. Ind.* 28, Dec. 17, 1930, p. 1364), and the other of American make (*J. Soc. Mot. Pict. Eng.* 17, December, 1931, p. 922).

MANUFACTURE OF SENSITIZED MATERIALS. As a result of discoveries of new series of sensitizing dyes for photographic materials, coupled with more precise manufacturing technic, marked improvements were introduced in the sensitiveness (both to white light and to colored light) of panchromatic emulsions. The speed was approximately doubled for daylight exposures and increased three to five times for artificial light (*Amer. Cinemat.* 11, March, 1931, p. 9; *ibid.* April, 1931, p. 17; also *Filmtechnik* 7, Sept. 19, 1931, p. 4; and *Amer. Cinemat.* 12, July, 1931, p. 15). (Plate I.) Negative materials for the amateur were also improved, especially with regard to speed, color sensitiveness, and freedom from halation (*Proc. Master Phot. Finishers Amer.* 1931, also *Amer. Phot.* 25, May, 1931, p. 3).

Especially fine grain emulsions were made available for use in cameras taking small pictures requiring enlarging for convenient examination (*Phot. Korr.* 67, March, 1931, p. 84).

The sensitiveness of emulsions for spectroscopic work was also increased considerably during the past year. At the October meeting of the Optical Society of America, Mees described some of these improved materials for use in photographing ultraviolet as well as infrared radiation. (*J. Opt. Soc. Amer.* 21, December, 1931, p. 753.) Using these new infrared materials, hypersensitized with ammonia to increase their speed still more, a picture was taken without the aid of visible radiation in October at the Kodak Research Laboratories. Tungsten lamps filtered to transmit only infrared were used as the source of radiation (Plate I).

Of especial interest was the research work initiated by the U. S. Bureau of Standards on emulsion manufacture, the first results of which were published by Carroll and Hubbard (*Bur. Stand. J. of Research* 7, August and November, 1931, pp. 219 and 811). In their first paper, independent variables were studied which influenced the after ripening of photographic emulsions. The influence of temperature, of bromide ion, and of hydrogen ion concentrations was found to agree with predictions on the basis of chemical

reactions forming sensitivity nuclei. The second paper presents data related to the silver ion-gelatin equilibrium.

**NEW APPARATUS.** Greater use was made of small size cameras which would take 8 to 16 exposures on a short length of roll film. Many different types of such cameras were marketed ranging from simple design to those having focal plane shutters with speeds up to  $\frac{1}{1600}$ th sec., a wide aperture and focusing mount working from 3 feet to infinity (*Camera*—Phila. 42, February, 1931, p. 125; *Amat. Phot.* 72, July 8 and 15, 1931, pp. 64 and 64; *Phot. Dealer* 45, August, 1931, p. 328). A stereo attachment was marketed for one of the small cameras using ciné film. The device divides and transposes the two picture halves independent of the lens diaphragm opening (*Photo Era* 47, September, 1931, p. 165). An exposure meter using a small photo-electric cell for measuring the light intensity was supplied for the use of the amateur ciné enthusiast (*Movie Makers* 6, October, 1931, p. 544).

The most noteworthy change in motion picture camera construction was the progress made in silencing the camera mechanisms, permitting several models to be used on sound sets without the necessity of special sound-proof housings (*Amer. Cinemat.* 11, December, 1930, p. 11; *ibid.* 12, July, 1931, p. 9; *Filmtechnik* 7, Aug. 22, 1931, p. 1). A non-intermittent camera of unconventional design was exhibited at the meeting of the Motion Picture Engineers held in Hollywood in May (*Amer. Cinemat.* 12, June, 1931, p. 12). Several new models of amateur ciné cameras of more compact design were introduced some of which incorporated magazine loading features (*Movie Makers* 6, November, 1931, p. 603).

The portability of sound recording equipment was improved greatly, such apparatus being characterized by their compactness.

Laboratories continued to install automatic processing equipment for motion picture, amateur, and aerial films. Simultaneous printing of picture and sound records was replacing the earlier methods necessitating separate printing of the two records (*Mot. Pict. Herald* 104, Sept. 5, 1931, p. 42).

The quality of reproduced sound improved in conjunction with pictures as a result of better amplification and changes in loud-speaker design. Greater compactness in the construction of such equipment permitted this installation on smaller theatre stages.

Better quality illumination of higher intensity was introduced in projectors for the amateur, of which several improved models were marketed (*Movie Makers* 6, August, 1931, p. 442).

Enlargers were made available suitable for making enlargements up to 8 in. by 10 in. from small negatives (*Brit. J. Phot.* 78, Nov. 20, 1931, p. 702). Several models of print straighteners were designed for commercial use. The popularity of the photo flash bulb was attested by the many designs of reflectors introduced for use with such illuminants.

**THE PHOTOGRAPHIC PROCESS.** Our knowledge still remains rather vague concerning the composition of solutions suitable for replenishing developers. The subject is becoming of greater importance each year as a result of the introduction of automatic processing machinery. An attempt to provide such information for one developer in use in the motion picture trade was made by Crabtree and Ives who published specific

directions for replenishing both for small and for large scale development (*J. Soc. Mot. Pict. Eng.* 15, November, 1930, p. 627). Development according to a definite time and temperature was encouraged more extensively with the introduction of the new fast panchromatic emulsions which must be handled preferably in total darkness.

Some workers preferred to use a desensitizer bath before development which permits development before a brighter safelight than is normally recommended. Opinions of investigators appeared to vary considerably as to whether such solutions decreased emulsion speed. Summarizing the opinion of various workers, Emmermann concluded that a slight decrease in speed existed but that it could be compensated for readily by increasing the development time (*Filmtechnik* 7, Apr. 4, 1931, p. 5).

**PHOTOGRAPHIC THEORY.** A comprehensive paper on the physical aspects of the mechanism of latent image formation published by Harrison (*Phot. J.* 71, April, 1931, *Supp.* p. 1) reviewed the evidence accumulated by different investigators concerning the external photo-electric, photovoltaic, and photo-conductance effects on silver bromide. The first named effect is ruled out completely as of assistance in explaining latent image formation. Work on the photovoltaic effect is considered favorable but incomplete. Accumulated evidence of several investigators showed that the mechanism producing the photo-conductance effect is the same as that which produces the latent image.

The minuteness of the calculated photo-silver necessary for development of grains, according to Sheppard (*Phot. J.* 71, August, 1931, p. 313), suggests that the state and orientation of the silver atoms is more important than their size and for development is the essential factor. Weigert holds to a theory of development involving the existence of complexes called "micelles" which surround the crystals in an emulsion. Processes usually considered as taking place on the crystal surface are believed to occur in the micelle. A catalyst produced as a result of the action of light on this complex makes developability possible (*Abstract—VIII Internat. Cong. Phot.*, J. A. Barth, Leipzig, p. 37).

Potassium bromide has long been considered the most satisfactory anti-fogging agent for use in developers. Trivelli and Jensen showed, however, that several organic compounds, notably 6-nitrobenzimidazole, represent promising substitutes and in some respects are superior to potassium bromide (*J. Franklin Inst.* 212, August, 1931, p. 155).

**BIBLIOGRAPHY.** General reviews of photographic progress are published annually by the Society of Chemical Industry (British), the *British Journal of Photography* (London), and the American Photographic Publishing Co. (Boston). A progress report of the motion picture industry is published semi-annually in the *Journal of the Society of Motion Picture Engineers* (New York).

The more notable books published during 1931 include: E. J. Wall, F. J. Mortimer, *Dictionary of Photography*, 12th ed. (London); F. R. Frippie and W. E. Woodbury, *Photographic Amusements*, 10th ed. (Boston); G. Seeber, A. Parzer-Mühlbacher, *Kamera Kurzweil*, 6th ed. (Berlin); W. S. Davis, *Practical Amateur Photography* (Boston); O. G. Pike, *Nature Photography* (London); F. R. Newens, *Technique of Color Photog-*

raphy (London); L. G. Gabriel, *Bromoil and Transfer* (London); Various authors, *Recording Sound for Motion Pictures* (New York); G. M. R. Balbi, *Talking Pictures and Acoustics* (London); F. Fischer and H. Lichte, *Tonfilm und Wiedergabe nach dem Klangfilm-Verfahren: System Klangfilm Tobis* (Leipzig); J. H. Reyner, *Cine-Photography for Amateurs* (London); S. von Angerer, *Wissenschaftliche Photographie* (Leipzig); Capt. M. Hotine, *Surveying from Air Photographs* (London).

A partial list of the handbooks and annuals appearing during the year is as follows: *Handbuch der wissenschaftlichen und angewandten Photographie*, edited by A. Hay, 9 vols. (Vienna). Volumes issued during 1930 were vol. ii on *Die photographische Kamera und ihr Zubehör*, by K. Pritschow; vol. vi, pt. 1, *Stereophotographie, Astrophotographie. Das Projektionswesen*; *British Journal Almanac* (London); *American Cinematographic Annual* vol. ii (Hollywood); *Kinematograph Year Book* (London); *Year Book of Motion Pictures* (New York); *Motion Picture Almanac* (New York); *Soviet Photo Almanac* (Moscow); *Deutsche Kamera Almanach* (Berlin); *Photofreund Jahrbuch, 1931-32* (Berlin).

**PHOTOPLAYS.** See MOTION PICTURES.

**PHYSICAL ANTHROPOLOGY.** See ANTHROPOLOGY.

**PHYSICAL CHEMISTRY.** See CHEMISTRY; PHYSICS.

**PHYSICS.** An impressive aspect of physics during the year was the thoroughgoing survey of the spectral field to round out our knowledge of the energy levels which promise so much for the physical interpretation of the structure of the atom. The vast volumes of wave length data and diagrams in which the least item may be of profound significance represents devotion to routine measurements equaled but not surpassed by the volumes of star positions which to-day make possible the interpretation of cosmic structure and evolution.

Not less striking is the diffusion of the new note of uncertainty, even in spectroscopy, in which precise measurements had given so sound a basis for theory. Before the British Association, General Smuts stated that "Science, envisaging a solid world ruled by definite and determinable forces, is a fallen God." He held that the new view breaks the grip of rigid deterministic law and thus better suits the common belief in at least some measure of free will. Probability enters the field to usurp rigid determinism to such an extent that some doubt the validity of the second law of thermodynamics. Lewis's new theory involves the "Fluctuations" from probability, as a basis, stating that we cannot ignore even systematic departures ("fluctuations") from the perfect regularity of probability. He postulates that the mode of communication between two systems does not affect the distribution of energy or matter between such systems.

Tolman affirmed that the second law is so changed in the relativistic world that a model universe may expand and contract over and over without reaching a point where there is no more energy to use.

Bancroft stated that new discoveries do not easily enter general credence but must be engineered into understanding, belief, and application. He recited cases. At present, when the popular mind seems almost too credulous, physicists engage in speculation which might have astonished

even Tyndall, to whom imagination seemed so necessary for scientific discovery. For example, our expanding universe doubling its radius in a billion and a half years with explosive velocities above 10,000 miles per second suggests varied destinies. Some hold that at a critical distance it may explode, others that it may reverse and shrink, while still others believe that the expansion of distant systems will continue "forever" at a steadily increasing rate until the velocity of light is attained.

Takeuchi discusses a spherical universe having a radius fixed by a function having a constant determinable from the recession speed for distant objects and also by the estimated rate at which matter is turned into radiation. Both methods gave the same value for the constant.

Hubbell and Humason suggest that the nebular red shift may be due to the "fatigue" of light quanta. If the quantum is reduced by imperfect transmission through space, the lowered quantum energy may automatically lengthen the wave according to Einstein's  $E = h\nu$  relation. The observational constant in the shift formula is  $H = 100 \times 10^2$ , which correlates with universal constants of nature more fully than would be expected if it is assumed to represent a relationship due to mere chance. Lancos gave out a new mathematical theory for the unification of the laws of gravitation and those of electromagnetism based upon "the universal principle of least action."

Shapley recited obstacles which evokes human ingenuity in the study of nature—that the mind is too feeble to comprehend the universe, that the universe is too large for our available devices, that such fact-finding aids to our senses are not powerful enough to survey the far reaches our reason tell us exist, that funds are lacking, that our air is too dusty, that cosmic clouds hide the brilliant centre of our galaxy, that human life is too short, and cosmic processes too slow. These obstacles call forth man's genius to create physical procedure to do by indirection what he cannot do directly.

The artificial transmutation of the atom, first achieved by Rutherford in 1919, is now a matter of laboratory routine. A most striking case during the past year was Bothe's transmutation of beryllium into carbon. A high speed alpha particle of mass 4 and positive charge 2, ejected from polonium, was buried in the atomic nucleus of beryllium. The atomic weight, 9, of the beryllium nucleus was thus increased by 4, giving the new atom the weight of 13; the positive charge, 4, of the beryllium nucleus, was thus increased to 6, making the new atom an atom of carbon, a true synthetic isotope of carbon of atomic number 6, mass 13. The ultra gamma waves produced proved to have more energy than the impinging alpha particle, indicating that true energy sources exist within the atom as forecast in 1904-5 by Einstein and Le Bon, thus settling a controversy of years standing in atomic physics.

Chadwick, Constable, and Pollard bombarded atomic nuclei with alpha particles from polonium and found evidence that intra-atomic energy is quantized. Anderson and Millikan reported that atomic nuclei can easily be altered and that they have successfully accomplished it. Numerous attempts are being made to produce sufficiently high voltages to smash the nucleus or alter it. Brasch and Lange of the University of Berlin

have used natural lightning flashes (as high as 30,000,000 volts) in their experiments on atomic nuclei. One X-ray tube withstood 2,600,000 volts, being constructed of alternate rings of paper, rubber, and aluminum. Brasch and Lange at Mt. Generoso were planning to use natural lightning to operate an X-ray tube carrying 7,000,000 volts (2,000,000 higher than any artificial voltages produced in the laboratory).

In England powerful electromagnets were being used to tear the atomic nuclei apart. Pokrowski, using 140,000 volts, had broken down the nuclei of lead atoms and induced radioactivity in them. The Research Foundation was aiding Van de Graaf of Princeton in a new type of high voltage generator, static electricity being evolved by silk belts—the first model developing 1,000,000 volts. It was hoped to produce 20,000,000 volts in the finished apparatus.

Gamow's studies of the constitution of atomic nuclei in the light of radioactivity phenomena and energy levels within the nucleus were published in book form under the title *Constitution of Atomic Nuclei and Radioactivity*. Data already acquired in this field permit predictions. "For example," says Gamow in the closing sentence of his book, "we can see from the curves that a large gain of energy may be expected when an alpha particle is ejected and a proton captured by the nuclei of the  $4n-3$  type ( $\text{Li}$ ,  $\text{B}_{11}$ ,  $\text{F}_{19}$ ), whereas with nuclei of the  $4n-2$  type this would mean a loss of energy." The complete analysis of all atoms and their isotopes to chart their total protons and electrons has brought interesting results and predictions in the light of the significance of the stable tetrahedral structure of the alpha particle as a building unit of atomic nuclei.

Urey, Murphy, and Brickwedde reported the discovery of hydrogen isotope of mass 2, the existence of which was indicated both from theory and by the mass spectrograph. The separation of the new isotope was made by evaporating hydrogen at  $434^\circ$  below zero, Fahrenheit. The increased share of the nucleus in radiation involves a new series of Balmer lines based upon the change in the Rydberg constant. This was quantitatively attributable only to hydrogen atoms of mass 2. The achievement is unique in that it involves doubling the nuclear mass of an atom. The last specimen was in the ratio of about 1:800. An ionized hydrogen molecule of mass 2 and charge 1 would assume the configuration proton-electron-proton which may well form the nucleus of the new isotope.

Various reports were current as to the discovery of elements 85 and 87. Papish reported the discovery of element 87 and described its properties—that it is insoluble, inflammable, light-sensitive. Whether or not these were observed or predicted from theory is not stated. He stated that the X-ray spectrum lines (not published) confirm his discovery. From theory it would be expected to have the lowest ionization potential and the largest atomic radius. Allison of Alabama Polytechnic Institute reported finding elements 85 and 87 by means of the Faraday effect, stating that the method was extremely sensitive. The method itself had previously been published. The discovery of element 61 at the end of the year awaited confirmation.

The cosmic rays were estimated by Millikan as of strength equal to the total radiation from the stars. Anderson and Millikan, using cosmic

rays (energy  $10^8$  to  $3 \times 10^8$ ) as laboratory tools, bombarded oxygen and nitrogen nuclei and ejected electrons at 99.9 per cent of the velocity of light, and protons at half the velocity of light.

Anderson produced photographs of high speed particles from atom nuclei disrupted by cosmic rays from interstellar space. One trace shows an electron of 140 million volts energy, the other shows a positive charge particle, probably a proton, of about 70,000 volts energy. The curve is produced by the influence of a powerful magnetic field of 17,000 gauss. They are made visible by water vapor, condensed by the passage of the rays.

Meggers published the first analysis of the arc spectrum of rhenium, finding, as expected, the effect of nuclear asymmetry in fine structure characteristic of odd values of the atomic numbers. He covered the range from 2100 to 8800 angstroms, the rare ultimate being 3460.47 angstroms.

Simultaneously in Japan and in Germany were published independent solutions of the hyperfine structure of mercury line 4048.50. The Murakawa report was accompanied by excellent graphic figures which clarify the somewhat complex explanation. He found that the even isotopes were without nuclear moment, and that the odd isotopes 199 and 201 had nuclear moments of  $1/2$  and  $3/2$ , respectively. This simple assumption gives a clear, complete, and concise explanation of the observed fine structure. Schlüter and Keyston report in much more detail the same conclusion in a similar paper in which diagrams of energy levels are made especially clear.

Of outstanding importance in the year's contribution to physical technique was a new dye for sensitizing photographic plates to deep infrared radiation. Plates are made up and used immediately since the life of the freshly sensitized plate is short. The maximum sensitivity is at about 9600 angstroms, and excellent spectrograms were made as deep in the infra-red as 12,000 angstroms. In this range are many important spectral lines needed to complete the analyses of spectral lines in the systematic survey of the entire field of spectra.

Raman's cablegram reporting that he had obtained experimental proof of the spin of the photon created somewhat of a sensation in physical circles. His paper in the *Indian Journal of Physics* stated that "the ratio of the energy to the linear momentum of the quantum determines the velocity of light while the ratio of the energy to spin determines its frequency." He added that "the energy, momentum, and spin of the photon have their counterparts in the Maxwellian field theory and, indeed, may be regarded as a translation into the language of the quantum theory, of ideas derived from the classical electrodynamics."

In simple scattering the rotational quantum number  $K$  of the molecule obeys the rule  $\Delta K = 0$  or  $\pm 2$ . A photon spin  $+\hbar/2\pi$  may remain unchanged, or change to  $-\hbar/2\pi$ , while a proton spin  $-\hbar/2\pi$  may remain unchanged or change to  $+\hbar/2\pi$ . The change in the quantum is thus 0 or 2 Bohr units. In the interchange of energy between the photon and the molecule, Raman's experiments and measurements are "clearly decisive in favour of the spin theory." This discovery, if confirmed, widens the gap between the quantum concept and the wave theory,

and adds to the evidence that light is corpuscular.

The quantum is the subject of many papers and much speculative study. The quantum is opposed to continuity and yet the space-time continuum is an achievement of relativity physics. Eddington portrayed vividly the paradox of the quantum. While a quantum of light is large enough to fill the lens of a 100-inch telescope, it is small enough to enter an atom. It may spread like a circular wave through the universe, but when it hits its mark, this cosmic wave instantaneously contracts to a point, where it strikes with its full and undivided force.

Podolsky, Einstein, and Tolman announced the astonishing opinion that "The principles of quantum mechanics would actually impose limitations on the localization in time of a macroscopic phenomenon such as the opening and closing of a shutter." They cite a model, suggesting the quantization of large scale phenomena. Connan suggests that photons may form protons and electrons if the frequency is high and the space cold enough and the density great, by a photochemical reaction.

Dumond confirmed the motions of negative electrons in solids by measuring the Doppler effect which increases the spread or scattering of transmitted X-rays, and gave the average speed of the orbital electrons of the carbon atom as 1500 miles per second.

Rogowski focuses electrons by an extra coil between the diaphragm and cathode, obtaining a very bright spot on the zinc sulphide screen, of 50-candles intensity. He records the oscillations of a very short wave with a "writing speed" of about a third the speed of light, this being at present the limiting speed since the electron mass increases rapidly at higher speeds.

Mourontseff found that electrons in an electron tube complete their passage in one six-hundred-millionth of a second. A bullet would take 60 times this period to travel through the paper on which this is printed, and it would take sound 6000 times longer to travel an inch.

For experimental physics and for industry and technology epochal achievements were to be credited to the electron tube, including the photo-electro cell, the triode and its companions, the X-ray tube, and the cathode-ray tube, in all of which the electron is the active agency. Tubes are now made of 500 kilowatt capacity. Photoelectric cells are finding countless uses in science, and industry, continuously and automatically controlling processes and measuring products without contact, without moving parts, replacing human scrutiny, toil, and handling where once mechanization seemed impossible. Almost every property or condition of a product can alter the characteristics of a circuit especially at high frequencies. Hence we can measure the changes in the circuit and thus deduce the changes in the product.

The extension of the uses of the electron in science, technics, and industry is a phenomenon of present day achievement. A low-grid-current tube with a thyatron or similar tube amplified a current ten thousand million million times to control one-tenth of an ampere directly. Sutherland discussed grid-current measurements, stressing the need of high insulation and describing a photo tube and single amplified tube unit which would operate a relay that would act directly for a period of years.

The lightest known unit is the electron, and the most mobile, capable of speeds almost as great as the velocity of light. The electron detects, counts, records, measures, controls, and regulates, and the electron tubes in which it operates may fitly be named "The Aladdin's lamps of industry." Among its numberless new uses is the control of carton wrapping, of the cutting of steel bars, of mine hoists, sorting beans by color, counting butter cartons, sending and delivering automatically mail bags to predetermined destinations, sorting letters into 100 compartments at the rate of a hundred a minute, sorting tabulating machine punched cards, stop-control of dangerous machinery which will not operate if any part of the operator is in the danger zone, similar control for elevators, and so on through a well-nigh endless list.

A notable contribution to electron tube design is the new Hund tube of great simplicity which operates cold, without vacuum, without filament, and amplifies, modulates, detects, and serves as oscillator, with seemingly indefinite life.

Mecke finds that at 50 kilometers altitude the concentration of ozone is about  $2 \times 10^{-4}$  compared with  $10^{-8}$  on the earth's surface.

The Carnegie Institution devotes constant effort throughout the world to measure the magnetic elements. Recent results confirm the striking similarity in the curve of terrestrial magnetic activity and the relative number of sun spots. The favored theory is that streams of particles from the sun affect the upper layers of the atmosphere, causing aurora and magnetic storms. As the sun turns it brings the same aspect facing the earth every 27 days. The correlation shows this period distinctly, connecting the spot and facular activity in the sun with terrestrial storms. The Carnegie results cover a world-wide front in the field of terrestrial magnetism. Its instruments are used of a sensitivity such as to be responsive to trolley lines five miles away.

Sotome reported that his measurements of calcium flocculi on the sun showed a higher correlation than sun spots in relation to total solar activity. He found that the central zone affects the sun's radiation especially and that Abbot's solar constant corresponds to actual solar activity. Schostakowitsch discussed periodicities involving solar activity revealed by the sunspot cycle with respect to geophysical, biological, economic, and social cyclical changes. In accordance with modern theory Armellini found that the diameter of the sun had increased by 1 second of arc in the period from 1925 to 1930, in proportion as the energy produced is greater than that radiated.

Radio showed the expected improvement as the 1932 minimum of the sunspot cycle was nearing. The cathode ray tube was expected to become the screen of the home movies shortly. The cathode scanning system gives a weightless moving system which makes it most suitable for the high frequency (quasi optical) waves which give great promise of use in television or visual broadcasting.

Olsen announced a new ribbon type microphone, a light metallic ribbon hanging freely in a magnetic field accessible to air vibrations. This has a sense of direction, and a plane of zero sensitivity in which the camera director and other disturbing noise sources may be placed without affecting the sound recording. At the Munich Congress of Electrical Music, instru-

ments were demonstrated by true audio-frequency oscillations produced electrically.

Recent advances in the measurement of sound intensities are adding precision to the entire system of sound recording, transmission, and reproduction of motion pictures with sound, and radio, both audio and visual. A range of 60 decibels on sound recording films is possible (a decibel being the least perceptible change in loudness). A fair-sized theatre may be given the illusion of a large-sized orchestra with a 20 decibel level, while a 30 decibel level will simulate gun fire, according to Hansen.

The establishment of the American Institute of Physics marks a great step forward. Physics now has three journals: *Review of Modern Physics*, *The Physical Review*, and *Physics—A Journal of Applied Physics*. The first gives "comprehensive, authoritative, and timely discussions of the current problems of special interest." The second continues as the American journal of experimental and theoretical physics. The third is conducted to expand physics in its rôle as the science "basic to other natural sciences and to the arts and industries." These three journals are published by the American Physical Society.

Nobel prize (q.v.) was awarded C. R. Bergius and Carl Bosch for the development of hydrogenation processes for liquefying coal to produce motor fuels, lubricating oils, methanol, and other substances.

The Frederick Ives Medal was awarded to Theodore Lyman for his researches in the ultraviolet spectrum of hydrogen.

The upper air is a physical laboratory in which nature's own experiments are being observed. During the year the stratosphere was reached by two investigators demonstrating that, suitably housed, life can exist and vehicles travel in regions 10 miles up and higher. A German and a French plane were being designed for speeds of 500 miles an hour for stratospheric flight in this region. A device to record continuously and automatically the height of the Kennelly-Heaviside layer is a new aid in the physics of high altitudes. Rocket designers have active projects of reaching the stratosphere and the higher regions to sample the atmosphere and to demonstrate the feasibility of long range rocket flight.

Thus physics extends its field into the heart of the atomic nuclei, to the farthest perceptible universe, to the highest atmosphere; and its theories, laws, methods, and devices are fast making it a master science, reconstructing all industries and sciences. See ASTRONOMY; CHEMISTRY; METEOROLOGY.

**BIBLIOGRAPHY.** The year was productive of new books in the field of physics. A few may be cited here. Jeffrey's *Scientific Inference* describes the formulation of generalizations from facts, and shows how conclusions may with high probability outstrip the measured data. Ross in his *Science, Matter, and Time* gave results of experiments testing some original points of view. Loeb outlined the current theories of gas behavior in his new work *The Nature of a Gas*. Brownell surveyed the general field of physical science in his new book entitled *Physical Science*. Planck's *The Universe in the Light of Modern Physics* proved to be his personal interpretation and exposition of recent physical theory.

Gregory published *A Short History of Atomism*, covering the subject from the earliest times.

Rabinowitsch and Thilo, in their *Periodisches System*, review the rise and development of the periodic system, the structure of the nucleus, spectroscopic basis for electronic structure, including wave mechanics, properties of the elements as related to their position in the periodic system, and finally the periodicity of properties which give it the name *Periodic System*. Style, in his *Photochemistry*, describes the quantum theory of light absorption, especially by molecules, basic laws of photochemistry, secondary processes, and the relation between quantum yield and temperature and pressure. Hill's *Adventure in Bio-Physics* reviews measurements of the energy balance in bodily exercise and sport. Braun's *Flussige Kristalle und Lebewesen* is unique in giving only the opinions and views of the 57 authors whose 172 papers in the field of liquid crystal phenomena are here abstracted. Gortner calls it "a new type of a book." The work deals with the rôle of liquid crystals in living processes.

**PITTSBURGH, UNIVERSITY OF.** A nonsectarian institution of higher education for men and women in Pittsburgh, Pa., founded in 1787. The total autumn enrollment for 1931 was 11,041, distributed as follows: College, 1933; engineering, 610; mines, 121; business administration, 660; education, 1054; Johnstown Junior College, 755; Erie Centre, 553; Uniontown Centre, 239; graduate school, 1210; downtown division, 2736; medicine, 265; law, 378; pharmacy, 230; dentistry, 284; retail training, 13; extension division, 1392. The 1931 summer session enrollment was 4007. There were 985 members on the faculty for the year ending June 30, 1931. The amount of endowment was \$2,032,555, and the income from endowment during 1930-31 was \$110,070. There were 144,703 volumes in the library. The Falk Clinic was dedicated and the Fanny Edel Falk Elementary School was opened in the autumn of 1931. Chancellor: John G. Bowman, LL.D.

**PLATINUM.** The platinum refiners of the United States in 1930 purchased 797 ounces of crude placer platinum of domestic origin and 44,765 ounces of foreign crude platinum, according to the U. S. Bureau of Mines. In 1929 the refiners purchased 516 ounces of domestic crude platinum and 51,618 ounces of foreign crude platinum. Domestic material purchased in 1930 included 513 ounces from Alaska, 236 ounces from California, 10 ounces from Oregon, and 38 ounces from unspecified sources. Refined platinum metals recovered in 1930 from crude platinum, from ore concentrates, and from gold and copper refining amounted to 43,502 ounces, of which 9308 ounces was reported to have come from domestic materials. During the year there was formed a British corporation, Consolidated Plat-

inums, Ltd., for marketing Russian, South African, Colombian, and Canadian platinum. In Canada platinum is a by-product of nickel refining.

The price of platinum in New York, which had fallen in 1930 from an average of \$61.923 per ounce in January to \$36.00 at the end of December in that year, continued to decline until May, 1931, when the average for the month was \$24.980. June witnessed an improvement with an average price of \$37.115 per ounce while in July and until the end of the year \$40 per ounce was the ruling price. Imports of platinum in 1931 were less in value and amount than in 1930. The 1931 imports of grain, nugget, sponge, and scrap totaled 67,078 ounces valued at \$1,905,062, while ingots, bars, sheets, and plates totaled 23,553 ounces valued at \$657,413. The 1930 corresponding imports were 81,229 ounces valued at \$3,363,858 and 24,926 ounces valued at \$961,334.

**PLUNKETT,** REAR ADMIRAL CHARLES PESHALL, U. S. N. RET. An American naval officer, died Mar. 25, 1931, in Washington, D. C., where he was born Feb. 15, 1864. He was graduated from the U. S. Naval Academy in 1884, and was promoted through the grades to rear admiral in 1919.

During the World War he was director of gunnery training and engineering and also commanded the 14-inch naval railway batteries operating with the French and American armies along the Western front. He commanded the destroyer force of the United States Fleet from January to July, 1919, and the destroyer squadrons of the Atlantic Fleet from July, 1919, to November, 1920. He was also in charge of all operations of the flight of the Navy N-C planes across the Atlantic in June, 1919. During 1920-21 he was chief of staff at the Naval War College and during 1921-22, president of the Board of Inspection and Survey. In December, 1922, he assumed command of the 3d Naval District and Navy Yard, New York, where he continued until his retirement in 1928. He received the Distinguished Service Medals of the United States Army and Navy, and was made a Commander of the French Legion of Honor.

**POLAND.** A European republic formed Nov. 9, 1918, as a result of the World War. Capital Warsaw.

**AREA AND POPULATION.** With a area of 149,958 square miles, Poland had a population at the census of Dec. 9, 1931, of 32,120,020 (preliminary returns). At the census of 1921, the population was 27,176,717. For the period 1925-29 inclusive, the average annual number of births per 1000 of population was 33.2, the average annual number of deaths was 17.3, and the

natural increase was 15.9. In 1929, when the excess of births over deaths was 468,140, there were 243,442 emigrants, most of whom went to Germany, France, Canada, Argentina, and the United States. Emigration in 1930 totaled 218,387, of whom 9231 went to the United States. The largest cities, with the census population of Dec. 9, 1931, and the 1921 census population in parentheses, were: Warsaw (Warszawa), 1,178,211 (930,713); Łódź, 605,287 (451,974); Posen (Poznań), 240,574 (184,758); Lemberg (Lwów), 316,177 (219,388); Cracow (Kraków), 221,260 (183,706); Wilno (Vilna), 197,049 (128,954 in 1919); Katowice, 127,841 (104,868). Poles formed 69 per cent of the population in 1921; Ruthenians, 15 per cent; Jews, 8 per cent; White Russians, 4 per cent; Germans, 3 per cent; and other nationalities, 1 per cent.

**EDUCATION.** During 1929-30 there were 26,577 elementary schools, with 77,338 teachers and 3,715,041 pupils; 759 secondary schools, with 14,279 teachers and 203,387 pupils; 214 teachers' training schools, with 1931 teachers and 35,515 students; and 731 professional schools, with 84,298 students. Universities and high schools in 1929-30 numbered 20, with a total of 45,060 students. The principal universities were: Warsaw, 9121 students; Cracow, 6061; Lwów, 6100; Posen, 4163; Wilno, 3416; and Lublin, 584.

**PRODUCTION.** Poland is predominantly agricultural, although there are numerous important industries. In 1930, 63.8 per cent of the population was engaged in agriculture, forestry, or fishing; 15.4 per cent in mining and industry; 9.5 per cent in trade and transportation; and 11.3 per cent in other occupations. Of the total area of Poland in 1931, cultivated land comprised 48.6 per cent, forest 24.1 per cent, pastures and meadows 15.3 per cent, and waste land 10.4 per cent. Nearly 60 per cent of the arable land was devoted to cereals. The area and production of the principal crops in 1929 and 1930 are shown in the accompanying table from the *Commerce Yearbook* for 1931.

#### POLISH CROPS: ACREAGE AND PRODUCTION

<sup>a</sup> Thousands of acres.

<sup>b</sup> Thousands of units—bushels except as indicated.

<sup>c</sup> Unit, metric ton.

<sup>d</sup> Seasons ended following year.

<sup>e</sup> Unit, pound.

The mineral production in metric tons in 1930, with 1929 figures in parentheses, was: Bituminous coal, 37,520,000 (40,236,000); lignite, 54,980 (74,000); crude petroleum, 662,763 (674,089); salt, 388,000 (509,488); potash, 298,000 (358,628); iron ore, 477,949 (705,532); steel, 1,237,497 (1,376,713); and zinc, 174,362 (169,029). The output of natural gas was 486,504,000 cubic meters (467,084,000 in 1929). The chief industrial products are cotton and wool textiles, paper and paper manufactures, chemicals, timber, iron, and refined petroleum. Petroleum refining

is of increasing importance, as is sugar refining. In 1929-30, 70 sugar refineries produced 824,300 metric tons. Virtually all industries were adversely affected by the economic depression of 1930-31, but the textile mills showed increased activity in 1931. The number of registered unemployed workers, including office workers and unskilled laborers, reached a peak of 372,536 in April, 1931. See UNEMPLOYMENT.

COMMERCE. The economic depression resulted in a drastic curtailment of Polish foreign trade in 1930, imports being 28 per cent and exports 13.5 per cent lower in value than in 1929. Imports in 1930 amounted to 2,245,973,000 zlotys (1 zloty equaled about \$0.1122), compared with 3,110,979,000 zlotys in 1929, while exports aggregated 2,433,244,000 zlotys, against 2,813,359,000 zlotys in the previous year. The visible balance of trade, which was unfavorable by 297,620,000 zlotys in 1929, became favorable by 187,271,000 zlotys in 1930, due to the sharp decline in imports. Part of the decline in foreign-trade values was attributable to lower price levels, but the volume declined also. In 1931, according to preliminary data, imports totaled 1,462,500,000 zlotys and exports 1,878,400,000 zlotys, leaving a favorable trade balance of 415,900,000 zlotys.

Polish imports in 1930 came chiefly from Germany, which furnished 26.8 per cent of the total (27.4 per cent in 1929); the United States, 12.2 (12.4); Great Britain, 7.9 (8.5); Czechoslovakia, 7.5 (7.3); France, 6.8 (6.9); Austria, 5.7 (5.9); Switzerland, 3.8 (3.3); Italy, 3.1 (2.6); and the Soviet Union, 2 (1.2). Germany, Czechoslovakia, Austria, and Great Britain were the principal purchasers of Polish exports. The United States in 1930 sold Poland directly goods valued at \$30,400,000 (\$43,000,000 in 1929), according to Polish statistics, and purchased Polish exports valued at \$2,838,000 (\$4,853,000 in 1929).

FINANCE. In the budget for the fiscal year commenced Apr. 1, 1931, as passed by Parliament, total receipts were estimated at 2,866,700,000 zlotys (1 zloty equals \$0.1122 at par) and expenditures at 2,865,900,000 zlotys, leaving an estimated surplus of 800,000 zlotys. The largest expenditure items were: Minister of War, 830,200,000 zlotys (29.2 per cent of the budget); public debt service, interest, and amortization, 315,100,000 zlotys (11 per cent). At the end of the first half of the 1931-32 fiscal year, expenditures exceeded receipts by 124,340,000 zlotys.

Actual total receipts for 1930-31 were 2,747,850,000 zlotys and actual expenditures were 2,809,600,000 zlotys, compared with the budget estimates of 3,038,700,000 zlotys and 2,975,400,000 zlotys (including supplementary credits of 34,500,000 zlotys), respectively. The actual deficit of 53,440,000 zlotys was covered out of funds of the Treasury Reserve accumulated during previous years. These reserve funds totaled 300,000,000 zlotys after the transaction. The 1929-30 budget operations yielded a surplus of 20,769,000 zlotys.

Approximately 36 per cent of the foreign debt was held in the United States, largely in the form of long-term government loans. Funds raised in France, which ranked next in volume, were invested chiefly in Polish enterprises. Translated into dollars, the public debt on July 1, 1931, amounted to \$572,944,496, or about \$15.25 per capita, of which \$525,644,496 represented the foreign and \$47,300,000 the domestic debt.

COMMUNICATIONS. At the beginning of 1930

there were 15,132 miles of state-owned railway lines in operation, of which 10,707 miles were main and 1425 miles narrow-gauge lines. The operating revenue of state lines in 1929-30 was 1,621,851,000 zlotys and operating expenses were 1,586,523,000 zlotys. Highways in 1931 extended 141,039 miles, of which 32,752 miles were surfaced and 108,228 miles were earth and sand-clay. There were also about 1875 miles of navigable waterways, of which 298 miles were accessible to vessels of over 400 tons.

Shipping traffic through the new Polish port of Gdynia during 1930 was approximately half that carried on through Danzig (q.v.). A total of 5078 vessels of 4,143,000 net registered tons entered Danzig and 6086 vessels of 4,143,000 tons cleared, compared with entrances of 2238 vessels of 2,031,000 tons and clearances of 2219 vessels of 2,015,000 tons at Gdynia. In 1931, traffic through Gdynia again showed a marked increase, while that through Danzig declined slightly as compared with 1930.

GOVERNMENT. Under the constitution adopted Mar. 17, 1921, executive power is vested in the President, chosen by both houses of the National Assembly for a period of seven years; and legislative power is vested in the National Assembly, consisting of the Senate of 111 members and the Diet (444 members), called the Sejm, both elected by universal suffrage. President in 1931, Ignace Moscicki elected June 1, 1926. The Cabinet appointed Dec. 5, 1930, included the following: President of the Council of Ministers (Premier), Walery Slawek; War, Joseph Pilsudski; Foreign Affairs, August Zaleski; Finance, Ignacy Matuszewski. The composition of the Sejm (lower chamber) following the election of Nov. 16, 1930, was: Government bloc, 247; National People's Union, 62; Peasant party, 48; Socialists, 24; Ukrainians, 17; Christian Democrats, 15; National Labor, 10; Jews, 6; Germans, 5; Communists, 4; other parties, 6; total, 444. Out of 111 members of the Senate, the Government bloc controlled 74; the National People's Union, 12; Peasants, 6; Socialists, 5; Ukrainians, 4; Christian Democrats, 4; Germans, 3; other parties, 3.

#### HISTORY

INTERNAL DEVELOPMENTS. The storm of political agitation which raged through 1930 subsided markedly during the following year. The parliamentary *impasse*, which had provoked unrest, was ended by the defeat of the Opposition in the elections of November, 1930, and the Government bloc pushed through without difficulty legislation designed to mitigate the effects of the economic depression. With the Sejm functioning normally in accordance with his views, Marshal Pilsudski's dictatorship became less obtrusive, although he remained the unchallenged ruler of Poland.

The Slawek Government at the beginning of the year found itself under heavy fire in connection with the imprisonment of many Opposition deputies at Brest-Litovsk during the 1930 election campaign. Defending the Government's action before the Sejm on January 24, the Premier denied charges of maltreatment of the prisoners and said that their arrest was necessary to prevent a planned *coup d'état*. The Premier's statement was sustained, and an Opposition motion for an investigation defeated, by a vote of 233 to 150. The defendants were released after two months in Brest-Litovsk prison, but 11 of the most prominent were brought to trial in Warsaw.

October 26, on a charge of plotting to overthrow the Republic by force. Among the defendants were former Premier Witos, the former Cabinet Minister Norbert Barlicki, Vladislav Kiernik, and Herman Lieberman, all leaders of the Socialist and Peasant parties. The trial, conducted by a tribunal of four professional judges, was still under way at the end of the year. Over 250 witnesses were heard.

The two main problems confronting the Government at the spring session of Parliament were the revision of the Constitution in line with Marshal Pilsudski's demand for the centralization of power in the hands of the executive, and the balancing of the budget. The projected constitutional changes provided for the election of the President by direct popular vote from two candidates, one designated by the two houses of Parliament and the other by the retiring President. His greatly increased powers would include the right to convene and dissolve Parliament, to appoint Ministers and judges and one-third of the Senators, to sign and ratify treaties without approval by Parliament, to issue decrees with the force of law, and to veto bills. Parliament would retain the right to overturn a Ministry by an absolute majority, but the Ministers would be responsible to the President as well as to the Sejm.

In the debate which opened in the Sejm in March, the Government bloc contended that the existing Constitution (promulgated in 1921) had been rendered obsolete by Pilsudski's *coup d'état* of May, 1926, and that the subsequent changes should be embodied in the fundamental law. The Opposition parties bitterly opposed the change on the ground that it would perpetuate the principle of dictatorship. While the revision passed its first reading in the Sejm in March, the Government was unable to muster the needed two-thirds majority to secure its final adoption.

Meanwhile the economic crisis was resulting in a sharp curtailment of revenues. Marshal Pilsudski returned from a four-months' vacation at Madeira, March 29, to aid in drafting economy measures, which Premier Slawek had hesitated to enact without his chief's approval. While declaring that the balancing of the budget was the Government's first duty, the Marshal, in the absence of the Finance Minister, ordered the distribution of a 15 per cent bonus to the 17,000 army officers. On May 1, however, the Ministry put into effect an economy programme which canceled the bonus and reduced by 15 per cent the salaries of all Government employees. Despite the Finance Minister's protests, Pilsudski on May 10 ordered the War Office to refund the deducted pay of army officers and soldiers and to make no reductions in the future. In subsequent conferences with the Premier and Finance Minister Pilsudski finally consented to a 5 per cent reduction in the army's pay. The position of the two Ministers had been weakened, however, and on May 26 the entire Ministry resigned.

The following day Col. Aleksander Prystor, the closest friend of the Marshal, formed a new Cabinet as follows: War, Marshal Josef Pilsudski; Interior, B. Pieracki; Foreign Affairs, Senator August Zaleski; Finance, Jan Pilsudski; Justice, C. Michalowski; Industry and Commerce, Gen. F. Zarzycki; Agriculture, Dr. L. Janta-Polczyński; Agrarian Reform, Prof. L. Kozlowski; Religion and Education, J. Jedrzejewicz; Labor and Social Welfare, Gen. S. Hubicki; Communica-

tions, Alfred Kühn; Public Works, M. Norwid-Neugebauer; Posts and Telegraphs, J. Boerner.

A new economy programme was announced by the Finance Minister June 16. Expenditures for the year 1931-32 were to be cut by some 390,000,000 zlotys to about 2,470,000,000 zlotys (approximately \$272,000,000). The income of civil servants was to be further reduced by the cancellation of allowances for rent and other extras. Five of the country's 13 Provinces and the three Ministries of Agrarian Reform, Public Works, and Posts and Telegraphs were to be abolished, thus allowing for the discharge of nearly 70,000 out of the 487,000 public employees. All capital expenditures were also to be postponed.

Partly as a result of these economies and partly because Poland's six-year tariff war with Germany had served to render her independent of the Berlin money market, the country was less affected by the German, Austrian, and British financial crises of the summer of 1931 than any of the central European states. The economic situation grew decidedly worse, however, and the fall session of the Sejm was convoked earlier than usual (on October 1) to consider measures for maintaining the stability of the zloty, and to deal with unemployment and farm relief. Among government measures introduced were proposals for an increase of the income tax, collection of tax arrears in kind from the peasants for distribution among the unemployed, the reduction of child labor, and the prohibition of overtime work.

**UKRAINIAN SITUATION.** Continuation of terrorist activities on the part of secret Ukrainian organizations during 1931 testified to the ineffectiveness of the Polish military punitive expeditions which were sent into Eastern Galicia in the autumn of 1930. With the approach of the September Assembly of the League of Nations, before which the Ukrainian minority leaders planned to lay their case against Poland, the Government took steps to conciliate them in an effort to induce them not to bring the matter before the League. M. Nakoniecznikoff-Klukowski, Governor of Lwów Province, who was responsible for the forcible "pacification" of that region in 1930, was removed in July, his post being filled by the recently resigned Finance Minister, M. Matuszewski. This did not meet the Ukrainian demands, however. They asked for the release of all those imprisoned during the "pacification," reparation for damage done by the Polish military, a long-term agrarian credit, and the formation of one administrative unit in place of the three Eastern Galician Provinces, with a local legislature. Meanwhile terrorist retaliation in Eastern Galicia was believed responsible for the assassination on August 29 at Truskawiec of Tadeusz Holowko, vice president of the Government bloc in the Sejm, who had been negotiating with the Ukrainian leaders.

**GERMAN MINORITY QUESTION.** Poland was severely censured by the League of Nations Council in January and May in connection with the complaints of the German minority in Upper Silesia, Poznań, and Pomerania against Polish outrages during the elections of November, 1930. At the January session of the Council, the Council's committee of inquiry presented a report severely critical of the action of Polish authorities in Upper Silesia. It was pointed out, however, that Poland admitted the rights of the German minority had been infringed and was prosecuting the

offenders. The tardy submission of Poland's reply before the May session of the Council, together with the statement of the Polish representative that Poland would not accept responsibility for new outbreaks in Silesia in case the report was not immediately accepted by the Council, evoked the wrath of Foreign Secretary Henderson of Great Britain, who was presiding. He adjourned the question to the September session, after telling the Polish representative flatly that his Government "cannot rid themselves of responsibility." Poland accepted the rebuke without a word, and the matter was buried for the time being in September (see LEAGUE OF NATIONS).

**THE FRENCH RAILWAY LOAN.** Conclusion in April of negotiations for a French loan for the completion of the Polish Upper Silesia-Gdynia railway line seemed certain to aggravate Polish-German relations over a long period. The new line promised also to modify the economic aspect of Central Europe by providing the Polish Silesian iron and coal area with a direct route to the sea about 100 miles shorter than the existing outlets through Germany. It seemed likely to attract much of the export business of eastern Czechoslovakia, to facilitate the development of the new Polish port of Gdynia, and to consolidate Poland's hold on the Corridor. Naturally, the agreement bound Poland more closely to its alliance with France and strengthened the position of France's allies in Eastern Europe.

As approved by the Sejm April 24 and by the Senate April 27, the agreement granted the *Compagnie Franco-Polonaise de Chemin de Fer* a 44-year concession to complete and operate a double-track line, already partly completed by the Polish Government, from Kattowice in Upper Silesia a distance of about 300 miles to Gdynia. The concessionary company subsequently floated at 1,000,000,000-franc loan (approximately \$39,200,000) on the French market, which was guaranteed by the Polish Government. Poland retained the prior right to purchase the concession after 20 years. It was stipulated that the Polish Government would fix all rates on the railway and exercise an important influence in the selection of personnel, although headquarters of the concessionary company remained in Paris. The concessionary further agreed to refund to the Government the sum of 90,000,000 French francs (about \$3,500,000) derived from the sale of bonds and an additional sum of 12,000,000 French francs (about \$468,000) at the end of each fiscal year, provided the operating account of the railway did not show a deficit.

**ANTI-SEMITIC OUTBREAKS.** Early in November, 1931, there was a recurrence of anti-Jewish hostility in Poland, resulting largely from the agitation of Nationalist university students. Attacks upon Jews reached such proportions that the authorities closed the universities and other educational institutions in Warsaw, Vilna, Cracow, and Lwów for several weeks. By the end of the month the disorders had given place to a fairly widespread economic boycott and social ostracism of Jews. According to the Central Committee of Orthodox Jews of Poland, the Government and the people generally condemned and helped to suppress the disorders. See JEWS.

**WILSON MEMORIAL UNVEILED.** At Poznań (Posen) on July 4, in the presence of President Moscicki, Mrs. Woodrow Wilson, and a great gathering of Polish notables, was unveiled a statue of President Wilson by Gutzon Borglum

presented to the Polish nation by Ignace Paderewski. See SCULPTURE.

**FOREIGN RELATIONS.** Polish foreign relations during 1931 were marked by a continuance of the fundamental Polish-German antagonism over the question of the Polish Corridor, Danzig, and the German minorities. The great military demonstration of the German Steel Helmet organization at Breslau near the Polish border on May 30 and the growth of Hitlerite and Nationalist sentiment in Germany during the year served to aggravate Polish fears of an attempted forceful revision of Germany's eastern boundary (see GERMANY under History). Hostility of Poles and Germans in Danzig (q.v.) grew more bitter and threatened to involve Germany and Poland.

The Danzig situation came before the May session of the League Council, which asked the World Court for an advisory opinion on the status of Polish nationals and persons of Polish origin resident in Danzig (see WORLD COURT). Count Gravina, the League's High Commissioner in Danzig, told the Council that "there is no concealing the fact that Polish-Danzig relations are traversing a serious crisis, the development of which in recent months has been particularly alarming." On October 25, the High Commissioner issued a verdict in the ten-year litigation between Poland and Danzig, which stated that Poland was obliged to use the harbor facilities of Danzig to the fullest extent. Poland interpreted the decision as acknowledging her right to develop the port of Gdynia. On July 12, the Danzig Government appealed to the League to prevent the marching of Polish marines through the streets. The World Court ruled, 11 to 3, on Dec. 11, 1931, that Polish war vessels were not legally entitled to access to the free port of Danzig.

The Polish-German controversy over the Corridor was spurred by Senator Borah's interview with French correspondents during Premier Laval's visit to Washington in October. Senator Borah suggested that conferences between Poland and Germany be held for the peaceful settlement of the boundary dispute. On October 25, Foreign Minister Zaleski announced in an interview that Poland would not discuss the problem of frontiers with Germany. Despite these evidences of rancor, the Sejm on March 12 ratified the trade convention between Poland and Germany signed a year earlier after five years of negotiation. Little was expected of the trade agreement, which was originally designed to promote the exportation of Polish agricultural products to Germany in return for German manufactures. At the same time the Sejm ratified another treaty settling various issues raised by the transfer of German territory to Poland after the World War.

There was little change in the status of the Polish-Lithuanian dispute over Wilno (Vilna). Polish relations with the Soviet Union improved coincidentally with the improvement in relations between France and Russia. On February 13, Foreign Minister Zaleski announced before the Foreign Affairs Committee of the Senate that negotiations for a non-aggression pact with Russia had been under way for some time. By August 23, the negotiations had progressed to the stage of the submission of a Polish trial draft of the treaty to Moscow. The mutual distrust between the two countries was by no means allayed, however. The Soviet Military Attaché at Warsaw returned hurriedly to Moscow July 17, when the

Military Intelligence Service of the Polish Army arrested and executed Major Piotr Demkowski, a Polish officer charged with being a Soviet spy.

**POLAR RESEARCH.** Interest in polar research during 1931 continued at a high level, due to the numerous expeditions in the field, particularly in the Greenland area, and to extensive preparations for an international polar project in 1932. By September of 1931, 14 nations had agreed to coöperate in the 1932 project, organized in commemoration of the 50th anniversary of a similar international undertaking. From August, 1882, to August, 1883, 12 nations coöperated in maintaining special expeditions in both the Arctic and Antarctic, which obtained valuable data on meteorological conditions and terrestrial magnetism. The 1932 expeditions were to remain in the field until August, 1933, and so far as desirable were to reoccupy stations used 50 years earlier. A British expedition planned to return to Fort Rae in Northern Canada. An American expedition, with two airplanes, arranged to establish a base at Fort Conger on Ellesmere Island, within 600 miles of the North Pole.

**ANTARCTIC.** Exploration in the Antarctic during 1931 was carried on by two expeditions. A Norwegian expedition on the *Norvegia*, commanded by Maj. Gunner Isachsen, on Feb. 7, 1931, completed the circumnavigation of the Antarctic Continent in one season. A number of exploratory airplane flights were made from the *Norvegia* by Capt. Hjalmar Riiser-Larsen, who reported the discovery of new land. About 200 miles of coast line, lying some 500 miles southwest of Enderby Land, was claimed for the Norwegian crown and named Princess Ragnhild's Land, in honor of the Norwegian princess.

Sir Douglas Mawson and his British-Australian-New Zealand Antarctic Research Expedition returned to Hobart, Tasmania, in the *Discovery* on Mar. 18, 1931, after extensive explorations along the coast of the Antarctic Continent from the vicinity of the Ross Sea westward to Kemp and Enderby Lands. The ship had sailed from Hobart on Nov. 22, 1930. The season's work resulted in the discovery of new lands, the charting of a considerable stretch of the Antarctic coast, the checking of previous observations, and the collection of a large amount of scientific data. New land was sighted by airplane between longitudes 121° and 128° E., which was named Banzare Land, after the title of the expedition. Further west, at longitude 76° E., more new land was sighted, which was named Princess Elizabeth Land. Landing parties conducted investigations along the coast of the nearby MacRobertson Land, which had been sighted on the *Discovery's* 1930 expedition.

**ARCTIC.** German, British, Danish, and Norwegian expeditions were active in Greenland during 1931. The German expedition of 17 members returned to Berlin Nov. 20, 1931, after a year and a half devoted to an investigation of the Greenland ice cap. They left in an icy grave the body of their leader, Prof. Alfred Wegener, who died in November or December, 1930, while attempting to return to the coast from the central station. His body was found the following May. Among the notable achievements of the expedition was the confirmation of Professor Wegener's theory that Greenland was a great ice-filled bowl instead of a high plateau. Extensive measurements of the ice cap were made and at the centre

of the island, where the altitude was 9850 feet, the ice was found to be 8850 feet thick. Meteorological observations were made throughout the winter of 1930-31 both in the interior and at the coast stations of the expedition. Parker Cramer, American aviator, and Capt. Wolfgang von Gronau, German aviator, made separate flights over the Greenland ice cap in the summer of 1931 to test the feasibility of a regular northern air route between Europe and America. Cramer was lost at sea en route to Copenhagen, but Von Gronau, flying westward, arrived safely in Chicago.

The British Arctic Air Route Expedition, which arrived in Greenland, July 26, 1930, to survey an air route from Canada to Great Britain across the Greenland ice cap, returned to London in the fall of 1931. One member of the party, Augustine Courtauld, spent more than six months alone at a station in the centre of the ice cap in order to make meteorological observations. Surveys of the coastal regions were made by boat and from the air. Another party of the expedition's members explored and mapped the region around Mount Forel (11,500 feet), the highest mountain in the Arctic, and ascended to within 500 feet of the summit. In the summer of 1931, two small parties crossed the ice cap from the east to the west coast.

Rivalry between Danes and Norwegians for the possession of the northwestern coast of Greenland resulted in the sending of one Norwegian and two Danish expeditions to that region during 1931. See **GREENLAND** under *History*.

In September, 1931, Sir Hubert Wilkins made an experimental cruise under the ice north of Spitzbergen (Svalbard), preliminary to a projected undersea voyage to the North Pole. His submarine *Nautilus* was damaged by contact with the ice, however, and Sir Hubert was persuaded to abandon his attempt. Returning from his eighth trip to the Arctic in September, 1931, Commander Donald B. MacMillan reported that he had mapped 1500 square miles of uncharted territory along the coast and interior of northern Labrador and explored some 50,000 square miles by airplane.

The Norcross-Bartlett Greenland Expedition collected plant specimens for the New York Botanical Gardens. Alterations in existing maps of Franz Josef Land and the discovery of additional small islands in that vicinity resulted from the explorations of the Soviet Arctic Expedition on the ice-breaker *Malygin*, headed by Prof. U. U. Vize. Another Soviet expedition on the *Lenin* explored the Siberian coast between the three great rivers, the Kolyma, Indigirka, and Lena. Soviet explorers, who wintered in North Land (formerly Nicholas II Land) in 1930-31, made several trips by sledge to unexplored areas. They reported that Northern Land was an island, covered for the most part with glacial ice. See **EXPLORATION**; **AERONAUTICS**.

**POLITICAL AND SOCIAL SCIENCE.** THE AMERICAN ACADEMY OF. A national forum for the discussion of political and social questions, founded in Philadelphia, Dec. 14, 1889, and in-

corporated Feb. 14, 1891. The organization does not take sides upon controverted questions, but seeks to secure and present reliable information to assist the public in forming an intelligent and accurate opinion. In addition to occasional meetings during the fall and winter, an annual meeting is held in the spring of each year which sessions, extending through two days, are devoted to the discussion of some general subject. The thirty-fifth annual meeting, which was held April 17-18, 1931, considered the general subject "Elements of an American Foreign Policy." A six-session meeting conducted November 6-7, 1931, dealt with the general topic "Power and the Public." The *Annals* is published bi-monthly as the official organ of the academy, each issue being devoted to a study of a particular topic of economic, political, or social importance. In 1931, the following volumes were issued: *The Coming of Industry to the South*; *The Insecurity of Industry*; *Organized Commodity Markets*; *Zoning in the United States*; *Elements of an American Foreign Policy*; *Prisons of Tomorrow*; and *An Economic Survey of Australia*. These publications, from time to time, have included special studies prepared by research fellows appointed by the academy. The officers in 1931 were: President, Dr. Ernest Minor Patterson; secretary, Dr. J. P. Lichtenberger; treasurer, Charles J. Rhoads; and vice presidents, the Hon. Herbert Hoover, Dr. Carl Kelsey, and Dr. Charles G. Haines. Headquarters are at 3457 Walnut Street, Philadelphia, Pa.

**POLITICAL ECONOMY.** Subjects in the field of applied economics are treated in this volume under the following heads: BANKS AND BANKING; BUSINESS REVIEW; FINANCIAL REVIEW; CHILD LABOR; COÖPERATION; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MATERNITY PROTECTION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES AND LOCKOUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION. See also such articles as: CHILD WELFARE; LABOR, AMERICAN FEDERATION OF; STATISTICS; SOCIALISM; TRADE UNIONS; WELFARE WORK. See also the article on AGRICULTURE and the various crops. Further discussions are to be found in articles on the several industries, minerals, public utilities, etc. Books on political science and economics for the general reader are to be found listed in the article LITERATURE, ENGLISH AND AMERICAN, under *Economics and Politics*.

**POLITICAL SCIENCE, ACADEMY OF.** An international institution for advancing the political sciences and promoting their application to public problems, founded in 1880 in New York City and incorporated in 1910. Its membership on Dec. 31, 1931, numbered 7103, of whom eight were honorary members, 224 life members, 5584 individual members, and 1287 subscribing members, chiefly libraries and organizations. At the semi-annual meeting on April 24 in New York City "Depression and Revival" were discussed. At the fifty-first annual meeting on November 13 unemployment, readjustments in production, prices and wages, and the world crisis were discussed. The officers for 1931 were: Alanson B. Houghton, president; Albert Shaw, Paul M. Warburg, and R. C. McCrea, vice presidents; Parker T. Moon, secretary and editor of publications; George A. Plimpton, treasurer; and Ethel Warner, director and assistant treasurer. The headquarters of the Academy are in Fayerweather Hall, Columbia University, New York City.

**POLITICS, INSTITUTE OF.** As finally established, in 1921, the purpose of the institute was to offer a forum for the discussion of world problems. The annual sessions of the institute generally occur in the month of August, and are held for four weeks.

The eleventh session of the institute met July 30-Aug. 27, 1931. The following lecture courses were delivered: "The Economics of Fascism," Dr. Luigi Villari, Rome; "The Economics of Communism," Dr. George S. Counts, New York City; "The Economics of Capitalism," M. C. Rorty, New York City; "The Economic Problems of the British Dominions," Prof. Theodore E. Gregory, London; "Economic Problems and Policies of Germany," Prof. Herbert von Beckerath, Bonn; "Economic and Commercial Policies of France," Charles A. Le Neveu, Paris.

The following is a list of round-table subjects, with the leaders of the round-table conferences: "The Future of Democracy," Prof. Arthur N. Holcombe, Harvard University; "Social Psychology of International Conduct," Prof. G. M. Stratton, University of California; "International Problems of Commercial and Financial Policy," Prof. Jacob Viner, University of Chicago; "The Future of the British Commonwealth of Nations," Dean P. E. Corbett, McGill University law faculty; "The Distribution of Wealth and Income," Prof. Theodore E. Gregory, London School of Economics; "The Political Situation in Western Europe," Dr. Williams E. Rappard, Geneva. There were special general conferences on "Public Opinion and Disarmament," conducted by James G. McDonald of the Foreign Policy Association, New York City, and "The Pact of Paris," presided over by Prof. George H. Blakeslee, of Clark University, who also conducted the conference on "India and Nationalism."

**POLO.** The Santa Paula polo team, fresh from the Pampas of the Argentine, completely dominated the 1931 season, achieving unexpected heights of excellence because of their thundering, hurly-burly style of play, and capping the summer's achievements by winning the National Open Championship at Meadow Brook in September. Only twice before has this title left the United States—in 1910, when the Earl of Rocksavage led the British to victory and in 1922 when Lewis Lacey's Argentine Hurlingham team won the championship. Manuel Andrada, Andres Gazotti, Juan and José Reynal composed the triumphant four. Alfredo Harrington was an original member but when he was thrown heavily when showing a mount in the National Polo Pony Show, Gazotti, reserve, was called into action. Stephen Sanford's Hurricanes, with Pat Roark, England's best, Terence Preece, and Winston Guest, defending champions were expected to gain top honors again but the aggressiveness, dash and fiery play of the visitors conquered.

Devereux Milburn, retired internationalist, returned to play in the Monty Waterbury Memorial Cup competition. He teamed with the two Guest brothers—Ray and Winston—and Michael Phipps and this quartet captured the trophy in this leading handicap event of the sport. In the final this Templeton team defeated Greentree, with Hitchcock, John Hay Whitney, G. H. (Pete) Bostwick, steeplechase rider, and Stewart Iglehart, riding, 11 to 9.

The national junior championship was won by Roslyn, composed of Ray Firestone, Seymour Knox, Harold E. Talbott, and W. H. Post, 2d.

Roslyn downed the Aiken Knights, 9-6, in the final of this tournament which was played at Rumson. These same Aiken Knights—Pete and Dunbar Bostwick, the Gerry's, E. T. and R. K., jr.—won the Herbert Memorial Cup.

With handicaps figuring for the first time in the history of the game, and incidentally in the only collegiate championship held, the U. S. Military Academy riders galloped off with the outdoor intercollegiate title at Cedarhurst. Yale was considered a top-heavy favorite but handicap burdens proved too much and the Blue did not reach the final. Army rode off Harvard in the final.

The indoor season was again a successful one with a new team—Los Nanduces—toppling Winston Guest's Optimists to win the national open title in April. Yale's great team galloped away with both the Class A and Intercollegiate titles. The Brooklyn Riding and Driving Club won the Class B competition, Cleveland Class C, and Fort Sheridan Class D. Hun School won interscholastic honors.

**POMPEII.** See **ARCHAEOLOGY.**

**POMPILI, BASILIO, CARDINAL.** An Italian prelate of the Roman Catholic Church, died in Rome, May 5, 1931. He was born in Spoleto, Italy, Apr. 16, 1858, and attended the Vatican and Pontifical Seminaries, where he specialized in canon and civil law. Following his ordination in 1880, he became advocate to the Congregation of the Council and in 1891 was appointed Uditore. He also held important posts in the tribunals of the Apostolic Penitentiary and of the Sacred Rota, and was one of the chief consulting experts to the commission appointed by Pope Pius X for the codification of the canon laws. In 1907 he was made secretary of the Congregation of the Council. Elevated to the cardinalate in 1911, he became Vicar General for the Diocese of Rome two years later and in 1917 Cardinal Bishop of Velletri and Archpriest of the Basilica of St. John Lateran.

**PORTO RICO (PUERTO RICO),** pōr'tō-rē'kō.

An island in the West Indies, ceded by Spain to the United States by the treaty of Dec. 10, 1898 (ratified Apr. 11, 1899). Capital, San Juan.

**AREA AND POPULATION.** The most easterly and smallest but most densely populated of the four Greater Antilles, Porto Rico is situated 480 miles east of Cuba and 1380 miles southeast of New York. The island is about 100 miles long and 35 miles wide, with an area of 3435 square miles, or approximately the size of Connecticut. The population at the census of 1930 was 1,543,913, or 449.5 inhabitants for each square mile, as compared with 1,299,809 (378.4 per square mile) in 1920, an increase for the decade of 244,104, or 18.8 per cent. In 1920, the population was 73 per cent white and 27 per cent Negro and mulatto. The leading cities, with their populations in 1930, are: San Juan, 114,715 (71,443 in 1920); Ponce, 53,530 (41,912); Mayagüez, 37,060 (19,124); and Caguas, 19,791 (12,149). For the period 1926 to 1930, births averaged 56,370 annually and deaths 33,876, the excess of births

being 22,494 annually. The average birth rate for the period per 1000 of population was 38.5 and the death rate 23.1.

**EDUCATION.** The public-school system is centralized under a Commissioner of Education appointed by the President of the United States for a term of four years. Elementary education is free and nominally compulsory. About 42 per cent of the population was illiterate in 1931, although illiteracy had been greatly reduced in the preceding quarter century. In 1930-31, enrollment in about 3786 public schools totaled 226,215. In addition, there were 9927 pupils in private schools and about 3493 in the University of Porto Rico. Provisions of the Federal vocational training act were extended to Porto Rico by Federal legislation approved Mar. 3, 1931, making available a Federal contribution of \$120,000.

**PRODUCTION.** Agriculture is the principal support of the population; there were 52,113 farms at the census of 1930, as compared with 41,078 in 1920. The major crops are sugar, tobacco, citrus fruits and coffee, and the secondary crops are cotton, cacao, coconuts, beans, plantains, and fresh vegetables. Porto Rican sugar has free access to the American market, but the disastrous fall of prices for this and other island products in the years 1929-31 reduced Porto Rico's income markedly. The sugar crop for 1931 totaled 783,295 short tons, a figure exceeded only by the 1930 crop of 865,352 short tons. Shipments of fresh vegetables to the United States increased from 368,163 pounds in 1928-29 to 1,678,458 pounds in 1929-30. Fruit shipments to the United States rose from \$3,861,000 in the calendar year 1929 to \$6,972,000 in 1930. See **AGRICULTURAL EXTENSION WORK.**

Manufacturing industries are confined chiefly to the production of refined sugar, cigars and cigarettes, wearing apparel, fine needlework, and canned and preserved fruits. The needlework industry, which employed about 50,000 workers, mostly women, shipped articles valued at \$12,883,000 to the United States in 1930 (\$14,293,000 in 1929).

**COMMERCE.** The external trade of Porto Rico for the fiscal year ended June 30, 1931, resulted in an excess of exports over imports of \$21,149,424, the largest favorable balance of trade in ten years. Exports held up remarkably well as compared with most other countries, the 1930-31 total being \$98,486,834, as against \$99,566,205 in 1929-30. Imports declined more sharply to \$77,337,410 from \$83,922,829 in 1929-30. In the calendar year 1931 imports from the United States were valued at \$60,636,500 (\$74,219,219 in 1930) and exports to the United States totaled \$87,911,706 (\$99,880,061 in 1930).

The United States monopolized the bulk of the external trade, purchasing exports valued at \$94,876,997 in 1930-31, as against \$95,097,640 in the previous year, and supplying imports to the value of \$68,018,167, as compared with \$73,078,779 in 1929-30. Exports increased considerably in volume but declined slightly in value due to lower price levels. The value of the five principal exports to the United States in the calendar year 1930 was: Sugar, \$57,391,000; raw tobacco, \$12,752,000; cotton clothing, \$11,645,000; fruits, \$6,792,000; and manufactured tobacco, \$4,039,000.

**FINANCE.** For the first time in 17 years, the Government reported an actual surplus in the general fund for the fiscal year ended June 30, 1931, including appropriation liabilities carried

over. Total receipts into general funds for the year were \$16,511,299, including \$11,054,197 of revenue receipts, \$3,394,001 received through the sale of bonds, and other transfers. Total disbursements and transfers amounted to \$16,360,150, including \$15,705,197 of disbursements against appropriations. The surplus of \$151,149, added to the balance of \$401,877 on hand July 1, 1930, left a balance on hand July 1, 1931, of \$553,026. On the latter date, the excess of total current assets over appropriation liabilities was \$203,969, while a year earlier appropriation liabilities exceeded the cash on hand by \$88,546. Including the wiping out of the floating debt, the improvement in the status of the general fund during the year was \$1,964,431. The budget for 1931-32 carried appropriations of \$11,285,245.

The bonded indebtedness of the Insular Government on June 30, 1931, totaled \$29,097,000, or a net increase during the year of \$3,558,633. Sinking funds for redemption of bonds were \$1,458,577. The debt was contracted mainly for public improvements.

**COMMUNICATIONS.** Porto Rico in 1930 had 463 miles of railway line, about 1600 miles of highway (including 1080 miles of hard-surfaced roads). A total of 1217 vessels of 1,463,000 registered tons entered Porto Rican ports in the foreign trade (excluding the United States) in 1930 and 1194 vessels of 1,555,619 tons cleared.

**GOVERNMENT.** Porto Rico is governed in accordance with the Jones Act passed by the United States Congress Mar. 2, 1917, and subsequent amendments. Executive power is vested in a governor appointed by the President of the United States and legislative power in a legislature of two elective houses—a senate of 13 members and a house of representatives of 39 members, all elected for four years. A resident commissioner, elected by the people for a term of four years, represents Porto Rico in the United States Congress. The six departmental heads form an executive council, presided over by the Governor. The Jones Act conferred United States citizenship collectively upon the people of the island. Of the 7143 Government employees in 1931, all except 233 were native Porto Ricans. Governor in 1931, Col. Theodore Roosevelt, a son of President Roosevelt, who assumed office Oct. 7, 1929, succeeding Horace M. Towner.

#### HISTORY

**PRESIDENT HOOVER'S VISIT.** The attention of the American mainland was centred on Porto Rico and its problems as a result of a two-day visit made by President Hoover on Mar. 23-24, 1931. The President was enthusiastically welcomed in the course of his 90-mile motor trip across the island to San Juan, the capital. In a speech there, he stressed the importance of co-operation in the economic rehabilitation of the island, which was still suffering from the disastrous effects of the 1928 hurricane.

**INDEPENDENCE MOVEMENT REVIVED.** A wing of the Unionist party under Senator Antonio R. Barcelo, which had exercised control of island politics from 1904 to 1930, revived the independence issue at a special convention held in San Juan June 8, 1931. The convention dropped the former party plank demanding statehood and substituted for it the goal of complete separation from the United States. This action was taken on the initiative of Senator Barcelo, shortly after the Porto Rican Supreme Court had refused him

permission to use the Unionist party label in filing his candidacy for the post of Resident Commissioner in the United States. The Court sustained the claim of the *Allianza* party to the Unionist title. Enactment of a law establishing a commission form of government for the city of San Juan had had the effect of cutting off the municipality's contributions to the Unionist party funds. Moreover, in 1930 the Unionist party was reduced to a minority in the Legislature for the first time since its organization a quarter of a century earlier. According to observers, these factors combined to bring about Senator Barcelo's change of policy.

According to American observers, the party's independence programme failed to provoke widespread enthusiasm in the island. The numerically small Nationalist party applauded the Unionist stand, but called on Unionist members to demonstrate their sincerity by resigning from all Government posts, an invitation which was not accepted. The three other parties—*Allianza*, Republicans, and Socialists—all vigorously opposed independence and a number of the Unionist leaders withdrew from the party in protest against the separation plank. Among these was former Senator Mariano Abril, a founder of the party and for many years editor of its chief newspaper. He declared that fully 80 per cent of the population favored autonomy, i.e., statehood or the right to elect the Governor and all other officials, rather than independence.

**THE SAN JUAN CONTROVERSY.** In connection with his effort at a general reorganization of Porto Rican municipal administration, Governor Roosevelt aroused the hostility and active opposition of Mayor Roberto Todd of San Juan and other city officials. The bonded indebtedness of all the island's municipalities had increased from \$4,132,177 in 1922 to \$18,123,652 in 1930. The hurricane of 1928 precipitated a financial crisis, which made it necessary for the Insular Government to assume the debt charges of certain cities. For the fiscal year ended June 30, 1930, 71 out of 77 municipalities reported budget deficits. Conferences between the Governor and municipal and Legislative officials resulted in the passage during the 1930-31 session of the Legislature of a law simplifying municipal administration and providing for a closer check on expenditures.

To meet the particularly acute financial situation in San Juan, the Legislature in May, 1931, passed an emergency measure creating a commission form of government to continue for six years. Five commissioners, nominated by the Governor and confirmed by the Senate, were to select a city manager and auditor for the city and supervise the actions and plans of both. The city manager, in turn, was to appoint the administrative staff. San Juan, which had been controlled for six terms by Mayor Todd, had reported increasingly large deficits. In 1928-29 the deficit was \$36,020, in 1929-30 it was \$114,363, and in 1930-31, \$140,000. According to Governor Roosevelt, these deficits did not include a considerable percentage of uncollectible taxes carried as assets. When the bill establishing commission government was passed municipal employees had been unpaid for many months and the city was unable to sell its securities on the open market.

Both laws were intended to become operative immediately, but were held up by suits filed in

the Porto Rican courts. Mayor Todd in the meantime refused to vacate his office, the term of which was to expire in January, 1933. He asserted that the law establishing commission government for San Juan was passed by a fictitious majority of the Legislature after legal adjournment time and that the city's accumulated deficit of over \$400,000 was due to the failure of the Insular Government to collect and pay to the city taxes due. In September, the local courts upheld the constitutionality of the law and the commission form of government went into effect, the new city manager being Jesus Benitez Castano.

**OTHER LEGISLATION.** Other legislation adopted during the 1930-31 session of the Legislature included a Civil Service law and fiscal measures intended to adjust more equitably the burden of taxation. Taxes were increased on gasoline, automobiles, tires, electric refrigerators, and a wide range of luxury articles. A Department of Labor was created to take over work formerly handled by a bureau in the Department of Agriculture and Labor. Governor Roosevelt vetoed an election bill which sought to abolish the literacy requirement for suffrage and which he said would put election machinery into the hands of the majority group in the Legislature.

**PROHIBITION REPEAL MOVEMENT.** An agitation for the repeal of the Volstead Act in so far as it applied to Porto Rico gained ground during 1931. In December of 1930 the Insular Supreme Court, by a three to two decision, had decided that Federal prohibition cases could be tried in the island courts, but that the prosecution must be conducted by the United States Attorney or one of his representatives. The decision ended prosecutions by the insular police and the insular Attorney General's Office, which previously had accounted for 80 per cent of all convictions involving prohibition law violations. An average of 3500 liquor cases a year had been tried in insular courts as a result of police enforcement activities. In June, 1931, the League of Civic, Economic and Social Associations, and the League of Women Voters voted to send a commission to Washington to secure permission from Congress for the holding of a prohibition referendum on the island at the 1932 election. The island's Resident Commissioner in Washington, Felix Cordova Davila, petitioned President Hoover for the restoration of the liquor traffic in Porto Rico.

Dr. Carlos C. Chardon, Insular Commissioner of Agriculture, was formally inducted as the first Porto Rican chancellor of the University of Porto Rico on May 23. Governor Roosevelt on August 4 addressed a letter to the Federal Land Bank in Baltimore urging modification of the bank's foreclosure policy, affecting some 5000 Porto Rican farmers who had borrowed \$15,000,000. The press of the island criticized severely the eviction of a number of farmers and Governor Roosevelt pointed out that the foreclosed farms for the most part reverted to jungle for lack of buyers.

**PORTS AND HARBORS.** New York. Permission was granted by the U. S. War Department on January 17 for the construction of 1000-ft. piers on both the New Jersey and New York sides of the Hudson River opposite mid-town Manhattan. This involved the further narrowing of the Hudson by an extension of the pier-head lines but would still leave a channel over half a mile wide. It cleared the way for pier constructions estimated at \$25,000,000. The War Department had under way a special study of the

much discussed question of bridge clearance in port areas. While existing New York bridges were built with a clearance of 135 ft., proposals for a bridge over the lower Hudson, in the heavy shipping area, led to the Port Authority advising 185 ft. clearance for the Hudson to Hastings and 150 ft. above that point.

**U. S. WAR DEPARTMENT.** In order to take advantage of lower construction costs Congress was asked to pass a new river and harbor bill at the increased total of \$75,000,000.

An international commission representing the United States and Mexico had under consideration the creation of a deep-water port at the mouth of the Rio Grande.

A radical change was made in harbor entrance design in the construction at Franklyn, Mich., and some other Great Lakes ports on the east shore of Lake Michigan. The old narrow channels between parallel entrance piers were replaced by a new entrance of the modern arrowhead type in which a triangular bay is inclosed by breakwaters. The two breakwaters are about half a mile apart at the shore and converge to a 400 ft. harbor entrance. It was expected that navigation would be facilitated during storm and ice conditions by this type of construction.

**PHILADELPHIA-CAMDEN PORT AUTHORITY.** Following the trend of recent years, a new organization, similar to the Port of New York Authority, was created June 29 to take over and operate the great Philadelphia-Camden Suspension bridge and supervise transit and port development in this area.

**SOUTHAMPTON, ENGLAND.** Steady progress was made in the dock extension project of the Southern Railway at this great port. About half of the 7000-ft. quay wall and the reclamation of 180 acres back of it, were completed. Construction of the remaining portion and the reclamation of 180 additional acres was to go forward immediately.

**UNIQUE FLOATING DOCK PROJECT.** The construction of a floating dry dock for the harbor board of Wellington, New Zealand, was completed in yards on the Tyne, England. The dock was constructed in three sections which were launched and joined together to form the completed structure, 584 ft. long and 107½ ft. wide. This was towed 13,000 miles to New Zealand by the Suez Canal route, reaching its destination safely on Dec. 28, 1931, after a trip of nearly six months.

**INDIA.** The Government of India had under construction a port on the east coast about midway between Madras and Calcutta. There was no port in this line of coast and the new work, to be completed in 1932, will serve an interior area of some 125,000 square miles. Dredging of swampy areas, filling in of other low land, construction of quay walls, store yards, water supply, and complete facilities for a 30-ft. ocean port were involved. Ore and oil will be important cargoes in this new development.

**PORTUGAL.** A republic of Europe, situated west of Spain in the Iberian Peninsula. Capital Lisbon.

**AREA AND POPULATION.** The total area of Portugal, including the Azores and Madeira, was 35,880 square miles and the census population for 1930 was 6,660,852 (preliminary), compared with 6,032,991 at the census of 1920. Continental Portugal comprised 34,604 square miles and 6,196,020 inhabitants (1930); the Azores and Madeira, 1276 square miles and 464,832 inhabit-

ants. Births for the period 1926 to 1930 averaged 206,872 annually and deaths 122,102, the rates per 1000 inhabitants being 31.1 and 18.3, respectively. The population of Lisbon was 587,334 in 1930 and 486,372 in 1920; of Porto (Oporto), 227,595 (203,091 in 1920).

**EDUCATION.** Of the total 1920 population, 4,277,341 were unable to read or write. In 1928-29 there were 340,622 pupils in primary schools, 10,290 in circuit schools, 14,080 in secondary schools, and 5013 in three universities at Lisbon, Coimbra, and Porto.

**PRODUCTION.** Agriculture is the chief industry. The yields of the principal crops in 1930 were: Wheat, 13,531,000 bushels; rye, 4,863,000 bushels; barley, 2,651,000 bushels; oats, 7,723,000 bushels; corn, 14,924,000 bushels in 1929; potatoes, 12,669,000 bushels in 1929; wine, 174,350,000 gallons in 1929; olive oil, 3,417,000 gallons in 1930-31. Cork production, one of the principal sources of wealth, totaled 140,000 metric tons in 1930. Sardine fishing is important. The 1929 mineral production included 228,000 metric tons of coal and lignite and 384,000 tons of copper pyrites. The chief manufactured products are cotton textiles, decorative tile, chinaware, superphosphate of lime (about 100,000 tons annually), cement, and embroidery.

**COMMERCE.** Imports in 1930 were valued at 2,405,709,000 escudos (\$108,016,000), as against 2,528,607,000 escudos (\$113,029,000) in 1929, and exports declined to 945,274,000 escudos (\$42,443,000) from 1,073,240,000 escudos (\$47,974,000) in the previous year. The United Kingdom in 1930 supplied 21.4 per cent of all imports and took 21.5 per cent of all exports. The chief exports, in order of value, were wines, fish and sardines, cork, fruits and nuts, and olive oil. According to preliminary figures for 1931, exports were 17 per cent and imports 30 per cent lower than in 1930.

**FINANCE.** For the fiscal year ended June 30, 1931, the Finance Minister reported a surplus in the closed account of 152,000,000 escudos, compared with surpluses of 40,000,000 escudos in 1929-30 and of 286,000,000 escudos in 1928-29. Ordinary budget estimates for 1930-31 were: Revenues, 1,947,242,000 escudos; expenditures, 1,899,965,000 escudos. For 1931-32, the respective estimates were 1,800,960,000 escudos and 1,764,297,000 escudos. The total public debt on June 30, 1929, including that held by the Government, amounted to 6,704,537,000 paper escudos (\$296,340,000, converted at the newly stabilized par of \$0.0442) and 185,342,000 gold escudos (\$200,202,000, converted at the par value of the gold escudo, \$1.0805). The escudo was stabilized at \$0.0442 U. S. currency, effective July 1, 1931 under the law of June 13, 1931; the former par value was \$1.0805.

**COMMUNICATIONS.** In 1929, there were 2100 miles of railway line operated by the private Portuguese Railway company, including 894 miles of line leased from the Government. Highways extended 9937 miles (1929). In 1930, 7356 vessels, of 27,597,000 net registered tons, entered the ports in the international and coastwise trade, and 7289 vessels, of 27,646,700 tons, cleared.

**GOVERNMENT.** For the Constitution of 1911, see 1930 YEAR BOOK. Acting President in 1931, Gen. Antonio Oscar de Fragoso Carmona (elected Mar. 25, 1928). The Cabinet, as constituted Jan. 20, 1930, was headed by Gen. Domingos de

Oliveira as Prime Minister. Dr. Antonio de Oliveira Salazar was Minister of Finance. Parliament had not been convened (1931) since the establishment of the military dictatorship on June 6, 1926.

## HISTORY

**ANTI-CARMONA REVOLTS.** The series of revolutionary conspiracies against the military dictatorship established by General Carmona in 1926 assumed more formidable proportions in 1931. Headed by political exiles from the mainland, garrison revolts broke out in Madeira and the Azores early in April, followed two weeks later by a temporarily successful uprising in Portuguese Guinea. The Government immediately dispatched a military and naval expedition, including some 700 troops, to Madeira. The rebel leader, General Sousa Diaz, was forced to capitulate unconditionally on May 2, following the bombardment of the environs of Funchal, the chief city, and skirmishing between attacking and defending forces. The Azores garrisons surrendered about the same time. The Government reported the cost of the revolts in both Madeira and the Azores at about \$3,000,000, the loss of a gunboat through a collision, and 15 men killed and 30 wounded.

Meanwhile revolutionary elements on the mainland took advantage of the absence of a part of the army to attempt the overthrow of the dictatorship. May Day disorders in Lisbon assumed such proportions that the members of the Cabinet took refuge in the military barracks. The police restored order only after turning a machine gun on the rioters. May Day's toll was four killed and 21 injured in Lisbon, 18 injured in Oporto (Porto), where martial law was declared, and minor casualties in other cities. The uprising in Bolama, capital of Portuguese Guinea, on the night of April 17 was not learned of in Portugal until May 4. A naval force with 600 Portuguese troops immediately sailed for Bolama and it was reported on May 7 that the rebel junta there had surrendered.

The Government sought to conciliate the unrest evidenced by these events and announced a plan to modify the dictatorship, which included the election in October, 1931, of a Parliament to draft a new Constitution and the promulgation of a new administrative code early in 1932. It also undertook an extensive program of public works construction, financed partly by a loan of \$5,000,000 floated in London. In preparation for the elections, the Democrats, Socialists, Nationalists, and minor parties opposing the dictatorship united their forces in a new National Union party, led by Gen. Norton de Matos, former Ambassador to Great Britain.

On the morning of August 26 another uprising against the Government took place among part of the Lisbon garrison. Fierce street fighting, in which machine guns, armored cars, and bombing planes participated, took a toll of 80 lives and about 300 wounded. The revolt, which apparently resulted from the dismissal of Col. Schiappa de Azeveda as Minister of War, was finally crushed. The officers and leading civilians participating in the outbreak were deported to the African colonies, while the disaffected troops were split up and distributed among other Portuguese garrisons. Nothing further was heard of the promise of elections in 1931, and political unrest was still acute at the end of the year.

**THE ECONOMIC DEPRESSION.** The prevailing political discontent was stimulated by high taxation at a time when the incomes of all classes of the population were falling off due to the world economic depression. At the close of 1931, Portuguese business and financial circles were alarmed by the continued low value of the pound sterling, with which the escudo was closely bound. The reduction of remittances from Portuguese emigrants and the suspension of interest payments on Brazilian external bonds were other blows to Portuguese economy, which were reflected in a 30 per cent decline in imports in 1931.

Friction between British commercial interests and the Portuguese Government continued during 1931, largely as a result of the discriminatory customs duties levied upon goods imported in foreign bottoms. In May, the Council of the London Chamber of Commerce requested the British Government to terminate the Anglo-Portuguese commercial treaty. See **NAVAL PROGRESS**.

**PORTUGUESE EAST AFRICA.** See **MOZAMBIQUE**.

**PORTUGUESE GUINEA, g'ĩnã.** A colony of Portugal on the west coast of Africa, entirely surrounded on the land side by French territory. It includes the archipelago of Bijagoz, together with the island of Bolama on which is situated the capital, Bolama (population 4000). Area, estimated at 22,000 square miles; population (1928), 343,961. The principal port is Bissau.

For the revolt against the Carmona Government in 1931, see **PORTUGAL** under *History*.

**PORTUGUESE WEST AFRICA.** See **ANGOLA**.

**POST OFFICE DEPARTMENT.** See **UNITED STATES** under *Administration*.

**POTASH.** See **FERTILIZERS**.

**POTASSIUM.** See **FERTILIZERS**.

**POTATOES.** The potato production in 1931 of 26 countries reporting to the International Institute of Agriculture was estimated at 4,448,511,000 bushels, a decrease of only 2.2 per cent from the preceding crop and an increase of 8.7 per cent over the annual average for the five years 1925-1929. The potato area of these countries in 1931, 25,093,000 acres, was 3.1 per cent above the acreage of 1930 and 3 per cent above the five-year annual average. As in the preceding year a number of European countries reported yields well above the annual average for the five-year period. The leading producing countries exclusive of the United States reported yields as follows: Germany, 1,592,009,000 bushels; Poland, 1,208,113,000 bushels; Czechoslovakia, 316,062,000 bushels; Spain, 124,162,000 bushels; and Belgium, 101,580,000 bushels. For the Soviet Republics an average annual yield of 1,604,057,000 bushels grown on 13,447,000 acres was reported for the five years 1925-1929. France, which is a large producer of potatoes, is not included in the estimates here given. The Canadian crop of 1931 was estimated at 91,815,000 bushels, or 14.2 per cent above the yield in 1930 and 23.1 per cent above the five-year annual average.

The potato crop of the United States in 1931 as estimated by the Department of Agriculture was 376,248,000 bushels produced on 3,382,000 acres or at an average yield per acre of 111.3 bushels. Both yield and acreage in 1931 were larger than in either of the two preceding years. The late potato crop was estimated as 13 per

cent larger than the crop of 1930. The early potato crop, grown in the Southern States and generally marketed from March to June, was placed at 46,381,000 bushels produced on 346,730 acres or at the rate of 134 bushels per acre. The average farm price, 42.9 cents per bushel, was based on the farm prices of late potatoes prevailing December 1, and on the seasonal average price of early potatoes. On this basis the value of the 1931 crop was only \$161,264,000 which was 45 per cent less than the value of the preceding crop and 62 per cent below that of the 1929 production. The average of December prices per bushel in 1931 was less than half the corresponding price the preceding year, only one-third of that price two years before and the lowest since 1900.

The leading potato producing States and their yields were reported as follows: Maine, 50,960,000 bushels; Minnesota, 28,880,000 bushels; New York, 28,684,000 bushels; Pennsylvania, 26,549,000 bushels; Wisconsin, 24,924,000 bushels; and Idaho, 24,200,000 bushels.

During the fiscal year ended June 30, 1931, the United States exported 1,548,000 bushels of potatoes and imported 343,757,000 pounds.

**POULTRY.** See **LIVESTOCK**.

**POULTRY DISEASES.** See **VETERINARY MEDICINE**.

**POWER, TYRONE.** An American actor, died in Los Angeles, Calif., Dec. 30, 1931. Born in London, England, May 2, 1869, he attended Dover College and made his first appearance on the stage in St. Augustine, Fla., in 1886 in *The Private Secretary*. He played in *The Lion and the Lamb* in New York City in 1889 and had the leading rôle in his own play, *The Texan*, in London in 1894. He subsequently toured with Beerbohm Tree, with Mrs. Fiske in *Little Italy* and *Becky Sharp*, and with Julia Marlowe in *When Knighthood Was in Flower*. His last stage appearances were with Fritz Leiber in Shakespearean repertoire. He also had appeared in several silent motion picture productions.

**POWER COMMISSION, FEDERAL.** See **UNITED STATES** under *Administration*.

**POWER DEVELOPMENT.** See **POWER PLANTS**; **STEAM TURBINES**; **WATER POWER**.

**POWER PLANTS.** The prevailing depression was reflected in the power plant field to the extent that fewer new plants were projected during 1931 than normally, although most of those stations upon which construction had begun were completed. There was a marked falling off in the industrial power load of central stations, but this was largely offset by an increase in the domestic load, with the commercial lighting load holding up well, so that the total output for the year, or 86,679,000,000 kilowatt-hours, was less than 4 per cent under that of 1930. The income from the sale of electricity was less than 1 per cent under the preceding year. The central station budget for 1932 was about \$450,000,000, of which 18 per cent was allocated to generating plants, 12 per cent to transmission lines and 64 per cent to distribution.

Some increased activity was apparent in the construction of new municipal plants and those serving public institutions. Increased attention was given to lower plant investment costs without sacrificing operating efficiency. This was reflected to some extent in simplification of design and as a result many of the newer plants showed low unit investment, which was, in most installations, under \$100 per kilowatt.

In engineering aspects, 1931 was not a year of spectacular achievements, but rather one of engineering refinements and technical research. With the exception of the new stokers at the Hudson Avenue station of the Brooklyn Edison Company, each capable of burning 57,000 pounds of coal per hour, and the largest built up to 1931, and the installation of a 50-ton pulverizer at the Kips Bay plant of the New York Steam Company, there were no new records established in the size of steam generating equipment. Although the first 1800-pound plant in the United States went into operation at the Philip Carey Company, Lockland, O., the number using steam at 1200 to 1400 pounds put into service was exceeded by those of moderate pressure, 400 to 600 pounds. There was, however, a noticeable trend toward higher temperatures with several of the new plants employing steam at 825° F. instead of 750° which heretofore had been considered as the desirable limit in America. This increase in temperature was made possible through advances in metallurgy. The 10,000-kilowatt 1000° F. unit at the Delray Station in Detroit, was in commercial operation and had been operating for some months at 900° F. The same trend was apparent in Europe. While a few stations there employed high temperatures for several years, the practice was gaining more general acceptance. Notable among these newer installations was the St. Denis station, nearing completion, which was to employ steam at 925 pounds pressure and 930° F. temperature and a new large high-pressure station in Moscow which will employ steam at 932° F.

During the year two notable applications of the mercury cycle were announced. These were a 20,000 high kilowatt installation at the Schenectady works of the General Electric Company and one of like size at the Kearny station of Public Service Electric & Gas Company of New Jersey. Decision to install these units was predicated largely upon the pioneer installation at Hartford which in February, 1931, had completed a year's continuous successful operation during which it turned out 135,000,000 kilowatt-hours at an average heat consumption of 10,100 B.t.u. per net kilowatt-hour. The new units which were double the size of the one at Hartford were expected to deliver a kilowatt-hour on 8800 B.t.u. The Schenectady installation was to be an outdoor plant. The mercury pressure was to be 125 pounds gauge, and after passing through the mercury turbine the vapor was to generate steam at 475 pounds, 465° F. in a condenser-boiler. The exhaust from the Kearny mercury turbine was to generate steam at 350 pounds to be used as part of the supply to a 75,000-kilowatt steam turbine.

**PRAIRIE PROVINCES.** The name applied to the three Canadian Provinces of Manitoba, Saskatchewan, and Alberta (q.v.). The census population of the three Provinces in 1931 was 2,353,529, compared with 1,956,082 in 1921. See CANADA.

**PRATT INSTITUTE.** A nonsectarian educational institution in Brooklyn, N. Y., founded in 1887 and composed of four schools: Fine and applied arts, household science and arts, science and technology, and library science. The 1931 autumn enrollment was 5080, distributed as follows: Arts, 2005; household science, 992; science and technology, 2056; library school, 27. There were 181 members on the faculty and 12 special lecturers.

The library contained 143,000 volumes. President, Frederic B. Pratt, A.M., LL.D.

**PREHISTORIC MAN.** See ANTHROPOLOGY.

**PRESBREY, EUGENE WYLEY.** An American producer and dramatist, died in Hollywood, Calif., Sept. 9, 1931. He was born in Williamsburg, Mass., Mar. 13, 1853, and made his début as an actor at the Boston Theatre, Boston, in 1874, remaining there until 1880 when he went to New York City to appear in *Hazel Kirke*. He was stage director for A. M. Palmer during 1883-96 and a lecturer at the American Academy of Dramatic Arts during 1886-94. From 1896 to 1906 he was an independent producer, and after 1919 a consulting expert for feature films, being associated with the Paramount and Metro-Goldwyn-Mayer Companies. Among his plays are *Squirrel Inn* (with Frank R. Stockton, 1893); *Giles Corey* (1894); *The Courtship of Miles Standish* (1895); *A Ward of France* (with Franklin Fyles, 1897); *The Three Graces* (1907); *The Coast of Chance* (1908); *The Barrier* (from Rex Beach's novel, 1908); and *The Other Man* (1912).

**PRESBYTERIAN CHURCH.** The Presbyterian Church, with the Reformed churches, rests on features of the Reformation brought forward by Zwingli and Calvin. It consists of bodies in the United States, the British Isles, and elsewhere, following the doctrinal and ecclesiastical system developed in Holland and France and more fully in Scotland under John Knox. Organizations in the United States bearing the Presbyterian name: The Presbyterian Church in the United States of America; Presbyterian Church in the United States (South); United Presbyterian Church of North America; Cumberland Presbyterian Church; Cumberland Presbyterian Church, Colored; Reformed Presbyterian Church; Reformed Presbyterian Church, General Synod; Associate Synod of North America, also known as the Associate Presbyterian Church; and the Associated Reformed Presbyterian Synod. The Presbyterian churches of the United States have official affiliations with the Alliance of Reformed Churches throughout the World Holding the Presbyterian System.

**PRESBYTERIAN CHURCH, CUMBERLAND.** See CUMBERLAND PRESBYTERIAN CHURCH.

**PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA.** This is the largest body of the denomination and is represented by churches in every State of the Union and by official mission stations in Alaska, Cuba, Porto Rico, and foreign lands. In 1931 its churches in the United States were organized into 46 synods and 293 presbyteries. Statistics for the year ending Mar. 31, 1931, showed a total communicant membership of 1,999,131. The Sunday-school enrollment totaled 1,620,496. As a result of the movement to dissolve churches having a nominal existence and to combine churches where advisable, the number was decreased by 75, giving a total of 9242, including 44 churches organized during the year, as against 80 which were dissolved. The number of ministers in 1931 was 10,014. Contributions during the year amounted to \$58,171,381. Of the total income, \$45,217,335 was used for congregational expenses, while \$12,484,804 was devoted to benevolences, including \$3,841,579 given to the board of national missions, \$3,364,882 to the board of foreign missions, \$842,684 to the board of Christian education, and \$324,985 to the board

of pensions for current needs, besides \$1,193,189 additional for the pension endowment fund. The denomination maintains 52 colleges and 13 theological seminaries. Its official organ is the *Presbyterian Magazine* (monthly). Privately-owned periodicals are the *Presbyterian Advance*, the *Presbyterian Banner*, and the *Presbyterian* (all weekly).

The 1931 meeting of the general assembly of the Presbyterian Church in the United States of America was held in Pittsburgh, Pa., May 29-June 3. As a result of action taken at the 1930 assembly, by which women were admitted to the office of ruling elder, women were enrolled as commissioners for the first time in the history of the assembly, five being seated. The department of church coöperation and union reported progress in negotiations looking toward union with other Reformed Churches holding the Presbyterian system. However, it was not regarded as likely that organic union would soon be achieved except with the United Presbyterian Church of North America; negotiations were continued on a definite basis with that body for possible union in 1932.

The assembly approved the report of the special commission on marriage, divorce, and remarriage, which included a study of a proposed revision of the chapter on marriage and divorce in the Confession of Faith; but it went unequivocally on record as disapproving ecclesiastical pronouncements on the subject of birth control. It also voiced its undiminished opposition to the beverage traffic in intoxicating liquor, whether legalized or illicit, and pledged whole-hearted coöperation to President Hoover and to those responsible in the enforcement of prohibitory laws. The assembly endorsed the programme presented by the general council, making the supreme issue of the coming year in the church one of spiritual emphasis, and voted to petition President Hoover for a national day of humiliation and prayer.

At this assembly was celebrated the centennial of organized American Presbyterian foreign missionary enterprise. A revision of the Book of Common Worship was adopted. The assembly declared adopted by vote of the presbyteries two overtures: one revising the organization and procedure of the permanent judicial commission; and one rescinding the constitutional rule which provided for the licensing of local evangelists. It also voted to send down overtures for the purpose of maintaining high standards in and assuring the better and easier distribution of the ministry. Dr. Lewis Seymour Mudge of Philadelphia was elected Moderator, or presiding officer, for 1931-32 and was also reelected as Stated Clerk of the general assembly for a third five-year term. This was only the fourth time since 1789 that the same person filled both of these offices simultaneously. Dr. Cheesman A. Herrick, president of Girard College, was named Vice Moderator. The office of the general assembly is 518 Witherspoon Building, Philadelphia, Pa.

**PRESBYTERIAN CHURCH IN THE UNITED STATES (SOUTH).** This division of the Presbyterian denomination covers the territory commonly known as the Southern States.

The denomination was composed in 1931 of 17 synods and 92 presbyteries, with 3557 organized churches, 2424 ministers, and 462,299 members. The ruling elders numbered 16,047 and deacons, 17,966. Contributions for the year amounted to \$8,808,292 for current expenses and \$4,164,815

for benevolences. The church supported 420 missionaries in Africa, Brazil, China, Japan, Korea, and Mexico; these missionaries were assisted by 3408 native workers. In the six countries there were 49,346 church members and 86,962 Sunday-school members. The church maintains 4 theological seminaries, 1 training school for lay workers (white), 1 training school for lay workers (colored), 18 colleges, 13 junior colleges, 12 secondary schools, 19 mountain schools, 2 Mexican mission schools, and 15 orphans' homes and schools. It publishes the *Presbyterian Survey*, which is the medium of communication of all departments with the membership of the church. Privately-owned papers are the *Christian Observer* and the *Presbyterian of the South*.

The general assembly of the Presbyterian Church in the United States met in Montreat, N. C., May 28, 1931. R. A. Dunn, LL.D., a ruling elder of Charlotte, N. C., was elected Moderator, succeeding the Rev. Thomas W. Currie, president of Austin (Texas) Theological Seminary. The offices of the general assembly are located at 720 Kirby Building, Dallas, Texas. The Rev. J. D. Leslie, D.D., was Stated Clerk and the Rev. E. C. Scott Assistant Stated Clerk in 1931.

**PRESBYTERIAN CHURCH OF NORTH AMERICA, UNITED.** A branch of the Presbyterian Church formed by the union of the Associate and the Associate Reformed Churches, effected in Pittsburgh in 1858.

The general assembly convened in Youngstown, Ohio, May 27, 1931. On that date there were in the United States 11 synods, 56 presbyteries, 879 congregations, 901 ministers, 4949 ruling elders, and a church membership of 176,666. The total membership, including missionary fields, was 242,293. The Sabbath-school enrollment was 207,144, while the young people's societies numbered 1133 with a membership of 29,874. Contributions for the year 1930-31 totaled \$5,892,484, and missionary contributions \$1,929,829. Among matters of chief importance approved by the Youngstown assembly were making optional the election of synodical superintendents by the American synods, and changing the membership of the board of administration, requiring that it be selected from the synods of America by a specified scale of representation, and not as heretofore from the membership of the budget mission boards.

The denomination supported 432 men and women in four foreign mission fields and 365 men and women in homeland missions. It carried on medical work in 32 foreign hospitals and dispensaries; conducted educational work in 397 schools at home and abroad; maintained nine colleges and four theological seminaries at home and abroad; and reached 37,729 young men and women in its schools and colleges, from which more than 6000 were graduated. The official organ of the church is the *United Presbyterian*, a church-owned, yet independent weekly, published in Pittsburgh. The moderator of the general assembly in 1931 was the Rev. J. Knox Montgomery, D.D., LL.D., president of Muskingum College, New Concord, Ohio, and the stated clerk was the Rev. O. H. Milligan, D.D., Avalon, Pa. Headquarters of the board of administration are at 705 Publication Building, Pittsburgh, Pa.

**PRICES.** See BUSINESS REVIEW.

**PRIMITIVE ART.** See ART EXHIBITIONS; PAINTING.

**PRIMITIVE METHODIST CHURCH.** See METHODISTS.

**PRINCE EDWARD ISLAND.** An island in the Gulf of St. Lawrence, constituting one of the Maritime Provinces of Canada. The smallest of the nine Provinces, it had an area of 2184 square miles and a population at the census of 1931 of 88,038, compared with 88,615 in 1921. The capital, Charlottetown, had 12,357 inhabitants in 1931 (10,814 in 1921). Living births in 1929 numbered 1668; deaths, 1122; marriages, 469, according to preliminary figures. The public school enrollment in 1929 was 17,180.

Approximately 90 per cent of the population is engaged in agriculture and 94.2 per cent of the farmers own their farms. Stock raising, fishing, and silver-fox breeding are other leading industries. Field crops valued at \$10,973,000 were harvested from 567,180 acres in 1930, as compared with \$16,940,400 from 545,763 acres (1929). The fisheries output totaled \$1,297,125 in 1929 (\$1,196,681 in 1928). The value of fur-bearing animals on farms in 1928 was \$3,676,229. With 276 manufacturing establishments, the gross value of factory output in 1929 was \$4,638,725, of which \$1,773,894 was the value added in process of production.

Preliminary figures for the fiscal year ended Dec. 31, 1930, placed ordinary provincial revenues at \$1,148,749 and ordinary expenditures at \$1,133,366, as compared with \$1,083,571 and \$1,033,315, respectively, in the preceding year. Total liabilities on Dec. 31, 1929, were \$2,558,740 and total assets about \$1,585,505. Under the provincial temperance law, upheld at a plebiscite in 1929, liquor sales are controlled by a Prohibition Commission, which reported sales during 1930 of \$126,410 and a gross profit of \$32,202. The government is administered by a lieutenant-governor, appointed by the Dominion, and a legislative assembly of 30 members elected for four years. Half of the assembly is elected by real property holders and the remainder by universal male and female suffrage. The Liberal administration of Premier W. M. Lea was defeated in the provincial election of Aug. 6, 1931, and a Conservative Government was formed headed by J. D. Stewart. Lieutenant-Governor in 1931, Frank R. Heartz. See CANADA.

**PRINCETON UNIVERSITY.** A nonsectarian institution of higher learning for men in Princeton, N. J., founded in 1746. The total enrollment in the autumn of 1931 was 2554, of whom 2298 were undergraduates and 256 were graduate students and fellows. The faculty numbered 315; there were also 37 assistants and 39 administrative officers.

The endowment in 1931 was \$24,328,339; the total income, \$2,892,278; and the total expenditure, \$2,870,415. Bequests and gifts amounted to \$1,755,345 for endowment and \$149,956 for current expenses. Among the bequests were \$100,000 for music from C. H. Ditson; \$359,482 for scholarships from Frank Hartley; and \$57,000 for the library, infirmary, scholarships, and fel-

lowships from T. W. Hunt. The Fine Memorial Hall, which was erected and endowed in memory of the late Dean Henry B. Fine by Thomas D. Jones and his niece, Miss Gwethalyn Jones, was opened as headquarters of the department of mathematics in the university. The library in 1931 contained 650,000 volumes, exclusive of pamphlets, broadsides, and manuscripts. President, John Grier Hibben, Ph.D., Litt.D., LL.D., whose announced retirement was to take effect in 1932 after 20 years of service.

**PRINGLE-PATTISON, ANDREW SETH.** A British philosopher and logician, died in Selkirk Sept. 1, 1931. Born in Edinburgh in 1856, he was educated at the university there and in Germany. He returned to the University of Edinburgh in 1880 to be an assistant and lecturer in logic and metaphysics for three years and was also appointed to the Balfour lectureship in philosophy. In 1883 he went to the newly-founded University College of Cardiff as professor of logic and philosophy, and in 1887 accepted the chair of logic, rhetoric, and metaphysics at St. Andrews University. In 1891 he was appointed professor of logic and metaphysics at the University of Edinburgh, where he remained until his retirement in 1919. In 1898 he assumed the name Pringle-Pattison, in addition to his own, on succeeding to the Haining estate. His publications include *The Development from Kant to Hegel* (1882); *The Idea of Immortality* (Gifford lectures, 1922); *The Philosophy of History* (British Academy lecture, 1923); and *Studies in the Philosophy of Religion* (1930).

**PROHIBITION.** WICKERSHAM COMMISSION. In January, 1931, the long awaited report of President Hoover's Commission on Law Observation and Enforcement was made public. It at once became apparent, despite the outward unanimity of the Commission, that considerable difference of opinion existed among its individual members as to the possibility of the enforcement of the Eighteenth Amendment by the Federal Government. In its conclusions the Commission, after having given the whole subject elaborate examination over a period of 18 months, made the following declarations: (1) It was opposed to the repeal of the Eighteenth Amendment. (2) It was opposed to the restoration of the saloon. (3) It was opposed to the entry by the Federal or State governments into the liquor business. (4) It was opposed to the modification of the Volstead Act in order to permit the manufacture and sale of light wines and beers. However, declared the Commission, the cooperation of the States and the support of public opinion were essential to law enforcement. Said it: The public was not obeying the law; the present organization for enforcement was inadequate; if, after further trial, enforcement was still impossible, the Eighteenth Amendment should be revised to give Congress the power "to regulate or prohibit" the manufacture, sale and transportation of intoxicating beverages.

The Commission's inquiries indicated that the following three factors were standing in the way of the enforcement of the Amendment: (1) The great margin that existed between the cost of producing or importing illicit liquor and the price that such liquor commanded when sold.

In other words, the liquor traffic was a vastly profitable industry and because it represented, in effect, big business, it was inevitable that there should be encouraged bootlegging, hijacking, gang wars, and official corruption. The public in many localities was, however, hostile to or, at best, completely indifferent to enforcement. (2) The Commission made the excellent point that in the case of the enforcement of the narcotic laws, for example, public opinion was favorably disposed, with the result that the traffic in drugs had been driven underground. On the other hand, the drink traffic flourished openly because the American public refused to regard it as a criminal enterprise. (3) The general feeling prevailed that the enforcement of the Eighteenth Amendment was the task of the Federal Government exclusively, and many States gave only lip service to the need for enforcement.

On these grounds the outlook in 1931 for the ultimate success of what President Hoover had characterized as a "noble experiment" was, to say the least, dubious. Because of the great number of "speakeasies" (i.e., places for illicit sale of liquor) that existed with "public tolerance" and because of the inability of the government to choke off the sources of the liquor supply, there existed reasons for regarding the whole problem skeptically. On the first point the Commission said bluntly: "Unless the number of speakeasies can be substantially and permanently diminished, enforcement cannot be held satisfactory." On the second point, while the Commission was hopeful that most of the channels through which the illicit liquor flow could be dammed up, it was not at all sanguine about the success as far as one source was concerned, namely: illicit distilling. This was the Achilles heel of Prohibition in 1931.

The volume of liquor actually manufactured in the United States was many times greater than the quantities both imported and produced from other sources. Said the Wickersham Commission concerning this most important source of supply coming from the existence of an illicit distilling industry.

With the perfection and discovery of new methods of distilling alcohol, the illicit distillery has become for the time being the chief source of supply. In consequence . . . a steady flow of whiskey, much of it of good quality, is put in circulation at cheap prices. . . . The improved methods, the perfection of organization, the ease of production, the cheapness and easy accessibility of materials, the ease with which plants may be concealed, the huge profits involved, have enabled this business to become established to an extent which makes it very difficult to put at an end.

The chief factor in the development of illicit distilling was the appearance of new and cheap materials that could be employed, notably corn sugar but also cane and beet sugar, molasses, corn meal, and other grains. Further, it was estimated by the Prohibition Bureau's director that in the fiscal year ending June 30, 1930 the illicit production of wine and malt liquors had been 118,320,000 and 683,032,000 gallons, respectively. This was not much less than 40 per cent of the actual legitimate withdrawals in 1914 and still took no count of other forms of liquor diversion. The Commission enumerated and described five other sources from which the nation got its illegal drink, as follows: (1) Importation from Canada, the Caribbean and Europe; (2) The diversion of industrial alcohol; (3) The illegal brewing of beer; (4) The diver-

sion of medicinal and sacramental liquors and wines; (5) Home-brewing.

Importation, especially importation from Canada, was perhaps the second most important source of supply. In the beginning, liquor was run across the border irregularly and through the use of such vehicles of transportation as were readily at hand; this traffic, too, had become organized and directed and a steady flow was making its way across the northern frontier, using trucks, speed-boats, and even airplanes. In 1929, Canada, on the representation of the United States, sought to check the traffic by refusing clearance to liquor destined for this country. Temporarily, the liquor traffic received a check. However, new methods were devised for running the rum across the border, and it was found that liquor exported to the West Indies, Mexico, and Central America might be reexported to the United States without difficulty.

Diversion of industrial alcohol constituted another important source of supply. Despite the fact that in 1928 the Government began to reduce the number of private denaturing plants and limited the quantities these might produce, the Wickersham Commission found over-production of industrial alcohol, with the inevitable conclusion that a large part was being diverted for the making of illegal drink, was the rule.

The home manufacturer who makes beer or gin for his own consumption or for sale to a neighborhood "beer flat," "blind pig," or "speakeasy" constituted the fourth important form of leakage. As Mr. James J. Forrester, a member of the Commission's research staff, said in *Current History* for March, 1931:

The distilling apparatus is easy to obtain, the materials abundant, and the process simple. He uses redistilled commercial alcohol, corn sugar, cornmeal, fruit, fruit and vegetable parings, raisins, and various kinds of cereals. The most commonly used ingredient is corn sugar, the production of which has increased far beyond the apparent demand of legitimate commerce during the past five or six years.

The Wickersham Commission had evidence to point that there were more speakeasies in existence ten years after Prohibition than there had been licensed saloons before. In fact, a commonly accepted estimate put the number of speakeasies at three times the old saloons.

Because there were signs of improvement in the nature of enforcement, particularly after the Federal Prohibition Service was placed on a merit basis, the majority of the Commission's members expressed a willingness to see the law given a further trial. But it was plain that enforcement could not travel very far without the aid of State officials. And the States, apparently, were showing little disposition to lend aid, particularly in those regions where large urban populations lived. Already, six States were without enforcement laws; in 1930, in two others, the electorates voted for the repeal of the enforcement measures; in few commonwealths were there separate enforcement departments. Without public approval, there was little likelihood of an expansion of State activity, and everything pointed to a growing desire to "let the Federal Government do it."

This, on the face of it, was plain enough and seemed to indicate that the Commission, while it saw serious obstacles in the way of the enforcement of the amendment, was not disheartened and advocated the continuance of the ex-

periment on the basis of a heightened enforcement effort. Yet there was serious cause for confusion in the public mind. This was due to the fact that appended to the formal report were the individual statements by all the Commissioners which indicated, to say the least, a serious difference of opinion among them and that the majority either favored revision or repeal of the Prohibition Amendment. Four of the commissioners sought revision; two were in favor of outright repeal; and only five placed themselves on record as favoring further trial of the present liquor regulations. The individual members stood as follows on the question of the continuance of the present situation: The chairman, George W. Wickersham, Judge William I. Grubb, Judge William S. Kenyon, Judge Kenneth Mackintosh, and Judge Paul J. McCormick favored further trial. The following called for revision of the amendment and the enforcing laws: President Ada L. Comstock, of Radcliffe College; Henry W. Anderson; Frank J. Loesch, and Dean Roscoe Pound, of the Harvard Law School. Newton D. Baker and Monte M. Lemann advocated outright repeal. Commissioner Anderson, in an elaborate appended statement, called for the sale of liquor by a corporation under governmental regulation, a proposal which was endorsed by Commissioners Loesch, Mackintosh, and Pound. Commissioners Kenyon and McCormick also gave the proposal their recommendation if further trial of the enforcement laws showed that the Prohibition Amendment continued to be a failure.

What further complicated the situation and added to the atmosphere of uncertainty was the fact that President Hoover, in transmitting the report to Congress, based his message entirely on the formal recommendations of the Commission and failed to take into consideration the doubts expressed by the Commissioners in their individual statements. The President declared himself in accord with the Commission (but not with the individual Commissioners) in opposing the repeal and in favoring the improvement of enforcement. He said further:

I do, however, see serious objections to, and therefore must not be understood as recommending, the commission's proposed revision of the Eighteenth Amendment which is suggested by them for possible consideration at some future time if the continued effort at enforcement should not prove successful. My own duty and that of all executive officials is clear . . . to enforce the law with all the means at our disposal without equivocation or reservation.

It was no wonder that both wets and dries regarded the report as favorable to their own particular points of view. Thus, prominent Congressional dries like Senator Sheppard and Andrew J. Volstead expressed themselves as pleased with the report. F. Scott McBride, of the Anti-Saloon League, said: "It's a good report for us." Bishop Cannon, of the Methodist Church, South, called it "eminently sound." On the other hand, Congressional wets like Senator Blaine and Representatives Celler and Lenthicum regarded the report as bolstering their cause.

**THE POSITION OF THE DEMOCRATIC PARTY.** John J. Raskob, chairman of the Democratic National Committee, made a number of serious efforts during the year to crystallize his party's position on the Prohibition question. Confronted by a state of affairs in which members of the Democracy in large urban centres, particularly in the East, were openly in favor of repeal and where Democratic members of the Southern States

were hostile to any talk of modification or the withdrawal of the Amendment, he, nevertheless, exercised himself in the search of a middle ground where these two widely separated points of view might meet. The formula finally perfected by Mr. Raskob called for the acceptance by the party of the principle of home rule under which the Eighteenth Amendment was to continue in the country's fundamental law but by which individual States might exercise their discretion as to whether or not they were to assume control of local liquor traffic. In other words, the proposal called for the maintenance of dry rule in those States that wished to continue as dry, and State control of liquor manufacture, sale and transportation in those States that were wet.

On March 5, Mr. Raskob placed his plan before the Democratic National Committee in Washington. Mr. Raskob explained his proposal in the following words:

This problem will undoubtedly be one of the outstanding issues in the next campaign, and my recommendation is that the Eighteenth Amendment be not repealed, but that the Democratic party advocate a new amendment which will provide that nothing in the Eighteenth Amendment shall prevent any State from directing and controlling absolutely, without interference by the Federal Government, the manufacture, transportation, and sale of intoxicating liquors within its own borders, provided that the plan under which it proposes to do this shall first have been submitted to the people of that State and approved by a majority of them in a State-wide referendum, and provided further that this new amendment to the Constitution shall not be effective unless and until it is ratified, not by the legislatures of three-fourths of the States, but by conventions of the people in three-fourths of the States.

Needless to say, Mr. Raskob's suggestion met with deep hostility. Southerners, notably Senators Joseph T. Robinson of Arkansas, Cordell Hull of Tennessee, and Cameron Morrison of North Carolina, expressed themselves as unalterably opposed to any tinkering with the Eighteenth Amendment and the National Prohibition Act. On the other hand, the party's former candidates, Alfred E. Smith and James M. Cox, gave the national chairman their support. That the party itself might refuse to accept such a solution of the most important political question of the day at its 1932 presidential election, was indicated by the nature of the comments with which Mr. Raskob's statement was received. It was becoming increasingly plain that the majority of the Democratic leaders planned to make the forthcoming Presidential contest revolve about important economic issues rather than the Prohibition question. Mr. Raskob's utterances were interpreted as an effort to further the candidacy of Alfred E. Smith to whom the Prohibition question was more important than any other.

**ATTITUDE OF THE AMERICAN LEGION.** One of the most significant straws in the wind was the action taken by the American Legion at its annual session in Detroit in September. By a vote of 1008 to 394 the convention adopted a resolution calling for the submission of the entire Prohibition question to the States for settlement. The American Legion resolution read as follows:

Whereas, the Eighteenth Amendment of the Constitution of the United States has created a condition endangering respect for law and the security of American institutions, therefore be it

Resolved, that the American Legion in this thirteenth annual convention assembled, favors the submission by Congress of the repeal or modification of the present prohibition laws to the several States with a request that each state submit this question to the voters thereof.

**AMERICAN FEDERATION OF LABOR.** Following the action of the American Legion was a somewhat similar step taken by the American Federation of Labor at its annual convention at Vancouver, B. C., in October. A resolution adopted by the convention called for the modification of the Volstead Act and the legalization of the manufacture, sale, and transportation of light wines and beer with alcoholic content of 2.75 per cent. The convention also approved the setting up of a committee to press the programme of modification it was advocating and an announcement was made that the order contemplated an intensive drive in its effort to change the dry law. Said a statement from the Federation's executive committee concerning the future plans of this campaign:

There have been those who fearful of the progress we are making have sought our defeat by raising the cry that modification of the Volstead act as urged by our committee and the American Federation of Labor will bring back the old saloon and all its attendant evils. We have no hesitation in saying that if that were true, and those who raise that cry know that it is untrue, such a condition would be 100 per cent better than now prevails.

However, all who approach the question with an open mind, know that there is no possibility of the saloon returning. Our programme does not contemplate the return of the saloon. We do not want the saloon. Nor do we want to take from the National Government control over the manufacture and sale of the malted beverages we ask to be made legal.

Then, too, all of our States would have authority and power to enact such additional laws as will make impossible the licensing of any saloon or other place for the sale of malted beverages of the alcoholic content urged by the American Federation of Labor and our committee. . . . We will continue to appeal to the reasonable man and woman who believes in law and order and public morality, and who is willing to honestly face facts, confident that in so doing we will secure that which we ask—an honest definition from Congress of what actually constitutes an intoxicating beverage.

**THE NATION'S DRINK BILL.** The Association Against the Prohibition Amendment, whose reports have received the attention of these columns in previous YEAR BOOKS, issued a statement in May in which it estimated that the liquor bill of the United States for 1929 was \$2,848,000,000. Declaring that the illicit traffic in liquor was one of the nation's major industries, the Association compared it to the value of all automobiles in the country which it put at \$2,793,000,000, and to the total receipts of the gasoline industry which it put at \$2,954,000,000. The Association estimated that the American people in 1929 had spent \$2,200,000,000 for distilled liquors, \$395,000,000 for beer, and \$253,000,000 for wine. Said it: "Though the amount of beer consumed annually in the United States has sunk to almost one-third of pre-war beer drinking, while twice as much wine as was used in 1914 is now consumed, the money paid for hard liquor shows an increase of over 300 per cent in the last fifteen years with an average increase in the nation's bill for all alcoholic beverages of more than \$1,000,000,000."

Under Prohibition, according to the Association's report, per capita consumption of spirits increased from 1.44 gallons in 1914 to 1.65 gallons in 1929, while the per capita consumption of beer dropped from 20.69 gallons in 1914 to 6.5 gallons in 1929. The consumption of wine increased from .53 to .90 gallons. Thus, the Eighteenth Amendment and the National Prohibition Law, according to the Association, could be credited only with a reduction in the beer consumption. Expenditures for drink are compared as follows in the Association's report:

	[000 omitted.]			Total
	Spirits	Malt liquors	Wines	
Drink bill, 1929 . .	\$2,200,000	\$ 395,000	\$253,000	\$2,848,000
Drink bill, 1914 . .	663,000	1,032,000	124,000	1,819,000
Increase .	1,537,000	637,000	129,000	1,030,000

\* Decrease.

On the basis of these findings, the Association Against the Prohibition Amendment indicated its belief that a tax on legalized liquor at 1918 rates would produce in excess of \$900,000,000, in those 17 States which could be expected to set up systems for liquor sales. The Association argued that State regulation would not increase the country's drink bill, pointing out that money which went to pay the extortionate profits of bootleggers and rum runners and for the corruption of public officials would find its way into the public treasury.

With these utterances the Woman's Christian Temperance Union took issue in July. A statement from its national headquarters declared that liquor taxes before Prohibition never constituted more than 8 per cent or 9 per cent of the income of State and local governments at any time. Liquor never paid a billion dollars in taxes to any one. "From the imposition of the Federal revenue tax on liquor in 1862 down through the Spanish-American War . . . liquor paid a total of only \$3,000,000,000 to the Federal Government, while local saloon and bar licenses paid a trivial amount in proportion . . . The total tax payments to national, State, county and local tax collectors was \$2,799,422,402 in 1913. Of this, liquor paid only 10½ per cent or only \$309,663,321 of which the Federal Government got \$230,146,332."

**DISAGREEMENT AMONG THE WOMEN.** That distinct differences of opinion among the women of the nation existed as far as the Prohibition law was concerned, was evidenced from the public expressions made by representative women's organizations during the year. Three outstanding groups met in Washington in the spring, of which two went on record as favoring the continuance of the Prohibition experiment while the third expressed its opposition. As one commentator declared: "Not since the suffragettes and the anti-suffragettes fought it out over the Nineteenth Amendment has there been such a fight among America's women." The Women's National Committee for Law Enforcement, whose delegates claimed they represented twelve million women, called on President Hoover with a pledge to support his stand on Prohibition. Headed by Mrs. Henry W. Peabody, this Committee declared itself as favoring a nation wide education campaign for law enforcement, to be "fortified by good example" in the home.

Next to express itself on the question was the National Women's Democratic Law Enforcement League, headed by Mrs. Jesse W. Nicholson, of Maryland. This group had bolted the Democratic party in 1928 because of the nomination of Alfred E. Smith and apparently was prepared to take similar action in the coming presidential campaign if the Democracy adopted a like position. The meeting demanded the removal of John J. Raskob, chairman of the Democratic National Committee, and cheered attacks upon the party's most prominent presidential

aspirants, Alfred E. Smith, Franklin D. Roosevelt, Albert C. Ritchie, and James A. Reed.

The third group, the Women's Organization for National Prohibition Reform, led by Mrs. Charles H. Sabin, announced its unalterable opposition to the continuance of the Prohibition law. Appearing before President Hoover, the delegation submitted a resolution petitioning him and Congress to permit the nation an opportunity to vote on the repeal of the Eighteenth Amendment. Another resolution adopted by the organization's meeting called upon its members to support only those candidates for public office who have openly declared themselves in favor of the repeal of the Eighteenth Amendment.

**ADVISORY RESEARCH COUNCIL, BUREAU OF PROHIBITION.** In May, the Federal Bureau of Prohibition announced the creation of an advisory research council whose members were to formulate plans of research into the operation of the Eighteenth Amendment along the lines of sociology and political economy. According to the announced plan, the council was to prepare a programme of subjects for investigation to be offered to graduate students working for the master's or doctor's degree in colleges and universities. Said Amos W. W. Woodcock, national Prohibition director, concerning the nature of the enterprise:

The reputation and character of the persons composing this council insure in advance the handling of research work in graduate schools along purely scientific lines.

The utmost academic freedom is to be given directors of research and those graduate students who elect to investigate the subjects made by the council.

No special objective is asked for. It is facts that are wanted.

The members of the council, who were to serve without compensation, were the following persons: R. C. Cabot, professor of social ethics at Harvard; S. M. Lindsay, professor of social legislation at Columbia; W. S. Carpenter, professor of politics at Princeton; R. D. McKenzie, chairman of the sociology department at the University of Michigan; C. W. Pipkin, professor of comparative government at Louisiana State University; C. E. Gehlke, professor of sociology at Western Reserve University; W. R. Miles, professor of experimental psychology at Stanford University; Emory R. Johnson, professor of transportation and commerce at the University of Pennsylvania; S. C. May, professor of political science, University of California; Miss Susan M. Kingsbury, professor of social economics at Bryn Mawr University.

**PROHIBITION AND THE SEVENTY-SECOND CONGRESS.** It became apparent that the Seventy-Second Congress, meeting for its first session in December, 1931, contained a sizable wet sentiment which was prepared to bring the matter of Prohibition to a definite issue. Heretofore, the dries in the Congress, holding overwhelming strength in both houses, had succeeded in blocking every move to bring a bill or resolution calling for modification or repeal out of committee. Not until the Seventy-Second Congress convened did there exist a national legislature where the wets were able to muster as many as 100 votes against the Amendment or the National Prohibition Law. In the Seventy-second Congress' House, however, out of a total membership of 435, the wets were able to count on the voting strength of at least 174 members. In the Senate, out of 96 members, the wets were able to muster at least 30.

That in the House, certainly, there was every possibility of a show-down on the question, one was able to gather from the following two facts: First an improved organization of its membership; and, second, a liberalization of the rules to permit an open fight on the floor.

The wet members banded themselves into what was unofficially called "The Committee Opposed to National Prohibition." Organized on non-partisan lines, it was headed by Representative J. Charles Linthicum, of Maryland. In the second place, the new rules voted by the House provided that on the petition of 145 members any committee might be cited for discharge from any further consideration of a bill. This meant that a House committee prepared to kill a resolution or bill might be called upon to submit the question for the total membership's consideration, whether or not the committee's majority was actually in opposition.

In the opening weeks of the new session there were before House committees two significant bills which seemed likely to receive the action indicated above and presented the possibility of an open fight on the House's floor. One demanded a national referendum on Prohibition and the other, in the form of an amendment to the constitution, called for the transference of Prohibition enforcement from the federal government to the State governments. The latter proposal was submitted by Representative John Q. Tilson, of Connecticut, Republican floor leader of the Seventy-First Congress.

**BIBLIOGRAPHY.** Two books of the year threw interesting light on the Prohibition discussion. The first of these, *The Prohibition Experiment in Finland*, by Dr. John H. Wuorinen, an American scholar, was published by Columbia University. Dr. Wuorinen pointed out that Finland, in its experiment with complete legal Prohibition since 1919, has gone through practically the same round of experience to be found in the United States, viz: (1) great initial enthusiasm and confidence in Prohibition; (2) difficulties of enforcement; (3) extensive smuggling and law breaking; (4) increased venality among enforcement authorities; (4) a gradual return to sober reflection on the whole issue, with resulting doubt as to whether legislative fiat is the best road to public or private morality. The action taken by Finnish citizens on the public referendum on the last two days of the year is described in the article *FINLAND under History*.

Prof. G. E. C. Catlin's *Liquor Control* (published in the Home University Series) is an excellent summary of the whole question. The author concerns himself with the biological and medical aspects of regulation and control as well as the political and sociological. The writer points out that heavy drinking is bad for the individual as well as the social group. He also recognizes that liquor restraint is likely to improve the economic status of the working classes. However, he makes the point that squalor and the misery of inadequate wages are just as likely to be responsible for the drinking habit as the reverse. Dr. Catlin sees the necessity for regulation (as opposed to Prohibition) and believes that the Bratt system of private liquor monopoly, as it exists in Sweden, is the most likely of success. He says:

The most efficient method, and the one most concurrent with the form which public control tends at the time to be taking, would appear to be the establishment of

local trusts for the sale, where demanded, under the most respectable and agreeable conditions of all such alcoholic liquors as public opinion might choose to sanction.

**WORLD-WIDE STATUS AT THE END OF THE YEAR.** The vote in Finland in favor of the repeal of the country's Prohibition law, if it were to be followed by repeal, would leave the United States alone in the whole world as a so-called Prohibition country. The experiences during the World War and in the post-War era had not been entirely satisfactory. In Russia, Prohibition was imposed as a war-time measure but was repealed in 1925. Estonia and Latvia, among the succession states, repealed Prohibition in 1920. Norway adopted Prohibition in 1916 but in 1927 abandoned it for regulation and local option. In Sweden, the Bratt system of regulation was adopted in 1919 and still continues to function. During the war eight of the nine Canadian provinces adopted Prohibition but in the succeeding years all but Prince Edward Island had returned to the regulation and licensing system. In New Zealand and in the Australian provinces of New South Wales and Victoria, popular plebiscites have returned heavy majorities against the adoption of Prohibition. See CANADA under *Foreign Relations*; CRIME; LAW, PROGRESS AND DEVELOPMENTS; ST. PIERRE AND MIQUELON; UNITED STATES under *Congress*; PORTO RICO under *History*.

**PROTACTINIUM.** See CHEMISTRY.

**PROTESTANT EPISCOPAL CHURCH.** A religious body representing the Anglican communion in the United States, of which the Church of England is the parent church, and which was brought to America in 1607.

In 1931 the total number of communicants of the Protestant Episcopal Church, in 8254 parishes and missions, was 1,312,004, an increase of 24,573 over the preceding year. The clergy numbered 6323; 175 priests were ordained during the year, while the 15 theological seminaries of the church reported 488 candidates for orders. In the 5000 church (Sunday) schools 500,782 pupils were enrolled. Baptisms during the year numbered 64,241, and confirmations 63,782. The government of the church centres in a general convention which meets triennially. The affairs of the church between sessions are conducted by a national council.

Operating on a balanced budget, the church in 1930 reported total expenditures amounting to \$3,775,802. Of this sum, the total expenditure for missions, domestic and foreign, was \$2,862,119, divided in practically even amounts between the two fields. The foreign-mission field included Japan, China, Liberia, Mexico, the Philippines, Alaska, Hawaii, Brazil, the Canal Zone, Cuba, Porto Rico, Haiti, the Dominican Republic, the Virgin Islands, and Palestine; in addition, there were establishments in 10 important European centres. Domestic missionary activities included work among the foreign born, Indians, Negroes, mountaineers, mill workers, in addition to a wide range of social service. American missionaries abroad numbered, men and women, respectively, 168 and 213; native staff abroad, 1499 and 918; American missionaries in the United States, 581 and 156, native staff in the United States, 105 and 14, making a total of 3654 persons. During the year, 69 new missionaries were appointed.

The national council is assisted by coöperating agencies, including: the Woman's Auxiliary; the

Brotherhood of St. Andrew; the Church Army; the Daughters of the King; the Guild of St. Barnabas (for nurses); the Girls' Friendly Society in the United States (for girls and young women); the Young People's Fellowship (for young men and women); the Church Mission of Help; the Seamen's Church Institute of America; and the American Church Institute for Negroes. Official periodicals are *The Spirit of Missions*, *Church at Work*, *Findings in Religious Education*, and *Bulletins* of the national council, together with material dealing particularly with each department of the council. Several independently owned publications make an important contribution to the life of the church: *The Living Church*, *The Churchman*, *The Witness*, *The Southern Churchman*, weeklies; *American Church Monthly* and *The Chronicle*, both of which are published monthly.

The year 1931 was marked by the death of four bishops: The Rt. Rev. Richard Henry Nelson, D.D., who had resigned as Bishop of Albany, July 1, 1929; the Rt. Rev. Thomas James Garland, D.D., Bishop of Pennsylvania and a member of the national council, who was succeeded by his coadjutor, the Rt. Rev. Francis M. Taitt, S.T.D.; the Rt. Rev. Theodore Irving Reese, D.D., Bishop of Southern Ohio, who was succeeded by his coadjutor, the Rt. Rev. Henry Wise Hobson, D.D.; and the Rt. Rev. John Poyntz Tyler, D.D., Missionary Bishop of North Dakota. The only bishop who retired during the year was the Rt. Rev. James Ridout Winchester, D.D., Bishop of Arkansas.

New members of the house of bishops consecrated during 1931 included: The Rt. Rev. Wyatt Brown, D.D., Bishop of Harrisburg; the Rt. Rev. Stephen E. Keeler, D.D., Bishop Coadjutor of Minnesota; the Rt. Rev. Frederick G. Budlong, Bishop Coadjutor of Connecticut; the Rt. Rev. Efrain Salinas, Suffragan Bishop of Mexico; the Rt. Rev. John Boyd Bentley, Suffragan Bishop of Alaska; and the Rt. Rev. Frederick B. Bartlett, Missionary Bishop of North Dakota, to succeed the Rt. Rev. Hugh L. Burleson, who was chosen assistant to the presiding bishop.

The fiftieth general convention of the Protestant Episcopal Church was held in Denver, Colo., Sept. 16-30, 1931. It was attended by 114 bishops and 648 clerical and lay deputies. One of the great issues facing this convention was the report of the joint commission on marriage and divorce, which had been studying the problem since 1925. After conference between the house of bishops and the house of deputies, its recommendations were considerably modified and an entirely new canon was adopted. See MARRIAGE AND DIVORCE for significant quotations from the amended Canon 43 on the Solemnization of Holy Matrimony. Three major questions, however, were deferred to the next general convention, viz: the requirement that one of the parties to the marriage must have received Christian baptism; the signing of a declaration as to the sanctity of marriage before it can take place; and the provision in the old canon making possible the remarriage in the church of the innocent party in the case of a divorce granted for adultery.

Another important issue before the convention was that concerning economic conditions not only in the United States but throughout the world. In view of the economic depression, and consequent distress, a resolution was adopted asking President Hoover to set aside, by proclamation,

Sunday, November 8, to be observed nationally as a day of public penitence and prayer. The interest of the convention in the responsibility of the church for the social welfare of the people found expression in the report of a committee appointed to consider national and world problems, including economic dislocation, lawlessness, and world peace. This report conceded to every man "the right to regularity of employment" and urged the necessity of providing security for the workers by some form of unemployment insurance, whether by voluntary arrangement or legal compulsion.

Under the head of lawlessness, which was declared to threaten the social order, the report condemned the lack of sense of social responsibility which marked many who desired for themselves the protection of position and property, and declared that "bootlegging would be no longer profitable were wealthy purchasers less generous in support of the traffic." At the same time, the report recognized widespread and honest differences of opinion, both in the church and the state, "as to the wisdom and desirability of retaining the Eighteenth Amendment and consequent legislation in their present form" and urged a serious effort to discover the deliberate opinion of the people on its retention or amendment. The report also roundly condemned war as a method of settling international disputes and endorsed the principles of the Kellogg Pact. It likewise expressed the opinion that the time had come for the United States to associate itself with the League of Nations.

The problem of church unity was to the fore during the convention. A report of a conference between the Episcopal and Methodist and Presbyterian churches on Christian morality in relation to organic unity was presented. Authority was given to continue the conference and to invite the cooperation of the Lutheran Church, and also to organize a commission on ecclesiastical relations under the national council. The convention approved of the acceptance of a pressing invitation to undertake missionary work in South India, and the department of missions was directed to embark upon the experiment as soon as the necessary funds had been subscribed. The convention also witnessed a great enlargement of the ministry of women in the church. Deaconesses were to be recognized as a distinct order of ministry and provision was made for their ordination.

The canons dealing with the trial of ministers of the Protestant Episcopal Church were codified, but a proposal to create a final court of appeals to deal with heresy trials was defeated. Authority was also given to create a fund of \$5,000,000 for a rural church foundation to foster the work of the church in rural communities.

The Rt. Rev. James DeWolf Perry, D.D., S.T.D., Bishop of Rhode Island, was elected presiding bishop for the ensuing six years. He was also president of the national council, whose headquarters are in the Church Missions House, 281 Fourth Avenue, New York City.

**PROTOZOA.** See Zoölogy.

**PRUSSIA,** prűsh'ă. A constituent republic of the German Reich. Formerly a kingdom of the German Empire, it was proclaimed a republic Nov. 13, 1918. Capital, Berlin. Area, Apr. 1, 1929, 113,129 square miles, as compared with 135,134 square miles before the World War; population, according to the census of 1925, 38,175,989, as

compared with 40,165,219 in 1910. Births in 1929 numbered 725,299, deaths 517,345, marriages 365,221. The chief cities, with their populations in 1925, are Berlin, 4,024,165; Cologne, 700,222; Essen, 629,564; Breslau, 599,770; Frankfurt-on-Main, 540,115; Dortmund, 525,837; Düsseldorf, 464,543; and Hanover, 425,274. Public elementary schools in 1926 enrolled 4,169,481 pupils and the private elementary schools, 13,925. There were 52,683 students in 14 universities in 1929-30, and about 732,700 pupils in various secondary and preparatory schools in 1926.

Agriculture, mining, and manufacturing are the principal industries. The chief crops, with the yields in metric tons, in 1929 were: Wheat, 1,968,913; rye, 6,113,599; barley, 1,752,798; oats, 5,210,640; potatoes, 26,592,134; meadow hay, 9,504,358. Vineyards yielded 10,928,877 gallons of wine, valued at 33,251,545 Reichsmarks (1 Reichsmark equaled \$0.2382 at par). In the fiscal years 1930-31 and 1931-32, the budgets of the Prussian Government were estimated to balance at 4,356,959,020 Reichsmarks and 3,972,694,000 Reichsmarks, respectively. The public debt in 1930 aggregated 531,678,497 Reichsmarks (381,575,995 Reichsmarks in 1929).

The Constitution of Nov. 30, 1920, vests legislative power in a Diet (Landtag) of 450 members, elected by direct suffrage, and a State Council (Staatsrat) elected by the Provincial Assemblies. The Diet elects the Premier, who appoints the members of his Cabinet. The Diet elections of May 20, 1928, returned 137 Social Democrats, 71 Centrists, 82 German Nationalists, 40 German People's party, 56 Communists, 21 Democrats, 21 Economic party, 6 National Socialists, and 16 others. Premier in 1931, Otto Braun (Social Democrat).

**HISTORY.** The tide of political reaction in Germany, which had risen to challenging proportions in the elections to the Reichstag in 1930, showed some recession in the referendum on the dissolution of the Prussian Diet held Aug. 9, 1931. The referendum was instigated by the Steel Helmet War Veterans' League, who in April secured the necessary 5,000,000 signatures to their petition, and was aimed at the overthrow of the Socialist-Centrist-Democratic coalition government headed by Premier Otto Braun. Supported by Adolf Hitler's National Socialists, the German Nationalists under Alfred Hugenberg, the Agrarians, a section of the People's party, and the Communists, the Steel Helmet League rallied 9,703,603 Prussians, or 36.9 per cent of the electorate, to their cause. As 13,200,000 votes—an absolute majority of the Prussian electorate—were required to overthrow the government, the referendum failed by approximately 3,500,000 votes. The State government's victory had an important effect in stabilizing the disturbed political condition of the German Reich (see GERMANY under History).

Drastic economy measures were inaugurated by the Government during the year. On September 9, the budget was reduced by about 208,000,000 Reichsmarks (about \$50,000,000) and on September 14 the membership of the Diet was reduced one-third by decree, to one representative for every 60,000 voters.

**PSYCHIATRY.** See PSYCHOLOGY; CRIME.

**PSYCHICAL RESEARCH.** There occurred very little of permanent significance during the year. There was no serious progress, but on the other hand no serious retrogression. Early in the

year the London Spiritualist Alliance, recognizing that some degree of critical investigation of mediums is necessary, formed a Research Committee. This Committee brought to London a Mrs. Duncan, a physical medium who claimed to be able to produce at a sitting one or more full form materializations. The Committee published a favorable preliminary report, but when the conditions of control were tightened up the medium was discovered in fraud. Before this stage had been reached, however, Harry Price, an independent investigator, had sittings with Mrs. Duncan, although the latter had signed an exclusive contract with the London Spiritualistic Alliance. By means of flashlight photographs and in other ways Mr. Price was able to show that the supposed supernatural ectoplasm produced by the medium was nothing more mysterious than cheese-cloth. As the medium was carefully searched before the sitting, it was not definitely known how she brought the material into the *séance*-room, but it was plausibly suggested that the medium swallowed and regurgitates the substance. Mr. Price has published a full report entitled *Regurgitation and the Duncan Mediumship*.

A still more deplorable exposure was that of George Valiantine. This medium's reputation, such as it was, was largely created by H. Dennis Bradley, who had written two books in which he acclaimed Valiantine, in the most laudatory terms, as the greatest medium of all time. Valiantine produced all sorts of phenomena, but specialized in the direct voice. During his last sittings with Mr. Bradley he went further and tried to give fingerprints. In doing so he was caught cheating and was completely exposed by Mr. Bradley in his book . . . *And After*. Mr. Bradley continued to believe in Valiantine's direct voices, and many supporters retained their faith in the medium, although he had been repeatedly exposed in both Europe and America.

Other notable physical mediumships referred to in previous years were largely quiescent, though their subterranean reverberations resulted in two unfortunate losses of useful workers. J. Malcolm Bird severed his connection with the American Society for Psychical Research for reasons unpublished, so that unfortunately the second installment of his history of the Margery mediumship was not published. Rudolf Lambert was dismissed from his post as assistant-editor of the German *Zeitschrift für Parapsychologie* because of his criticisms of the Millesimo and Silbert mediumships. There remained only two scientific publications devoted to psychical research, the *Proceedings* of the Society for Psychical Research and the *Bulletin* in the Boston Society for Psychic Research (apart from the privately printed *Journal* of the Society for Psychical Research).

On the other hand an important item was to be entered to the credit of the physical phenomena. At the very end of the year Dr. E. Osty, the Director of the Paris Institut Métapsychique, published the first installment of what promised to be a valuable report on the mediumship of Rudi Schneider, employing a new technique.

In the mental phenomena a certain amount of useful work was done. Theodore Besterman, S. G. Soal, and Ina Jephson published in the *Proceedings* of the Society for Psychical Research a report of a series of experiments in clairvoyance conducted under approximately fraud-proof conditions and with the investigators and subjects at

a distance from each other. The technique employed was carefully described and the results analyzed statistically and theoretically. No evidence of clairvoyance was found but much material of psychological value was obtained. Theodore Besterman also published in the *Proceedings* a full account of two series of control experiments in booktests (the supernatural perception of the contents of closed books), which fully demonstrated that the results obtained by the medium Mrs. Leonard were far superior to what chance could obtain even under the most favorable conditions.

In addition to the works mentioned above, there were published during the year 1931 Max Dessoir, *Vom Jenseits Der Seele* (6th edition); T. W. Mitchell (Myers Memorial Lecture) *Beneath the Threshold*; the first installment of an extensive report on *Human Experiences*, by W. F. Prince; a small book on *L'Avenir et la Prémonition* by the veteran Charles Richet; Dame Edith Lyttelton's *Our Superconscious Mind*; and *My Life in Two Worlds* by the medium Mrs. Leonard. Also E. Servadio, *La Ricerca Psichica*; A. A. Friedlander, *Telepathie und Hellsehen*; E. Caillet, *La Prohibition de l'Occulte*; A. M. Muhl, *Automatic Writing*; E. J. Dingwall, *Ghosts and Spirits in the Ancient World*; *An Adventure* (4th edition); and Sir Arthur Conan Doyle's *The Edge of the Unknown*.

**PSYCHO-ANALYSIS.** See PSYCHOLOGY.

**PSYCHOLOGY.** NOTES AND NEWS. The thirty-ninth annual meeting of the American Psychological Association was held at the University of Toronto, Toronto, Ontario, on Sept. 10, 11, and 12, 1931. There was a registered attendance of 448 persons. Fifty papers were read in ten formal sessions and 67 shorter ones were read in eight other sessions. Of the total of 117 papers, 20 were concerned with the problems of learning and 12 with the problems of development and growth. Seventeen papers dealt with animal psychology and fifteen with the phenomena of perception. The remaining 50 or more papers covered a great variety of topics.

The address of the retiring president, W. S. Hunter of Clark University, was on "The Psychological Study of Behavior." The newly elected president to serve during the year 1932 was W. R. Miles, Professor of Psychology at Stanford University. Professor D. G. Paterson, of the University of Minnesota was elected secretary to serve for a period of three years. The by-laws of the association were amended to provide for the regular annual meeting to be held early in September of each year, instead of the latter part of December. Cornell University was chosen as the place for the meeting in 1932.

The seventh Conference Internationale de Psychotechnique was held at Moscow on September 6 to 11. The President was I. Spielrein, and the secretary-general was J. M. Lahy. Over 100 foreign delegates were present from 17 countries, in addition to several hundred Russian workers in the field of psychotechnics.

The twelfth Kongress der Deutschen Gesellschaft für Psychologie was held at Hamburg April 13-17, 1931. There was an attendance of 250 persons and 79 papers were read.

The 35th Anniversary of the establishment of the First Psychological Clinic for the mental analysis and diagnostic and corrective education of human beings was celebrated at the Univer-

sity of Pennsylvania. Dr. Lightner Witmer, who established this clinic in 1906, was presented with a commemorative volume, containing contributions from 27 of his colleagues and students. The 25th anniversary of the founding of the Vineland Laboratory of the Training School at Vineland, New Jersey, was celebrated from September 3 to 5. Formal dedication of the Institute of Human Relations of Yale University occurred on May 9. The Annual Convention of the Society for the Study of Disorders of Speech held at Chicago on Dec. 31, 1930, and Jan. 1, 1931, adopted a nationwide coöperative programme for the study of the problem of stammering.

The French Société de psychologie named the following foreign members during the year 1930: Professors Cassirer, Lewin, and Wirth of Germany; Bartlett and Burt of England; Dwelshauvers and Michotto of Belgium; and Cannon, Dodge, and Yerkes of the United States.

One of the most unique events of the year 1931 was the inauguration by the National Advisory Council on Radio in Education of a series of 15-minute radio talks on "Psychology Today." They were broadcast each Saturday evening beginning October 17, at 8.30 over the WEA network. The opening talk was by President James R. Angell of Yale. This was followed by a set of four talks dealing with problems of human management, learning and forgetting, social attitudes, old prejudices and new schools in psychology. A second group of five talks dealing with child development began on November 21, and included the growth of the infant mind, children's fears, anger: its causes and control, social behavior in infancy, and childhood and adolescence.

A listener's notebook was prepared for each set of five lectures containing a brief introduction and a summary of each talk, and a page for notes and comments. As stated in a foreword, these booklets were an innovation in the United States, although they had been provided for years in England for members of the radio audience who wished to pursue further the subjects which the speakers presented. These booklets were to be distributed through the University of Chicago Press, at a nominal price. The sales far exceeded preliminary estimates, and the comments which were received indicated a widespread and intelligent interest in psychology. It was planned to continue the programme into 1932 with series on Animal Behavior, Educational Psychology, Problems in Personality, and Industrial Applications.

A notable attempt at collective experimental research on the problem of psychological origins in human development was undertaken by the Soviet Union. An expedition was organized by the Uzbek Research Institute of Samarkand and the Moscow Institute of Experimental Psychology under the direction of Prof. Alexander Luria of Moscow. Work was begun with the native population of Uzbekistan in Central Asia, where the people live under primitive nomadic conditions. Reports of the expedition were to be published in a series of *Transactions* and in foreign psychological journals.

Dr. A. P. Weiss (q.v.) Professor of Experimental Psychology at Ohio State University, died at Columbus, Ohio, on April 3. He had just completed a study of the "Psychology of the Highway," having been chairman of a com-

mittee of the National Research Council devoted to that problem. The results of the numerous researches of this committee were published in June by Ohio State University under the title: *Psychological Principles in Automotive Driving*.

The nationwide survey in English usage undertaken by the Psychological Corporation during 1930 was continued into the present year. Nearly 1,000,000 pupils had been tested. National norms of usage in the United States were soon to be completed and ready for distribution.

A British *Journal of Educational Psychology* was inaugurated by the British Psychological Society and the Training College Association. Its editor was C. W. Valentine, and its headquarters were the University of Birmingham, Birmingham, England.

The sixtieth birthday of William Stern, Director of the Psychological Laboratory at the University of Hamburg, was celebrated by the publication of a Festschrift (*Zeitschrift für Angewandte Psychologie*, 1931, Heft 59) containing contributions by his colleagues.

GENERAL AND THEORETICAL PSYCHOLOGY. There has been a general increase in interest in the concept of wholeness as opposed to the concept of summation of elements, with the centre of activity in Germany. The movement goes by varied names, such as Gestalt, Personalism, Structuralism, and Nativism, according to the special interests of its sponsors. The one characteristic which these different movements have in common is that the personality shall not be dissected, but shall be conceived as a unit.

The confusion often created in the mind of the lay reader by these psychological controversies over theoretical problems might be resolved by reading *Contemporary Schools of Psychology*, by R. S. Woodworth (New York, 1931). This is a critical examination of introspection, behaviorism, Gestalt psychology, psychoanalysis and its related schools, and purposivism or hormic psychology. In addition, the background of these disputes is presented together with the point of view of psychologists who prosecute their researches without adherence to any school.

An attempt to evaluate the influence of Freud upon textbooks of psychology published since 1910 (Freudian Influence on Academic Psychology," by D. G. Park, *Psychological Review*, 1931, vol. 38, pp. 73-85) brought forth the conclusion that 92 per cent of the 50 texts examined showed Freudian influence; of the four that ignored Freudianism entirely, two were published before 1912. This influence grew until it reached a maximum in books published between 1924 and 1928. Since that time there has been little change. An examination of revisions of books showed "a decided increase in the amount of Freudian influence; as well as a spread into most of the major categories of psychology."

A somewhat similar but less statistical evaluation of Gestalt psychology in modern systems was made by W. Line ("Gestalt Psychology in Relation to Other Psychological Systems," *Psychological Review*, 1931, vol. 38, pp. 375-391). The roots of Gestalt were readily found in the ideas of earlier systems, although Gestalt was given credit for indicating novel problems and suggesting new approaches to old problems.

Along with the championing of the new and revolutionary in psychology, there were efforts

to defend the older concepts. Thus, H. C. Warren ("In Defense of Some Discarded Concepts," *Psychological Review*, 1931, 38, pp. 392-405) became the defender of the concepts of Sensation and Will. Even Consciousness and the methods of introspection found a champion in L. P. Chambers ("Does Consciousness Exist," *Monist*, 1930, vol. 40, pp. 256-280).

**SOCIAL PSYCHOLOGY.** A striking demonstration of the degree to which the experimental method has found its way into the field of sociology, and particularly social psychology, was furnished by the appearance of two books during the year. One of these, *Experimental Social Psychology* (New York, 1931), is a book of more than 700 pages, by Gardner Murphy and Lois B. Murphy, whose main contribution consists in pointing out problems and suitable methods for their solution. The other is *Methods in Social Science: A Case Book*, edited by Stuart Rice (University of Chicago Press, 1931). It comprises an interpretation by about 50 specialists of the methods employed by investigators in the social sciences. This book of more than 800 pages consists mainly of case histories so selected as to illustrate the salient points of the various research methods. It was prepared under the direction of a special committee of the Social Science Research Council.

An important contribution within the field of Social Psychology appeared in *Psychopathology and Politics*, by H. D. Lacswell (University of Chicago Press, 1930). It represented the most successful attempt thus far to interpret political behavior in psychoanalytic terms, and to show the influence of events in the early life of the individual upon the character of his point of view in regard to the various political problems affecting him.

The experimental study of racial and national prejudices, antipathies, and tolerances showed the great interest of the social psychologist in problems having to do with international relations. Attempts were made not only to discover the reactions of individuals to racial and national groups but to find causes for the growth of prejudiced reactions and to discover means by which they might be prevented or corrected. A typical study of this nature was "Racial Preferences of a Thousand American University Students," by J. P. Guilford (*Journal of Social Psychology*, 1931, vol. 2, pp. 179-202).

Religions were likewise subjected to analysis by the psychologist and the statistician in order to determine their influence upon social growth. Among the problems attacked were the relation between rate of growth of religious sects, the nature of their doctrines, and the intelligence of their followers (see for instance, "Some Notes on the Census of Religious Bodies," by Raymond Pearl, *Journal of Social Psychology*, 1931, vol. 2, 47-430); the relation between scientific standing and religious affiliation (see H. C. Lehman, and P. A. Witte, "Scientific Eminence and Church Membership," *Scientific Monthly* 1931, vol. 33, pp. 544-549); and the relation between the individual's personality and the nature of his religious experience (see "Temperament and Religious Experience," by Keith Sward, *Journal of Social Psychology*, 1931, vol. 2, pp. 374-395).

**EDUCATIONAL PSYCHOLOGY.** The year 1931 saw a revived interest and activity in the analysis of the problems of learning. The attacks made

upon the generally accepted concepts of learning, by the Behaviorists, the Conditioned Reflex psychologists, and the Gestalt psychologists, laid open for reconsideration the whole problem of the laws of learning. Not only were the old laws subjected to reexamination (as in *Human Learning*, by E. L. Thorndike, New York, 1931) but there were numerous attempts to find a more fundamental and substantial basis for the phenomena of learning (as in "The Primary Factors in Learning" by K. F. Muenzinger, *Psychological Review*, 1931, vol. 38, pp. 347-358; "Inhibition, Facilitation, Learning: Summation of Stimuli," by M. N. Chappell, *Psychological Review*, 1931, vol. 38, 317-331; and "The Laws of Association," by H. A. Carr, *Psychological Review*, 1931, vol. 38, 212-228).

The problems of development and growth were receiving an amount of attention almost equal to that of learning. In addition to the educational psychologist's inherent interest in these questions, attention was directed to them through the controversy over the relative influence of learning and maturation, and through the emphasis during the last few years upon the education of the adult. Studies have ranged all the way from the growth of the group reaction in young infants to the mental changes in senescence. Of especial interest was the study of "Perceptual Abilities in the Age Range from Seven to Ninety-Two" (W. R. Miles) and "Psychological Work in Salvaging Old Age" (L. J. Martin). Both these studies and others of the same nature were reported at the 1931 meeting of the American Psychological Association.

Some notion of the influence of the different schools of theoretical psychology upon points of view in educational psychology was provided in *Viewpoints in Educational Psychology: a Book of Selected Readings*, by E. H. Cameron (New York, 1931).

**APPLIED PSYCHOLOGY.** Among the many practical applications of psychology recorded during 1931, none had more practical significance than the study of automobile driving conducted primarily at the Ohio State University under the auspices of the National Research Council ("Psychological Principles in Automotive Driving," by A. P. Weiss and A. R. Lauer, Ohio State University Studies, Psychological Series, No. 11, 1931). Besides the study of accident frequency and the development of a criterion for automotive driving, the influence of various human factors was investigated.

One of the interesting results of the investigations was the extent to which one defect may be compensated for, when it has been detected and proper teaching methods have been employed. Nervousness is a major cause of accidents, especially when coupled with poor coordination. Low vitality from any cause, whether it be due to health, poor home conditions, or worry is conducive to inattention and hence to accidents.

Defects of vision appeared to be of minor importance, except in so far as they created strain and fatigue with consequent inattention. The results were acknowledged to be exploratory in character, but formed the foundation for a more elaborate and systematic programme of investigation.

Besides such specific attacks upon practical problems there were a number of surveys of fields that are of particular interest to those who

are not professional psychologists. For instance, there was *Readings in Industrial Psychology*, by B. V. Moore and G. W. Hartmann (New York, 1931), which presented some 550 pages of extracts from studies dealing with vocational selection and guidance, occupational interests, training the worker, scientific management, fatigue, working conditions, accidents, monotony and satisfaction, labor unrest, leadership, etc.

A *Scientific Approach to Labor Problems* (by A. Ford, New York, 1931) showed the psychological techniques and tools that were available for the solution of the puzzling problems of labor.

Psychological aspects of the law, particularly the problems of crime prevention and the treatment of the criminal, have not received the attention warranted by their importance since the days of Hugo Münsterberg. One of his students, however, made a genuine contribution to this field in 1931 in the form of a résumé of the material contributed by psychologists in the form both of methods of procedure and of results (*Legal Psychology*, by H. E. Burt, New York, 1931). When the data have been thus assembled one gets a perspective which may serve as a guide for future research. The bulk of the labor of many years has been expended upon devices for evaluating evidence and for detecting the presence of guilt. However ingenious the methods and however accurate the results, the great problem of prevention, which is primarily a psychological problem, remains unsolved. This matter has not been entirely neglected, as is shown by chapters on the insane and the mentally defective criminal, and particularly by the chapters on predelinquency, eugenics, and education and crime prevention.

**MENTAL TESTS.** In the field of mental tests there appeared to be a growing interest in the search for fundamentals as contrasted with the haphazard multiplication of tests which had continued for a number of years. Two indications of such a change in attitude may be mentioned. The one emanated from such studies as that of Raymond Dodge, who for many years had been searching for and measuring the basic facts of variability in human behavior (see R. Dodge, *Conditions and Consequences of Human Variability*, Yale University Press, 1931). Differences in behavior were reduced to their lowest terms and measured as effects of differences in refractory phase, of relative fatigue, of susceptibility to faint stimuli, of the development of simple behavior patterns, and their complication by the interaction of neural levels. This mode of attack promised to provide a physiological foundation for the measurement of individual differences.

Another indication arose in the study and analysis of mental organization into its lowest terms. This movement is an outgrowth of the years of controversy over the theories of general and specific factors. (The nature of this controversy is described in Spearman, C. E., *The Abilities of Man*, New York, 1927.) It has led to a search for a certain limited number of fundamental and unique traits in human nature, which, combined in various proportions, would produce the varied individual behavior patterns. The method of attack is primarily one of statistical analysis. Among the unique traits which were at least partially isolated were speed, power, perseveration, suggestibility, number abil-

ity, language ability, memory, and mechanical ability. When behavior had been broken down into such units, the statistical methods of multiple correlation would be applied to determine the relative influence of each factor in determining a given form of response.

In the meantime numerous books and articles were published which were intended to guide the student through the increasing maze of test materials and methods. For instance, an *Introduction to the Use of Standard Tests*, by S. L. and L. C. Pressey (New York, 1931), was recommended as "a reference for busy teachers, supervisors, and superintendents." Covering a somewhat narrower range, was *Educational Measurements in High School* by C. W. Odell (New York, 1930). Of the 641 pages of this book 300 were devoted to the analysis and explanation of available tests in a great variety of school subjects. It contained a full list of publishers of the various tests.

**PUBLIC AFFAIRS, INSTITUTE OF.** An organization inaugurated in 1927 at the University of Virginia for the purpose of advancing the popular understanding of public questions and stimulating in the public mind a more vital interest in public matters, particularly the domestic problems of the United States. The attendance at the 1931 session, held from June 28 to July 11, consisted of 594 registered members and 1184 registered visitors from 37 States, the District of Columbia, Mexico, Porto Rico, Costa Rica, Guatemala, and Nicaragua. Membership in the institute is open to men and women who have taken part in public life and to those who are interested in any phase of public affairs.

The programme of the 1931 session was planned in accordance with the announced purpose of the institute to limit its discussions primarily to a study of governmental problems of national, State, and local concern and to certain economic and social conditions underlying them. It consisted of nine round tables, dealing with the following subjects: "Law Enforcement"; "Our Latin-American Relations"; "The Plight of Southern Agriculture"; Problems of Municipal Administration"; "Religious Education in the Rural Church"; "The Chain Store"; "The New Industrialism of the South"; "Regionalism"; "Unemployment"; and five special conferences on the following topics: "Public Personnel Administration"; "Adult Education"; "The Place of the Child in Public Affairs"; "County Government"; "The Federation of Women's Clubs." The invited speakers, in addition to those who gave evening addresses, numbered 127.

The 1932 session of the institute was to be held from July 3 to 16. The officers of administration in 1931 were: Dr. John Lloyd Newcomb, acting president of the University of Virginia; Dr. Charles G. Maphis, dean of the summer quarter and director of the institute; Eleanor McKenney Gibson, secretary of the institute; and an advisory board composed of 24 prominent educators and recognized leaders in public affairs, selected from all sections of the United States and from the two political parties. Headquarters are at the University of Virginia, Charlottesville, Va.

**PUBLIC FINANCE, UNITED STATES.** As in other branches of national business, so in Public

Finance, the results of the year 1931 continued to be dominated by the effects of the collapse of values in 1929. The lack of coincidence between fiscal and calendar years had masked the shrinkage of revenues which had occurred during 1930 except to those who followed receipts closely from day to day. From the beginning of the calendar year 1931, however, it grew plainer and plainer that the year would be one of great loss of revenue; and this fact, more than ever apparent after the first filing of income tax statements on March 15, was emphasized by the moratorium on foreign debts proclaimed about the beginning of July; and by the continuous losses of foreign trade due in part to the effort of foreign countries to shut out American goods.

The situation was rendered more serious by the adoption by Congress, in February, 1931, of the so-called "bonus certificate" bill which at once entailed an extra expenditure of close to one billion dollars. This represented an outlay, recognized as eventually to be made when the original bonus measure was adopted, but which was not counted as an immediate necessity until the "bonus" measure of 1931 making 50 per cent of the veterans' certificates available at once as a basis for loans. Continuous drafts by the Farm Board upon the moneys already set aside for it further drew down the active bal-

difficulty of collecting installments of income and profits taxes acknowledged and due, but not collectible, owing to bankruptcy or inability on the part of individuals to pay, the shrinkage of income became far more noteworthy as the year proceeded. The later installments of income tax (subsequent to the close of the fiscal year for which the figures just quoted are representative) likewise intensified the unfavorableness of the case and convinced Treasury officials that new sources of income speedily must be sought. By the close of the calendar year, the Treasury foreshadowed a deficit of not less than \$2,150,000,000.

Although the policy of collecting back taxes and of keeping revenues as nearly up to date as practicable was pushed, as had been the case in recent years, the difficulties of collection were multiplying; and the evident fact that the returns of income tax for the coming year would be greatly reduced owing to the falling off of employment, the incurring of severe losses of every description, the growth of bankruptcies and the absence of foreign payments rendered the treasury outlook more and more menacing, and, added to the size of the burden which had been imposed upon the banks by the habit, already firmly fixed in former years, of borrowing at banks to cover the deficit.

## ORDINARY RECEIPTS, FISCAL YEARS 1920 TO 1931

[On basis of daily U. S. Treasury statements (unrevised)]

Year ending June 30—	Customs	Income and profits taxes	Miscellaneous internal revenue	Miscellaneous revenues, including Panama Canal Proceeds from foreign obligations	All other	Total

ances of the Treasury, while the continuation of extraordinary outlays for building and construction intended as relief work to mitigate the severities of the panic also added to the great total of outlays. The total ordinary receipts for the year ending June 30, 1930, amounted to \$3,317,233,493 and were thus over \$850,000,000 below those of the preceding fiscal year. Expenditures of \$4,219,950,338, were about \$200,000,000 ahead of the outlays for the preceding year; and, after allowing for transactions in public debt, the ultimate result was a net deficit of \$900,000,000. Shortage of revenue was most marked in income and profits taxes which fell off about \$540,000,000, while customs receded some \$208,000,000 below the preceding year, and miscellaneous revenues were \$40,000,000 lower. As already stated, the situation was thus far more favorable on the surface than was represented by current incomes, owing to the holding over of income tax liabilities from former periods in which business had not reached so low a point of depression.

Conditions during the forepart of the year were far better maintained than was the case during the second six months but with the further collapse of business and the increasing

FEDERAL EXPENDITURES. The total situation in public expenditures has already been noted but the trend and its causes need brief attention. Among the specific causes for enlargement of outlay, in spite of all talk of national economy, particularly observed by the Secretary of the Treasury were additional outlays for Federal highway construction and emergency relief in drought-stricken areas, large payments for rivers and harbors, flood control, the army housing programme, and larger outlay for the air corps. A total of \$953,000,000 spent for payments and loans on veterans' account ("bonus") was the greatest additional draft, while total expenditures from the agricultural marketing fund (farm board) ran to \$190,000,000. A postal deficit of \$145,000,000 and incidental additional outlay in various minor directions made up the total budgetary increases.

In these circumstances, a great change in the formerly flourishing surplus of the nation was to be expected. Although the excess of receipts had been steadily running down from year to year, as extravagance gained ground and as taxes were slowly reduced or remitted to favored classes, it had continued in substantial sums up to the end of the calendar year 1930. With the heavy

outlays for bonus and other items early in 1931, and with preceding reductions of revenue it had wholly disappeared and from the beginning of 1931, the department was on a deficit basis. Reductions of public debt by carrying surpluses of revenues to settlement of bank obligations ceased and in place of it was increased certificate borrowing. The result is exhibited in the accompanying table.

**ORDINARY RECEIPTS, EXPENDITURES CHARGEABLE AGAINST ORDINARY RECEIPTS, AND SURPLUS 1920 TO 1931**

[On basis of daily Treasury statements (unrevised)]

Fiscal year	Total ordinary receipts	Expenditures chargeable against ordinary receipts	Surplus
1920 ...	\$6,694,565,388	\$6,482,090,191	\$212,475,197

\* Deficit.

**PUBLIC DEBT SITUATION.** The public debt situation was thus greatly altered; and was changed not only in the obvious way indicated by a mere change from surplus revenues to deficits but by alteration in relations with the banks. The Department had for years allowed itself to go on borrowing heavily at banks, justifying this unorthodox plan by the statement that the government was in a highly liquid condition, and could at any time fund its short-term debt into bonds. The unreliable character of any such expectation became plain as soon as the surplus disappeared; for the banks, already weakened by the enormous borrowing from them on the part of the community based upon long-term securities, and frightened by the fact that the Treasury was apparently disposed to ask them to carry the rapidly mounting deficit, were disinclined to bid for short-term certificates as in the past. It became necessary, practically, to insist upon continuation of the bank advances on an increasing scale. This gradual alteration of conditions, and increase in difficulty of management became more and more evident as the year advanced.

The change in public debt situation summarized by the Secretary of the Treasury for 1931 is shown in the accompanying tables, including that on page 690 giving the debt as of December 31.

**TREASURY FINANCE.** In the circumstances already sketched, there could, of course, be no successful operations on the public debt, of the kind that had been characteristic of former years. Reduction of the debt in a formal way would have been absurd, and recognized additions to long-term debt by the conversions of certificates into long-term bonds were not sufficiently urgent to demand action on a large scale, although skillful financiers were of opinion that long-term issues were needed. Two small issues of long-term bonds were placed in the autumn (after the fiscal year covered by the Secretary of the Treasury's report); it was deemed best to make one of the offerings consist in part of regular bonds running 20 years at 3 per cent, but the public response was unsatisfactory, and the issue

immediately went to a discount. Accordingly, the department was confirmed in the policy of relying upon the banks. No general policy or change of front seemed to be in sight up to the actual close of the calendar year 1931.

Absence of the usual debt receipts from foreign countries left open the question, in some minds at least, whether there might not be a renewal of these incomes from outside sources, while still others were of the opinion that payments could never be resumed. The subject continued as a source of question and controversy; and doubtless tended materially to prevent the department from reaching a final decision on policies for the future, so far as funding was concerned. The raising of rates at reserve banks, and the deterioration of government bonds in prices during the later months of the year, of course, brought sharp warning that it would not longer be possible to follow the "easy money" policy of former times.

**BUDGET ESTIMATES.** Secretary Mellon, in his annual report to Congress, at the opening of December in 1931, called sharp attention to the Treasury situation and noted budget estimates indicating a probable deficit for the year ending June 30, 1932, amounting to \$2,122,961,000. He stated:

The foregoing estimates show deficits for the fiscal years 1932 and 1933 in the amounts of \$2,123,000,000 and \$1,417,000,000, respectively. The estimated expenditures include for the retirement of debt in accordance with the provisions of the sinking fund and other statutory requirements, \$412,000,000 for 1932 and \$497,000,000 for 1933. In the absence of other provisions, the amounts of deficits must be financed through borrowing. For the 3-year period 1931-1933 the gross deficits aggregate approximately \$4,440,000,000 and the indicated increase in the public debt approximates \$3,250,000,000. Such a financial situation calls for immediate remedy, notwithstanding the fact that the rapid retirement of our public debt throughout a decade of plenty may be considered to have created something in the nature of a reserve upon which we are justified in drawing during lean years.

On this basis he asked for immediate enlargement of the income tax and for certain other additions to revenue, saying:

**Individual income tax.**—The normal rates to be fixed at 2, 4, and 6 per cent; surtax rates at 1 per cent, beginning with incomes over \$10,000, graduated up to 37 per cent on incomes between \$100,000 and \$200,000, and reaching 40 per cent on incomes in excess of \$500,000 as compared with the present maximum rate of 20 per cent on incomes in excess of \$100,000. Personal exemptions to be fixed at \$1,000 and \$2,500 with a credit of \$400 for each dependent. The earned income provisions of the revenue act of 1928 permitting larger deductions in respect of earned income than were permitted by the act of 1924 should, in my opinion, be continued.

**Corporation income tax.**—The rates to be increased from the present 12 per cent to 12½ per cent.

In addition I recommend that the exemption of \$3,000, at present provided for domestic corporations with net incomes of \$25,000 or less, be eliminated.

It is estimated that this proposal will result in an increase of about \$27,000,000 in corporation income tax receipts during the last half of the fiscal year 1932 and about \$60,000,000 during the full fiscal year 1933.

Accordingly I recommend that additional revenue be provided from the following sources: An increase of one-sixth in the present rates on tobacco manufactures and products except cigars; an increase of 1 cent in the existing stamp tax upon sales or transfers of capital stock; extension of the present tax on admissions through the reduction of the present exemption to 10 cents; a tax on manufacturers' sales of automobiles, trucks, and accessories at 5, 8, and 2½ per cent, respectively; a stamp tax on conveyances of realty of 50 cents for each \$500 of value in excess of \$100; a tax of 5 per cent on manufacturers' sales of radio and phonograph equipment and accessories; a stamp tax of 2 cents on each check and draft; and a tax on telephone, telegraph, cable, and radio messages of 5 cents for charges in the amount of 14 to

<sup>a</sup> No estimates of amounts payable during the fiscal year 1932 on these accounts are included because of the President's proposal of June 20, 1931, for postponement.

<sup>b</sup> The Veterans' Administration began to function on Aug. 1, 1930, in accordance with Executive order of July 21, 1930. For comparative purposes, the figures shown above for the Veterans' Administration include the expenditures for the entire fiscal year 1931 for the Bureau of Pensions, heretofore under the Department of the Interior, and for the National Homes for Disabled Volunteer Soldiers; payment of annuities under acts of May 23, 1908, and Feb. 28, 1929; and artificial limbs, appliances, and trusses for disabled soldiers, heretofore under the War Department.

<sup>c</sup> Exclusive of the Bureau of Pensions. See note <sup>b</sup>.

<sup>d</sup> Exclusive of National Homes for Disabled Volunteer Soldiers and War accounts referred to in note <sup>b</sup>.

<sup>e</sup> Includes refunds and drawbacks under Bureau of Industrial Alcohol.

<sup>f</sup> Expenditures shown above for the District of Columbia represent the share of the United States charged against the general fund of the Treasury. The expenditures chargeable against the revenues of the District of Columbia under "trust funds" amounted to \$38,868,647.61 for the fiscal year 1931.

	190,641,927.97	
Deposits for retirement of national-bank and Federal Reserve bank notes .....	48,166,075.50	
Old demand notes and fractional currency .....	2,042,293.80	
Thrift and Treasury savings stamps, unclassified sales, etc. ....	3,382,960.47	
		244,233,257.74
<b>Total gross debt .....</b>		<b>17,825,449,753.00</b>

50 cents, and 10 cents for charges in amounts in excess of 50 cents.

**LEGISLATIVE PROSPECTS.** Discussion of these Treasury proposals was immediately taken in hand by the new Ways and Means Committee, organized under Democratic control, due to the change which had occurred in the complexion of the House of Representatives at the preceding elections. See UNITED STATES under *Administration* and *Congress* for subsequent developments.

**PUBLIC LANDS.** See LANDS, PUBLIC.

**PUBLISHING.** See LITERATURE, ENGLISH AND AMERICAN.  
**PUGILISM.** See BOXING.  
**PULITZER PRIZES.** A series of awards established in 1915 by the will of Joseph Pulitzer,

publisher of the *New York World*, to be presented annually by Columbia University, on recommendation of the advisory board of the Pulitzer School of Journalism, for outstanding achievements in letters and journalism. The value of the prizes in the group devoted to letters is \$1,000, with the exception of that for the best work on the history of the United States which is \$2,000. The value of the prizes in the journalistic group is \$500, with the exception of that for the best example of a reporter's work during the year which is \$1,000.

The recipients in the group devoted to letters in 1931 were: Margaret Ayer Barnes, whose *Years of Grace* was adjudged the American novel which "best presented the wholesome atmosphere of American life"; Susan Glaspell, whose *Alison's House*, presented by the Civic Repertory Theatre, was considered "the original play, performed in New York, which best presented the educational value and power of the stage"; Bernadotte Everly Schmitt, whose *The Coming of the War: 1914* was pronounced the best book of the year upon the history of the United States; Henry James, whose *Charles W. Eliot* won the prize for the best American biography "teaching patriotic and unselfish service to the people, illustrated by an eminent example"; and Robert Frost, whose *Collected Poems* was adjudged the best volume of verse published during the year by an American author.

In the journalistic group, the 1931 gold medal for "the most disinterested and meritorious public service rendered by an American newspaper during the year" was awarded to the Atlanta (Ga.) *Constitution* for its campaign against municipal corruption. The winner of the award for the best example of correspondence was Hubert Renfro Knickerbocker of the *New York Evening Post* and the Philadelphia *Public Ledger*, whose series of articles on the practical working of the Five Year Plan in Russia was adjudged to "make clear the significance of the subject covered in the correspondence." The winner of the award for the best editorial article written during the year was Charles Silcott Ryckman, editor of the Fremont (Neb.) *Tribune*, whose prize-winning editorial, entitled "The Gentleman from Nebraska," was published in his paper on Nov. 7, 1930. The award for the best example of a reporter's work during the year was given to Alexander Black MacDonald of the Kansas City (Mo.) *Star* for his investigation of the so-called "perfect crime" in which A. D. Payne, lawyer, murdered his wife by blowing up the family automobile at Amarillo, Texas, on June 27, 1930. The award for the best cartoon published in any American newspaper during the year was given to Edmund Duffy for the cartoon entitled "An Old Struggle Still Going On," which was published in the Baltimore (Md.) *Sun* on Feb. 27, 1930.

**PULP, PULP-WOOD INDUSTRY.** See FORESTRY; PAPER.

**PURDUE UNIVERSITY.** A State technological institution in Lafayette, Ind., founded in 1869. The main purpose of the institution has been to train men for service in the fields of engineering, agriculture, and applied science, and women in the fields of home economics and general science. The enrollment for the autumn of 1931 was 4655, of whom 3918 were men and 737 women; registration in the 1931 summer session was 833. There were 338 members on the faculty

and in addition 80 assistants. The endowment amounted to \$340,000 and the income for the year was \$3,500,000. During the year the Thomas Duncan Memorial Laboratory, an addition to the electrical engineering building, was completed. The library contained 101,537 volumes. President, Edward C. Elliott, Ph.D., LL.D.

**QUEBEC**, kwé-bék'. The largest Province in Canada; bounded on the west by Hudson Bay and Ontario, on the north by Hudson Strait, on the east by Labrador, and on the south by New Brunswick, the United States, and southern Ontario. Area, 594,434 square miles; population, according to the census of 1921, 2,361,199, of whom 357,108 were of British origin, and 1,889,277 of French origin. The population at the census of June 1, 1931 numbered 2,874,255, of whom about 1,810,173 resided in urban centres. Farmers numbered only 4.7 per cent of the 1931 population. Populations of the chief cities at the 1931 census: Montreal proper, 810,925; Quebec (the capital), 129,103 (95,193 in 1921); Three Rivers, 35,197 (22,367); Verdun, 60,378 (25,001); Sherbrooke, 28,888 (23,515), and Hull, 40,000. In 1928, there were 8145 schools of all kinds, with 611,783 pupils and 23,742 teachers. There are four universities: McGill (Montreal, Protestant), with 4240 students in 1928-29; Lennoxville (Protestant), 161 students; Laval (Quebec, Roman Catholic), 6890; University of Montreal (Roman Catholic), 8656.

The industries of the Province ranked in importance according to the net value of production in 1928 as follows: Manufacturing, \$562,581,419; agriculture, \$228,209,110; forestry, \$105,949,186; construction, \$101,195,000; mining, \$37,037,420; electric power, \$36,172,736; custom and repair, \$15,725,000. In 1929, there were 7156 manufacturing establishments, with a capital investment of \$1,673,011,000, 212,849 employees, and a value of output of \$1,160,612,992 gross and \$617,372,403 net. Plowed land comprised 36 per cent of the total area of the Province in 1930; in the same year field crops from 7,342,400 acres were valued at \$120,366,000, as compared with \$153,664,000 from 7,051,605 acres in 1929. The wool clip for 1930 was 4,968,000 pounds. With 187,766 square miles of forest, Quebec produced 54 per cent of the wood-pulp output of Canada in 1929. The value of wood-pulp produced was \$69,286,498; of paper (including newsprint), \$107,504,475; of lumber and sawmill products, \$28,342,626.

Mineral production in 1931 was provisionally reported at \$35,639,126, as compared with \$41,158,741 in the previous year. Asbestos, copper, gold, silver, mica, and zinc are the principal mineral products. The asbestos output normally comprises 85 per cent of the world total.

Quebec is governed by a lieutenant-governor and a responsible ministry, assisted by a legislative council, appointed for life by the Lieutenant-

Governor, and a legislative assembly of 90 members elected for five years. Quebec in 1931 was the only Canadian Province in which women did not exercise the franchise. In the Dominion general election of 1930, the Province returned 37 Liberals, 25 Conservatives, and 1 Independent to the House of Commons at Ottawa. Lieutenant-Governor in 1931, Henry George Carroll; Premier, Attorney-General, Minister of Municipal Affairs, and Provincial Treasurer, L. A. Taschereau (Liberal). See CANADA.

**HISTORY.** In the provincial general election held Aug. 24, 1931, the Liberals under Premier Taschereau won 79 and the Conservatives 11 of the 90 seats in the Legislative Assembly. The previous Legislative Assembly consisted of 65 Liberals, 11 Conservatives, four Independent Liberals, and one Laborite. The Liberals, who had been in power in Quebec for 34 years, proved invulnerable to the Conservative attack, despite the spectacular showing of the Conservatives in the Province in the Dominion general election of 1930. With the overthrow of the Liberals by the Conservatives earlier in the year in Prince Edward Island, Quebec remained the only Province in Canada with a Liberal administration. The Conservative leader in the campaign was Camilien Houde, Mayor of Montreal. He failed to receive the undivided support of his own party, the Conservative financial interests of the Province showing a strong preference for Premier Taschereau. The Unemployment Relief Commission of the Province on September 17 voted \$20,088,600 to 1241 municipalities, in addition to \$1,438,000 for direct relief.

For the fiscal year ended Mar. 31, 1931, the Quebec liquor commission reported gross sales of \$22,711,639, or \$5,000,000 less than in the previous year. The commission paid \$8,498,052 for stock, turned over \$7,452,158 to the Federal Government in customs and excise taxes, and the remaining \$6,761,429 went for costs of operation and profits to the Quebec Government. During the commission's ten years of existence, its total revenue was \$215,544,037, of which \$85,509,000 went for stock, \$78,147,203 was paid to the Federal Government, and \$53,000,000 to the Province.

**QUEEN'S-CHICORA COLLEGE.** A college for women in Charlotte, N. C., founded in 1857; nonsectarian in purpose but under the direction of the Presbyterian Church. The enrollment for the autumn term of 1931 was 336. There were 38 members on the faculty. The endowment amounted to \$325,000. The library contained 12,500 volumes. President, William H. Frazer, D.D., Litt.D.

**QUEENSLAND.** A state of the Australian Commonwealth, occupying the northeastern quarter of the continent. With an area of 610,500 square miles, it is second in size among the states of the Commonwealth; the population Jan. 1, 1931, was estimated at 948,195, compared with 755,972 at the census of 1921. In 1930, there were 18,939 births, 7455 deaths, and 6199 marriages. The net immigration of 5840 in 1930 was in contrast to the other five states, all of which showed an excess of emigration over immigration. The total population increase for the year was 17,324. Capital, Brisbane, with 313,251 inhabitants on Jan. 1, 1931.

State primary schools in 1929 numbered 1731, the average daily attendance being 112,489. There were also 187 private schools, with a daily attendance averaging 24,487. The University of

Queensland (Brisbane) had 588 students in 1929. Stock-raising, agriculture, and manufacturing are the leading industries. The area under cultivation (1929-30) was 1,921,675 acres and the value of farm production was £13,803,792. Sugar cane, cotton, wheat, corn, and hay are the principal crops. The 1929-30 wool clip was 161,087,873 pounds from 20,324,000 sheep. Lumbering and fishing are important. Coal and gold are the chief minerals mined; the value of all mineral production in 1930 was £1,263,236, compared with £1,707,179 in 1929.

The value of direct overseas imports in 1929-30 was £11,326,844 and of direct overseas exports £18,821,824; for 1930-31 imports were £5,567,817 and exports £16,754,567. Of the State budgets from the fiscal year 1925-26 to 1929-30 only one (1927-28) showed a surplus. In 1929-30 revenue amounted to £15,997,870 and expenditures to £16,721,055. See AUSTRALIA under *Finance* for 1931-32 budget. The gross public debt on June 30, 1930, stood at £112,623,979 and the net debt at £111,808,975; interest on the debt payable in the year 1929-30 totaled £5,354,237.

Executive power is vested in a governor, who acts through a responsible ministry, and legislative power in a legislative assembly of 72 members elected for three years. Governor in 1931, Sir T. H. J. C. Goodwin; Premier, Chief Secretary, and Vice President of the Executive Council, A. E. Moore, who headed a coalition Government of Nationalists and Country Progressives. See AUSTRALIA.

**QUICKSILVER.** The world production of quicksilver in 1930 was estimated by the U. S. Bureau of Mines at approximately 107,000 flasks of 76 pounds each, or a decline from 161,814 flasks in 1929. In 1930 Italy was the leading producer with 56,069 flasks, followed by the United States with 21,553, Spain with 19,221, and Mexico with 4821. The domestic production for the United States in 1930 was 21,553 flasks, valued at \$2,478,789, a decline of 9 per cent in quantity and 14 per cent in value as compared with 23,682 flasks, valued at \$2,892,038, in 1929. California was the leading quicksilver-producing State, with an output of 11,451 flasks in 1930, followed by Nevada with 3282 flasks and Oregon with 2919 flasks. The production for Texas, Arizona, and Alaska amounted to 2822 flasks in 1930, as compared with 3725 flasks in 1929. Apparent consumption declined 35 per cent and the consumption of imported mercury decreased from 14,917 flasks in 1929 to 3725 flasks in 1930.

The decline in the price of quicksilver, which marked 1930, continued during 1931. In January, 1930, the monthly average price in New York was \$121.192 per flask of 76 pounds, while in December it was \$105.346. The average price in January, 1931, was \$103.00 per flask, from which the price fell until for December the average was \$66.115, making an average for the year of \$87.351 as against \$115.009 for 1930. The imports of quicksilver in 1931 were 356 flasks valued at \$32,649, as against 2943 flasks valued at \$295,829 in 1930, and 14,292 flasks, valued at \$1,447,142, in 1929. Of the total in 1930, 2802 flasks were reported as received from Spain and 141 flasks from Mexico.

**RACE PSYCHOLOGY.** See ANTHROPOLOGY.

**RACE STUDIES.** See ANTHROPOLOGY.

**RACING.** Horse racing in 1931 was a succession of glorious feats, just one great horse after another. The year's champion cannot be picked

fairly out of the group—Top Flight, two-year-old filly, who broke all existing money records for two-year-olds and for mares; Mate, the horse that won the Preakness, American Derby and American Classic; Twenty Grand, Kentucky Derby winner as well as winner of the Wood Memorial, the Travers, the Belmont, Dwyer, Saratoga Cup, Lawrence Realization, the Jockey Club Gold Cup; Sun Beau, six-year-old veteran, who became the world's greatest money winner by winning \$110,925 to amass a total of \$376,744.

Top Flight's achievements were the most sensational. This unprepossessing filly owned by Cornelius Vanderbilt Whitney, trained by Tom Healey, won all seven races in which she was entered and won \$219,000. The former juvenile record had stood at \$170,890 since Domino in 1893 and that Western mare—Princess Doreen—had stood supreme in her sex with a total of \$174,745 in her whole career. In compiling this remarkable record Top Flight won the Clover at Aqueduct, the Lassie at Arlington, the Saratoga Special and the Spinaway at Saratoga, the Matron and the Futurity at Belmont, and the Pimlico Futurity at Pimlico.

Next to Top Flight, Twenty Grand was the leading money winner of the year, with a total of \$218,545. He started his campaign by finishing second to Mate in the Preakness. In the Kentucky Derby, a week later in May, Mrs. Payne Whitney's prize possession walked away from this same Mate as well as from all other opposition.

Sun Beau, six-year-old champion, missed winning the rich Agua Caliente Handicap in March, but came on later with a rush to capture the money winning honors of all time from Gallant Fox, three-year-old champion in 1930. In the Arlington Cup of a mile and a quarter he raced to a new track record of 2.01½. It was his victory in the Arlington Handicap of the same distance—worth \$27,300—that whisked Sun Beau past Gallant Fox in the list of money winners. Other major triumphs of this old trooper, owned by W. S. Kilmer of Binghamton, N. Y., were scored in the Lincoln Handicap, the Hawthorne Gold Cup, and the Philadelphia Handicap.

Cornelius Vanderbilt Whitney headed the list of winning owners with \$419,137, a mark not far behind the record of Harry F. Sinclair's Rancocas Stable in 1923, the year his Zev beat Papyrus in the first international race. Top Flight was mainly responsible in putting Whitney to the fore. Tom Healey, the filly's trainer, led the list of money winning trainers but Lloyd Gentry, mid-West trainer, saddled the most winners, sixty-two. Dr. Freeland and Flying Heels moved into the Silver Circle of \$100,000 winners; Top Flight, Mate, and Twenty Grand found places in the Golden Circle of \$200,000 and Sun Beau flashed into the Diamond Circle of \$300,000 where only Zev and Gallant Fox stood before. J. E. Widener's Mr. Sponge ran the fastest mile of the year when he turned the distance in 1.36. Top Flight went five and a half furlongs in the Lassie at Arlington Park in 1.05½. James Butler's Questionnaire, one of the very best in the handicap division, raced the mile and furlong in 1.49 and Epithet was credited with six furlongs in 1.10 at Arlington Park, known as the fastest racing strip in the country.

Dis Donc and St. Germans were the leading sires of the year, thanks to Top Flight and Twenty Grand, respectively. The steeplechase season was active and excellent with Green Cheese,

owned by Mrs. John Hay Whitney, winning the Grand National Steeplechase at Belmont Park.

Grakle won the Grand National at Aintree, near Liverpool, the prize accomplishment for a thoroughbred.

J. A. Dewar's three-year-old Cameronian was the outstanding horse of the English turf. This sturdy thoroughbred won the Derby at Epsom and then captured the Two Thousand Guineas. In his attempt to gain the Triple Crown, and win the St. Leger in the fall, he finished last, 200 yards behind Sandwich, the winner. Four Course won the Thousand Guineas at Newmarket; Sir Andrew, William Woodward's American-bred horse, the Newmarket Stakes; Noble Star, the Ascot; Trimdon, a gallant five-year-old, the Ascot Gold Cup over the two-and-a-half mile course; Noble Star the Cesarewitch.

Marcel Boussac's Tourbillon won the French Derby at Chantilly in June, but in the Grand Prix, three weeks later this same favorite met with defeat at the hands of Barneveld and Bouillon. Marcel Boussac made up for this loss by later seeing his Brulette, a French-bred filly, win the English Oaks. The French Oaks fell to Miss Diana Esmond's Pearl Cap, which at the end of the season was adjudged the best three-year-old of the French season. This horse won the French One Thousand Guineas, the Prix de Diane and the Prix de l'Arc de Triomphe, the feature of the fall session at Longchamps.

**HARNESS RACING.** Protector did not win the Hambletonian Stakes at Goshen, the greatest individual race of the trotting season, but nevertheless was recognized at the end of the season as the leading three-year-old. Protector only lost one race during the season and defeated Calumet Butler, winner of the rich Hambletonian, both before and after that classic. Protector was not entered in the Hambletonian, but in the second heat of the Kentucky Futurity at Lexington he went a mile in the record time of 1.59¼. This was a world's record for three-year-old trotters and for trotting stallions in a race. Although Protector's achievements were outstanding in the three-year-old classics, the two-year-old trotters formed the most remarkable class of their age that had yet appeared. These colts started making world's records at the Horse Review Futurity at Springfield. The Marchioness, sister to Protector, won the first and fourth heats in 2.04¾, 2.07¼. Calumet Chuck took the second heat in 2.04½, and the Lad, by Truax dam, the two-minute mare, Rose Scott, 1.59¾, won the third in 2.05½, the average time was 2.05½, unheard of. Practically the same field, with the addition of Maid McElwyn, raced at Lexington in the Junior Kentucky Futurity. The Marchioness won the first in 2.04½; Maid McElwyn the second in 2.02¼; Calumet Chuck the third in 2.04 and the fourth in 2.08¼; for the grand average of 2.04¾. Maid McElwyn's mark stands as the world's record for two-year-old trotters. Calumet Butler's unexpected triumph in the Hambletonian, carrying \$50,921, after the breakdown of Nedda Guy (2.03¾), was the surprise of the season.

**RACKETEERING.** See CRIME.

**RACQUETS.** See COURT GAMES.

**RADCLIFFE COLLEGE.** A nonsectarian college for women in Cambridge, Mass., founded in 1879. The enrollment for the autumn of 1931 was 1051, distributed as follows: Regular students, 778; graduate students, 240; special students, 33.

Instruction was given to the students of the college by 300 teachers from Harvard University. The productive funds amounted to \$5,080,470, and the income, including tuition, for college purposes, was \$553,354. The library contained approximately 67,000 volumes, exclusive of pamphlets. In the fall of 1931, as the result of a grant of \$500,000 from the General Education Board, the college began the construction of a laboratory for chemistry and physics, which was to be ready for occupancy in September, 1932. President, Ada Louise Comstock, A.M., Litt.D., L.H.D., L.L.D.

**RADIO.** Commercial radio telephony and telegraphy enlarged the range of their availability very materially, as several new long-distance connections were made. Guatemala, Salvador, and an additional part of Mexico were connected with North America; Brazil, Chile, and Argentina were linked with Europe, and the United States and Australia and New Zealand were brought into the network. The system became capable of bringing into telephonic connection any two of 30,000,000 telephone subscribers. The principal operators of the system were the American Telephone and Telegraph Company and the International Telephone and Telegraph Company.

Some interesting new high-power transmitting stations were put into operation for telephone service between California and Hawaii and for inter-island service in Hawaii. They operate at from 6,000,000 to 15,000,000 cycles and use from 12 to 48 kw. of power. Noteworthy experiments were made in synchronizing two high-power broadcasting stations so that they could send out the same programme on the same wave-length without interference. This was done in some cases by tying the stations together by a wire circuit carrying a synchronizing current, and in others by accuracy of control of frequency by the quartz, crystal frequency setter. Thus WEAf and WTIC were tied together on 660 kilocycles, and WJZ and WRAL on 760 kilocycles.

The Federal Radio Commission in the United States announced, that all broadcasting stations would be required to maintain their frequency constant to within a difference of 50 cycles which is approximately one part in 15,000. It was considered that quartz-crystal control could do this. One of the most powerful broadcasting stations in the world was installed at Prague with a power of 200 kw.

The equipment of airplanes with two-way radio sets both for telegraphy and telephony was proceeding. All U. S. Army and Navy airplanes were so equipped and many of the commercial planes. With a 30-lb. set, it was possible to telegraph 100 to 200 miles and to telephone 25 to 40 miles.

Some new experimental work was the establishment of radio telephone service from Calais to Dover across the English channel on "Short Waves" of 18 cm. or 7 inches wave length corresponding to a frequency of 1,600,000,000 cycles. It has the disadvantage that it is confined to a direct straight line like the line of vision, but opens up a large new field of radio frequency channels making possible the use of nine times as many channels as were formerly considered feasible. Very special electron tubes are required for these very short waves and the internal parts have to be placed very close together and be accurately spaced. The antenna for these 7-inch waves is less than one inch in length.

In broadcast receivers for the home, the trend in style was to use the screen-grid tube, super-

heterodyne connection, and a pentode tube for the output. The push-pull amplifier was also returning to popularity, particularly in the midget sets. Automatic volume control and tone control were being provided in most of the recent sets. A new loud-speaker was developed, using a permanent magnet instead of an electro-magnet, thus doing away with the nuisance of a direct-current supply for the loud-speaker. Elaborate sets had become available combining a radio and a talking machine, the latter being equipped with an automatic record changing device and provision for making records in the home. See *EDUCATION IN THE UNITED STATES* under *Motion Pictures and Radio*; *ROMAN CATHOLIC CHURCH*.

According to the preliminary count of the U. S. Census 12,078,345, or 40.3 per cent of the total of 29,980,146 families in the United States in April, 1930, had radio sets. New York, Pennsylvania, and Illinois each reported more than 1,000,000 families with radio sets, but New Jersey led in the percentage with 63.3 per cent and New York was second with 57.8 per cent. On the other hand, only 5.4 per cent of the families in Mississippi and only 7.6 per cent of the families in South Carolina were supplied with radio receiving apparatus.

**RADIOACTIVE MATERIALS.** See *CHEMISTRY*.

**RADIO CITY.** See *ARCHITECTURE*.

**RADIO COMMUNICATION.** See *CANADA* under *History*.

**RADIUM.** Up to 1926, when the production of radium salts in the United States virtually ceased, there had been produced by American radium factories some 202.5 grams of radium. This covered the period from 1913 and at one time the beginnings of an industry were indicated, but by 1923 Belgian radium came to the United States and from that time imports increased and the native industry ceased to function on a commercial basis. At the end of 1930, the imports which began in 1923 totaled about 85.87 grams so that the United States had about 238 grams of radium without making allowance for broken tubes and other losses but taking into consideration some 20 grams of possible exports. In 1931 this amount increased by 13.41 grams valued at \$731,204 which were imported, there being a decrease from 16.85 grams valued at \$924,852 imported in 1930.

The known production of radium continued to be confined to the Belgian Congo deposits owned by the Union Minière Du Haut Katanga from which it was reported that 944 metric tons of uranium ore were exported in 1929 and 1926 tons in 1930. This company in 1929 and in 1930 sold each year some 60 grams of radium making a total of 270 grams since these Belgian Congo ores were first worked in 1923. The government-owned pitchblende mines at Jachymov in Czechoslovakia in 1930 from 28.23 metric tons of selected ore produced 3,578 grams of radium as against 3,521 grams in 1929 from 33.5 tons of ore. In 1931 radium from the Union Minière Du Haut Katanga was quoted in New York City on a sliding scale at from \$70 per milligram for lots of less than one gram to \$50 per milligram for lots of four grams or more.

**RAILROADS.** See *RAILWAYS*.

**RAILWAY ACCIDENTS.** The U. S. Interstate Commerce Commission, in its annual state-

ment of railroad casualties, reported for 1930 a grand total of 5481 persons killed and 49,430 injured on American railways. Compared with the preceding year, this total represented a decrease of 15.63 per cent in the number of persons killed and of 35.80 per cent in the number of persons injured, all classes, all causes. There also was established a new low record for the number of passengers killed in train accidents, this figure in 1930 being 7 as compared with 10 in 1927. In 1928 and 1929 it was 16 and 36, respectively, while the annual average for the five years preceding 1927 was 77. The number of passengers injured in train accidents was 790, as compared with 1742 in 1929 and 1404 in 1928. In train-service accidents, 43 passengers were killed and 1875 injured, and in non-train accidents 515 were injured. The total number of employees killed in train and train-service accidents in 1930 was 712, while the total number injured was 13,533. In non-train accidents, 223 employees were killed and 21,792 were injured. The casualties for "other persons" totaled 4409 killed and 9364 injured in train and train-service accidents, and 87 killed and 1561 injured in non-train accidents. In the latter category are included passengers carried on contract, such as newsdealers. Casualties at grade crossings numbered 2020 persons killed and 5517 injured in 1930.

Important railway accidents in the United States in 1931 included the following:

January 19. An express train westbound and a local passenger train outbound of the New York, New Haven & Hartford Railroad collided in a blinding snow storm at a crossover at Readville, Mass., and one locomotive and three cars were overturned, resulting in injury to 107 passengers and 11 employees.

February 7. A passenger train of the Grand Trunk Western Railway ran over a misplaced switch at Battle Creek, Mich., and collided with a yard engine standing on a side track. One car was wrecked and 11 persons were injured.

February 25. The *Pan-American* of the Louisville & Nashville Railroad was derailed 18 miles north of Mobile, Ala., when it ran into an open draw over the Mobile River. The first sleeping car, occupied by 18 passengers, was stopped when half way over the end of the fixed span. Four employees were killed.

February 28. The *Olympian* of the Chicago, Milwaukee, St. Paul & Pacific Railway collided with the *Victory* of the Chicago & North Western Railway at the joint passenger station of the two lines at Camp Douglas, Wis. Four cars of the *Olympian* and three of the *Victory* were derailed, as well as the locomotives of both trains. A fireman was killed.

March 6. A passenger train of the Michigan Central Railroad ran over a misplaced facing point switch near Town Line, Mich., and was derailed on the curve of the side track. The locomotive and tender were overturned and the first car destroyed, three employees were injured.

May 27. The *Empire Builder* of the Great Northern Railway was derailed on a low embankment near Moorhead, Minn., when struck by a tornado. One passenger was killed and three others were seriously injured, while 45 passengers and nine employees sustained minor injuries.

July 3. In a collision of passenger trains Nos. 86 and 27 of the New York, New Haven & Hartford Railroad at New Haven, Conn., one passenger was killed and 92 passengers and 22 train employees were injured.

November 22. Four men were killed and 20 were injured when 22 cars of a 62-car train, carrying livestock to the International Livestock Exposition in Chicago, were derailed on the Missouri Pacific Railroad near Lexington, Mo. Nine prize horses also were killed and 24 injured. The train was traveling at about 80 miles an hour, when it broke a rail which had been weakened by a transverse fissure.

Among important railway accidents in other parts of the world in 1931 were the following:

January 3. Three persons were killed and 30 were injured when the engine and four coaches of an express train, en route from Edinburgh to London, was derailed near Carlisle, England.

January 19. Five persons were killed and 41 were in-

jured in a collision at Gdynia, Poland, of a passenger and freight train; the latter was running on the main line contrary to instructions.

February 7. In a collision near Cracow, Poland, of two express trains running between Cracow and Katowitz (Katowice), eight persons were killed and 20 were injured.

March 18. Eight persons were killed and 20 were injured when the rear coach of the Paris-Bordeaux Express was derailed at Etampes, France, striking a train on the adjoining line.

March 22. The *Royal Scot* of the London, Midland & Scottish Railway was derailed at Leighton Buzzard, England, six persons being killed and six badly injured.

March 31. Ten persons were killed and 54 were injured in a collision at the Poletava station, near Chelabinsk, Siberia. A passenger train, which was awaiting repairs to a rear car, instead of being sidetracked was left on the main track, and was telescoped by another train running at full speed, whose engineer had ignored a closed signal. Eight railroad executives and employees were arrested.

April 29. Forty-five persons were killed and 41 were critically injured in the destruction of a passenger train by fire at Benha, Egypt, 30 miles north of Cairo. The accident was caused by a car catching fire from a heated journal, and the train ran a long distance before it was stopped, communication with the locomotive being impossible. Some of the passengers were killed by jumping from the train.

May 27. A woman was killed and 22 persons were injured in a collision between two passenger trains at Fakenham, Norfolk, England.

August 16. Twelve persons were killed and 10 were badly injured when the Rome-Vienna Express crashed into a freight train near Leoben, Austria, the engine of the express train and three of the freight cars being hurled down an embankment.

September 13. Twenty-two passengers were killed and 40 were injured when the Budapest-Vienna Express was wrecked by a Communist bomb at Bia Torbagy, Hungary.

December 2. In a collision between the Lille-Antwerp Express and a local passenger train near Malines, Belgium, four coaches of the express train were overturned, resulting in the deaths of two persons and injury to 17 others.

December 18. Fog was responsible for a collision between a passenger train, en route from London to Tilbury, and a freight train near Dagenham, Essex, England. One passenger and the guard of the freight train were killed, and about 30 passengers were injured. The guard was killed while trying to warn the passenger train of its danger.

December 24. Two passengers were killed and six were injured when the Bologna Express was derailed at Coronato, near Foggia, Italy, three cars being overturned.

**RAILWAYS.** In its annual report to Congress presented in the latter part of 1931 the Interstate Commerce Commission says in regard to the prevailing distrust of railroad investors that this distrust was "natural but quite undue." This was an opinion expressed by men whose experience entitled their opinion to great weight but it was, nevertheless, an expression from political appointees who might be considered to have some responsibility for the financial distrust of railroad securities as a safe and profitable investment.

The Pennsylvania Railroad spent \$49,775,170 for maintenance and repairs of its track and stations in 1931 as compared with \$69,053,618 for like purposes in 1930. The Pennsylvania Railroad operated and maintained 10,878 route miles of railroad in 1930 and 10,914 miles in 1931 so that the maintenance of way expenses were \$4,560 per mile in 1931 and \$6348 per mile in 1930. The New York Central Railroad, operating and maintaining 11,421 route miles of railroad in 1931 and 11,477 in 1930, spent \$4237 per mile for maintenance and repairs of its track and stations in 1931 and \$5648 per mile for like purposes in 1930.

In general the railroad executives' energies were concentrated on maintaining adequately the properties for which they were responsible. There were certain important exceptions to this policy. The Reading Railroad continued the elec-

trification of its suburban passenger service out of Philadelphia. The Delaware, Lackawanna & Western pushed forward the electrification of its line west from New York for all classes of service, while the Pennsylvania was engaged in the electrification of its line from New York City to Washington, D. C. The Pennsylvania's project was on much the largest scale, the estimated cost being \$175,000,000; in 1931 about 6000 men were employed on it. The estimated cost of the Lackawanna electrification was \$16,000,000; of the Reading electrification, over \$23,000,000.

In the Far West, an important new line connecting the Great Northern and Western Pacific systems was completed and opened for freight traffic early in November, 1931. Extending approximately 200 miles, between Klamath Falls, Ore., and Keddie, Calif., the line not only provided a new route from the Northwest into San Francisco, but also provided an outlet to the East from a large area in Oregon and Northern California, previously without railway facilities. The Santa Fe Railroad completed a group of new lines, aggregating more than 225 miles, which opened up new territories in Oklahoma, Texas, and New Mexico.

The Railroad Executives' Association made application in accordance with the methods of procedure prescribed by the Transportation Act to the Interstate Commerce Commission to put into effect a 15 per cent increase in freight rates. The Commission refused to approve a general flat increase of 15 per cent in freight rates but said that if the railroad executives would file tariffs for increased rates of 10 per cent on certain freight—not including wheat—and would pool the revenue derived from these increased rates and give it to the railroad companies in danger of defaulting on their bond interest charges, the Commission would approve such increases. The railroad executives said they would do this but would lend, not give, the money from the pool to companies that failed to earn bond interest. In the course of its opinion the Interstate Commerce Commission called attention to the fact that railroad passenger business was not nearly as profitable as railroad freight business.

The railway executive, in 1931, was in a difficult position. He was, theoretically at least, responsible to his stockholders for the adequate upkeep of the railway of which he was in charge. Along with this responsibility was the necessity of earning enough to pay his coal bill, his labor, and his officers, and his bond interest. Last of all he might conceivably operate the railway in such a way as to also earn some profit for the stockholders. He could not raise his income by increasing his freight rates without the consent of the Interstate Commerce Commission. He had been asked by the President of the United States to refrain from cutting wages of labor. This request was additional to the fact that he had agreements with all classes of railway labor which prohibited him from reducing wages and the consequence of an attempt to reduce wages would quite surely be a strike. Passenger fares would not be raised without the loss of passenger business, to busses. Salaries of officers were reduced, but this afforded very little relief. During 1931 no important reductions were made in railway labor wages.

**CONSOLIDATIONS.** Some progress toward consolidations was made in the East. The careful

and well thought out plan of the Interstate Commerce Commission for five systems of railway between the Atlantic Coast and the Mississippi Valley was disregarded and by agreement between the President of the United States and the presidents of the principal Eastern railways and with the approval of the Interstate Commerce Commission, four systems in the East were set up.

These four systems were: (1) The New York Central Railroad to which was added, the Delaware, Lackawanna & Western, the Ulster & Delaware, the Pittsburgh & Lake Erie, and the New York, Ontario & Western. (2) The Pennsylvania Railroad to which was added the Norfolk & Western, the Wabash, and the Detroit, Toledo & Ironton. (3) The Chesapeake & Ohio, and the New York, Chicago & St. Louis (Nickel Plate) to which were added the Erie Railroad, the Lehigh Valley Railway, the Pere Marquette, and the Chicago & Eastern Illinois. (4) The Baltimore & Ohio to which was added the Reading, the Central of New Jersey, the Buffalo, Rochester & Pittsburgh, the Chicago & Alton, and the Western Maryland.

**REVENUES.** Taken as a whole, gross earnings of railways reflected general conditions beyond the control of railway executives. Wages were fixed and rates were fixed, so the policy toward maintenance and development tells the history of the year 1931 in so far as it was shaped by railway executives. Conditions which railway executives had to meet are reflected in the following figures, taken from the *Railway Age* and from the annual statistical review of the Bureau of Railway Economics.

CONDENSED INCOME ACCOUNT OF CLASS I  
RAILWAYS  
[Millions of dollars]

	1931	1930	1929
Total operating revenues .....	4,237	5,344	6,360
Total operating expenses .....	3,266	3,977	4,561
Taxes .....	308	354	403
Net operating income .....	531	885	1,275

According to a summary of the Bureau of Statistics of the Interstate Commerce Commission, the net income of the Class I railways for 1931, after taxes, rents, interest, and other charges, was \$141,160,935, compared with \$527,704,007 for 1930, a reduction of \$386,543,072 in the amount available for dividends. However, 71 companies listed among Class I railways ended 1931 with deficits below fixed charges, aggregating \$90,745,061 (exclusive of roads in receivership on Dec. 31, 1931).

Declines in railway traffic in 1930 and 1931, measured in net ton-miles and passenger-miles, are shown herewith (figures from the Bureau of Railway Economics, as published in the *Railway Age*, Jan. 2, 1932).

	1931	1930	1929
Net ton-miles * .....	340,148	422,117	492,313
Passenger-miles * .....	21,899	26,823	31,078

\* In millions of miles.

**MAINTENANCE.** It must be remembered that there is a wide margin as to what may be spent for rail renewal, tie renewal, bridge repair, station repair, etc., called "maintenance of way" and defined with nicety by the Interstate Commerce Commission. If a rail is renewed with one of the same weight the entire cost of the renewal

must be charged to "maintenance of way." If on the other hand a rail weighing 90 pounds to the yard is replaced by one weighing 100 pounds to the yard, the cost of 90 pounds to the yard of the new rail must be charged to "maintenance of way" and the cost of 10 pounds to the yard of the new rail to "additions and betterments." Therefore a strictly accurate comparison is made in the statement that "maintenance of way" in 1931 for the Class I railways cost \$553,000,000, in 1930, \$713,000,000, and in 1929, \$865,000,000.

Labor costs were hardly any lower per hour in 1931 than in 1930 and 1929. Material costs were a little lower in 1931, but it was believed that physical inspection would show a big reduction in the amount and standard of maintenance work done in 1931 as compared with 1930.

**NEW CONSTRUCTION.** During 1931 there were 748 miles of railway completed compared with 513 miles completed in 1930 and 865 miles completed in 1929. In 1902 there were 6026 miles of railway completed. At the end of 1931 there were 112 miles under construction. At the end of 1930 there were 596 miles under construction.

**RAILWAYS ABANDONED.** In 1931 the mileage abandoned was 795, in 1930, 694, and in 1929, 575, so the net decrease—excess of railway mileage abandoned over the new mileage built—was in 1931, 47 miles, in 1930, 181, but in 1929, 91 miles less was abandoned than built.

**SPEED OF FREIGHT TRAINS.** The average speed of freight trains in 1931 was 14.8 miles per hour against 13.8 per hour in 1930 and 13.2 miles per hour in 1929. This important element in the changes that were taking place from year to year in the railway situation in the United States is given here between the record of new railway built and the record of cars and locomotives built because it is a factor in those records. Thus a higher average speed for trains means a greater use of the locomotives, the cars and railway track and is analogous (in result—not cost) in the production of transportation, to the building of new railways and putting in use more cars and locomotives.

**NEW EQUIPMENT.** There were 235 locomotives ordered in 1931 in the United States according to the records of the *Railway Age*. This compared with 440 locomotives ordered in 1930 and 1212 ordered in 1929. The number of locomotives built in 1931, again according to the *Railway Age*, was 198; in 1930 it was 1023 and in 1929 it was 1065. The number of freight cars ordered for domestic use in the United States was 10,808 in 1931, 46,360 in 1930, and 111,218 in 1929. For export the number of freight cars ordered in 1931 was 151, in 1930 it was 1200, and in 1929 it was 3023. Freight cars built in the United States in 1931 numbered 13,614, in 1930, 77,097, and in 1929, 85,408. The number of passenger cars ordered for service in the United States in 1931 was 11, in 1930 it was 667, and in 1929 it was 2303. The number ordered for export in 1931 was 21, in 1930 it was 15, and in 1929 it was 33. The number of passenger cars built in 1931 was 198, in 1930 it was 1264, and in 1929, 1254.

**DIVIDEND CHANGES.** In its results over a series of years arrested development of railways with lowered maintenance standards may result in greater loss to the stockholder than a reduction in dividend and threatens the security of principal and interest of the railway creditors. The record, therefore, of maintenance, new construction, and new cars and locomotives put into use

by railways in 1931 is a more fundamental criterion of railway conditions than the dividend record. Railway company dividend payments show payments of \$570,000,000 in 1931 as against \$670,000,000 for 1930.

For purposes of reference dividend changes in 1931 are given in alphabetical order, not order of importance.

The Alabama Great Southern omitted 3 per cent extra in 1931. The 3 per cent extra was paid in 1930.

The Atlanta & West Point reduced its dividend from 8 per cent to 4 per cent.

The Atlantic Coast Line reduced its regular dividend from 7 per cent to 4 per cent and omitted in 1931 the 3 per cent extra, paid in 1930.

The Baltimore & Ohio, which was paying 1½ per cent quarterly in 1930 reduced this to 1¼ per cent quarterly in March, reduced it again to 1 per cent in September, and omitted it altogether in December. This was on the common stock. The regular 4 per cent dividends were being paid on the preferred stock.

The Boston & Maine reduced its dividend on the common stock, from 4 per cent to nothing, and omitted the dividends on all classes of preferred (various rates) except the dividend on the prior preference stock which was continued.

The Buffalo & Susquehanna paid \$4 a share on its common, the first dividend in 6 years.

The Canadian Pacific reduced its quarterly dividend from 2½ per cent to 1¼ per cent.

The Central Railroad of New Jersey omitted the regular quarterly dividend of \$2 in November.

The Chicago & North Western paid the regular 7 per cent on the preferred stock, and 2 per cent quarterly on the common, in the first half of 1931 but in November omitted both the dividend on the common and preferred stocks.

The Chicago Great Western paid a first quarterly dividend of \$1 a share in the first quarter of 1931. Fifty cents a share was paid quarterly in April, July, and October.

The Chicago, Indianapolis & Louisville omitted the semi-annual dividend of \$3.50 a share on the common stock and \$2 a share on the preferred stock in June 1931.

The Chicago, Rock Island & Pacific reduced its quarterly dividend on the common stock from \$1.25 to \$1 in the first quarter of 1931, omitted all common dividends for the last three quarters and omitted the quarterly dividend on the preferred stock also in December.

The Cincinnati, New Orleans & Texas Pacific paid its regular 8 per cent dividend on the common, and 5 per cent on the preferred but only paid \$3 extra on the common in 1931 as against \$50 in 1930.

The Colorado & Southern omitted the \$3 dividend on the common stock.

The Delaware, Lackawanna & Western which paid \$6 regular and \$1 extra in 1930, reduced the regular \$1.50 quarterly dividend to \$1 and then, in September, again reduced the quarterly dividend to 50 cents a share.

The Erie omitted the dividends on the 1st and 2d preferred stocks.

The Great Northern which had been paying \$5 a share on the so-called preferred stock—it has no common outstanding—paid only \$2.50 in 1931.

The Gulf, Mobile & Northern omitted the \$6 dividend on its 6 per cent cumulative preferred stock in February, 1931.

The Illinois Central reduced its dividend from \$7 to \$4 in May, 1931, and to nothing in October.

The Kansas City Southern reduced the dividend on its common stock from \$5 to \$2 to nothing.

The Kansas, Oklahoma & Gulf reduced its non-cumulative preferred stock dividend from \$6 to \$3.

The Lehigh Valley reduced its dividend from a rate of 7 per cent to a rate of 5 per cent in the first half of 1931 and omitted it entirely in the second half of the same year.

The Maine Central reduced its quarterly dividend from \$1.25 to nothing.

The Missouri, Kansas & Texas omitted the \$1 quarterly dividend on the common stock, and in December omitted the \$1.75 quarterly dividend on the preferred stock.

The Missouri Pacific omitted the \$1.25 quarterly dividend on the preferred stock in December, 1931.

The Mobile & Ohio, which in 1930 paid \$7 regular dividend and \$15 extra, omitted the regular and extra dividend in July, 1931.

The Nashville, Chattanooga & St. Louis reduced its semi-annual dividend from \$2.50 to \$1.50, in July, 1931.

The New York Central reduced its dividend rate from 8 per cent to 4 per cent, and in the latter part of 1931 omitted the dividend entirely.

The New York, Chicago & St. Louis (Nickel Plate),

in August, omitted the regular \$1.50 quarterly dividend on both the common and preferred stocks.

The New York, New Haven & Hartford reduced its dividend rate on the common stock from 6 per cent to 4 per cent and then omitted it entirely.

The Northern Pacific reduced its quarterly dividend from \$1.25 to 75 cents.

The Pennsylvania Railroad reduced its dividend rate from 8 per cent (\$4 on \$50 par value share) to 6 per cent and then to 4 per cent (\$2 on \$50 par value share).

The Pere Marquette which had been paying 6 per cent regular on the common and 2 per cent extra, omitted all common dividends and omitted the preferred dividend in September.

The Pittsburgh & Western Virginia which was paying 6 per cent, reduced the rate to nothing.

The St. Louis-San Francisco reduced the annual rate of dividends from 8 per cent to nothing.

The Southern Railway paid 6 per cent on the common stock in 1931 (mostly earned and declared in 1930), and omitted the preferred dividend in December.

The Southern Pacific reduced its dividend rate from 6 per cent to 4 per cent.

The Texas & Pacific reduced its dividend rate from 5 per cent to nothing.

The Wheeling & Lake Erie reduced the amount paid on the prior lien stock from 19½ per cent to 14 per cent.

The Wabash, which later went into the receiver's hands, omitted the dividend on both classes of preferred stock in January, 1931.

**RECEIVERSHIPS.** There were 19 railway companies put into the receiver's hands in 1931, operating 5195 miles of railway and having outstanding \$432,151,526 face value of stock and bonds. The two most important railway companies were the Wabash, operating 2524 miles of railway, and the Florida East Coast Railway, operating 865 miles of railway.

**FORECLOSURE SALES.** There were only 2 foreclosure sales of railways during 1931. One was the Chicago, Springfield & St. Louis, operating 87 miles of railway, and the other was the Kansas & Oklahoma, operating 15 miles. Since foreclosure sale of a railway is in the majority of cases one of the first steps looking to the organization of a new company it was to be expected that there would be few receivership sales in 1931.

**RAILWAY SECURITIES SOLD.** According to the *Wall Street Journal* (New York) the total amount of railway securities sold to the public during 1931 was \$559,033,000 compared with \$1,006,667,600 in 1930. The three most important sales during 1931 were: The New York Central Railroad sale of \$75,000,000 4½ per cent bonds due in 2013 sold to the company's bankers, J. P. Morgan & Co., at 97¾ per cent of par and by the bankers to the public at par, a commission to the bankers of 2¼ per cent.

The Pennsylvania Railroad sold to its bankers, Kuhn Loeb & Co., \$50,000,000 4¼ per cent bonds due 1981. The price which the railway company got from the bankers was 94 per cent. The price for which the bankers sold the bonds to the public was 96½ per cent of par, a commission to the bankers of 2¼ per cent.

The Southern Pacific Co. sold to its bankers, Kuhn Loeb & Co., \$50,000,000 4½ per cent bonds due in 1981. The price to the bankers was 94¼ per cent of par, and to the public 96¾ per cent of par, a commission to the bankers of 2½ per cent.

See UNITED STATES under Administration.

**RAINFALL.** See METEOROLOGY.

**RAMDOHRITE.** See MINERALOGY.

**RANDOLPH-MACON WOMAN'S COLLEGE.** An institution for the higher education of women in Lynchburg, Va., under the auspices of the Methodist Episcopal Church, South, founded in 1893. The enrollment for the autumn of 1931 was 642. The faculty numbered 69. The

endowment amounted to \$1,203,565, while the income for the year was \$558,671. The library contained over 37,000 volumes. Acting President, N. A. Pattillo, A.M., Ph.D.

**RAPID TRANSIT.** NEW YORK. The first bids on the Sixth Ave. section, the final link in the new independent municipal subway, were received on May 19 by the Board of Transportation. This will complete the 55 route miles of new subway undertaken in 1925 and includes almost 200 miles of track, at a total cost of over \$500,000,000. Starting this work was delayed pending a decision as to the disposal of the Sixth Ave., Elevated Railroad. Because of existing subways, the elevated line, the Hudson & Manhattan tubes, and the Catskill Aqueduct distribution tunnel, all of which occupy portions of Sixth Ave., and the character of the ground to be encountered, this last link would be one of the most difficult pieces of subway work ever undertaken. A further delay of two years before construction would begin was announced by the Board. The fear that blasting on the new work might possibly cause trouble with the Catskill distribution tunnel, which would critically affect the water supply of Brooklyn, Queens, and Richmond, led to this decision. The summer of 1931 having been one of particularly low water supply, this consideration further added to the risk. In two years, or less, the new distribution tunnel No. 2 would be completed and this possible danger removed.

**PHILADELPHIA.** Construction was ordered resumed in March on the new Market Street subway, after two delays of nearly a year each had held up this project since the contract was awarded in 1929. The two single-track lines looping around the City Hall were to be replaced by a single double-track line passing directly under the old building. A dispute between the contractor and the Department of Rapid Transit as to the methods to be used in this work was responsible for the last delay. A Board of Arbitration advised changes in the underpinning which were estimated to cost \$200,000 additional but which were accepted by the Department.

**BUENOS AIRES.** The second section of the La Croze subway, 1.7 kilometers long, was scheduled for completion in 1931. The first section was completed and put in operation in 1930. It was 4.6 miles long and was built in 20 months by American engineers and contractors. The new section is more than a normal subway line, for it provides access to the heart of the city for the Central R. R. of Buenos Aires and its connections, the Entre Rios, Central of Paraguay and the Northeastern Argentina. The two terminal stations, also, were designed to accommodate railroad trains. See TUNNELS.

**RASKOB, JOHN J.** See UNITED STATES; PROHIBITION.

**RATIONALIZATION.** See GREAT BRITAIN under Industry and Shipping.

**RAYON.** Unlike most manufacturing productions in the United States the domestic output of rayon in 1931 reached a new high mark of 143,900,000 pounds, an increase of 31 per cent over 1930. Of the 1931 production 87.8 per cent was viscose rayon and 12.2 per cent was rayon made by other processes, comparable figures for 1930 being 85.3 per cent and 14.7 per cent respectively. The consumption of rayon also reached a new high peak of 150,100,000 pounds, an increase of 43 per cent over 1930. At the end

of the year the rayon stocks were in a sound position with about a seven-week supply in sight, or essentially the same position in regard to sales as obtained at the end of 1929. The accompanying table, compiled by the *Textile Organon* of the Tubize Chatillon Corporation, indicates the production and consumption of rayon for a number of years:

ANNUAL RAYON PRODUCTION AND CONSUMPTION

[Units are thousands of pounds]

Year	Domestic production	Imports	Exports	Est. chg. in dom. stocks prev. Dec. to current Dec.	Domestic consumption
1921	15,000	3,276	Not	.....	18,250
1922	24,400	2,116	re-	+ 500	26,000
1923	36,000	3,029	port-	+ 1,500	37,500
1924	38,500	1,712	ed	+ 2,000	38,200
1925	51,902	7,001	148	+ 4,000	54,750
1926	63,600	10,063	400	+ 7,000	66,250
1927	75,556	18,236	401	+ 9,000	100,400
1928	97,900	12,734	196	+ 6,000	104,500
1929	119,500	15,950	223	+ 8,000	132,250
1930	110,000	5,649	345	+10,000	105,800
1931	143,900	1,531	314	- 5,000	150,100

The use of rayon in the textile industry is indicated in the accompanying tabulation:

**RAYS, RADITION.** See PHYSICS.

**READ, CARVETH.** A British metaphysician, died in London, Dec. 8, 1931. He was born in Falmouth Mar. 16, 1848, and attended Christ's College, Cambridge, and the Universities of Leipzig and Heidelberg. From 1903 to 1911 he was Grote professor of philosophy in the University of London, and from 1911 to 1921 lecturer on comparative psychology at University College, London. His works include: *A Theory of Logic* (1878); *Logic Deductive and Inductive* (1898); *The Metaphysics of Nature* (1905); *Natural and Social Morals* (1909); and *The Origin of Man and of His Superstitions* (1920).

**REALISM.** See PHILOSOPHY.

**REAL WAGES.** See STATISTICS.

**REAPPORTIONMENT.** See LAW, PROGRESS OF.

**RECALL.** See MUNICIPAL GOVERNMENT.

**RECLAMATION.** UNITED STATES. In an address Dr. Ellwood Mead, U. S. Commissioner of Reclamation, made some important suggestions and comments on the vast but largely financially unproductive work of the Bureau. "The era of reclamation as a creative activity," said Dr. Mead, after noting the virtual disappearance of unproductive desert land, "would appear to be

about over, and future reclamation will be more exclusively salvage work involving the rehabilitation that many districts need if they are to be saved from ruin and the construction of new canals and reservoirs to provide a thoroughly dependable water supply." He was particularly emphatic in stating that it is only through a broad Federal control that the full conservation of western streams, with practically the complete capture of flood waters which is essential to the future water supply of the West, can be effected. Water power, flood control, and other constructions all play a part in this work but must be properly coordinated to be effective.

From the financial viewpoint the Commissioner noted a method of financial rehabilitation was before the seventy-first Congress and would probably be reintroduced in the succeeding Congress. This was a plan to set up a revolving fund for purchasing the outstanding bonds of districts that could not meet their obligations and thus refund these bonds at a lower interest rate as a debt to the Government. "The original principles of the Reclamation Law are not adapted," the Commissioner stated, "to the change of function (in connection with future activities of the Bureau) and a new law is in order."

The whole reclamation policy was forced to the front more strongly than ever before due to the fact that a large number of the government projects would fail to meet expenses in 1932. Representatives of 23 projects in nine States proposed a blanket moratorium for three years without interest, to which Dr. Mead made a counter-proposal of extending relief only to the individuals on each project actually in need of assistance. "If the Bureau were to forego the revenue (about \$5,000,000 a year) for three years," said Dr. Mead, "it would be obliged to postpone work on most of its projects." An allotment by Congress of a \$5,000,000 emergency fund for the Bureau in 1931 was permitting work to proceed on many of these projects.

Among the non-federal undertakings difficulties have also been experienced. The Merced Irrigation District in California defaulted on its bonds and it was proposed to place the risk of decreased power revenue, which was largely responsible for the difficulty, on the bondholders instead of the taxpayers. Voters of the Nevada Irrigation District planned to refund their 8½ per cent bonds by the simple expedient of issuing new bonds at the reduced interest rate of 4 per cent. On the other hand, the Salt River Valley Water Users Association, Phoenix, Ariz., was authorized to increase their indebtedness to \$22,000,000 and conditions were reported as the best in five years.

**DALLAS, TEXAS.** The work of straightening Trinity River through the heart of Dallas progressed rapidly and was nearing completion. The cost of this \$20,570,000 project was divided among city, county, railroad, utilities, and private owners.

**NILE DELTA.** The Egyptian government has recently undertaken a vast drainage project with the object of reclaiming those lands of the Nile Delta unsuited to agriculture because of the high salinity of the soil. These banks lie in a belt 10 to 25 miles wide stretching across the northern part of the delta for 100 miles from Alexandria toward Port Said. It was proposed to wash out the salt by flooding the lands with fresh Nile water and draining them by using a canal system with low lift pumping stations.

**RECONSTRUCTION FINANCE CORPORATION.** See BANKS AND BANKING; UNITED STATES under *Administration*.

**RED CROSS, AMERICAN NATIONAL.** A semi-governmental organization, chartered by Congress in January, 1905. The charter designates its obligations as follows: "To furnish volunteer aid to the sick and wounded of armies in time of war . . . to perform all duties devolved upon a national society by each nation which has acceded to the treaty of Geneva . . . to act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the people of the United States and their Army and Navy . . . to continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great national calamities, and to devise and carry on measures for preventing same."

The year of 1931 gave the Red Cross an opportunity for the greatest peace-time relief operation in its history. The previous year had been marked by a drought which exceeded all others in the history of the U. S. Weather Bureau, both in length and extent, besides being accompanied by economic depression. The full effect of this disaster was felt with the winter, when the scant store of home-grown food was exhausted and wild game scarce. In February and March, 1931, the relief work reached its peak, beginning to decline with the coming of vegetable gardens and new pastures in the spring. Among the needy, these vegetables were raised from seed donations by the Red Cross. In the fall of 1930, the Red Cross gave seed to 70,083 families to raise vegetable crops and pasturage before the freezing weather set in.

A summary of the work done shows that the Red Cross gave direct aid to about 2,765,000 drought sufferers in the form of food, seed, and clothing. In addition, it provided lunches to 3524 schools, furnishing a nourishing meal on school days to some 184,000 children. It also provided powdered yeast to 18,302 pellagra sufferers, since yeast supplies a needed element in the alleviation of that disease. The retail value of the vegetables grown from Red Cross seed has been estimated by an agricultural economist at \$20,000,000. The relief fund amounted to \$15,589,780, of which \$5,000,000 was donated from the National Red Cross treasury. Donated supplies amounted to nearly \$1,000,000 in addition.

By June 30, 1931, the end of the fiscal year, the drought sufferers still being aided had dropped to about 75,000; and this number diminished rapidly with the coming of splendid crops in the central, southern, and eastern drought areas. But a new drought situation, requiring Red Cross aid, then arose in Montana and North Dakota. The relief work done there in the summer and fall of 1931, and planned to extend through the winter of 1931-32, involved an estimated cost of \$1,500,000.

During the fiscal year of 1930-31, the Red Cross gave aid in a total of 78 disasters, including drought, storms, fires, floods, mine explosions, and tornados. Of these, 51 occurred in the United States and 20 in insular territory, with seven foreign disasters to which were sent donations of money. The most important disasters apart from drought, were the Bethany (Okla.) tornado, which destroyed or damaged 782 buildings, and

the Nogales (Ariz.) flood, which destroyed or damaged 690 buildings. On March 31, an earthquake destroyed Managua, capital of Nicaragua. To the scene the Red Cross sent a representative by airplane, who helped to organize the relief work. In aid of the refugees, the American society sent from its treasury a donation of \$100,000.

The Red Cross nursing service maintains a reserve of enrolled Red Cross nurses for the Army and Navy and other government departments, as well as for Red Cross service. This reserve numbered 37,574, not including nurses in government service or located in foreign countries. Another Red Cross nursing service is engaged in the field of public health. During the year these public health nurses paid 1,338,252 visits to individuals and inspected over 1,000,000 school children.

At the close of its fiscal year, the Red Cross had a membership of 4,075,049 adults, distributed among 3603 chapters in the United States and its insular possessions. In addition, the Junior Red Cross numbered 7,016,288 children enrolled in the schools.

On May 21, 1931, the society observed the fiftieth anniversary of its founding by Clara Barton. Although the International Red Cross was founded at Geneva, Switzerland, in 1864, the organization of an American society was delayed until 1881 because of the opposition of the United States Government to signing the Red Cross international treaty. The event was observed by various chapters throughout the United States and by a dinner given at Washington, where addresses by distinguished speakers were broadcast on a national hookup. These speakers were: President Hoover, who is president of the society; John Barton Payne, its chairman; Miss Mabel T. Boardman, its secretary; and Judge Max Iluber of Geneva, Switzerland, president of the International Committee of the Red Cross. Chief Justice Charles Evans Hughes presided.

National headquarters of the American Red Cross are at 17th and D Streets, N. W., Washington, D. C., with branch administrative offices in St. Louis and San Francisco.

**REED COLLEGE.** A nonsectarian, liberal college of arts and sciences for men and women in Portland, Ore., founded in 1911. The enrollment for the autumn term of 1931 totaled 418 students. The faculty numbered 36, with 12 graduate assistants. The productive funds for 1930-31 amounted to \$1,877,829, while the net income as of Aug. 31, 1931 was \$90,843. The library contained approximately 40,000 volumes. President, Norman Frank Coleman, LL.D.

**REFERENCE WORKS.** See PHILOLOGY, MODERN; LITERATURE, ENGLISH AND AMERICAN; FRENCH LITERATURE, GERMAN LITERATURE; ETC. **REFINING OF METALS.** See METALLURGY.

**REFORMED CHURCHES THROUGHOUT THE WORLD HOLDING THE PRESBYTERIAN SYSTEM, ALLIANCE OF.** An organization formed in London, England, in 1875 with the one great purpose, to encourage comity, cooperation, and efficiency in the accomplishment of Christian work. In 1931 there were 106 churches connected with the alliance. The members and adherents of the Presbyterian and Reformed churches throughout the world numbered about 60,000,000, including members of the Evangelical Church in Germany. The general secretary in 1931 was the Rev. W. H. Hamilton of Edinburgh, Scotland, and the American secretary was the Rev. Henry B. Master,

D.D., whose offices are at 1012 Witherspoon Building, Philadelphia. A general council of the alliance was to be held in Belfast, North Ireland, in 1933.

**REFORMED CHURCH IN AMERICA.** Composed originally of settlers from Holland, and known until 1867 as the Reformed Protestant Dutch Church in North America, the denomination has since become largely intermixed with elements from many other nationalities. It adheres to the doctrines of the Belgic Confession and the Heidelberg Catechism and in 1839 endorsed the Westminster Catechism. The form of government is of the Presbyterian type.

In 1931 the Reformed Church in America reported 733 churches, 850 ministers, 87,862 families, 159,030 communicants, and, approximately, 200 foreign and 235 domestic missionaries. The value of property used for worship was placed at more than \$38,000,000 in the Federal census of religious bodies of 1928. There are foreign missions in China, India, Japan, Arabia, and Mesopotamia, the last named being a joint enterprise with the Presbyterian Church in the United States of America and the Reformed Church in the United States. There is also a mission in the State of Chiapas, Mexico, administered by the boards of domestic missions. Missions to the American Indians are located in Nebraska, Oklahoma, and New Mexico. Schools are maintained among the mountain people of Jackson County, Ky., and for the Negroes in Brewton, Ala.

There are theological seminaries in New Brunswick, N. J., and Holland, Mich. The church colleges are Hope, at Holland, Mich.; Central, at Pella, Iowa; and the Northwestern Junior College, at Orange City, Iowa. Rutgers University in New Brunswick, N. J., is historically affiliated with the denomination, although entirely independent of ecclesiastical control. The official periodical of the denomination is the *Christian Intelligencer*. At the session of the general synod in June, 1931, the Rev. Frank Barrows Seeley, D.D., of Kingston, N. Y., was elected president.

**REFORMED EPISCOPAL CHURCH.** A denomination formed in December, 1873, by clergymen and laymen who had withdrawn from the Protestant Episcopal Church. The denomination maintains a seminary in Philadelphia, Pa., and issues a periodical, the *Episcopal Recorder*. The latest available statistics gave: Churches, 86; ministers, 91; church members, 25,300; and Sunday school enrollment, 26,000. The triennial general council of the denomination was held in Philadelphia, May 21-23, 1930. The Rev. Frank C. Cloak, D.D., was elected a bishop at a special meeting of the general council in Atlantic City, N. J., Oct 22, 1931, with jurisdiction in Ohio and Illinois. Bishop Robert Westly Peach, D.D., of Philadelphia, was presiding bishop.

**REICHERT, EDWARD TYSON.** An American physiologist, died in St. Petersburg, Fla., Dec. 25, 1931. He was born in Philadelphia, Pa., Feb. 5, 1855, and was graduated from the University of Pennsylvania with the M.D. degree in 1879, later attending the Universities of Berlin, Leipzig, and Geneva. He was connected with the University of Pennsylvania as demonstrator in ex-

perimental therapy from 1879 to 1884, as demonstrator in physiology from 1884 to 1886, and as professor of physiology from 1886 until his retirement in 1920. His researches ranged from studies in the toxic principles of serpent venoms (on which he assisted Dr. S. Weir Mitchell) to the crystallization of hæmoglobins and the differentiation and specificity of corresponding vital substances in relation to genera and organic evolution. He also determined a biochemic basis for the study of problems of taxonomy, heredity, sex, species, and organic evolution.

**REID, ELISABETH MILLS.** An American philanthropist, died in Cap Ferrat, near Nice, France, Apr. 29, 1931. She was born in New York City, Jan. 6, 1858, the only daughter of Darius Ogden Mills, the financier. In 1881 she was married to Whitelaw Reid, later publisher of the New York *Tribune*, minister to France from 1889 to 1892 and ambassador to Great Britain from 1905 to 1912. Her important philanthropic projects included the American Art Students' Club in Paris, which she converted during the War into a hospital for French and American officers, and the Trudeau Sanitarium at Saranac Lake, N. Y., which she helped found and at which she later established the D. O. Mills Training School and Home for Nurses.

**RENSSELAER POLYTECHNIC INSTITUTE.** A nonsectarian institution for the technical training of men in Troy, N. Y., founded in 1824. In 1931 there were 1653 students enrolled. The teaching staff numbered 138. The productive funds amounted to \$5,857,500, and the income for the year to \$759,600. The total value of the property of the institute, including market value of securities and value of buildings and equipment, was more than \$10,000,000. The gifts for endowment during the year amounted to \$251,654. The library contained 22,468 bound volumes and 23,093 pamphlets. During 1931 eight dormitories and a club house were under construction at a cost of about \$650,000. President, Palmer C. Ricketts, E.D., LL.D.

**REORGANIZED CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS.** See LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF.

**REPARATIONS AND WAR DEBTS.** In accordance with the proposal of President Hoover made June 20, 1931, and approved with modifications by France on July 6, payments of conditional reparations and of all inter-governmental war debts were postponed from July 1, 1931, to June 30, 1932.

President Hoover's original proposal follows in part:

The American Government proposes the postponement during one year of all payments on inter-governmental debts, both principal and interest, of course not including obligations of governments held by private parties. Subject to confirmation by Congress, the American Government will postpone all payments upon the debts of foreign governments to the American Government payable during the fiscal year beginning July 1, next, conditional on

a like postponement for one year of all payments on inter-governmental debts owing the important creditor powers.

The purpose of his action, Mr. Hoover announced, was "to give the forthcoming year to the economic recovery of the world and to help free the recuperative forces already in motion in the United States from retarding influences from abroad. . . ." He made it plain that he did "not approve in any remote sense of the cancellation of the debts to us." The moratorium was intended to check the German financial crisis by relieving that country for one year of the necessity of paying reparation in accordance with the Young Plan (see GERMANY under History).

The Hoover proposal was approved without reservation by all of the principal powers concerned except France and Yugoslavia. France demanded that the moratorium on German reparation should be brought in line with the procedure outlined in the Young Plan (see FRANCE under History for a full discussion). After two weeks of delicate negotiation, a compromise agreement was approved by the French Government on the evening of July 6, the moratorium going simultaneously into effect. The text of the accord of July 6 follows:

After an exchange of views the French Government states that it is in agreement with the United States on the essential principle of President Hoover's proposal and on the following propositions, which may be expressed thus:

1. The payment of inter-governmental debts is postponed from July 1, 1931, to June 30, 1932.

2. However, the Reich will pay the amount of unconditional annuity. The French Government agrees, in so far as it is concerned, that the payments thus made by the Reich shall be placed by the Bank for International Settlements in guaranteed bonds of the German railroads.

3. All suspended payments shall be subject to interest in accordance with the conditions suggested by the American Government, payable in ten annual instalments beginning with July 1, 1933.

4. The same conditions shall apply to the bonds to be issued by the German railroads. On the three points which it is recognized do not directly concern the American Government the French Government makes the following observations:

(A) A common action by the principal central banks acting through the medium of the Bank for International Settlements shall be organized to assist the countries of Europe which would be particularly affected by the postponement of the payment as proposed.

(B) A preliminary understanding should take place between France and the Bank for International Settlements in order that France shall not supply the guarantee fund provided for in the Young Plan in the event of a moratorium except by monthly payments in accordance with the needs of the Bank for International Settlements after actual transfer of payments by Germany.

(C) The question of deliveries in kind and the various modifications which will become necessary as a result of the application of the American proposal and the present agreement shall be studied by a committee of experts named by the interested powers, which shall reconcile the material necessities with the spirit of President Hoover's proposal. France reserves the right to request of the German Government indispensable assurances concerning the utilization for exclusively economic purposes of the sums freed to the Reich budget.

The British Government immediately invited the committee of experts mentioned in the Franco-American agreement to meet in London to consider the incidental questions not disposed of in the agreement. The committee consisted of experts appointed by the Governments of Belgium, France, Great Britain and Northern Ireland, Germany, Italy, and Japan. A representative of the United States attended. A formal protocol giving effect to the experts' recommendations was signed at London August 11 on behalf of the respective governments, with the endorsement of

Australia, Canada, Czechoslovakia, Greece, India, New Zealand, Portugal, Poland, Rumania, and South Africa.

A separate agreement was concluded by Germany and Belgium covering German payments under the German-Belgian agreement of 1920. Negotiations concerning the suspension of reparation payments by Bulgaria to Greece and the suspension of Yugoslav reparation receipts were not completed at the date of the signature of the protocol. On August 14, Yugoslavia notified the American Government that it was unable to participate in the moratorium agreement, as it would involve a proportionately heavy loss to the Yugoslav treasury of about \$16,000,000 for the year (see YUGOSLAVIA under History).

Another agreement reached in principle called for the suspension during the year of Hungarian reparation payments under the Paris agreement of April 28, 1930, and of Bulgarian payments under The Hague agreement of January, 1930. Adjustments were required in both these cases, however, to provide for the continuation of payments to individuals. Agreement was also reached on a plan for the suspension for the year of the Czechoslovak annuities due the principal allied Governments in accordance with The Hague settlement of January, 1930.

Under the modified Hoover Plan Germany was relieved of the necessity of meeting reparation payments for the period July 1, 1931, to June 30, 1932, amounting to approximately 1,650,000,000 reichsmarks (1 reichsmark or mark equals \$0.2382 at par). The continued payment of the unconditional reparation annuities to the Bank for International Settlements was in a technical sense only, as these funds, amounting to about 700,000,000 marks, were immediately returned to the German Government through the medium of the German Railway Company.

The accompanying table from *Europa* (London) shows receipts and payments postponed during 1931-32 under the Hoover moratorium agreement by the various countries affected. Figures are in pounds sterling of \$4.8665 par value, conversions from other currencies having been made at former pars of exchange.

#### RECEIPTS AND PAYMENTS POSTPONED UNDER THE HOOVER PLAN

[In thousands of pounds sterling]

Country	Receipts	Payments	Net loss (-) or gain (+)
United States . . . . .	53,600	.....	- 53,600

Bulgaria . . . . .	150	400	+ 250
Austria . . . . .	.....	800	+ 800

\* South Africa continued payments on her war debt to Great Britain.

The Hoover moratorium was approved by the House of Representatives of the U. S. Congress

on Dec. 18, 1931, by a vote of 317 to 100, and was subsequently passed by the Senate. However, the action of Congress was taken subject to a declaration that it was contrary to the policy of Congress to reduce or cancel the foreign obligations due the United States. The accompanying table for the New York Times of Jan. 24, 1932, shows the status of the war debts, including interest, owing to the United States at the time of the inauguration of the Hoover moratorium on July 6, 1931:

**WAR DEBTS DUE THE UNITED STATES**  
[In millions of dollars]

	<i>Borrowed</i>	<i>To pay</i>	<i>Paid</i>
England .....	\$ 4,277	\$11,106	\$1,912
France .....	8,404	6,848	486
Italy .....	1,648	2,407	97
All others .....	1,009	1,827	133
<b>Total .....</b>	<b>\$10,338</b>	<b>\$22,188</b>	<b>\$2,628</b>

According to a statement by Chancellor of the Exchequer Snowden in the House of Commons June 15, 1931, Germany's aggregate reparation payments to that date, including deliveries in kind and state properties, amounted to \$5,131,500,000. Austria had paid \$4,210,000 by deliveries in kind, Bulgaria \$13,200,000 in cash, and Turkey nothing.

BANK FOR INTERNATIONAL SETTLEMENTS. Under the provisions of the Young Plan and in accordance with the charter granted by the Swiss Government, the Bank for International Settlements was opened at Basel, Switzerland, in May, 1930. The functions of the International Bank are outlined in its statutes as follows: "to promote the cooperation of central banks and to provide additional facilities for international financial operations; and to act as trustee or agent in regard to international financial settlements entrusted to it under agreements with the parties concerned." The principal task entrusted to it at the outset was the distribution of German reparation payments in accordance with the Young Plan.

The bank had a capital of 500,000,000 Swiss francs (about \$96,500,000), subscribed by central banks or individuals in ten countries. Officials in 1931 included: Gates McGarrah, an American, president; Pierre Quesnay, France, general manager; Dr. Ernst Hueelse, Germany, deputy general manager; Sir Charles Addis of Great Britain and Dr. Melchior of Germany, vice presidents; Signor Pilotti of Italy, general secretary; Paul van Zeeland, Belgium, head of the investment department; and Leon Fraser, deputy to President McGarrah and second American director on the board.

The report of the bank covering its activities from its inception to Mar. 31, 1931, stated that this period had been one of steady development in each of the institution's spheres of action. It had aided the development of cooperation between the various central banks and provided additional facilities for international financial operations and capital movement. Deposits during the period had increased from 220,000,000 Swiss francs to 1,780,000,000, 43 per cent of the latter sum representing deposits made by central banks on their own account. The collaboration of the central banks had enabled the B.I.S. to become a reserve centre for the foreign exchange holdings of those agencies in the respective countries charged

with the duty of maintaining exchange stability.

The balance statement of the Bank for International Settlements, giving its condition on Dec. 31, 1931, was as follows. Figures are in Swiss gold francs of \$0.193 par value.

**STATEMENT OF BANK FOR INTERNATIONAL SETTLEMENTS**

	<i>Dec. 31, 1931</i>
<b>Assets</b>

THE WIGGIN REPORT. The Bank for International Settlements played an important rôle in connection with the financial arrangements for the inauguration of the Hoover moratorium plan. It also served as a focus for the international efforts to check the withdrawal of short-term credits from Germany during the crisis of the sum-

mer. At the request of the Seven-Power Financial Conference held in London in July (see *GREAT BRITAIN and GERMANY under History*), the board of directors of the International Bank appointed a committee of financial experts nominated by the central banks of ten nations, and headed by Albert H. Wiggin, an American banker. The committee met at Basel August 8 to consider the immediate and further credit needs of Germany and to study the possibilities of converting a portion of her short-term credits into long-term credits. Its conclusions were set forth in a report issued August 19.

On the same day the Wiggin report was issued, a consortium of Germany's foreign creditors, meeting with German bankers in Basel under the committee's auspices, signed an agreement extending for six months short-term credits totaling about \$1,200,000,000, which would otherwise have been in greater part withdrawn.

**ADVISORY COMMITTEE CONVOKED.** The German Government on Nov. 10, 1931, asked the Bank for International Settlements to convoke the Special Advisory Committee, provided for in the Young Plan, to determine Germany's capacity to continue reparation payments at the expiration of the moratorium. The Government asserted that it was convinced that "Germany's exchange and economic life might be seriously endangered by the transfer in part or in full of the postponable part of the annuities." The Advisory Committee, also known as the Basel Committee, which met at Basel, December 8, consisted of Alberto Beneduce (Italy), chairman; Dr. Rudolf G. Bindschedler (Switzerland); H. Colijn (Netherlands); G. D. Jouritch (Yugoslavia); E. Franquet (Belgium); Walter T. Layton (Great Britain); C. Melchior (Germany); D. Nohara (Japan); Charles Rist (France); O. Rydbeck (Sweden); and Walter W. Stewart (United States).

The committee's report, issued December 23, stressed the need of prompt adjustment of both reparation and war debts if Germany was to be saved from disaster. It found adequate justification for the German contention that payment of conditional annuities could not be resumed in July, 1932, and intimated that even the unconditional annuities could not be paid in 1932, thus raising the question whether the Young Plan could be maintained. The report pointed out that the difficulties facing Germany were so fundamental that even an additional two-year moratorium, such as provided for under the Young Plan, might not be sufficient to stave off disaster.

On December 22 Hungary declared a one-year moratorium on the transfer of payments on her foreign debts. Spurred by these evidences of the need for quick action, the British Government on December 30 took the initiative in summoning a conference on German reparations at Lausanne, Switzerland, for early in 1932.

Reparations and war debts are discussed also in the articles on GERMANY, FRANCE, GREAT BRITAIN, UNITED STATES, BELGIUM, ITALY, YUGOSLAVIA, GREECE, etc. under *History*; BANKS AND BANKING, under *Federal Reserve Banks and International Relations*.

**BIBLIOGRAPHY.** For authoritative studies of the reparation question consult Denys P. Myers, *The Reparation Settlement* (World Peace Foundation; Boston, 1931); Hjalmar Schacht, *The End*

*of Reparations* (New York, 1931); Raoul Plus, *Reparation* (London, 1931); and Hamilton Fish Armstrong, "France and the Hoover Plan," *Foreign Affairs*, October, 1931. **REPTILIA.** See ZOOLOGY.

**RESEARCH COUNCIL.** NATIONAL. See NATIONAL RESEARCH COUNCIL.

**RESERVE BANKS.** See BANKS AND BANKING; FINANCIAL REVIEW.

**RÉUNION, rā'u'nyōn'.** An island colony of France in the Indian Ocean, situated 420 miles east of Madagascar. Area, 970 square miles; population at the census of 1926, 186,637, of whom 180,694 were French citizens. St. Denis, population 23,390 in 1926, is the capital and Pointe des Galets, the chief port. The island sends one representative to the French Senate and two to the Chamber of Deputies. Governor in 1931, M. J. Repiquet.

**REVELL, FLEMING HEWITT.** An American publisher, died in Yonkers, N. Y., Oct. 11, 1931. He was born in Chicago, Ill., Dec. 11, 1849, and was educated in that city. In 1869 he entered upon independent editorial and publishing work, and coming to New York City was president after 1890 of the Fleming H. Revell Company, publishers, who made a specialty of religious books.

**RHINELAND, EVACUATION OF.** See GERMANY and FRANCE under *History*.

**RHODE ISLAND. POPULATION.** According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 687,479, in 1920 it was 604,397. The native whites numbered 506,302 (1930), 420,481 (1920). The foreign-born whites, 170,714 (1930), 173,499 (1920). Negroes, 9913 (1930), 10,036 (1920). Among the minor groups, the chief in 1930, was 318 Indians. The population was urban to an overwhelming extent, dwellers in communities of at least 2500 numbering 635,429 (1930), 589,180 (1920). A reclassification of some localities formerly classed as urban resulted, however in a sharp apparent gain of the rural population, to 52,058 (1930), from 15,217 (1920).

Of the 297,168 persons listed in 1930 as in gainful occupations, 163,857 were in the manufacturing and mechanical industries; 45,240, in trade; 26,303, in domestic or personal service; 19,185, in professional service; 18,878, in transportation; 8873, in agriculture. Providence, the capital and most populous city, had 252,981 inhabitants (1930), 237,595 (1920); Pawtucket, 77,149 (1930), 64,248 (1920).

**AGRICULTURE.** The table on page 705 shows the acreage, production, and value of the principal crops in 1931 and 1930.

**MINERAL PRODUCTION.** The total value of the mineral production of the State was \$939,602 for 1929; for 1928, \$830,742. The chief of the components of these totals was the production of stone, to the quantity of 141,290 short tons

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame	1931	34,000	44,000*	\$554,000
	1930	35,000	41,000*	527,000
Corn	1931	8,000	844,000	206,000
	1930	9,000	878,000	416,000
Potatoes	1931	2,000	800,000	195,000
	1930	2,000	880,000	437,000

\* Tons.

for 1929 and of 149,130 for 1928; by value, \$590,627 for 1929 and \$707,257 for 1928. There was a substantial industrial coking activity, dependent on coal imported from outside the State, of which the totals were not included in the State's mineral aggregate.

**MANUFACTURES.** Federal Census figures gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 1693 (13.3 per cent more than the number for 1927). These establishments employed 124,838 wage earners (4 per cent more than had been employed in 1927). Wages paid in the manufacturing industries amounted to \$142,340,508 (2.7 per cent in excess of the total for 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$342,078,164 (about 9 per cent higher than the cost for 1927). The manufactured product was valued at \$664,216,174 (exceeding the corresponding value for 1927 by 12.2 per cent). Providence had 930 establishments, 47,194 wage earners, a wage total of \$55,197,341, and a product of \$240,549,196. Pawtucket had 221 establishments, 21,184 wage earners, a wage total of \$23,857,967, and a product of \$112,467,353.

**FINANCE.** State expenditures of the year ended June 30, 1930, as reported to the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$7,600,610 (of which \$519,516 was for local education); for interest on debt, \$855,139; for permanent improvements, \$5,747,674; total, \$14,223,878 (of which \$5,364,583 was for highways, \$1,061,934 being for maintenance and \$4,302,640 for construction). Revenues were \$17,128,132. Of these, property and special taxes formed 59.2 per cent; departmental earnings and remuneration to the State for officers' services, 3.6; sale of licenses, 31 (including gasoline sale taxes amounting to \$1,631,902). The State's funded debt outstanding on June 30, 1930, was \$21,904,500. Net of sinking-fund assets, it was \$17,280,386. On a property valuation of \$1,419,219,663 were levied in the year State taxes of \$1,177,012.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 190.65. During the year preceding, there had been added 0.33 miles to total under operation, but 5.45 miles had been abandoned. No building of new line or main trackage in 1931 was reported.

**EDUCATION.** The number of the State's inhabitants of school age in January, 1931, was stated as 211,124. There were enrolled, in 1931, 117,217 pupils in public schools, 29,769 in parochial schools, and 4238 in private schools. Those enrolled in the public day schools were thus classed: pre-elementary, 8424; elementary, 55,457; junior high, 14,220; senior high, 11,474; primary, 14,162; grammar, 11,959; mixed schools, 1705; four-year high, 3960; special schools, 1639; vocational schools, 697. Expenditures of the academic year 1930-31 for public school education

totalled \$9,962,661. Salaries of teachers, principals and supervisors, by the year, averaged \$1705.72.

The municipal appropriations for public schools, according to State Superintendent Ranger, were well maintained despite the economic depression of 1931, and the movement for the development of junior high schools made further progress. A charter was granted by the Legislature for a new institution of higher learning, Roger Williams University, which was to have a department of practical arts, a law school, and a medical school.

**LEGISLATION.** Among the acts of the year's session of the Legislature the most conspicuous was that removing the Police and Fire departments of Providence and its Public Service Department from municipal control and placing them under the authority of a State Public Service Commission created for the purpose. The ostensible motive behind this action was the laxity of the enforcement of law in Rhode Island; opponents attributed the enactment to Republican dismay at the gains of Democratic Anti-Prohibition sentiment. A city charter was granted to Warwick, subject to adoption by the local vote in a referendum. As a measure of financial assistance, Central Falls was authorized to issue \$500,000 of bonds for refunding purposes. The Legislature petitioned the Federal Congress to institute a constitutional convention for the repeal of the Eighteenth Amendment. The incorporation of an osteopathic hospital was authorized. The law on life insurance policies was recodified. Public camps, bathing beaches and places of outdoor amusement were made subject to State inspection by the Public Health Commission. A commission was created to study the liquor laws of the States, with a view to recommending measures to liberalize those of Rhode Island. The State Board of Roads was put under budgetary control.

**SPECIAL SESSION.** Called in session on November 24 by Governor Case to enact means for the local relief of the destitute, the Legislature passed a law to permit municipalities to borrow from State funds, unto 0.1 per cent of their several assessed valuations without reference to their fixed borrowing capacities under other statutes. An unpaid ex-officio commission was created to supervise expenditures for relief. Local relief officers were authorized to dispense the funds thus secured for each locality, but it was required that dispensations should be to residents of two years' standing and at rates not over \$15 a week, if money should represent wages for actual work, nor over \$1 a day for each independent individual and 50 cents addition for each dependent in a family, in case of grants for sustenance.

**POLITICAL AND OTHER EVENTS.** The State-created Providence Board of Public Safety began its work in April by removing from office the city's public service engineer and other Democratic holders of posts. The city government took legal steps to contest the validity of the law depriving it of the control of its own fire and police services. In Warwick the taxpayers, at a special election held on April 21 approved by 1045 to 930 the adoption of the city form of government, as provided by a charter act of the Legislature, to become operative on Jan. 1, 1933.

**OFFICERS.** Governor, Norman S. Case; Lieutenant-Governor, James G. Connolly; Secretary

of State, Ernest L. Sprague; Treasurer, George C. Clark; Comptroller, Albert E. Godfrey; Attorney-General, Benjamin M. McLyman.

**JUDICIARY.** Supreme Court: Chief Justice, Charles F. Stearns; Associate Justices, Elmer J. Rathbun, John W. Sweeney, John S. Murdoch, J. Jerome Hahn.

**RHODESIA**, rō-dē'zhī-ā or -zī-ā. A British territory in south central Africa, extending northward from the Transvaal to the borders of the Belgian Congo and Tanganyika Territory. It is divided into Northern Rhodesia and Southern Rhodesia by the Zambezi River; Southern Rhodesia comprises Matabeleland and Mashonaland.

**NORTHERN RHODESIA.** This territory was taken over by the British Crown from the British South Africa Company on Feb. 20, 1924. With an area of 287,950 square miles, mostly high plateau country, it had a permanent European population at the census of May, 1931, of 13,630, as compared with the estimate of 9981 for December, 1929, and a native population estimated Jan. 1, 1928, at 1,298,651. Capital, Livingstone, with 1596 Europeans in 1931. Mining is the primary occupation, the total value of mineral production in 1929 being £1,097,846; (zinc, £547,964; copper, £408,258); for 1930 the total value was about £806,000. Discovered copper-ore deposits are estimated at 400,000,000 tons, containing some 16,000,000 tons of pure copper. Gold, lead, vanadium, mica, iron, and manganese are mined on a small scale and coal has been discovered. Tobacco, wheat, fruits, and maize are the chief agricultural crops. Imports in 1929 were valued at £3,602,417 and exports at £899,736. Government revenue in 1929-30 totaled £672,289 and expenditure was estimated at £554,000. A shorter outlet for the copper and other ores of Rhodesia to the west coast at Lobito Bay (Angola) was provided with the completion in March, 1931, of the Benguela Railway extension to join with the Katanga Railway in the Belgian Congo. The territory is administered by a Governor, assisted by a nominated Executive Council and by a Legislative Council. The Governor in 1931 was Sir James Crawford Maxwell, who had been appointed in 1927.

**SOUTHERN RHODESIA.** Formally annexed by the British Crown from the British South Africa Company in October, 1923, Southern Rhodesia has an area of 149,000 square miles and a population estimated on June 30, 1930, at 1,092,400, including 48,400 Europeans (49,904 at the census of May 5, 1931), 4000 Asiatics, and 1,060,000 natives. Capital, Salisbury, with about 27,000 inhabitants (including 7213 Europeans at the 1931 census). Bulawayo, with 25,000 inhabitants (10,580 Europeans), ranks second in size.

The country is well suited to agriculture and European settlement. In 1929, the acreage devoted to the chief crops was: Maize, 325,300; tobacco, 17,800; ground-nuts, 9700; legumes and fodders, 29,300. Exports of oranges and lemons increased from 53,000 boxes in 1923-24 to 159,000 boxes in 1929. Livestock in 1929 included 2,398,000 cattle, 353,800 sheep, and 61,300 swine. The mineral output for 1930 was valued at £4,518,000; gold, chrome ore, asbestos, and copper are the chief minerals exploited. Several minor industries have been established. Imports in 1930 were valued at £7,346,000 and exports at £7,320,000 (including reexports).

Revenue for the year ended Mar. 31, 1930, totaled £2,489,000, compared with £2,333,000 in

1928-29, and expenditure amounted to £2,967,800 (£2,930,600 in 1928-29). The net public debt Mar. 31, 1930, was £6,142,479. Railways provide through communication with Beira on the east coast, Capetown on the south, and Lobito Bay on the West coast. There is a highway motor service system covering 1357 miles. Executive power is vested in a governor, aided by an executive council; legislative power in an elected legislative assembly. Governor and Commander-in-Chief in 1931, Sir Cecil H. Rodwell, appointed 1928. Premier and Secretary for Native Affairs, H. U. Moffat. For the development of the British Government's native policy in Africa in 1931, see KENYA. Both Northern Rhodesia and Southern Rhodesia on Oct. 12, 1931, followed the example of Great Britain and abandoned the gold standard.

**RHODES SCHOLARSHIPS.** See UNIVERSITIES AND COLLEGES.

**RICE.** The rice production of the crop year 1931-1932 of the countries reporting to the International Institute of Agriculture not including the United States was estimated as follows: Japan, 487,514,000 bushels; Java, 230,747,000 bushels; Korea, 140,968,000 bushels; Formosa, 32,164,000 bushels; Italy, 31,721,000 bushels; Madura, 20,576,000 bushels; Manchuria, 15,560,000 bushels, and Bulgaria, 645,000 bushels. India ranked first in acreage with 77,429,000 acres; Japan second with 7,952,000 acres, and Java third with 7,742,000 acres. Manchuria reported an acreage of 495,000 acres. While no complete data on Chinese production were available a reduction of the crop, from 15 per cent to 20 per cent below the average was reported.

In the United States according to estimates published by the Department of Agriculture rice production in 1931 in the four States growing nearly all the crop was 45,014,000 bushels of 45 pound each as compared with 44,299,000 bushels in 1930. In these States 970,000 acres were harvested in 1931 and 959,000 acres in the preceding year. The increase in the 1931 over the 1930 crop was due to a larger production in California where 8,000,000 bushels were harvested from 125,000 acres in 1931 compared with 7,271,000 bushels harvested from 110,000 acres in 1930. The 1931 rice production in Arkansas, Louisiana, and Texas was reported as 37,014,000 bushels, while in 1930 it was 37,028,000 bushels and in 1929, 34,391,000 bushels. The average farm price on Dec. 1, 1931, was 60.9 cents per bushel, the lowest for many years, and on this basis the total value of the crop was \$27,402,000 the lowest since 1915.

**RICE INSTITUTE.** A coeducational institution for higher education in Houston, Texas, opened in 1912. The enrollment in the autumn of 1931 was 1454, and the faculty numbered 99. The plant equipment and productive funds of the institution were estimated at \$15,000,000, and the income from endowment for the fiscal year 1930-31 was in excess of \$600,000. The library contained approximately 87,000 volumes. President, Edgar Odell Lovett, Ph.D., Sc.D., LL.D.

**RICKETTS.** See FOOD AND NUTRITION.

**RICKETTS, CHARLES.** A British painter, sculptor, engraver, stage designer, and author, died in London, Oct. 7, 1931. He was born in Geneva, Switzerland, Oct. 2, 1866, and was educated in France. From 1889 to 1897 he was joint editor with Charles Shannon of the *Dial*. He then founded the Vale Press and until 1904 was de-

signer and publisher of the Vale books and other publications, becoming noted as a craftsman in the book field. In 1906 he became a theatre costume and scenery designer. He was elected an Associate of the Royal Academy in 1922 and an Academician in 1928. His principal pictures are "The Death of Don Juan" (in the National Gallery, Millbank); "The Plague" (in the Luxembourg Museum, Paris); and "Montezuma" (in the Manchester Gallery). He was the author of *The Art of the Prado* (1907); *Titian* (1910); and *Pages on Art* (1913).

**RIFLE SHOOTING.** See SHOOTING.

**RIO GRANDE RIVER.** See MEXICO under History.

**ROAD CONSTRUCTION.** See AGRICULTURE, UNITED STATES DEPARTMENT OF.

**ROADS AND STREETS.** State highway construction with Federal-aid, the States contributing at least as much money as the United States, was speeded up by the desire to relieve unemployment. During the fiscal year ending June 30, 1931, nearly \$158,000,000 of Federal-aid funds were obligated and \$133,000,000 actually paid to the States for work on the Federal-aid highway system. In the previous year, \$102,000,000 were obligated. Some of the excess was paid from emergency advance funds authorized by Congress and to be charged against the normal \$125,000,000 appropriation over a period of five years. The Federal-aid road mileage completed and paid for in 1930-31, including money for stage construction (partial improvement) and for reconstruction, totaled 11,033, against 8682 miles in 1929-30. Even more significant is the 16,480 miles under construction on June 30, 1931, compared with 9916 a year earlier. The average number of persons employed on Federal-aid road construction increased from 54,852 in March to 154,453 in June. The Federal-aid highway system, as revised to June 30, totaled nearly 200,000 miles of which nearly half had been completed or put under construction. The 88,715 miles of Federal-aid roads on which some degrees of improvement had been completed by June 30, 1931, included 11,248 miles that had been graded and drained only; 35,530 miles of either sand-clay or gravel; 2345 of macadam; 1574 of low-cost bituminous mix; 4196 of bituminous concrete; 28,001 miles of Portland cement concrete; 994 miles of block; and 390 miles of bridges and approaches. See annual reports, Bureau of Public Roads, for extensive details, both for the country and by States.

The Federal-aid highway system comprises only 7 per cent of the roads in the rural districts of the United States, which exceed 3,000,000 miles. State highway systems, including the nearly 200,000 miles of Federal-aid roads, totaled 324,496 miles at the beginning of 1931, of which 226,221 were surfaced with some grade of material according to figures gathered by the U. S. Bureau of Public Roads. The total expenditures by State highway departments, including Federal-aid funds, were \$980,000,000 in 1930, of which \$713,000,000 was for construction, \$191,000,000 for maintenance and the remainder for equipment, interest on bonds and miscellaneous purposes. The chief source of funds for State highway expenditures were gasoline taxes and motor-vehicle licenses, 36 and 26 per cent or 62 per cent together. Two States made radical changes in road administration. In North Carolina, the State took over the entire

highway system formerly administered by counties and special highway districts—all highways outside incorporated places. In Michigan, a law was passed for the transfer of all township roads to counties, at the rate of 20 per cent a year, beginning in 1932. (For details of the Michigan change, see *Engineering News-Record*, Nov. 19, 1931; the same journal devoted to local highway problems most of its issue of Dec. 3, 1931; while the issue of Nov. 11, 1931, took up the important and complicated problem of the design of highway intersection so as to lessen traffic dangers and delays.)

**NORWAY.** An extensive highway improvement plan for Norway, involving an ultimate expenditure of about \$253,000,000, was outlined in United States *Commerce Reports* for July 27, 1931, as having been "recently completed by the 'Vie Direktoratet'" (Bureau of Public Roads) and accepted by the Storthing (National Congress). Execution of the programme was to be delayed because of financial conditions. The programme is divided into periods, the first of which, involving expenditures of about \$40,000,000, covers twenty years. Of a total of 18,391 miles, the state will carry out 2964 at a cost of \$53,000,000, aided by subsidies from counties; counties would execute 7634 miles at a cost of \$128,800,000, and communes 7793 miles at a cost of \$78,500,000, both the counties and the communes being aided by subsidies from the state. There is an allotment of nearly \$12,000,000 to repair existing roads and of over \$1,000,000 to ferries. The total state road expenditures in Norway were about \$4,800,000 in 1929-30. The budget for 1930-31 was a little over \$5,000,000 and the proposed budget for 1931-32 was \$5,800,000. Of the latter about \$2,435,000 was contributed by the federal government and \$3,330,000 came from various taxes, the principal of which was a road tax. On Jan. 1, 1931, the government put into effect a gasoline tax of 3.2 cents per gallon, collected in gross on importations.

A new book dealing with highways is Johansson, *Highway Economics* (New York). See AUTOMOBILES.

**ROANOKE COLONY ANNIVERSARY.** See CELEBRATIONS.

**ROBBINS, SIR ALFRED (FARTHING).** A British journalist and playwright, died in London, Mar. 10, 1931. He was born in Launceston, Cornwall, Aug. 1, 1856. Engaging in journalism in 1871, he served as London correspondent for the *Birmingham Post* from 1888 to 1923. He was prominent as a Freemason, visiting the United States in 1924 and Argentina, Uruguay, and Brazil in 1927 on behalf of the British Grand Lodge. He was knighted in 1917. His works include *Five Years of Tory Rule* (1879); *William Edward Forster, the Man and His Policy* (1882); *The Marquis of Salisbury, a Personal and Political Sketch* (1882); *Practical Politics, or the Liberalism of Today* (1888); *The Early Public Life of William Ewart Gladstone* (1894); *Parnell, the Last Five Years* (1926); *The Press* (1928); and *English-speaking Freemasonry* (1930). He was also noted as a playwright.

**ROBINSON, EDWARD.** An American archaeologist and museum director, died in New York City, Apr. 18, 1931. He was born in Boston, Mass., Nov. 1, 1858, and was graduated from Harvard University in 1879. After five years' study in Europe, especially in Greece and at the

University of Berlin, he became curator of classical antiquities in the Boston Museum of Fine Arts, holding that post until 1902 when he was appointed director of the museum. He was also lecturer on classical archaeology at Harvard during 1893-94 and during 1898-1902. In 1905 he was appointed assistant director of the Metropolitan Museum of Art in New York City, and succeeded Sir Caspar Purdon Clarke as director in 1910. Mr. Robinson retained the curatorship of the Metropolitan Museum's classical department until 1925 and also arranged collections of classical antiquities and casts in various museums throughout the United States. His publications consisted of catalogues and articles on archaeological subjects in the *Bulletin of the Metropolitan Museum* and leading magazines.

**ROCHESTER, ENGLAND, BIMILLENNIUM.** See CELEBRATIONS.

**ROCHESTER, UNIVERSITY OF.** A nonsectarian institution of higher education for men and women in Rochester, N. Y., founded in 1850. It consists of three schools—the college of arts and sciences, composed of a college for men and a college for women; the Eastman School of Music; and the school of medicine and dentistry. A school of nursing is also maintained in conjunction with the Strong Memorial Hospital, the property of the university. The enrollment for the autumn session of 1931, exclusive of extension division and special music students, totaled 1833, distributed as follows: Arts and science, 1229, of whom 741 were men and 488 women; music, 432; medicine and dentistry, 172. For the summer session, 790 were enrolled in the arts college and 410 in the music school. There were 1039 in the extension division. The faculty had 390 members. The productive funds as of June 30, 1931, amounted to \$29,082,941, and the total resources, including land, buildings, equipment, and endowment, were approximately \$50,000,000. President, Rush Rhees, D.D., LL.D.

**ROCKEFELLER FOUNDATION, THE.** An institution chartered in 1913 "to promote the well-being of mankind throughout the world," and in 1929 merged with the Laura Spelman Rockefeller Memorial, forming a new organization which received from the two consolidating corporations all their assets and assumed all their obligations. Its plan of work provides for coöperation toward the advancement of knowledge in the fields of public health, the medical sciences, the natural sciences, the social sciences, and the humanities. During the year 1931 approximately \$17,500,000 was expended by the foundation for work in the five fields in which its interests lie.

In addition to the new grants made during 1931, enumerated below, the foundation continued to make payments toward many projects initiated in 1930 or earlier years, where support or assistance over a period of years was specified in the original appropriations.

**INTERNATIONAL HEALTH DIVISION.** The governments of 36 States of the United States and 47 foreign countries were assisted in projects for improving public health conditions. This aid included participation in studies of yellow fever, malaria, hookworm disease, undulant fever, anaemia, tuberculosis, and respiratory diseases; in campaigns for the reduction of yellow fever in Brazil; in demonstrations of malaria and hookworm disease control and of local health work; in the organization or maintenance of essential

services of State and national health departments, and in coöperation in the development of schools and institutes of hygiene and public health or public-health nursing. Assistance was also given toward the advancement of the work of the Health Organization of the League of Nations, and special provision was made for epidemiological investigations in Mexico and several States of the United States. Fellowships in public health were provided for approximately 215 persons from 30 countries.

**THE MEDICAL SCIENCES.** Grants for the advancement of medical education were made in the form of endowments or contributions toward construction programmes or development of departments, or toward maintenance, of a number of institutions, including the following: Albany Medical College, Albany, N. Y.; Chulalongkorn University, Bangkok, Siam; Peiping Union Medical College, Peiping, China, through a grant to the China Medical Board, Inc.; Queen's University, Belfast, Northern Ireland; Trinity College, Dublin, Irish Free State; University College, Dublin, Irish Free State; University of Brussels, Belgium; University of Edinburgh, Scotland; University of Montreal, Canada; and the University of Szeged, Hungary.

A number of grants for general research funds or special research projects in medical schools were made to individuals, groups, or departments engaged in research important to the advancement of medical knowledge. Among the institutions receiving such aid were the following: Columbia University, New York City (studies of the common cold); Institute for Psychiatry, Munich, Germany (research in neurohistology, serology, and biochemistry); Henry Phipps Institute, University of Pennsylvania, Philadelphia (development and testing of new stereo-fluoroscope); Institute of Anatomy, University of Turin, Italy (problems of growth); Medical Research Council of Great Britain (research in puerperal fever at Queen Charlotte's Maternity Hospital, London); National Research Council, Washington, D. C. (work of Committee for Research in Problems of Sex); Institute of Histology and Embryology, University of Padua, Italy; Institute of Physiological Chemistry, University of Leipzig, Germany; University of Rochester, N. Y. (research in dental pathology); Yale University, New Haven, Conn. (research in dental pathology).

The Rockefeller Foundation granted and itself administered approximately 155 fellowships in medicine for graduate students to enable them to study in countries other than their own. In addition, payments were made to the National Research Council, Washington, the Medical Research Council of Great Britain, the *Notgemeinschaft der Deutschen Wissenschaft*, and the Hungarian Scholarship Council for the support of fellows in medicine, of their own selection. A new volume of *Methods and Problems of Medical Education* (Series XIX) appeared in 1931.

**THE NATURAL SCIENCES.** In the field of the natural sciences contributions toward endowments, building programmes, apparatus and equipment, maintenance, or general development were made to the following universities and scientific institutions: Apia Observatory, Western Samoa (geophysical station); Bermuda Biological Station for Research; Biological Laboratory, Cold Springs Harbor, Long Island,

N. Y.; Hungarian Biological Research Institute, Tihany; Marine Biological Laboratory, Plymouth, England; University of Geneva, Switzerland (Station of Experimental Zoölogy); University of Oslo, Norway (Institute of Theoretical Astrophysics); University of Stockholm, Sweden (departments of biochemistry and plant physiology); University of Szeged, Hungary; University of Warsaw, Poland (Institute of Physics).

In addition, contributions toward the advancement of knowledge in the field of the natural sciences were made through specific appropriations for research to the following institutions and organizations: American Institute of Mining and Metallurgical Engineers, New York City (mineral inquiry); American Society of Civil Engineers, New York City (seismological report); Iowa State College, Ames (general research fund); Massachusetts Institute of Technology, Cambridge (general research fund); Institute of Physics, University of Munich, Germany (study of electron movements); University of Szeged, Hungary (research in specified departments).

Other projects included the provision of scientific instruments for the Wilkins-Ellsworth Transpolar Submarine Expedition (through the Woods Hole Oceanographic Institution), support of the Marine Institute of Biology held at Amoy, China, under the auspices of the Marine Biological Association of China during the summer of 1931, and a grant to the National Academy of Sciences for the work of its committee in aid of research publications.

Approximately 120 fellowships for graduate study in the natural sciences were supported and administered directly through the foundation during 1931. Funds were also contributed to the National Research Council, Washington, for the support of fellowships in the physical and biological sciences, including forestry and agriculture.

**THE SOCIAL SCIENCES.** Contributions were made toward endowments, buildings, apparatus and equipment, or maintenance, in the following universities, institutions, or organizations: East Harlem Nursing and Health Service, New York City; Jean Jacques Rousseau Institute, Geneva; International Institute of Public Law, Paris; Institute of Pacific Relations, Honolulu; International Institute of African Languages and Cultures, London; Joint Vocational Service, New York City; London School of Economics and Political Science; National Catholic School of Social Service, Washington, D. C.; National Institute of Public Administration, New York City; New Education Fellowship, London; Orthological Institute, London; Psychological Institute, University of Vienna, Austria; Royal Anthropological Institute, London; University of Chicago (development of faculty of social science, and graduate school of social service administration); University of Denver (bureau of business and social research); University of Stockholm, Sweden; Welfare Council of New York City.

Research programmes were aided in the following institutions or organizations: American University of Beirut, Syria; American Law Institute (law administration in Federal courts); Australian National Research Council (anthropological research); Behavior Research Fund, Chicago; Dutch Economic Institute, Rotterdam;

Fisk University, Nashville, Tenn.; Harvard University, Cambridge (anthropology); Industrial Relations Counselors, New York City (administrative procedure of employment exchanges, unemployment insurance studies); Institute for International Economics and Maritime Trade, University of Kiel, Germany; Johns Hopkins University, Baltimore (civil justice); Massachusetts Department of Mental Diseases (statistical and record study of the insane in Massachusetts institutions); Rumanian Institute of Social Science, Bucharest; University of Hawaii (racial problems); University of Minnesota, Minneapolis (unemployment studies).

In addition to the above, contributions were made to the Association of Community Chests and Councils, New York City (development and coördination of effective local relief measures in the unemployment crisis); to the Emergency Unemployment Relief Committee, New York City; to President Hoover's Emergency Committee for Employment (demonstration of a plan for family food production in connection with industrial employment); to the Social Science Research Council, New York City, for a summer conference, 1931, and for maintenance of a programme of research planning in the field of international relations.

The foundation administered directly 125 fellowships in the field of the social sciences and made a grant to the Social Science Research Council for its fellowship programme.

**THE HUMANITIES.** In this field the Rockefeller Foundation made grants to the following universities and institutions: American Council of Learned Societies, Washington (fellowships and grants in aid of research); American Library Association, Chicago; American Library in Paris; American School of Classical Studies, Athens, Greece (contribution toward cost of government museum at Lesbos); Columbia University, New York City (general research fund); Tulane University of Louisiana, New Orleans (support of department of Middle American research); University of Pennsylvania, Philadelphia (excavations at Ur of the Chaldees, in collaboration with the British Museum); Yale University, New Haven, Conn. (support of excavations at Jerash and Dura-Europos, Syria).

**ROCKS.** See **GEOLOGY**.

**ROGUE RIVER, BRIDGE AT.** See **BRIDGES**.

**ROLLINS COLLEGE.** A nonsectarian, coeducational institution of higher learning in Winter Park, Fla., founded in 1885. The enrollment for the fall term of 1931-32 was 500, the limit specified by the trustees. The full-time faculty members numbered 49 and part-time members about 25. The productive endowment amounted to \$1,300,000 yielding an annual income of about \$67,000. The income from other sources amounted to approximately \$209,000. The library contained 33,000 volumes, in addition to 4500 public documents.

During the year 1931 the Knowles Memorial Chapel and the Annie Russell Theatre were under construction. There also was inaugurated in the fall of 1931 a new curriculum plan, by which the work of the college was divided into upper and lower divisions. Degrees were to be evaluated no longer in terms of courses, grades, hours, points, or terms of residence, but were to depend upon the acquisition of a specified broad fundamental training and mastery in a field of specialization. President, Hamilton Holt, LLtT.D., LL.H.D., LL.D.

**ROLVAAG, OLE EDVART.** An American educator and author, died in Northfield, Minn., Nov. 5, 1931. He was born in Rolvaag, Helgeland, Norway, Apr. 22, 1876, and went to the United States at the age of 20. He attended Augustana College in Canton, S. D., and St. Olaf College in Northfield, Minn., receiving the B.A. degree from the latter in 1905. After spending a year at the University of Norway he became in 1906 professor of Norwegian language and literature at St. Olaf College, and after 1916 was head of that department. He was the author of *Laengselens Batt* (1921); *I De Dage* (1924); *Riket Grundlaegges* (1925); and *Norsk Laesebok* (3 vols., 1919-25). Translations in English include the novels *Giants in the Earth* (1927), *Peder Victorious* (1929), and *Their Fathers' God* (1931), all of which give a vital picture of frontier life among the Norwegian immigrants of the Northwest.

**ROMAN CATHOLIC CHURCH.** The year 1931 was notable for the series of important Encyclicals and Apostolic Letters promulgated by the Pope, and for his use of the radio world-wide broadcast. From the new Vatican City radio station, HVJ, on February 12, Pope Pius XI delivered a message of peace and benediction to the whole world. He wished the peace of Christ to all and gave his apostolic blessing to the listening nations. He spoke in Latin. Translations of his message were broadcast successively in English, French, German, Polish, and Spanish. The programme was received in the United States by more than 100 stations. The Pope's voice was heard over the radio again on May 15 when, during the celebration of the fortieth anniversary of Pope Leo's "Rerum Novarum," he addressed a great throng of labor pilgrims, who with their Bishops came from almost every country in the world. The American group was led by Bishop O'Hara of Great Falls, Mont.

The first Encyclical was issued on January 8 and reiterated the strict Catholic doctrine on marriage and warned the world to turn from its mad pace back to the paths of Divine law. It severely attacked modern marital theories and birth control (See MARRIAGE AND DIVORCE). This was followed by the Encyclical on the Reconstruction of the Social Order, on May 23; and on Catholic Action, on July 4. The Apostolic Letter on the world's economic troubles, pleading for Christian unity and a return of the world to the veneration of the Virgin Mary, was issued December 26.

On April 24 the Pope caused surprise when he appeared at the inauguration of the new college for the Congregation of the Propagation of the Faith. Only twice before had he set foot outside the Vatican. He blessed the new college buildings and then returned to the church to address the gathering assembled there for the formal opening. In his speech he paid high tribute to Cardinal Mundelein of Chicago, who financed the construction of the new college.

For the first time in history a microphone was placed near the high altar in St. Peter's when the Pope on December 27 officiated at High Mass, Benediction of the Blessed Sacrament, and the chanting of a Te Deum. Only portions of the latter ceremonies were broadcast, the Pope declining to permit the Mass to be transmitted.

The pilgrimage sponsored by the International Catholic Federation of Catholic Alumnae, petitioning the canonization of Mother Elizabeth Ann Seton, foundress of the Sisters of Charity in the

United States, was received in audience by the Pope on July 23. The United States and Canada are represented by seven and nine names, respectively, in the new catalogue of Causes for Beatification and Canonization pending in 1931, published by the Sacred Congregation of Rites. The catalogue contained a list of 551 causes. The process for the canonization of the Indian maid, Catherine Tekakwitha, "the Lily of the Mohawks," was begun at Albany, N. Y. on May 18. A Bull, dated December 16, proclaimed Albertus Magnus a Doctor of the Church and a Saint without the usual formalities.

The Roman Rota had 64 matrimonial cases during the year. Of these, 54 were applications for a decree of nullity. Only in 13 cases was the contract found to be null and void. Rome never annuls a valid consummated marriage.

A census of the Vatican City in 1931 put the population at 639, of whom 550 were residents. Non-resident citizens included all Cardinals living in Rome.

**THE CARDINALS.** Four Cardinals died during the year: Pietro Maffi, Archbishop of Pisa, March 17; Basilio Pompili, the Pope's Vicar-General, May 5; Felix Raymond Rouleau, Archbishop of Quebec, May 31; and Francesco Ragonesi, Prefect of the Tribunal of the Segnatura, September 14. Former Cardinal Louis Billot, S.J., who resigned in 1927, died on December 18 at a Jesuit novitiate where he had retired to spend his last days. No new Cardinals were created during the year. The membership of the Sacred College at the end of 1931 was 55.

**THE HIERARCHY.** The 1931 edition of the *Anuario Pontificio*, showed that there were at that time 1604 residential Sees, 36 Nunciatures and Inter-Nunciatures, and 21 Apostolic Delegations without diplomatic character. Thirty-five nations had diplomatic representations at the Holy See. The Ceremonial Congregation of the Holy See decided that in future all Archbishops and Bishops should be officially styled "Your Excellency." Both Bishops and Archbishops were to be addressed as "Most Reverend" thereafter.

In the jurisdiction of the Propaganda Fide the Pope, through this world headquarters of Catholic missions, erected 17 new ecclesiastical territories and named 21 new ordinaries. China was given two native Bishops, one in the north and one in the south. In the Vicariate of Paoingfu, Fr. Joseph Chow, C. M., was named Vicar Apostolic. Bishop Fourquet of Canton was given an auxiliary in the person of one of the Chinese secular priests of his vicariate, Fr. Boniface Yeung. These two nominations raise the total of Chinese Bishops chosen by Pope Pius XI to thirteen.

The Pope instituted an Apostolic Delegation to Bulgaria at Sofia, appointing Archbishop Angelo Roncalli as Apostolic Delegate. Archbishop Roncalli had resided in Bulgaria since 1925, as Apostolic Visitor. Father Peter Kierkels, head of the Passionists in Holland, was appointed Apostolic Delegate to India, to succeed Archbishop Edward Mooney, who has been transferred to Tokyo. Archbishop Mooney is a native of Mount Savage, Md., and his appointment as Apostolic Delegate marked the first time that an American ecclesiastic had been given such an office. Official statistics showed that there were 46,170 Catholic missionaries working in various parts of the world. This number was made up of 12,959 priests, 5112 Brothers, and 28,099 Sisters. Of

these, 4304 priests, 1315 Brothers and 11,899 Sisters were native missionaries. Missionaries working in the apostolate for more than 30 years numbered 3852.

Changes in the hierarchy of the United States were the death on August 6 of Bishop George A. Guertin of Manchester, N. H.; the appointment of Bishop John G. Murray of Portland, Me., to be Archbishop of St. Paul, Minn.; and the resignations of Bishops J. H. Tihen of Denver, January 12, and James A. Duffy of Grand Island, Neb., July 6. To succeed the former the Rt. Rev. Urban Vehr of Cincinnati was appointed, and the Rev. Stanislas Bona of Chicago for the latter. A new Diocese, embracing the State of Nevada, was created and the Rev. Dr. Thomas K. Gorman of Los Angeles, Calif., appointed its first Bishop. The Rev. Dr. Karl Alter was named Bishop of Toledo, Ohio.

**STATISTICS.** According to population statistics published by *Het Schied*, Dutch Catholic monthly publication, the total population of the world was estimated at 1,850,174,334 and the total number of Catholics 351,839,065, or 19 per cent. The estimates of continents were: Europe, 42.9 per cent; the Americas, 52.1; Australia, 3.2, Africa, 3.8; Asia, 1.7. The 1931 issue of the *Annuaire Pontifical* estimated that in Europe there were 208,882,000 Catholics; in America, 109,097,000; in Asia, 16,536,000; in Africa, 5,330,000, and in Oceania, 1,585,000. In the United States, there is one priest for 800 Catholics and 3900 non-Catholics, and in India one for 860 Catholics and 100,000 non-Catholics.

The Catholic population of the United States proper was 20,091,593, according to *The Official Catholic Directory* for 1931, an increase of 13,391. The number of converts reported was 39,528, a gain of 1296 over the previous year. The priesthood increased by 939, there being 27,854 priests, 8552 of whom were members of religious Orders. There were 4 Cardinals, 16 Archbishops (including the Cardinals), and 104 Bishops, the Bishops being increased by two. Sixty-two new parishes were established, the total number being 12,475. There were 5743 mission churches where services were held. Ten new theological seminaries were established in 1931, the total number being 145, with 17,616 students for the priesthood attending, an increase of 1316. In the educational field, 222 colleges for boys and 725 academies for girls were reported; 7387 free parish schools with an enrollment of 2,283,084, an increase of 162 in the number of schools and 39,463 in enrollment. Six new orphan asylums were established, the total being 335. They cared for 52,328 orphans, 805 more than the previous year. There were 15 more homes for the aged, the total being 157. In hospitalization work there were 18 new hospitals, bringing the total to 642. It was estimated that these institutions were caring for more than 100,000 patients daily.

Fully half of the Catholic population of the United States was in the New England and Middle Atlantic States. Three provinces, Boston, embracing the New England States, New York, including New York and New Jersey, and Philadelphia, comprising the Dioceses of Pennsylvania, accounted for half of the total Catholic population or about 10,000,000. Nearly 3,000,000 were to be found in the New England States, over 4,000,000 in New York and New Jersey, and the balance in Pennsylvania. The last named province had shown the greatest gain among these three in

this 20-year period. The remaining 10,000,000 Catholics lived in the Middle West, the South, and the Far West.

According to *Canada Ecclesiastique* for 1931, the Dominion had 3,997,171 Catholics in 4153 parishes and missions, served by 6807 priests in 45 ecclesiastical divisions: 11 archdioceses, 24 dioceses, six vicariates, one prefecture, and one abbey. The growth was 216,723 in 1930 or 456,835 since 1929. There are five Catholic universities, 12 seminaries, 52 preparatory seminaries, 47 colleges, 1427 academies, 357 hospitals, 51 monasteries, and 96 convents with 35,800 religious.

The *English Catholic Directory* for 1932 gave the Catholic population of England and Wales as 2,235,237, a gain of 29,993. The 4581 priests showed a gain of 97 and the churches of 46. There were 384,129 pupils in the Catholic schools, a gain of 4845. The converts in 10 years numbered 121,372. There were 24 Catholics in the House of Commons.

Despite the unsettled conditions in parts of China, the Catholic population rose from 2,472,619 in June, 1929, to 2,490,392, in June, 1930, a gain of 17,773. The number of foreign priests rose from 2011 to 2092, a gain of 81, and the Chinese priests from 1371 to 1446, a gain of 75. The actual converts totaled 50,109. The young Chinese studying to become priests in the preparatory seminaries totaled 1463; in the minor seminaries, 2745 (as against 2465 in 1929); and those in the major seminaries, 921 (as against 838 in 1929), the total increase in students for the priesthood being 346.

The Sisters of Mercy throughout the world celebrated the centenary of their congregation which was founded on Dec. 12, 1831, in Dublin, Ireland, by Mother Mary Catherine McAuley. The world membership in 1931 was more than 20,000. The Sisters were introduced into the United States in 1843, their number in 1931 being more than 9000.

The Jesuits in the United States increased 214 in the year 1930. The total number was 4231. Of this number, 1101 belonged to the Maryland-New York province, an increase of 38 over the previous year; 798 to the Missouri province, an increase of 35; 716 to the California province, an increase of 52; 646 to the Chicago province, an increase of 41; 621 to the New England province, an increase of 32; and 349 to the New Orleans province, an increase of 16. Although the Jesuits in the United States aggregated only about one-fifth of the total number of Jesuits in the world, their increase in the year was 214, or almost half of the total increase of Jesuits in the world, which was about 450. The total number of Jesuits throughout the world was 22,337. Of this number the Italian assistancy had 1879; the German, 3069; the French, 2953; the Spanish, 5269; the English, 3639; the American, 4231; and the Slavic, 1297. The Society's largest membership was really in the United States, as the Spanish assistancy included Portugal, Mexico, and some of the South American countries.

The conflict between the governments and the Church in Spain and in Mexico broke out again with extreme violence as the year ended. In Mexico, however, thousands of pilgrims from all parts of the country flocked to the Basilica of Our Lady of Guadalupe, on the outskirts of Mexico City, for the celebrations, held from December 1 to 12, 1931, to commemorate the fourth centenary of the Apparition of Our Lady of Guadalupe.

**EDUCATION.** A total of 2,662,000 students began the 1931-32 scholastic year in 10,588 Catholic institutions of learning in the United States, according to an estimate made by the department of education of the National Catholic Welfare Conference. There were approximately 2,258,000 pupils in the 7912 Catholic elementary schools; 260,000 students in 2254 Catholic high schools; 10,000 students in 67 normal schools; 114,000 students in 167 colleges; and 20,000 students in 188 Catholic seminaries. These Catholic schools had a total of 89,981 instructors. These figures represented about one-eleventh of all those attending schools in the United States in 1930-31, if the figures of the Federal Office of Education are accepted.

A total of 18,906 students were enrolled in the major and preparatory seminaries of the United States in the school year ended in June, 1930, an increase of more than 1500 students. "Major seminaries" are institutions of collegiate rank. In 1930, there were 98 Junior seminaries preparing students for the priesthood, 59 for the various Religious Orders, 26 for secular priests, and 13 for both fields of religious work. The 98 major seminaries had 860 instructors, and the total number of students was 7633, of whom 2959 were studying for Religious Orders and 4674 for the secular priesthood. The total number of ordinations reported by the 98 major seminaries in 1930 was 902. The 90 preparatory seminaries had 1089 instructors and were attended by 11,273 students. These seminaries graduated 1453 students, of whom 940 entered major seminaries.

**CONVENTIONS AND MEETINGS.** At the annual general meeting of the Bishops of the United States at the Catholic University, Washington, November 12-13, there were present two Cardinals, eight Archbishops, and 68 Bishops. The "unbridled race for armament" and the "avarice of human nature" were denounced as contributing causes of unemployment in a statement by the Bishops.

International group meetings for the discussion of religion were more frequent, and in November the National Commission on Better Understanding between Jews and Christians in America honored Archbishop Hanna of San Francisco by conferring upon him the American Hebrew Medal, awarded to the "Christian who has done most during the past year towards establishing better understanding between various denominations in the United States." The national conventions and conferences—including the National Council of Catholic Men meeting in Rochester in conjunction with the Catholic Conference on Industrial Problems, the National Council of Catholic Women gathering in Washington October 4-7, the Rural Life Conference in Wichita, October 20-22, the Catholic Central Verein in Baltimore, in August, the Franciscan Tertiaries, in San Francisco, August 9-12, the Laymen's Retreat movement in Latrobe, Pa., the Catholic Educational Association in Philadelphia June 22-25, and the National Catholic Alumni Federation in Chicago April 24-26, all indicated Catholic virility throughout the United States. At St. Louis, Mo., the application of Catholic principles to the improvement of the economic and social condition of the colored population in the United States formed the subject of illuminating papers and discussions at the seventh annual convention of the Federated Colored Catholics of the United States, September 5-7.

The total amount expended for charity by the Society of St. Vincent de Paul in the United States in the year ended September 30 was \$3,331,290. There are in the United States 15 provinces, nine Metropolitan Central councils, six Diocesan Central councils, 69 Particular councils, and approximately 1600 conferences of the Society, with an estimated active membership of 20,000. See VATICAN CITY; KNIGHTS OF COLUMBUS; SPAIN, MEXICO, LITHUANIA, IRISH FREE STATE, BOLIVIA under *History*.

**ROSE, WICKLIFFE.** An American medical and educational administrator, died near Port Alberni, B. C., Canada, Sept. 5, 1931. He was born in Saulsbury, Tenn., Nov. 10, 1862, and was graduated from the University of Nashville in 1889. After acting as instructor in history and mathematics at the Peabody Normal College during 1891-92, he was appointed professor of philosophy at that institution and the University of Nashville, and in 1902 accepted the chair of history and philosophy of education at the University of Tennessee. He was dean of Peabody College and the University of Nashville during 1904-07, general agent of the Peabody Educational Fund during 1907-15, and executive secretary of the Southern Education Board during 1909-13. He also served during 1910-15 as administrative secretary of the Rockefeller Sanitary Commission. From 1913 to 1928 he was a member of the Rockefeller Foundation, acting as general director of the International Health Board (through which the Foundation assists various public health projects throughout the world) during 1913-23 and as president of that division and of the General Education Board during 1923-28.

**ROTARY CLUBS.** Organizations established for the purpose of developing the highest ideal of unselfish service; of making practical application of that ideal to the business and professional life of the individual members, to organizations of which they may be members, and to the communities and nations in which they live; and of advancing international peace and goodwill through a fellowship of business and professional men of all nations united in the ideal of service.

Membership in the clubs is limited to one representative of each business, profession, or institution in a community.

The twenty-second annual convention of Rotary International was held June 22-26, 1931, in Vienna, Austria. There were 4288 Rotarians and members of their families present, representing Rotary clubs in 57 countries. The 1932 convention was to be held in Seattle, Wash., June 20-24.

On Nov. 1, 1931, Rotary International consisted of 3472 clubs, with an approximate membership of 157,000. There were 2439 clubs in the United States, 110 in Canada, 355 in Great Britain and Ireland, and 568 in other parts of the world. Officers for 1931-32 were: President, Sydney W. Pascall, London, England; first vice president, Robert E. Heun, Richmond, Ind.; second vice president, Biagio Borriello, Naples, Italy; third vice president, John Nelson, Montreal, Quebec, Canada; secretary, Chesley R. Perry, Chicago, Ill.; treasurer, Rufus F. Chapin, Chicago. Headquarters of Rotary International are at 211 West Wacker Drive, Chicago, Ill., with a branch office at 74 Bahnhofstrasse, Zurich, Switzerland.

**ROWING.** A fighting Navy crew swept down the river at Poughkeepsie to win the collegiate rowing title over that gruelling four-mile course. Washington, Columbia, Cornell, and Syracuse had come to Poughkeepsie undefeated and with California that had only been nosed out by Washington for the Pacific Coast title were favorites in the nine-shell field. Navy had lost all except one of its early season races. Following Washington down the first three miles Navy jumped the Westerners and with Cornell second and Washington third the race ended. California, Syracuse, Pennsylvania, Columbia, Wisconsin, and M.I.T. followed over the rain-swept course.

A powerful Harvard crew, the only unbeaten one of the year, swept home ahead of Yale at New London winning by two and a half lengths. The big Crimson boat, stroked by Gerard Cassedy, pulled away in the early part of the race and easily staved off the exhausting last-mile challenge by the Blue. The Harvard crew, coached by Charles Whiteside, was the first undefeated Crimson boatload since 1908. The Yale 150-pound crew was the leading and undefeated lightweight crew, winner of the American Henley (the Wright Cup), and traveled to Seattle to outrow the University of Washington lightweight boatload by three and a half lengths.

Columbia, a disappointment at Poughkeepsie, won the Blackwell Cup on the Harlem, defeating Yale and Pennsylvania. The Blue and White also won the Childs Cup for the fourth time in the annual race with Princeton and Pennsylvania. Cornell, 1930 champion, and hailed as the best boat of the year until the Navy triumphed at Poughkeepsie, won the Carnegie Cup in the annual Derby Day regatta on the Housatonic from Yale and Princeton. Early in the season Harvard won a triangular race with M.I.T. and Princeton, and later defeated Navy and Pennsylvania on the Charles. Navy also succumbed to Syracuse in an early race on the Severn.

The Penn Athletic Club senior eight, a crew that had been rowing together for three years, easily took senior honors on the Schuylkill, and

this crew, stroked by Chester Turner, loomed as a serious contender for Olympic honors in 1932. It also took honors at the annual regatta of the National Association of Amateur Oarsmen. The senior four-oared championship was won by the Bachelors' Barge Club. William G. Miller of the Bachelors' won the national sculling title, with Kenneth Myers, former champion, second, and Russell Codman, Jr., of Boston, third. Ted Phelps of England captured the world's professional championship and Bobby Pearce, of Hamilton, Ontario, won the Diamond Sculls at Henley. The No. 1 crew of the London Rowing Club won the Grand Challenge Cup. Cambridge won the Oxford-Cambridge race in March.

**RUANDI-URUNDI.** See CONGO, BELGIAN.

**RUBBER.** With continuing large production and diminished consumption of rubber in 1931, the price of crude rubber declined during the year to a new low point for all time, reaching 4.1 cents a pound in New York early in December. The excess of production over consumption resulted in a gain in world stocks, as shown in the accompanying table.

PRINCIPAL WORLD RUBBER STOCKS  
[Long Tons]

	Dec. 31, 1930	Dec. 31, 1931
Malay States .....	25,837	30,083
Straits Settlements Dealers .....	39,610	50,721
Other Malay Dealers .....	15,082	21,136

French Indo-China .....	11,696
Amazon Valley .....	12,121
Other America .....	222
Africa .....	3,072
Total .....	792,055

According to *Commerce Reports*, the production for the Malayan states in 1931 was maintained close to the level of the two preceding years in the case of estates of over 100 acres, while the native estates showed about the same output as in the previous year. In Ceylon it was estimated that the large estates had cut their production about 50 per cent since 1929, while in Java and Sumatra there was a somewhat higher rate of production in 1931 than in previous years. In British India there was a sharply declining output during 1931, while French Indo-China ex-

ported more rubber for that year than for 1930.

Strenuous efforts were being made to develop some form of restriction of production in the Far East so as to secure a basis at which the plantations could operate. Any such plan must include the Dutch as well as the British producers, as previously the failure to include owners of plantations in the Netherland East Indies led to the lack of success of the so-called Stevenson plan which was in force from 1922 to 1928. It was realized in the meetings of the liaison committee of the British and Dutch growers that the native producer was the source of the greatest difficulty in arranging any scheme, and it was believed that some form of export tax might be developed which would bear on him as well as on the other plantation owners. However, up to the end of 1931 no agreement had been reached between the British and Dutch governments.

During 1931 the world consumption of rubber declined, although Japan and Czechoslovakia increased their takings on account of the development of the rubber footwear industry, while Soviet Russia imported 30,671 tons as against 12,229 tons in 1930. Australia increased its takings, as did Austria and Argentina, but France showed a decline as did Germany, Canada, Italy, and the Scandinavian countries.

Consumption (in long tons) by countries in 1931 is indicated in the accompanying tabulation of the U. S. Department of Commerce.

Consumption	1931 Long tons
United States .....	352,047
United Kingdom .....	76,583
<i>Net Imports.</i>

The production of pneumatic casings, tubes, and solid tires in 1931, compiled by the statistical department of the Rubber Manufacturers' Association and comprising returns from 80 per cent of the industry, indicated a considerable decrease in output from 1930. This is shown in the following tabulation for production and shipments covering the two years:

#### PNEUMATIC CASINGS, TUBES, SOLID TIRES

	Production		Shipments	
	1931	1930	1931	1930
Balloon Casings .....	83,445,806	83,878,514	84,084,198	84,989,030
High Pressure Casings .....	5,546,914	6,908,864	5,964,854	7,974,078
Total Casings .....	88,992,220	40,782,378	40,048,552	42,913,108
Balloon Inner Tubes .....	31,352,440	32,077,485	32,112,341	38,847,719
High Pressure Inner Tubes .....	7,313,986	8,858,573	7,904,834	10,104,515
Total Inner Tubes .....	38,666,376	41,936,008	40,017,175	43,952,234
Solids and Cushions .....	186,261	204,280	167,556	250,798

The foreign commerce of the United States in rubber and rubber manufactures materially decreased in 1931, the exports falling from \$58,906,299 in 1930 to \$36,710,910 in 1931. As usual, pneumatic tires for trucks, busses, and other automobiles, amounting in all to \$19,676,519, supplied over half of the exports. The dollar value of these shipments declined from \$29,444,527, in 1930, while the amount suffered a decrease of 27 per cent or from 2,680,573 casings for 1930 to 1,954,865 in 1931.

Likewise, the imports of rubber and rubber manufactures fell on the basis of value from \$144,297,899 in 1930 to \$76,373,699 in 1931. Of this amount, crude rubber represented the greater amount, having a value in 1930 of \$140,641,834, which declined to \$73,803,304 in 1931. When it is stated that the quantity in 1931 was 1,124,003,278 pounds or 501,341 tons, a greater amount than 1,089,920,700 pounds or 487,317 tons in 1930, the shrinkage in value is apparent.

The United States led in the export of automobile casings in 1931 when the total exports were estimated at 6,298,834, as compared with 8,301,451 in 1930 and 9,533,948 in 1929. Other leading countries in 1931, in the order of their foreign shipments, were: the United Kingdom, 1,166,792; France, 1,020,490; Canada, 741,804; Belgium, 498,179; Germany, 190,871, and Japan, 155,100.

The total importations of crude rubber into the United States during the calendar year 1931 totaled 495,163 long tons as against 488,343 tons in 1930 and 561,454 tons in 1929. Of this amount, 489,351 tons was plantation rubber, 5615 Paras, 196 African, and 1 centrals.

Along with the increased imports went a gradual decline in prices throughout the year with but a few recoveries. Ribbed, marked sheets closed the year 1931 around 4½ cents a pound as against 8½ cents at the end of 1930. For other grades the spread was practically the same, No. 1 thin latex being 5⅞ cents against 9 cents; No. 2 amber, 4¾ cents as against 7¾ cents; No. 1 brown 4¾ cents as against 7¾ cents, and Up-River fine para 5½ cents against 11½ cents. For purposes of comparison it may be stated that in July, 1925, similar grades sold from 78 cents to \$1.23 a pound.

The consumption of crude rubber in the United States in 1931 amounted to 352,047 tons, showing a decrease from 375,980 tons, or some 6½ per cent from 1930. See PHYSICS; CHEMISTRY, INDUSTRIAL.

**RUBIO, ORTIZ.** See MEXICO under *History*.

**RUINS.** See ARCHÆOLOGY.

**RUMANIA.** A constitutional monarchy of southeastern Europe; bounded on the south by the Danube River and Bulgaria; on the east by the Soviet Union and the Black Sea; on the north by Poland, Czechoslovakia, and Hungary, and on the west by Yugoslavia. Capital, Bucharest; reigning sovereign in 1931, Carol II.

**AREA AND POPULATION.** Before the World War

Rumania had an area of 53,242 square miles and an estimated population of 7,904,104 (1915). New territories acquired by the peace treaties of 1919 increased the area to 122,282 square miles and the population to 17,393,140. The estimated population in 1930 was 18,326,000. For the five-year period 1924-28, births averaged 612,649 and deaths 372,487 annually. The chief cities, with their populations in 1927, are Bucharest, 875,000; Chişinău (Kishinev), 175,000; Cernăuți (Czernewitz), 175,000; Galaţi, 130,000; Ploesti, 115,000; Timisoara, 110,000; Iaşi (Jassy) and Cluj (Klausenburg), 110,000 each.

**EDUCATION.** Education is nominally free and compulsory, but in many districts there are no schools. In the fiscal year 1927-28, there were 14,123 elementary schools, with 1,600,098 pupils; 924 secondary schools, with 185,780 pupils; and 15 higher educational institutions, with 30,892 pupils. There were in addition four universities at Bucharest (7532 students), Iaşi (3584 students), Cluj (about 2000 students), and Cernăuți.

**PRODUCTION.** Rumania is primarily an agricultural country, with three-fourths of the population deriving a livelihood from the soil. Arable land in 1929 comprised 32,150,000 acres, or 44 per cent of the total area; there were 10,019,000 acres of permanent meadow and pasture; 1,516,000 acres of trees, shrubs, and bushes; and 17,851,000 acres of woods and forests. About 38 per cent of the entire area was planted to cereals. The 1930 yield of the five principal cereals was 11 per cent below the unusually good crop of 1929, but 33 per cent above the five-year average of 1923-27. Low prices for agricultural products and high interest rates made the condition of Rumanian peasants increasingly critical in 1930 and 1931. The chief crops were wheat, rye, barley, oats, corn, potatoes, beet sugar, wine, and tobacco. See AGRICULTURE under *World Agriculture*; UNEMPLOYMENT.

Rumania in 1930 ranked second to Russia among the oil-producing countries of Europe and fifth among the countries of the world. Production in 1930 was estimated at 41,680,000 barrels (34,689,000 barrels in 1929). An agreement reached in July, 1930, for the restriction of the crude-oil output was terminated at the end of the year due to friction between producers and refiners. The exploitation of natural-gas resources was made a state monopoly during 1930. Production of other minerals in 1929 was: Lignite, 2,675,000 metric tons; coal, 371,000 tons; salt, 708,779,000 pounds; iron ore, 90,014 metric tons; pig iron, 72,346 metric tons; copper, 316,294 pounds; steel, 144,000 metric tons (1928); gold, 71,149 troy ounces; silver, 90,729 troy ounces.

The lumber industry of Rumania, which has some 17,844,000 acres of forest lands, is the third important source of income. It was badly depressed in 1930, due chiefly to Russian competition. Flour milling, distilling and brewing, textile manufacture, and metallurgy are the leading industries.

**COMMERCE.** Rumania's foreign trade for 1930 returned a relatively large favorable balance of \$35,608,000, with imports totaling \$134,119,000 (22,540,929,000 lei) as compared with exports of \$169,727,000 (28,525,585,000 lei). Comparative figures for 1929 were: Imports, \$175,207,000 (29,397,216,000 lei); exports, \$172,528,000 (28,947,619,000 lei). There was an adverse balance in 1929 of \$2,698,000 (449,597,000 lei). The

favorable balance of 1930 was due to a 24 per cent drop in the value of imports. Exports declined less than 2 per cent in value, although the volume was 30 per cent greater than in the previous year.

The five leading export items in 1930 in millions of lei, with figures for 1929 in parentheses, were: Petroleum products, 10,437.8 (9628.7); cereals, 9992.3 (8866); wood products, 3094.7 (4679.4); live animals, 1878.4 (1993.6); edible animal products, 1068.2 (891.2).

**FINANCE.** As published in the *Official Monitor* of Dec. 31, 1930, the Rumanian budget for the fiscal calendar year 1931 balanced tentatively at 35,305,954,000 lei (about \$211,835,724 at par). This represented a reduction of 2,144,046,000 lei from the budget estimates for 1930, which included, however, an item of 1,768,520,000 lei for the payment of past-due claims.

On the basis of 1930 budget operations, a deficit of 3,426,000,000 lei was anticipated for 1931. Provision was made to cover this by reductions in salaries of Government officials amounting to the same sum. The 1931 appropriation for national defense was higher than the 1930 appropriation by 1,111,330,000 lei, or 11 per cent.

Actual receipts in 1930 totaled 30,846,996,000 lei (about \$185,081,976), or 6,603,004,000 lei (\$39,618,000) below the budget estimate for the year of 37,450,000,000 lei. While no figures for actual expenditure were available, the deficit for the year was officially estimated at 2,000,000,000 lei (\$12,000,000). This was partly offset by an advance of \$8,000,000 received from the International Telephone and Telegraph Company in return for the transfer of the state-owned telephone system to the company in January, 1931. In April, 1931, the second installment of a stabilization loan for the nominal amount of \$53,000,000 was obtained from a foreign banking syndicate, in which French interests predominated. The loan was guaranteed by the revenues of the Autonomous Monopolies Institute. The nominal proceeds of the loan amounted to \$42,000,000, most of which was earmarked for the organization of a central agricultural mortgage bank and of a short and medium-term credit bank to relieve financial stringency among the farmers. According to the official budget statement, the public debt on Jan. 1, 1930, totaled \$1,021,690,000, of which \$917,176,000 was external. The debt due the U. S. Government amounted to \$64,561,000 on Dec. 31, 1930.

**COMMUNICATIONS.** All Rumanian railway lines, except a few unimportant ones, chiefly in Transylvania, are state owned and operated. In 1929, there were 6915 miles of state railways, which carried 37,199,000 passengers and 21,557,000 metric tons of freight, with gross receipts equivalent to \$65,118,000. In accordance with the financial stabilization programme adopted in 1929, some 850 miles of track were relaid in 1930, more than 200 miles were double-tracked, and various other extensions as well as the reform of administrative and accounting systems were undertaken.

In January, 1931, the state-owned telephone system was transferred to the International Telephone and Telegraph Company under a concession granted the company on July 3, 1930. The system comprised over 80,000 miles of line connecting more than 50,000 telephones.

**GOVERNMENT.** Under the constitution of Mar. 28, 1923, which nationalized all forests and sub-

soil, executive power is vested in the King and a council of ministers, the King having a suspensive veto over the laws passed by parliament; and legislative power is vested in a senate, consisting in 1931 of 199 elected and various *ex officio* and appointed members, and a lower chamber, with 387 members. The composition of the Lower House following the election of December, 1928, was as follows: National Peasant party, 324; Hungarian group, 16; National Liberals, 13; Social Democrats, 9; German group, 9; Jewish groups, 3; minor parties, 13. The Senate consisted of 199 elected members, divided as follows: National Peasants, 160; National Liberals, 26; Hungarian group, 6; Jews, 5; Independents, 2. The Cabinet formed by George G. Mironescu (National Peasant) on Oct. 10, 1930, was in office at the beginning of 1931. The Cabinet formed Apr. 19, 1931 (see below under *History*), was composed of: Prime Minister and Minister of Education, Nicholas Jorga; Finance and Internal Affairs, Dr. Constantine Argetoniu; Foreign Affairs, Prince Demetre Ghyka; Justice, Dr. C. Hamangiu; Public Health, Dr. Cantacuzino; Commerce and Industry, M. Manolescu; Transport, M. Valcovici; Agriculture, Ionescu Sisesti; War, M. Stefanescu-Amza.

### HISTORY

Rumanian political history in 1931 was marked by the emergence of King Carol II as the most powerful factor in the country. Displaying unsuspected initiative and a shrewd opportunism, he not only divested himself of the political tutelage of the National Peasant party leaders, but he drove from power the strong peasant organization to which he owed his throne. Within a year after his spectacular return to Bucharest on June 6, 1930, he had established a puppet government headed by his former tutor, Professor Nicholas Jorga, and laid the foundations for the establishment of a dictatorship on the Yugoslav model.

**MIRONESCU FORCED OUT.** The circumstances which brought George Mironescu to the head of the Government in October, 1930, in succession to Premier Julius Maniu, leader of the National Peasant party, were largely the same as those which forced his resignation on Apr. 4, 1931. The National Liberal party leaders, who controlled the economic life of the old Kingdom, had taken advantage of the economic depression and their ownership of the banks to manoeuvre Maniu into a critical parliamentary position. Rumanians of the old Kingdom, including the King, resented the influence in the Cabinet of men from Transylvania and the other provinces acquired by the peace treaties. And finally, dissensions among his own followers and the refusal of Carol to accept a reconciliation with Queen Helen except on his own terms made Premier Maniu's position untenable.

The National Peasant party, however, held an overwhelming majority in the National Assembly and Carol was not yet ready to put into effect his plans for a personal government. Accordingly he called upon Mironescu, Minister of Foreign Affairs in the Maniu Cabinet, to form a new Ministry. At Carol's request, Mironescu included in his Cabinet as Minister of Industry one of the King's close adherents, Mihai Manolescu. Confronted by the identical forces which had vanquished Maniu, Mironescu was soon on the defensive. With great difficulty he secured Par-

liament's approval of a \$53,000,000 loan from France, the contract for which was signed at Paris, March 10. On April 4 came the opportunity for which the King had apparently been waiting. M. Manolescu introduced a measure providing for government participation in a Transylvanian explosives factory, which was rejected by the National Assembly. Urging Manolescu not to withdraw his resignation, the King rejected all the candidates proposed by Premier Mironescu to fill the vacant post. The entire Cabinet was thus forced to resign.

The King then summoned Nicholas Titulescu, Minister to the Court of St. James's, and instructed him to form a Ministry embracing representatives of all parties. If this should prove impossible, Titulescu was authorized to organize a "ministry of personalities" without reference to parties, which meant a dictatorship. To the surprise of the King, M. Titulescu won the support of both the National Peasants and the National Liberals, the two most powerful and mutually antagonistic parties in the country. On April 17, Carol approved M. Titulescu's list of Ministers, but withdrew his approval the following day because Titulescu refused a last-minute demand from the King to include in the Cabinet, C. Argetoniu, a well-known advocate of dictatorship. The King then summoned Professor Jorga, who in a few hours presented a Cabinet which included a number of the King's partisans but no Transylvanians or members of the National Peasant party (see under *Government* above).

**THE JORGA RÉGIME.** While Carol's adherents among the army officers were promoted to key posts and military men were gradually introduced into civil administrative positions, Premier Jorga proceeded to destroy the National Peasant party majority in Parliament. On April 30, he dissolved Parliament by Royal decree, without giving it an opportunity to vote upon his Cabinet or allowing Opposition leaders to speak. New elections for the Chamber were announced for June 1 and for the Senate for June 4. Jorga's pronouncement in favor of the administrative reorganization of the government on a basis of centralism and his statement that rights of the Crown withdrawn in preceding years would be fully restored aroused fears of absolutism and dictatorship.

In the elections of June 1 and 4 the Jorga Government supporters secured 291 seats out of the 387 seats in the National Assembly and won all except two mandates in the Senatorial district elections. The victory was due partly to the manipulation of the election machinery and partly to a peculiar election law, which gave 75 per cent of all seats to the party polling at least 40 per cent of the votes. The Jorga bloc secured about 48 per cent of the votes cast, the National Peasant party about 15 per cent, or 27 seats, and the remainder were divided among nine other parties. The Government built up a "national union" combination, selecting 60 per cent of its candidates from professional organizations and other nominally non-political supporters and naming the other candidates from persons making an electoral agreement with the Government. The Liberal party entered the coalition on the promise of 80 seats in the Assembly and 20 in the Senate regardless of the voting. The German party and various Jewish organizations were enlisted on a similar basis. In addition, Government decrees forbade campaigning except on Sun-

day and then written permission of Government officials was required. Many Peasant party leaders were arrested and the Government was accused of wholesale frauds.

In his speech from the throne at the opening of the new Parliament June 16, Carol sharply criticized the previous Peasant party governments and stated frankly that the election had given him a much-desired opportunity to play a greater part in the government. The resignation of Emil Haciegan, Minister for Transylvania, on June 17 and the withdrawal of his 11 followers from the Government bloc destroyed Premier Jorga's majority in the National Assembly. The Premier retrieved the situation by declaring invalid the mandates of the five Communist deputies, the pretext being that one of the five was a Hungarian subject, and dividing the vacant mandates among his own and other parties. Angered by their treatment at the hands of the King and the Government and the dominance of a small court clique, former Premier Maniu, General Averescu, and several other Opposition leaders announced their retirement to private life. The National Peasant party executive committee, meeting at Cluj on July 5, declined to accept Dr. Maniu's resignation as leader.

Faced with an economic crisis probably more severe than that of Austria or Hungary, and a budget deficit estimated at \$72,000,000, the King in September abandoned the economic system based on a high protective tariff for Rumanian industries and undertook the reduction of wage levels, retail prices, rents, and transportation costs. In preparation for this move, he appointed his right-hand man, Minister of Commerce Manoilescu, to the presidency of the National Bank on July 14, the ministerial post being filled by Vasilescu Carpen. The King entrusted his new programme to Premier Jorga and Finance Minister Argetoianu. The Premier, however, declined to play the subordinate rôle selected for him by the King and friction developed which was believed to presage the fall of his Ministry. The seriousness of the economic situation was indicated by a run on Marmarosch, Blank & Co., Rumania's largest bank, which was forced to close its doors on October 21 for five days. On December 4, the King summarily removed M. Manoilescu from the presidency of the National Bank. On Dec. 28, 1931, it was learned that the National Bank had received a credit of \$10,000,000 from the Bank of France.

Political unrest increased along with the economic depression, and in well-informed quarters Carol's throne was considered in danger. Toward the end of July a number of railway trains were bombed and 200 suspected Communists were arrested in a general police roundup.

**THE ROYAL FAMILY.** The long uncertainty over the status of Carol's divorced wife, Queen Helen, mother of Prince Michael, was ended on July 17, when she left Bucharest for London to join her mother, Dowager Queen Sophie of Greece. All members of the royal family except Carol and her son were at the station to bid her farewell. Helen had previously renounced the title of Queen, and was thereafter known as Princess Helen of Rumania. An adequate income was said to have been assured her by the Government. It was reported that Carol was much under the influence of Mme. Magda Lupescu, his companion during his exile, who had returned to Bucharest despite the strong opposition of influential Rumanian

opinion. Subsequent to Princess Helen's departure, the King announced that their divorce was final and that there was no possibility of a reconciliation. Princess Ileana, the King's youngest sister, was married to Archduke Anton of Hapsburg at Sinaia on July 26, having first embraced the Roman Catholic faith. Her husband was a distant relative of ex-King Alfonso of Spain.

On November 9, the Associated Press reported that Carol's younger brother, Prince Nicholas, had eloped with Mme. Jana Lucia Deletj, the divorced wife of a country lawyer, and had been married by the Mayor of Tohan. King Carol was said to be greatly displeased and two days later Government officials ordered the destruction of the marriage register at Tohan.

**FOREIGN RELATIONS.** Rumania under King Carol became increasingly bound to France by financial and political ties, much to the dissatisfaction of National Peasant party leaders, who had sought to make the country more independent of foreign guidance. It was officially confirmed on June 17 that negotiations with the Soviet Union for a settlement of the Bessarabian question were again proceeding. Discussions regarding Russia's claim to the Province were opened under French auspices in the autumn of 1930 but were abandoned when Rumania demanded recognition of her title to Bessarabia as a condition to the resumption of diplomatic relations. A commercial agreement between Rumania and Germany was signed June 26, 1931, by which Germany granted tariff reductions of 50 and 60 per cent on Rumanian corn and barley, respectively, in return for lower Rumanian import duties on over 300 manufactured products imported principally from Germany. For the Balkan Conference, in which Rumania participated, see **TURKEY** under *History*. See also **FRANCE** under *History*; **LITTLE ENTENTE**.

**RUM ROW, RUM RUNNING.** See **PROHIBITION**.

**RURAL HYGIENE.** See **AGRICULTURE**.

**RUSINOL Y PRATS, SANTIAGO.** A Spanish author and painter, died in Aranjuez, Spain, June 13, 1931. Born in Barcelona in 1861, he studied sculpture and painting under Clarassó, Canudas, Utrillo, and Zuloaga. His paintings won awards in Paris, Chicago, Barcelona, Rome, and Venice. Commencing his literary career in 1890 with the monologue *L'home de orga*, he published the plays *L'aligria que passa* (1898, staged in 1901); *I Llibertat! La mare; La bona gent; El mistic*. Also the prose works *Anant el mon* (1896); *Oracions* (1897); *Fulls de la vida* (1898). Written in Catalan, these were translated into Spanish, French, and other languages.

**RUSSELL SAGE FOUNDATION.** An institution created by Mrs. Russell Sage as a memorial to her husband, and incorporated by the Legislature of the State of New York in 1907 for the improvement of social and living conditions in the United States. Its initial endowment was \$10,000,000, to which \$5,000,000 was added by Mrs. Sage's will.

The charity organization department studies and publishes in the field of social case work and family welfare. Two important pamphlets published during 1931 were *Emergency Relief in Times of Unemployment* and *Community Planning in Unemployment Emergencies*. The industrial studies department cooperated especially during 1931 in efforts to improve current statistics of employment and to develop uniform pro-

cedure in the United States. The department of recreation studied during the year the changing phenomena brought about by the increase of individual free time and planned for filling such time with wholesome and constructive recreation. The department of surveys and exhibits is concerned with community fact-finding and with the spread of information about social problems and social work.

The department of remedial loans during 1931 concerned itself largely in survey and consultant work in connection with the 215 bills affecting small loans introduced in the Legislatures of 40 States. The department of statistics provided a unique and nearly complete record of monthly relief expenditures through its plan of current monthly collection and study of relief statistics covering 81 cities of over 100,000 population in the United States and Canada. The foundation also published during the year the *Social Work Year Book* (vol. i) and *Labor Agreements in Coal Mines* and issued bibliographies on such subjects as "Social Surveys," "Cost of Medical Care," "Unemployment," "Child Welfare," "Interviewing and Case Recording," and "Crippled Children."

The trustees of the foundation in 1931 were: Lawson Purdy, vice president and treasurer; John M. Glenn, secretary; Johnston de Forest; Frederic A. Delano; John H. Finley; Mrs. Frederic S. Lee; Mrs. Finley J. Shepard; and Harold T. White. Shelby M. Harrison was general director. Headquarters are at 130 East Twenty-second Street, New York City.

**RUSSIA.** See UNION OF SOVIET SOCIALIST REPUBLICS.

**RUSSIAN LITERATURE.** See PHILOLOGY, MODERN.

**RUTGERS UNIVERSITY.** A nonsectarian institution of higher learning in New Brunswick, N. J., founded under the name of Queen's College in 1766. The university consists of the following schools and colleges: Arts and sciences, engineering, agriculture, pharmacy, chemistry, education, and New Jersey College for Women. The registration for the autumn of 1931 was 2778, of whom 1084 were registered at the college for women. Enrollment in the 1931 summer session was 2026. Of the 297 members of the faculty, 176 were professors and 121 instructors. The endowment funds amounted to \$4,350,000, and the income for the year, exclusive of the State agricultural experiment station, amounted to \$2,873,000. Lands, buildings, and endowments had a total valuation of more than \$17,600,000. The library contained 173,000 volumes. In June, 1931, a division of physical education, which included the departments of physical education, inter-collegiate athletics, and student health, was established. A gymnasium, erected at a cost of \$700,000, was opened in December of that year. Acting President, Philip M. Brett, LL.D.

**RUTHENIA.** A Province of Czechoslovakia. See CZECHOSLOVAKIA under *Area and Population*.

**RYDBERG,** ríd'bërg, PËR AXEL. An American botanist, died in New York City, July 25, 1931. He was born in Odh, Sweden, July 6, 1860, and was graduated from the Royal Gymnasium in Skara in 1881 and from the University of Nebraska in 1891, later receiving the Ph.D. degree from Columbia University in 1898. He became assistant curator in 1899 and curator in 1907 of the New York Botanical Gardens. His publications include monographs on *Physalis*, *Potentil-*

*les*, *Saxifraga*, *Rosacæ*, *Carduacæ*, and *Fabacæ*; *Catalogue of the Flora of Montana and the Yellowstone National Park* (1900); *Flora of Colorado* (1906); *Flora of the Rocky Mountains and Adjacent Plains* (1917); and *Key to the Rocky Mountain Flora* (1919).

**RYE.** The world's rye production in 1931 was reported as one of the lowest in the past 10 years due to a reduction in area of about 3,000,000 acres and to a loss in yield in many of the larger European producing countries as a result of bad weather during ripening and harvest time. The production of 24 countries, not including the Soviet Republics but including the 1931-32 crop of Argentina, according to estimates published by the International Institute of Agriculture was 802,947,000 bushels as compared with 980,031,000 bushels in 1930, a reduction of 18.1 per cent and less by 13 per cent than the average crop for the five years 1925-1929. The area in these countries was reduced from 48,155,000 acres in 1930 to 45,358,000 acres in 1931. In Europe production as compared with the preceding year diminished by about 164,000,000 bushels and by approximately 115,000,000 bushels in comparison with the five-year average. The production of the leading countries in 1931 exclusive of the United States was reported as follows: Germany, 202,982,000 bushels; Poland, 222,826,000 bushels; Czechoslovakia, 50,498,000 bushels; France, 31,013,000 bushels; Hungary, 21,574,000 bushels; and Belgium, 21,135,000 bushels. The average yield for the five-year period of the Soviet Republics was reported as 873,285,000 bushels produced on the corresponding acreage of 66,620,000 acres. In the southern hemisphere where about 8,000,000 bushels are produced annually, Argentina, the leading country, recorded a yield of 4,724,000 bushels in the crop year 1930-31 and reported an estimate of 9,055,000 bushels for the crop year 1931-32. The Canadian crop of 1931 was estimated at only 5,888,000 bushels in comparison with 22,018,000 bushels produced in 1930, a reduction of 73.3 per cent and of 54.5 per cent below the average yield of the five years 1925-1929.

The rye crop of the United States in 1931 as estimated by the Department of Agriculture was 32,746,000 bushels which was about 28 per cent less than that of 1930 but only about 2,000,000 bushels less than in 1929. At the average farm price on Dec. 1, 1931, of 38 7 cents per bushel the total value of the crop was \$12,673,000 as compared with \$17,419,000, the value of the preceding crop.

**SAAR BASIN.** A section of the German Rhineland, which, under Article 45 of the Versailles Treaty, was awarded to France for exploitation of its coal fields, as compensation for the destruction of the coal fields in northern France by the German armies. Area, 737 square miles; population (1927), 770,030. The Saar is administered by a commission appointed by the League of Nations, pending a plebiscite in 1935 to determine its future. There is an advisory assembly (Landesrat) of 30 members. Mineral production in metric tons, in 1930 was: Coal, 13,236,000 (13,582,000 in 1929); pig iron, 1,908,000 (2,100,000); steel, 1,972,000 (2,208,000).

**SAFETY AT SEA.** The passing on plans of hulls and boilers by a staff of experts at the central office in Washington of the U. S. Steamboat Inspection Service, in lieu of the existing system of examination of the completed work by field

inspectors, was urged by Supervising Inspector General D. N. Hoover, in his annual report. A high standard of ship construction, Mr. Hoover pointed out, was adopted at the Conference of Safety at Sea in London in 1929, but this convention had yet to be ratified by the U. S. Senate. If the London convention is not ratified, it will become necessary for the U. S. Steamboat Inspection Service to formulate regulations that will obtain the highest standard of construction in the subdivision of ships. In either event, it will be necessary to have stationed in the central office technically qualified men to work out the regulations formulated, and to check their application. Modern developments, having made necessary from time to time the amendment of the existing statutes covering boiler construction and inspection, a new code was being formulated which should be completed before the end of the 1932 fiscal year.

During the fiscal year, 1930-31, 6526 vessels were inspected by the U. S. Steamboat Inspection Service and more than 100,000 tests were made in connection with marine boilers. In addition large numbers of life-preservers and other apparatus were inspected, 24,000 ships officers were licensed and certificates issued to more than 6000 able seamen.

How well the safety of passengers by sea is safeguarded in this modern era is indicated by the striking fact brought out in the report that during the fiscal year there were 305,219,538 passengers on vessels required to report the number of passengers carried; dividing this number by 71 (the total number of passengers lost) shows that for every life lost 4,298,866 passengers were safely carried. The total number of lives lost from all causes, both passenger and crew, was 295, a decrease of 196 over the previous year. Of the lives lost, 184 were from suicide, accidental drowning, and other causes beyond the power of the service to prevent. The total number of accidents resulting in loss of life was 24, a decrease of 147 from the previous year.

The U. S. Coast Guard reported that during the fiscal year 665 American merchant vessels sustained casualties involving a loss of \$300 or more in the case of each vessel. These 665 vessels were valued at \$141,190,555 and their cargoes at \$37,596,115, the total value of property endangered being \$178,786,670. The losses to vessels amounted to \$12,152,815 and to cargoes \$1,816,268, making the aggregate property loss \$13,969,083. The number of vessels totally lost was 220. Of the vessels involved in disasters, 54 foundered, 154 stranded, 152 were in collisions, and 305 sustained miscellaneous casualties. These foundering, strandings, collisions, and miscellaneous casualties were distributed by coasts and localities as follows: On the Atlantic and Gulf coast, 204; on the Pacific coast, 156; on the Great Lakes, 45; on United States rivers, 128; at sea and in foreign waters, 132. A total of 22,539 persons were on board the 665 vessels, 7019 being passengers and 15,520 crew members; 139 lives were lost, 135 being crew members and four passengers.

Among notable accidents recorded in 1931 the following are of chief interest:

January 20. The Russian steamer *Javaria* was sunk in a storm in the Black Sea, 50 lives being lost.

February 9. The Japanese coastal vessel *Kikurui Maru* was rammed and sunk by the French steamer *Portheos* in a snow storm off the coast of Japan, 50 lives being lost.

February 16. More than 100 Chinese were drowned when the steamer, aboard which they were celebrating

the Chinese New Year, struck a rock in the Pearl River and sank.

March 11. The Chinese steamer *Taochi* sank in the Yangtze River, following a blast; 800 lives were lost.

March 15. In an explosion on the sealer *Viking*, chartered to make a film of the sealing industry, off Horse Island in White Bay, east of Newfoundland, 28 persons were killed and scores of others out of the 155 aboard were injured.

March 16. The French steamer *Chang Kiang* was sunk in the China Sea off Amoy, 250 of the 800 passengers being reported drowned.

March 17. The British steamer *Otrine*, from Glasgow, struck rocks off the Isle of Man and sank, 10 persons being drowned.

April 1. The British aircraft carrier *Glorious* collided in a dense fog off the coast of Malaga, Spain, with the French immigrant liner *Florida*, 40 passengers on the latter vessel being killed.

May 22. Submarine No. 9 of the Soviet Navy was sunk in manoeuvres in the Gulf of Finland, the crew of 35 being lost.

June 9. The British submarine *Poseidon*, one of the latest type, was rammed and sunk by the Chinese merchant vessel *Yuts* 21 miles north of Wei-hai-wei, China, with a loss of 20 lives.

June 14. The French excursion steamer *St. Philibert*, carrying 842 passengers and a crew of seven on its return trip from Nourmoutier's Island, capsized in a gale off the mouth of the Loire River, only eight persons being saved. Most of the passengers were members of Nantes and St. Nazaire (workingmen's) cooperative societies, with their families.

August 9. The British cargo steamer *Kwong Sang* foundered in a typhoon in the China Sea, six British officers and 50 Chinese being drowned.

December 24. In a collision of the Japanese steamers *Yaeyamba Maru* and *Kansai Maru* in the Kurushima Channel of the Inland Sea, six passengers were drowned and 13 were missing.

**SAFETY COUNCIL, NATIONAL; SAFETY, INDUSTRIAL.** See NATIONAL SAFETY COUNCIL.

**SAFETY MOVEMENTS.** See NATIONAL SAFETY COUNCIL.

**SAGHALIEN.** See SAKHALIN.

**ST. CHRISTOPHER** or **ST. KITTS.** See LEeward ISLANDS.

**ST. HELENA.** An island of volcanic origin in the South Atlantic, about 1200 miles from the west coast of Africa, belonging to Great Britain. Area, 47 square miles; population, according to the census of 1921, 3747; estimated civil population, Dec. 31, 1929, 3846. Capital and seaport, Jamestown. Attached to the colony of St. Helena is Ascension, a volcanic island 34 square miles in area situated 700 miles to the northwest. Governor in 1931, Sir Charles Harper.

**ST. JOHN'S COLLEGE.** A college of liberal arts and sciences for men in Annapolis, Md., founded as King William's School in 1696. The enrollment for the first half-year of 1931-32 was 297. There were 29 faculty members. The endowment fund as of July 1, 1931, amounted to \$226,333, and the income for the year ending June 30 was \$316,547. The library contained 24,042 volumes. President, Douglas H. Gordon.

**ST. LAWRENCE UNIVERSITY.** An institution for the higher education of men and women in Canton, N. Y., founded in 1856. The registration for the autumn term of 1931 was 2331. The faculty numbered 136 members. The endowment funds amounted to \$4,948,174, and the income for the year to \$242,952. The library contained 54,000 volumes. President, Richard Eddy Sykes, D.D.

**ST. LAWRENCE WATERWAY.** See CANADA under *History*; CANALS; WATER POWER.

**ST. LOUIS CITY ART MUSEUM.** See ART EXHIBITION, ART MUSEUMS.

**ST. LUCIA, loo'shi-lá.** A British insular colony in the Windward group of the West Indies. Area, 233 square miles; population in 1929, 57,482. Castries, the chief port and capital, is a naval

base and coaling station. The chief products are cacao, sugar, lime juice, hides, logwood, and rum. Imports in 1929 totaled £244,753; exports, £199,000; expenditure, £86,434; revenue, £83,139 (including an Imperial grant of £3000); total shipping, 1,700,139 tons. Administrator and Colonial Secretary in 1931, Charles William Doorly. See LEEWARD ISLANDS.

**ST. PHILIBERT DISASTER.** See FRANCE under *History*; *SAFETY AT SEA*.

**ST. PIERRE AND MIQUELON**, mē-ko-lōn'. Two small groups of islands belonging to France, situated close to the southern coast of Newfoundland, and named from their two largest islands. Area of St. Pierre group, 10 square miles; of Miquelon group, 83 square miles; total population (1929), 4030. St. Pierre, the capital and chief port, had 3040 inhabitants. The islands are rocky and unsuited to agriculture, their main importance being as a centre for the cod-fishing industry and as a base of operations for liquor-smuggling into the United States. Following the embargo laid by Canada early in 1930 on the exportation of liquor across the American border, the rum-running trade of St. Pierre showed a marked increase. In the calendar year 1930, the islands ranked ninth in the foreign trade of Canada. Purchases from Canada, consisting almost entirely of liquor for re-export to the United States, totaled \$11,004,479. Governor in 1931, Adrien Juvanon.

**ST. THOMAS.** See SÃO THOMÉ AND PRÍNCIPE; VIRGIN ISLANDS.

**ST. VINCENT.** A British insular colony in the Windward group of the West Indies. Area, 150.3 square miles; population in 1929, 51,995. Kingstown, with a population of 3836 in 1921, is the capital. Births in 1929 numbered 1836; deaths, 1009; marriages, 151. The chief products are arrowroot, sugar, cotton, rum, cacao, and spice; the Sea Island cotton is regarded as the best grown in the British Empire. In 1929, imports totaled £180,439; exports, £151,570; revenue, £64,090; expenditure, £70,786; public debt, £33,060. Administrator, Major H. W. Peebles.

**SAKHALIN (SAGHALIEN)** sá'-ká-lyén'. An island off the eastern coast of Siberia, separated from Japan by the narrow Strait of Soya. The portion south of the 50th parallel of N. latitude belongs to Japan; north of that line lies Soviet Sakhalin. Japanese Sakhalin or Karafuto (see KARAFUTO), has an area of about 13,934 square miles and a residential population (1929) of 240,502. The area of Soviet Sakhalin is 14,688 square miles, with a population estimated at 22,500 at the beginning of 1930, compared with about 34,000 in 1915. The colonization of 10,000 new settlers was undertaken in 1931 by the state company charged with the development of the Soviet part of the island.

**SALANDRA**, sá-lán-drá, ANTONIO. An Italian statesman, died in Rome, Dec. 9, 1931. Born in Troia, near Foggia, Aug. 31, 1853, he was graduated from the University of Naples in 1875, and became instructor and later professor of administrative law at the University of Rome. In 1886 he was elected a member of the Chamber of Deputies, where he joined the Moderate Conservatives. In the second Pelloux Ministry (1899-1900) he was Minister of Agriculture, and in the first (1906) and second (1908-10) Sonnino Cabinets he held the portfolio of finance. He became Premier and Minister of the Interior in March, 1914, succeeding Giolitti. At the outbreak of the

World War he opposed Italy's joining her forces with Germany and Austria, despite the existence of the Triple Alliance. Later, under the popular leadership of his Ministry, preparations were made to enter the War on the side of the Allies in May, 1915. Salandra remained Premier until June, 1916. He attended the Paris Peace Conference and was Italian representative in the Council of the League of Nations until 1926, when he resigned and withdrew his support from the Fascist government. Thereafter he took no active part in politics, although appointed Senator in May, 1928, by King Victor Emmanuel. He was the author of a number of works on economics, finance, history, law, and politics. Among these are: *Trattato della giustizia amministrativa* (1904); *La politica nazionale e il partito liberale* (1912); *Legioni di diritto amministrativo* (2 vols., 1912); *Politica e legislazione: saggi, raccolti da Gisulino Fortunato* (1915); *Il discorso contro la malfede tedesca* (1915).

**SALVADOR**, sal'-vá-dör', (EL SALVADOR). A Central American republic on the Pacific coast, bounded on the east by Honduras and on the north by Guatemala. Capital, San Salvador.

**AREA AND POPULATION.** The area is estimated at 13,176 square miles; the population in 1930 was 1,437,611. The mestizos, or persons of mixed race, numbered 1,000,000 or more. San Salvador had a population of 95,700 in 1930. Other large towns were: Santa Ana, 74,800; San Miguel, 39,800; San Vicente, 24,500; and Ahuachapán, 28,117. From 1925 to 1929, births averaged 61,022 annually and deaths 33,565.

**EDUCATION.** Pupils enrolled in primary schools in 1930 numbered 56,578; in secondary schools, 1137 (1929); in the National University, 411.

**PRODUCTION.** The coffee crop is the major factor in the national economy, normally furnishing about 90 per cent of the value of all exports. The coffee crop in 1929-30 was reported at 142,763,000 pounds, but prices averaged 40 per cent lower than in 1928-29; exports in 1930 were 129,238,000 pounds, valued at \$11,957,000, against 103,137,000 pounds, valued at \$17,045,000, in 1929. The 1930-31 crop was the largest in the history of the republic, but prices declined further. Other products are sugar (about 20,000 short tons in 1930-31), henequen, balsam, indigo, cotton, rubber, corn, rice, and beans. The forests produce dyewoods and cabinet woods. Lead and some gold and silver are mined. Sugar grinding and coffee cleaning are the principal manufacturing industries. Trade depression began in Salvador with the break in coffee prices in the latter part of 1929 and continued, with variations, through 1931. The drop in coffee prices resulted in reduced government revenues, a decline in imports, restricted credits, wage cuts, and unemployment. In 1931, wages of agricultural workers were reduced about 50 per cent. Political uncertainty contributed to the business depression.

**COMMERCE.** Salvador's foreign trade declined 27 per cent in value in 1930, due chiefly to the lower prices prevailing. According to preliminary figures, exports amounted to 27,313,000 colones (\$13,656,500), against 36,831,000 colones (\$18,415,500) in 1929, while imports totaled 24,872,000 colones (\$12,436,000), compared with 34,681,000 colones (\$17,340,500) in 1929. The visible trade balance was favorable by 2,441,000 colones (\$1,220,500) in 1930 and by 2,150,000 colones (\$1,075,000) in the preceding year. The United States took exports to the value of \$4,445,000

in 1930 (\$8,050,000 in 1929) and furnished imports valued at \$2,875,000 (\$3,830,000 in 1929).

**FINANCE.** According to the Minister of Finance, ordinary revenues in the calendar year 1930 totaled 21,964,881 colones (1 colon equaled \$0.50 at par and exchanged at \$0.4902 in 1930), or 4,182,279 colones less than in 1929. Expenditures amounted to 23,048,451 colones, or 1,083,570 colones more than ordinary revenues. Early in 1931, it was reported that payments on a majority of the civil list were about three months in arrears. The general budget for the fiscal year ended June 30, 1931, calculated revenues and expenditures at 24,793,000 colones and 25,189,147 colones, respectively; that for 1931-32, at 20,986,300 and 20,977,084, colones, respectively. Due to an increase of 3,878,383 colones in the internal debt, the total public debt increased from 42,720,884 colones at the end of 1929 to 43,620,921 colones at the end of 1930.

**COMMUNICATIONS.** Railway lines in operation in 1930 totaled 375 miles, of which the principal line was the Salvador branch of the International Railways of Central America. Construction of the Salvadorean section of the Pan American Highway (204.6 miles in length) progressed sufficiently to allow automobile traffic over its entire length in 1931.

**GOVERNMENT.** Executive power is vested by the constitution in a president elected for four years, who acts through a ministry of four members, and legislative power in the Congress of 42 members elected for one year by universal suffrage. President at the beginning of 1931, Dr. Pio Romero Bosque, who assumed office Mar. 1, 1927; Vice President, Gustavo Vides.

**HISTORY.** The presidential elections held Jan. 11, 12, and 13, 1931, were indecisive (see 1930 YEAR BOOK). Arturo Araujo, wealthy agriculturalist and candidate of both the National Labor and Salvadorean Proletariat parties, received about 104,000 votes, as against about 64,000 for Gómez Zárate, the highest of his three opponents. Señor Araujo failed to receive a majority of the votes cast, however, and in accordance with the Constitution, the selection of the President devolved upon the National Congress. On February 12, Congress unanimously elected Señor Araujo as President and Gen. Maximiliano Hernández Martínez as Vice President. Both officials were inaugurated Mar. 1, 1931, for a four-year term.

On Dec. 3, 1931, President Araujo was forced to flee to Guatemala by a military revolt at San Salvador and the following day he resigned. The insurrection, opposed at first by the police, was accompanied by street fighting in which former Finance Minister Francisco Espinosa and a number of others were killed. Failure of army officers to receive their pay was reported to have been the direct cause of the coup d'état. However, there had been growing dissatisfaction with the Araujo Administration, accompanied by charges of inefficiency and corruption. Due to the collapse of coffee prices, the Government was said to be on the verge of bankruptcy and was unable to carry out promised social reforms. President Araujo had also adopted stringent measures against alleged Communists, in connection with which he imposed a censorship on the press.

President Araujo was succeeded in office by General Martínez, the former Vice President and Minister of War. The latter was eligible to succeed the deposed President under the Constitu-

tion, but the Governments of the United States, Guatemala, Honduras, and Costa Rica refused to recognize him because of the treaty of 1923. The treaty, which was adhered to by the United States, bound the Central American governments not to recognize a revolutionary régime established by any leader in the revolution or cabinet minister in the deposed administration. General Martínez was still in office at the close of the year, but his resignation was expected. The financial position of his Government made its position particularly vulnerable, as under the loan contract of 1922 American bankers were authorized to establish a receivership in Salvador in case of default.

**SALVATION ARMY.** A world-wide organization with international headquarters in London, England, whose purpose is the "salvation of mankind from all forms of spiritual, moral, and temporal distress." The government is military in character and in 1931 was under the command of Gen. Edward J. Higgins. The higher command is divided into territories, each territory usually being a separate country, or colony, led by a commissioner, and subdivided into divisions consisting of a number of corps or posts under the direction of a captain and lieutenant. The United States has four territories, with headquarters in New York City, Chicago, San Francisco, and Atlanta. The Salvation Army is active in 82 countries and colonies, and preaches the Gospel in 73 languages.

The constitutional problem, which had been under discussion for more than two years, was settled in July, 1931, by the passage through the British Parliament of a bill which gave legal force to the reforms which had been advocated for some time past. (For events leading up to this measure, see the 1930 YEAR BOOK.) This bill, as passed, was shorn of the provisions for fixing a retiring age for the General and for an arbitration board to settle differences between officers of the Army and the General. It was the feeling, both of the House of Commons and of the House of Lords, that these matters were purely domestic affairs which could better be arranged outside an Act of Parliament. As the Act stands, all future Generals must be elected by a competent representative body, and the property of the Salvation Army in Great Britain and the North of Ireland is to be held by a custodian company of officers, appointed by virtue of their office in the Army. The custodian trustee company, however, has no power over the property of the Salvation Army in the United States, where all the Army's assets are held by a board of trustees appointed under the charter of incorporation.

In 1931 there were in the service of the Salvation Army throughout the world 25,658 officers and cadets, 9644 persons without rank wholly employed, 155,874 local officers and bandmen, 64,954 songsters, 34,471 corps cadets, and 15,113 corps and outposts in operation. Social institutions and agencies numbered 1568, and day schools 1040. Among the social institutions were: 30 naval and military homes; 14 prisoners' homes, with a capacity of 638; 141 hotels for men and 23 hotels for women, accommodating 38,150 persons; 6 inebriates' homes with 239 patients; 99 homes housing 5105 children; 24 crèches; 19 industrial schools with 1289 pupils; 103 women's industrial homes, accommodating 3484 women; and 92 maternity homes with 3903 patients. The Army also maintained 301 miscellaneous social

services, as well as 12 farms, 177 slum posts, 218 homes, elevators, workshops, and woodyards accommodating 7271 persons. In addition to 32 food depots, there were 138 combined shelters for men and 27 shelters and food depots for women. Through the 142 labor bureaus, 238,234 men and women were supplied with work. The organization published 128 periodicals, with an average circulation of 1,838,575 copies per issue.

The economic depression brought to the Salvation Army in the United States in 1931 a wider opportunity for service than ever before. The entire resources of the organization were placed at the disposal of the President's Committee on Unemployment by Commander Evangeline Booth.

In the United States there were, in 1931, 1777 corps and outposts, 5076 officers and cadets, 14,930 local senior officers and bandmen, and 13,201 local junior officers and bandmen. Converts during the year numbered 129,649. Among the social institutions were 89 men's hotels, 1 women's hotel, and 13 residential hotels for young women, accommodating a total of 8998. Men's industrial homes numbered 117, with accommodation for 4652 persons; children's homes 10, with accommodation for 828 persons; women's homes and hospitals 45, with accommodation for 2992 persons; and dispensaries 10, with a total of 25,700 patients. During the year 11,128 families were visited, while Thanksgiving and Christmas dinners were distributed to 686,946 persons. In addition 40,970 prisoners were assisted by the Salvation Army on discharge and situations were found; 15,375,452 persons were afforded temporary relief outside social service centres and hotels; 41,270 children and 8505 mothers were given summer outings; and 238,737 men and women found employment through the Army's 105 free employment bureaus.

The national headquarters of the Salvation Army in the United States are at 120 West Fourteenth Street, New York City. Evangeline Booth, daughter of the founder, is the commander-in-chief. The territorial commissioners in 1931 were: John McMillan (eastern); William McIntyre (central); Col. Andrew Crawford (acting, following the death of Adam Gifford (q.v.) western; and Alexander M. Damon (southern).

**SAMARSKITE.** See CHEMISTRY.

**SAMOA.** A group of 14 islands in the Pacific Ocean, about 2000 miles south of Hawaii and 4000 miles southwest of San Francisco. Since Feb. 13, 1900, the islands east of 171° W. longitude have belonged to the United States; the islands west of that line belonged to Germany until the outbreak of the World War in 1914, when they were occupied by New Zealanders and later turned over to New Zealand for administration, under a mandate of the League of Nations.

**WESTERN SAMOA.** The official name applied to the former German Samoan Islands is the Territory of Western Samoa. This territory includes Savaii and Upolu, two of the largest islands. Area of Savaii, about 700 square miles; Upolu, about 430 square miles. Population, Dec. 31, 1929, 44,571, including 2749 Europeans and half-castes, 40,722 natives, and 955 Chinese laborers. The principal port is Apia, on the island of Upolu. The products include copra, cacao, bananas, rubber, sugar, and cardamoms. The imports for 1929 totaled £288,849; exports, £293,938. Revenue for the year ended Mar. 31, 1930, amounted to £151,416; expenditure, £131,280. The general control of the islands is under the New Zealand Ministry

of External Affairs, and the local Government is under an administrator. There is a legislative council, the membership of which is restricted to British subjects or persons born in Samoa of European descent, and a native council which advises the administrator in native affairs. Administrator in 1931, Brig-Gen. H. E. Hart (appointed February, 1931).

**AMERICAN SAMOA.** Tutuila, Tau, and the Manua group comprise the American Samoan islands. The total area is about 60 square miles; the total population at the census of 1930 was 10,055, as against 8056 at the census of 1920. The native population in 1931 was estimated at 9985, compared with 5697 in 1900. The principal port is Pago Pago on the island of Tutuila, the best and safest harbor in the South Seas. In 1931 there were 24 public schools, with 2100 pupils, and four private schools, with about 400 pupils. Production of copra, the sole export, totaled 1619 tons, valued at \$135,028, in 1930. The fertile soil produces a variety of fruits. Imports in 1930-31 totaled \$154,493 and gross revenues were \$132,716, with expenditures slightly lower. The United States Navy has established a high-powered radio station on the island of Tutuila. Government is in the hands of the Governor of the United States Naval Station at Pago Pago. Governor in 1931, Captain G. S. Lincoln, U.S.N., appointed Aug. 2, 1929.

**HISTORY.** According to the annual report of Secretary of the Navy Charles Francis Adams, the visit of a Congressional delegation to American Samoa in September-October, 1930, and the publication of the commission's findings resulted in almost complete cessation of political agitation among the islanders for the establishment of civil government. To meet native complaints, a bill of rights was added to the Codification of the Regulations and Orders for the Government of American Samoa, in accordance with the commission's recommendations. Acting upon further recommendations of the commission, the Navy Department established the new office of Attorney General, which was filled by the appointment of Lieut.-Commander Frank L. Lowe, effective September, 1931. In January, 1931, a violent storm did considerable damage to public works and native plantations, reducing the 1931-32 copra output to about 600 tons. Congress appropriated \$30,000 for the repair of public buildings and roads and the American Red Cross donated \$2500 for relief work. Establishment of a \$200,000 foundation for the education of the natives of American Samoa was announced in Honolulu Sept. 16, 1931, by Mr. and Mrs. William S. Barstow of Great Neck, L. I.

In contrast to conditions in 1929 and 1930, the native agitation in Western Samoa for greater political and economic autonomy was in general quiescent in 1931.

**SAMSON, CHARLES RUMNEY.** A British aviator, died near Salisbury, Feb. 5, 1931. Born in Manchester in 1883, he entered the British Navy in 1898. In 1911 he was elected as one of four naval officers to be trained as airplane pilots, and the following year made the first ascent from the deck of a moving battleship. He also carried out the first seaplane experiments in the British Navy and was one of the first pilots to make a practice of night-flying.

On the outbreak of the World War he was appointed to command Wing No. 2 of the Royal Naval Air Service in Belgium. He took part in

the siege of Antwerp and the first Battle of Ypres. In 1915 his Wing was sent to Tenedos to assist the Mediterranean Expeditionary Force in the Dardanelles campaign. After the failure of that campaign he was stationed at Port Said, where he was in command of the *Ben My Ohree* which raided the Syrian and Palestine coasts. During 1917-18 he commanded the air station at Yarmouth, the centre of anti-submarine patrols. In 1922 he was promoted to Air Commodore. While Chief Staff Officer for the Middle East during 1926-27 he headed many notable flights, including one to Aden and another from Cairo to the Cape and back. On his retirement in 1929 he wrote *Fights and Flights*. He was a Chevalier of the French Legion of honor and a Companion of the Order of St. Michael and St. George.

**SAN FRANCISCO.** See MUNICIPAL GOVERNMENT.

**SAN FRANCISCO, BRIDGES AT.** See BRIDGES.  
**SANITARY ENGINEERING.** See GARBAGE AND REFUSE DISPOSAL; SEWERAGE AND SEWAGE TREATMENT; WATERWORKS AND WATER PURIFICATION.

**SAN JOSE SCALE.** See ENTOMOLOGY, ECONOMIC.

**SAN MARINO**, mà-rě'nō'. A tiny independent republic situated near the northwest coast of the Adriatic and encircled by Italian territory. The area is 38 square miles and the population (Oct. 31, 1929) was 13,387. Capital, San Marino (2000 inhabitants). An electric railway from Rimini to San Marino was scheduled for completion in 1931. Legislative power is vested in a council of 60 elected members and executive power in two regents appointed every six months by the council.

**SANSKRIT STUDIES.** See PHILOLOGY, MODERN.

**SANTO DOMINGO.** See DOMINICAN REPUBLIC.

**SÃO PAULO.** See BRAZIL under *History*.

**SÃO THOMÉ**, soun tō-mă', **AND PRINCIPE**, prěnthě-pa. Two islands in the Gulf of Guinea, about 125 miles from the coast of Africa, constituting a province of Portugal. Area 360 square miles; population in 1921, 52,160 for São Thomé and 6905 for Principe. Europeans numbered 1115 and Negroes 57,125. Cacao, cinchona, coffee, and rubber are the chief exports. Governor in 1931, Eugenio de Barros Soares Branco.

**SARAWAK**, sã-rã'wāk. An independent state, comprising the northwestern part of the island of Borneo; under the protection of Great Britain. Area, about 50,000 square miles (coast line 400 miles). Population estimated at 600,000, made up of Malays, Dyaks, Kayans, Chinese, etc. Kuching is the capital, with a population of 25,000. The chief exports are petroleum products, plantation rubber, and sago flour. In 1929, imports totaled 22,726,657 Straits dollars; exports, 63,311,501 Straits dollars (1 Straits dollar exchanged at \$0.56 in 1929). In the same year revenue amounted to 6,671,291 dollars and expenditure to 6,515,757 dollars. There is no public debt. The region was acquired by Sir James Brooke in 1842 from the Sultan of Brunei. Rajah in 1931, Sir Charles Vyner Brooke, grandnephew of Sir James.

**SASKATCHEWAN.** One of the Prairie Provinces of Canada, situated between Alberta on the west and Manitoba on the east. Area, 251,700 square miles; the census populations were 921,785 in 1931 and 757,510 in 1921. Regina, the

capital, had 53,209 inhabitants in 1931 (34,432 in 1921); Saskatoon, 43,291 (25,739); Moosejaw, 21,299 (19,285). Living births during 1929 numbered 21,310; deaths, 6707; marriages, 6535. The total enrollment in the public schools in 1929 was 227,263 (223,049 in 1928). The University of Saskatchewan at Saskatoon had 2449 students in 1928-29.

Agriculture is the leading occupation, the gross value of the agricultural production being estimated at \$229,304,000 in 1929. The sown area of the chief crops in the spring of 1931, according to the 1931 census, was 21,746,039 acres, compared with 17,667,852 acres in 1921. Field crops harvested from 22,868,300 acres were valued at \$120,215,000 in 1930, as compared with \$235,248,000 from 22,420,232 acres in 1929. The wool clip for 1930 was 1,211,000 pounds. The value of the mineral output rose from \$2,253,506 in 1929 to \$2,298,725 in 1930.

Ordinary provincial revenues for the fiscal year ended April 30, 1930, totaled \$16,561,528 and expenditures \$17,079,704 (provisional figures), as compared with \$16,096,666 and \$15,971,231, respectively, in the previous fiscal year. The bonded indebtedness in 1929 was \$58,275,776. Executive power is vested in a lieutenant-governor and a legislative assembly of 63 members elected for five years. In 1931, the government coalition included 24 Conservatives, 5 Progressives and 6 Independents, with 28 Liberals forming the Opposition. Lieutenant-Governor in 1931, H. W. Newlands; Premier, President of the Council, and Minister of Education, J. T. M. Anderson.

The condition of the agricultural population of the Province became desperate in 1931, due to drought and low grain prices (see CANADA under *History and Business Conditions*). The wheat production from 13,881,000 acres in 1931 was estimated at only 101,300,000 bushels, the smallest crop since 1919, when the wheat acreage was 3,300,000 acres. In June the Provincial Treasurer estimated necessary farm relief expenditures for the balance of the year at \$5,000,000. The Saskatchewan Court of Appeal ruled in May, 1931, that the Saskatchewan Grain Marketing Act, which provided for 100 per cent compulsory pooling, was *ultra vires* of the Legislative Assembly. An appeal was to be taken to the Supreme Court of Canada.

**SATELLITES.** See ASTRONOMY.

**SATIN MOTH.** See ENTOMOLOGY, ECONOMIC.

**SAULT STE. MARIE**, CANALS AT. The Lake commerce passing through the canals at Sault Ste. Marie in Michigan and Ontario during 1931 suffered a marked decrease over the previous season. There were 13,056 vessels with a registered tonnage of 35,917,044 as against 16,818 vessels of 54,828,769 net tons, a decline in number of 22 per cent and in tonnage of 34 per cent. The 1931 traffic involved 10,935 steamers, 748 sailing vessels, and 1373 unregistered craft. There were 9537 lockages against 12,661 in 1931.

The freight passing through the canals in 1931 totaled 44,013,671 short tons as against 72,897,752 tons in 1930, a decline of 39 per cent, while passengers were 33,006 as against 45,303 in the previous year, a decline of 26 per cent. The traffic in wheat amounted to 189,090,091 bushels or a decline of 22 per cent from 243,927,016 bushels in 1930. Grain was 56,303,180 bushels as against 55,433,921 bushels in 1930, a gain of 2 per cent. Iron ore in 1930 was 24,259,899 short tons or a decline of 48 per cent from 47,050,854 tons in

1930. Soft coal was 9,891,474 short tons a decline of 25 per cent from 13,256,786 tons in 1930.

The U. S. Canal, which opened April 10 and closed Dec. 15, 1931, had a season of 250 days, and the Canadian Canal, which opened April 13 and closed Dec. 15, 1931, had a season of 247 days.

The greater amount of the freight was east-bound and amounted to 32,686,929 short tons, of which 30,874,207 passed through the U. S. Canal and 1,812,722 tons through the Canadian Canal. The total westbound freight was 11,926,742 tons, of which 11,512,551 passed through the U. S. Canal and 414,191 passed through the Canadian Canal.

**SAUNDERS, WILLIAM LAWRENCE.** An American engineer, died in Tenerife, Canary Islands, June 25, 1931. He was born in Columbus, Ga., Nov. 1, 1856, and was graduated from the University of Pennsylvania in 1876. During 1878-82 he was in charge of the hydrographic work and subaqueous rock excavation for the National Storage Company at Black Tom Island, New York harbor. Later he became president of the Ingersoll-Sergeant Drill Company, and at the time of his death was chairman of the board of directors of the successor organization, the Ingersoll-Rand Company. In addition, he was officer or director of several tool and machinery manufacturing companies. He invented apparatus for drilling rock under water, the Ingersoll track and bar channellers, and gadders for quarrying stone and originated the system of pumping liquids by compressed air and the radialaxe system of coal mining. In 1915 he was appointed a member of the U. S. Naval Consulting Board, and during the World War served on the 2nd district committee on capital issues of the Federal Reserve Board, on the advisory board of the Fuel Administration, and on the military engineering committee. He was also appointed by President Wilson a member of the New Jersey Harbor Commission and of the advisory committee of the Federal Trade Commission, and later served as governor and deputy chairman of the board of the Federal Reserve Bank of New York. In 1926 he founded the William Lawrence Saunders Gold Medal awarded by the American Institute of Mining and Metallurgical Engineers in recognition of achievement in mining. His publications include *Compressed Air Information* (1903); *Rock Drilling* (with Richard T. Dana, 1911); and *The Subways and Tunnels of New York* (with Gilbert H. Gilbert, 1912).

**SAVING BANKS.** See **BANKS** and **BANKING**.

**SAXONY.** The name applied to three divisions of the former German Empire: the Republic of Saxony (formerly the Kingdom of Saxony); the former Grand Duchy of Saxony (now part of Thuringia); and the Prussian Province of Saxony.

**REPUBLIC OF SAXONY.** The third largest state of the German Reich; proclaimed a republic on Nov. 9, 1918. Area, 5786 square miles; population, according to the census of 1925, 4,994,281. The capital, Dresden, had a population in 1925 of 625,016. The largest city is Leipzig, with a population of 684,782 in 1925. The other cities with over 100,000 in 1925 were Chemnitz, 335,982, and Plauen, 111,436. In 1929, births numbered 83,031, deaths 61,013, marriages 50,425. The excess of births over deaths declined rapidly from 31,942 in 1926 to 19,566 in 1929.

Saxony constitutes one of the leading industrial centres of Germany. Crops are wheat, rye,

barley, oats, potatoes, and meadow hay. The ordinary budget for 1930-31 was estimated to balance at 416,500,000 Reichsmarks and the extraordinary budget at 43,730,000 Reichsmarks. The estimated deficit in the ordinary budget for 1929-30 was 27,956,000 Reichsmarks. The Constitution of Oct. 26, 1920, vests supreme power in a Diet of 96 members. The leading parties in the Diet elected June 22, 1930, were: German Social Democrats, 32; National Socialists (Hitlerites), 14; Communists, 13; Middle Class party, 10; German People's party, 8. Premier, Herr Schieck, appointed May 8, 1930. See **GERMANY** under *Area and Population*.

**SCABIES, ERADICATION OF.** See **VETERINARY MEDICINE**.

**SCANDINAVIAN LITERATURE.** This review includes the late books of 1930 in addition to the books of 1931, and is divided into Danish, Norwegian, and Swedish literature.

In order to stimulate fiction writing three publishing houses, one in each country, cooperated in arranging a literary contest. Prizes ranging from 10,000 kroner down were awarded in each country for the three novels voted the best by a national committee. The nine works thus selected were then submitted to an all-Scandinavian jury, who chose one of them as the best Scandinavian novel of the year. The all-Scandinavian prize, 25,000 kroner, went to the Norwegian writer, Sigurd Christiansen, as discussed below.

**DANISH.** *Poetry.* Harald Herdal's *Eros og Døden* (Eros and Death) contains free verse as well as poetry written according to the older formulas. Paul la Cour's new volume, *Menneskets Hjem* (Man's Home), is characterized by a unity of content and form.

*Fiction.* Critics noted that the three prize novels, mentioned below in their order of ranking, all have their scene in the territory of the Limfjord in northern Jutland, and yet are entirely different in character. The differences can, no doubt, be explained by the time of the action in each case. Johannes Buchholtz' *Susanne* is a story of to-day, which contrasts the strict moral ideas of the old-fashioned small town citizens with the selfish ideals of the plutocrats. Bent Steenberg takes us back to the beginning and middle of the eighteenth century in *Hjerremandsbørn* (Children of Good Family), which exemplifies the biblical thesis that the sins of the fathers are visited on the children. In *Jørgen Lykke*, a romantic story, well written although its strong local color sometimes comes near producing the effect of parody, Thit Jensen goes back to the sixteenth century.

*Op nu venter vi paa Skib* (Waiting for Ships), by Marcus Lauesen, who clearly belongs to a new generation of writers, has, in addition to its external action, an inner symbolic action, which also is in keeping with the title. In *Midt i en Jazztid* (In the Midst of a Jazz Age), Knut Sønderby gives a pessimistic picture of the Danish youth of to-day. Among collections of short stories may be mentioned Johann Skjoldborg's *Dybe Strømme* (Deep Streams) and Gunnar Gunnarsson's *Verdens Glæde* (Joys of the World).

**NORWEGIAN.** *Drama.* Two plays (the first one a revision of an older play by the same author) were received favorably on the stage: Ronald Fangen's *Fienden* (The Enemy), which presents the conflict between the idealist who lives on a higher plane and the materialist who maintains

that life is low and lives accordingly; and Sigurd Christiansen's *En reise i natten* (A Journey at Night), the hero of which commits what he considers a justifiable murder, atones for it in prison, and discovers upon his release that his crime and suffering have been in vain.

**Fiction.** In the literary contest referred to above Sigurd Christiansen received the first Norwegian prize (as well as the general Scandinavian prize already mentioned) for *To levende og en død* (Two Living and One Dead), a concentrated dramatic story quite different from the author's previous works. The second prize was awarded to Sigurd Hoel for *En dag i oktober* (A Day in October), which impresses the reader as a series of scenes from a play rather than as a novel. Peter Egge received the third prize for *Gjester* (Guests), which tells the story of a man whose own guilt engenders in him a torturing jealousy and suspicion of his wife.

In *Ragnhild* the great Landsmaal writer, Olav Duun, portrayed a renewal of the conflict of *Medmenneke*. In *Eldjarstad*, which is one of her best works, Barbra Ring left her usual domain, the psychology of the modern woman, and went back to the middle of the last century for her material, centring her story around an old family estate. Another novelist that turned to the past was Ingeborg Møller, whose *Vaarfrost* (Frost in Spring) gives a good picture of an earlier period in Norwegian history. In *Prinsesse Terese* (Princess Terese) Oskar Braaten shows how the humiliation and loneliness of a man's youth casts a shadow over his entire life. Ronald Fanger continued the story of *Nogen unge mennesker* in *Erk*. This year's book by O. E. Rølvaag, whose recent death was a great loss to American as well as Scandinavian readers, continues the story of Peder "Victorious." It was published simultaneously in Norway and in the United States under the respective titles *Den signede dag* and *Their Father's God*.

**SWEDISH.** Three important writers died during the year: the poet, Erik Axel Karlfeldt, who was posthumously awarded the Nobel prize in literature for the year; the novelist, Hjalmar Bergman; and the scholar, Archbishop Nathan Söderblom, internationally known for his investigations in the field of comparative religions.

**Poetry.** Ebba Lindqvist made her début with *Jord och rymd* (Earth and Space), which deserves mention not so much for its form as for the seriousness and genuine feeling that pervade it. In *Valda dikter* (Selected Poems) Sigurd Agrell shows a desire to escape from the world of reality and an insistent attention to form. Two modernistic poets may be quoted: Harry Martinson, who wrote *Nomad*, and C. E. Englund, who wrote *Trasiga Sagor* (Legends in Rags).

**Fiction.** The prize for the best Swedish novel was given to the Finlander Jarl Hemmer for *En man och hans samvete* (A Man and His Conscience). This story, written in a simple and direct style, recounts with seriousness and pathos the sufferings of a human soul. The second prize went to Karin Boye for *Astarte*, a story which gives a good picture of modern metropolitan life and shows a keen insight into social problems on the part of the author. The third prize novel, Py Sörman's *Aloe*, suggests Heiberg's *A Soul after Death* and Strindberg's *A Dream Play*. It pictures the death of a poet and his encounter

in the spirit world with the great writers who have preceded him to the shadowy region.

*Avsked till Hamlet* (Farewell to Hamlet), which seems very much like a series of pictures in a cinema film, is one more example of Eyvind Johnson's desire to create something new and different in the field of fiction. Two promising writers made their début: Waldemar Hammenhög with *Esther och Albert* (Esther and Albert), a story independent of any modern tendencies and strangely reminiscent of Ahlqvist's almost century-old *Det går an*; and Allan Tallqvist with *Topi från Sörnäs* (Topi from Sörnäs), which portrays realistically the underworld of Helsingfors. Hans Botwid, who delights in the effects of contrast in his poetry, shows the same predilection in his volume of short stories, *Det ingen visste* (What No One Knew). See also PHILOLOGY, MODERN.

**SCHNITZLER**, shnits'lér, ARTHUR. An Austrian playwright and novelist, died Oct. 21, 1931, in Vienna, where he was born May 15, 1862. The son of Johann Schnitzler, a distinguished Jewish physician, he himself studied medicine at the University of Vienna, from which he was graduated in 1885. During 1886-88 he was on the staff of the Imperial General Hospital and then practiced privately. He also began at this time to contribute poems and prose sketches to various literary journals, and in 1893 received recognition as a playwright with the publication of *Anatol*. The success of a second play, *Liebelei* (1895), led Schnitzler to abandon medicine for literature. In 1899 he published *Der grüne Kakadu*, *Paracelus*, and *Die Gefährtin*; in 1902, *Lebendige Stunden*, and in 1903, *Reigen*, a cycle of ten dialogues. Schnitzler's social-problem plays include: *Freiwild* (1895); *Das Vermächtnis* (1901); *Der einsame Weg* (1903); *Der Ruf des Lebens* (1905); *Zwischenspiel* (1906); *Comtesse Mizzi* (1909); and *Professor Bernhardt* (1912). In *Der Schleier der Beatrice* (1901) and *Der junge Medardus* (1910), Schnitzler used as historical setting the Italian Renaissance and Napoleonic campaigns, while in *Das weite Land* (1911) he adopted the "slice-of-life" methods of the Russian school. His later plays include: *Komödie der Worte* (1915); *Die Schwestern* (1919); *Komödie der Verführung* (1924); and *Der Gang zum Weiher* (1926).

Schnitzler was also a writer of short stories and novels, which rank practically as high as his plays. Among these are *Sterben* (1895); *Leutnant Gustl* (1901); *Die griechische Tänzerin* (1905); *Dämmerseelen* (1907); *Der Weg ins Freie* (1908); *Frau Beate und ihr Sohn* (1913); *Casanovas Heimfahrt* (1918); *Fräulein Else* (1924); *Spiel im Morgengrauen* (1927); and *Therese* (1928). In 1912 his *Gesammelte Werke* were published in Berlin in seven volumes. The following of his plays and novels have been translated into English: *Anatol* (1911); *Professor Bernhardt*, *The Green Cockatoo and Other Plays* (1913); *Playing with Love* (1914); *The Lonely Way*, *Intermezzo*, *Countess Mizzi* (1915); *Casanova's Homecoming* (1922); *Comedies of Words and Other Plays* (1923); *Fräulein Else* (1925); *Daybreak* (1928); and *Flight into Darkness* which was published posthumously in 1931).

**SCOTT, FRED. NEWTON.** An American philologist, died in San Diego, Calif., May 29, 1931. He was born in Terre Haute, Ind., Aug. 20, 1860, and was educated at the University of Michigan (A.B., 1884; Ph.D., 1889). From instructor in English at the University of Michigan in 1889, he was advanced to professor of rhetoric in 1901 and professor of rhetoric and journalism in 1921, retiring as professor emeritus in 1927. He wrote *Æsthetics: Its Problems and Literature* (1890) and *Principles of Style* (1890) and was joint author of other texts. He was also a contributor to the NEW INTERNATIONAL ENCYCLOPEDIA.

**SCULPTURE.** Although the pace of sculpture in the United States still lags behind that of painting, the year 1931 was not without interest even in this field where the high cost of translating the artist's sketch into stone or bronze was more than usually discouraging. An outstanding event was the Exhibition of American Folk Sculpture which opened in the fall at the Newark Museum, revealing a not inconsiderable background of plastic art in America. The exhibition included ships' figureheads, cigar-store figures, Pennsylvania Dutch stove plates—anything, in fact, to which the early American carver, whittler, or molder could turn his hand. One of the most interesting pieces in the exhibition was a wooden figure of Henry Ward Beecher carved by an Indiana farmer with an abstraction and sense for essential caricature strangely suggestive of modern work. The exhibition took as its premise the belief that at no time has plastic talent been entirely lacking in America, and the collections went far toward supporting this statement.

The opening of the American Folk Art Gallery in New York, sponsored by the Downtown Galleries, also in the fall of 1931, was another indication of growing interest in the field of "American primitive" sculpture, although paintings and various forms of craftsmanship were also exhibited in this case.

The award of two prizes at the Forty-fourth Annual Exhibition by Contemporary American Painters and Sculptors at the Art Institute of Chicago to works of sculpture was also noticeable. The First Logan Medal was awarded to a painter, but the Second and Third went to William Zorach for his group of "Mother and Child" and John Storrs for his "Seated Torso." Sculpture was exhibited, also, though not so prominently, at the Pennsylvania Academy show, where prizes were awarded to Gladys E. Bates for "Eve" and to Edward McCartan for "Dionysus." Other non-commercial exhibitions were those of the American Academy of Arts

and Letters, which showed the work of Paul Wayland Bartlett, and of the Architectural League of New York, which exhibited the work of the winner of the Prix de Rome in 1928—David Rubins. The classic sense for weight and solidity of form in this latter exhibition indicates that Rome has still the power to influence strongly the work of those who study there.

Among exhibitions in various New York galleries were works by Daniel Rumsey, Max Kalish, and Leopold Seyffert, shown together at the Grand Central Galleries; an exhibition of sculpture by Robert Laurent at the Valentine Galleries, showing both the old, subtle, flowing surfaces and a tendency toward a new, more rugged style; and an exhibition bearing the name of Contemporary American Sculpture which modestly hid the names of the group of women whose work it revealed—Anna Glenny, Minna Karkavy, Concetta Scaravaglione, Marion Walton, Anne Morgan Wright, Sonia Brown, and Helene Sardeau. Exhibitions of garden sculpture were the most plentiful, for in this field, which combines the decorative and utilitarian with the purely æsthetic, there is more chance at present for financial success. These exhibitions, held at several galleries, included works by Paulanship, Seymour Fox, Charles Rumsey, Paul Jennewein, Harriet Frishmuth, Janet Scudder, Enid Bell, Brenda Putnam, Orazio Mardarelli, Pietro Montana, Abastenia St. Leger Eberle, and others.

Averell House showed an interesting exhibition of garden sculpture of many periods, with a contemporary American group of animal sculpture including works by William Zorach, Paul Manship, Eli Nadelman, Albert Stewart, and others, and a series of bronzes by Herbert Haseltine of prize English cattle, which were to form the models for life-size figures commissioned by Marshall Field for the Field Museum in Chicago—one of the most regal orders for many a day. The Wildenstein Galleries exhibited some two dozen pieces by the Russian-American, Boris Lovet-Lanski, chiefly stylized ideal figures, and the Fourth Annual Members' Exhibition held at the Grand Central Galleries in November included a fair number of sculptures, the prize for sculpture being awarded to Edward McCartan for his "Diana and Dog."

Among individual works by American sculptors which attracted attention during 1931 were the statue of Woodrow Wilson by Gutzon Borglum erected at Poznan, Poland; the figure of Leif Ericson standing upon the prow of his ship designed by A. Stirling Calder and presented as a gift from the American people to Iceland to be erected at Reykjavik; a marble bust of Jefferson by Attilio Piccirilli, presented to the Capitol at Richmond, Virginia, by a group of French citizens; a statue of Radigost, an ancient Slavonic god of harvest, executed by Albin Polasek for erection in the Carpathians; Lorado Taft's Crusader, set up in Graceland Cemetery, Chicago, as a memorial to Victor Lawson, founder of the Chicago *Daily News*; and a life-size bronze figure, "Flight," by Richard Recchia of Massachusetts, which was awarded the cross of merit and a gold medal at the International Exposition held during the summer at Bologna under the auspices of the Italian Government.

Such exhibitions as that of Contemporary American Ceramics by the firm of W. & J. Sloane of New York called attention to the fact that

NOTABLE SCULPTURE OF 1931

a considerable amount of talent is spending itself, often anonymously, in the designing of the pottery figures which are steadily growing more popular—an employment at which no sculptor need look askance considering the work of Cellini and other great sculptor-craftsmen of the Renaissance to whom a cup or a salt-cellar was as authentic a form of art as a life-size statue.

Among the awards of the Guggenheim Fellowships appeared the names of three sculptors—Harold Cash of Chattanooga, Tennessee, who was then at work studying the Negro types of the Belgian Congo; Oronzio Maldarelli; and Ruben Nakian. The Prix de Rome for sculpture went to Warren G. Mosman of Bridgeport, Connecticut.

American sculpture suffered a heavy loss in the fall of 1931 by the death of Daniel Chester French (q.v.), for so long a leader in the National Sculpture Society as well as friend and patron of younger artists. **SEISMOLOGY.** The occurrence of earthquakes of abnormally great focal depth is a much discussed question, on which opinion is still divided. The hypothesis of deep foci was proposed by Turner in 1922, to explain the observed times of arrival of longitudinal waves at stations near the epicentre and near the antipodes; but Jeffreys, Byerly, and others maintain that other considerations make it difficult to accept the existence of foci at depths of 300 kilometers in normal quakes, and suggest that the data used by Turner must admit of some other interpretation. However, in searching for further evidence, an examination of the seismograms of these supposedly deep focus quakes revealed phases that do not correspond to any of those shown by normal disturbances; and these additional phases seem to be caused by supplementary reflected waves that appear because of the abnormal depth of the focus. The actual occurrence of deep focus quakes is thus apparently confirmed; and a means is provided for recognizing such quakes from records at a single station.

Strong earthquake motions, such as those which take place in the vicinity of the epicentre of a destructive shock, are being investigated in the United States through the coöperation of several agencies, including the Bureau of Standards, the Coast and Geodetic Survey, the Massachusetts Institute of Technology, and the Seismological Society of America. Suitable instruments for recording such motions, and for measuring the forces which are exerted, have been designed, and will be placed at a network of stations in seismic regions. Experiments with shaking tables were also being carried out, in order to obtain data for engineering purposes.

Many important investigations of particular earthquakes and their effects, numerous contributions to the mathematical theory of the propa-

gation of earthquake waves in the earth, and a number of studies of the interpretation of seismograms will be found in the *Bulletin* of the Seismological Society of America, the *Bulletin* of the Earthquake Research Institute of Japan, the Geophysical Supplement to the *Monthly Notices* of the Royal Astronomical Society.

**SENEGAL**, sɛn'egal'. A colony belonging to France on the west coast of Africa, under the Government of French West Africa (see FRENCH WEST AFRICA). Total area, 74,112 square miles; population in 1929, 1,480,139, including 424 European and 1984 native troops. Capital, St. Louis, with 19,108 inhabitants in 1929. Other important towns are Dakar, the seat of the Governor-General of West Africa and a fortified naval station; population, 1926, 33,697 (Europeans, 2939); and Rufisque, population, 16,703 in 1929. Dakar is the only coaling station on the French West African coast. The colony sends one deputy to the French Parliament. Lieut.-Governor in 1931, M. Beurnier.

**SEWAGE TREATMENT.** See SEWERAGE AND SEWAGE TREATMENT.

**SEWAGE AND SEWAGE TREATMENT.** The treatment of sewage before its final discharge in those vicinities or areas where the water receiving it is insufficient in volume or devoted to such uses as make it undesirable to discharge the sewage without treatment continued to present interesting problems. Even here the interest centres in details rather than in main process of treatment, the latter falling for the most part into screening, sedimentation in one- or two-story tanks, and either direct aération, as in the activated-sludge process, or filtration, both of the latter being biological processes. Various combinations of the methods used are employed and sometimes practically all available principal methods of treatment are brought together in a single plant, including final disinfection by chlorination of the final effluent in extreme cases. Disposal of the sludge or sediment removed from the sewage is being given more and more attention. The volume of sludge from sedimentation tanks is reduced in the lower or digestion chamber of the two-story tanks while that from the one-story tanks and from the activated-sludge process is being more and more frequently treated in separate digestion tanks. In the latter case the gases produced in the digestion process are sometimes drawn off and burned for the production of power. Thus far the number of cities utilizing the gas from digestion tanks is small, as is also the number

that derive a revenue from the sludge by selling it to the public for utilization as fertilizer.

The most common method of sewage treatment, the world over, is still screening and sedimentation, either alone or combined with the use of filter beds. The activated-sludge process, which has come into use in the last 15 years or so, is rapidly gaining in favor and in use. The central element in the process is aeration of the sewage in the presence of an accumulation of the solids or sludge. This is effected in tanks, either by the introduction of compressed air through porous plates at the bottom of the tank or else by bringing air into the sewage at the surface and by means of revolving wheels.

In the United States air agitation is more extensively used than agitation by wheels. On July 7, 1931, the formal beginning of construction of an activated-sludge plant with a daily capacity of 180 million gallons was begun by New York City. The plant is located on Ward's Island in the East River and is designed to treat the sewage of a population of 1,350,000 contributed by adjacent territory on either side of the river. It is expected that the process will remove 90 per cent of the suspended matter in the sewage and 95 per cent of the bacteria. Most of the sludge produced will be barged to sea and dumped, but there will be a small plant for the production of fertilizing material from the sludge, this plant to be operated with a view of determining the practicability of recovering the fertilizing material. The total estimated cost of the Ward's Island plant is \$16,000,000, but to this must be added \$14,000,000 to provide tunnels and appurtenances to bring the sewage under water to the plant.

New York City already has a number of smaller plants for the treatment of its sewage. Its Department of Sanitation submitted a report outlining a programme for the treatment of the entire sewage of New York City but no action to put the programme into effect, beyond the works already provided or under construction, had been taken at the close of 1931. Three tentative plans were submitted, each providing for a different degree of removal of impurities from the sewage—79, 92 and 95 per cent. The plan recommended for adoption would remove 79 per cent of the impurities and would provide for the treatment of an average daily flow of 2,117,000,000 gallons of sewage at a total cost of \$244,000,000. Nearly all of this sewage, according to the plan, would be treated by the activated-sludge process, at some 20 different plants.

The work outlined would be designed to take care of the sewage from the city up to the year 1960, and would include the cost for land and for engineering. If the plan providing for 92 per cent removal of impurities were adopted, the total outlay would be \$358,000,000; for 95 per cent removal, the cost would be \$109,000,000.

At Cleveland, Ohio, some of the contract work for an activated-sludge plant to treat the sewage of the easterly district had been let. The population to be provided for ultimately is 770,000. The sludge from this plant will be pumped 13 miles for final treatment at one of the two other existing sewage-works.

Providence, R. I., was building a 52,000,000-gallon activated-sludge plant, making over, so far as practicable, a precipitation plant built in the late nineties but long since outgrown. At the close of the year the Westchester County,

N. Y., Sanitary Sewer Commission put in operation a plant built at a cost of \$800,000 to screen and chlorinate 80,000,000 gallons of sewage daily. Under the construction programme laid down by the United States Supreme Court (see 1930 YEAR BOOK), the Chicago Sanitary District had expended over \$96,000,000 for sewage treatment works, pumping plants and trunk sewers by June 1, 1931, but still had work to be done at an estimated total cost of \$173,000,000. The treatment plants already in use and to be built will treat to a high degree the sewage of the entire sanitary district of Chicago, which includes some 50 municipalities altogether. Of the two large plants already in service one makes use of the activated-sludge process and the other consists of Imhoff tanks.

Novel studies designed to show the possibilities of so treating sewage as virtually to reduce it to its original state of water suitable for various uses, were being conducted by the city of Los Angeles, Calif. That city and adjacent municipalities forming the Southern California Metropolitan Water District are handicapped by their location in an area with insufficient rainfall. This gives rise to the question already indicated. The studies thus far reported (*Engineering News-Record*, Mar. 12, 1931) indicate that by a combination of various processes of sewage treatment, the sewage could be reclaimed so it might be used for irrigation, for industrial purposes, or for the replenishment of the underground water of a portion of the district and possibly, after a very high degree of purification, for municipal water supply. The journal just named, in its issues of May 28, 1931, and Oct. 29, 1931, continued the discussion of some of the points raised by the Los Angeles studies, the first of these two articles being by Dr. Carl Imhoff of the Ruhr district in Germany, where resort is had to various expedients to provide sufficient water supply for municipal and industrial purposes, and the second article being in the nature of a symposium by various American engineers and sanitarians.

Two new books may be noted: Adams, *Modern Sewage Disposal and Hygienics* (London) and Nurse, *Purification and Disposal of Sewage* (London), each dealing with the subject primarily from the British viewpoint.

**SHIBUSAWA**, shēbōō-sā'wā, EI-ICHI, VIS-COUNT. A Japanese financier, died in Tokyo, Nov. 10, 1931. Born in Saitama-ken, Feb. 13, 1840, he took service under the Tokugawa Shogunate in its declining days and visited Europe in 1867-68 in the company of a Tokugawa prince. He was appointed to a high post in the Treasury Department on the establishment of the Imperial government in 1869, but resigned in 1873 to found the first national bank of Japan, known as the First Bank. In time he came to be supreme in the commercial, financial, and industrial life of Japan, acting as president of the Tokyo Savings Bank, which he also founded, as chairman of the Tokyo Bankers' Association, and as promoter of

Nippon Yusen Kaisha, the largest Japanese steamship line, and of railroads in Japan, Korea, and Manchuria. He was created a Baron in 1900 and a Viscount in 1920. He visited the United States in 1902, 1910, 1915, and 1921 in the interest of Japanese-American friendship.

**SHIP, NAVAL.** See **NAVAL PROGRESS.**

**SHIPBUILDING.** With a total output of mercantile vessels launched in 1931 reaching 1,617,115 tons, or a decrease of 1,272,357 tons as compared with 1930, there was recorded the lowest production of any year since 1909, with the exception of the war year 1915. These figures and the following summary of shipbuilding are from the annual record of *Lloyd's Register of Shipping*, which does not include warships and takes into account only merchant vessels of 100 tons gross and upwards that were launched in 1931, whether they were completed during the year or were still under construction at its close. The total launches included 24 vessels of 294,406 tons to be fitted with steam turbines, nine vessels of 125,559 tons with electric drive, and seven vessels of 26,478 tons with a combination of steam reciprocating engines and turbines. The motor tonnage for 1931, aggregating 920,495 tons as compared with 1,582,994 tons launched in 1930, exceeded by over 237,000 tons the world's output of steam tonnage, as was the case in 1930 by over 330,000 tons, while in 1929 the motor tonnage launched equaled 84.4 per cent of the steam tonnage. The total steam tonnage of 1931, 683,000 tons, included about 538,000 tons for steamers fitted for burning fuel oil, so that the tonnage depending exclusively upon coal for propulsion was less than 10 per cent of the world's 1931 output. There were 596 vessels launched in the world during the year, of which 14 were over 15,000 tons, 12 between 10,000 and 15,000 tons, 89 between 6000 and 10,000 tons and 24 between 4000 and 6000 tons. The five largest vessels launched during the year were as follows:

	Tons	Built in
Turbines s. s. <i>Rex</i>	50,100	Italy
Turbines s. s. <i>Conte di Savoia</i>	46,000	Italy
Turbine s. s. <i>Manhattan</i>	30,000	United States
Turbine s. s. <i>Champlain</i>	28,912	France
Motorship <i>Georgic</i>	27,000	Ireland

In 1931 there were launched 85 tankers of 642,507 tons, of which 73 vessels of 553,136 tons were motorships. As usual, though with a decreased amount, Great Britain and Ireland led in the amount of tonnage launched, the following countries having an output of 100,000 tons or more during 1931:

	Tons
Great Britain and Ireland	502,487
United States	205,865
Italy	165,048
Denmark	125,974
Holland	120,296
Sweden	112,703
Germany	103,934
France	103,419

The table on page 730 from *Lloyd's Register of Shipping* indicates the fluctuation in the yearly totals for world tonnage launched in the years 1913-31. During the five years 1927-31 the average tonnage launched annually in the world was about 33,000 tons less than the average tonnage launched in the five pre-war years 1909-13.

**GREAT BRITAIN AND IRELAND.** The tonnage launched in 1931, 502,487 tons, or 976,076 tons less than in 1930, was the lowest recorded since 1888. This output represented 31.1 per cent of the world's output as compared with 51.2 per cent for 1930, 54.5 per cent for 1929, 53.6 per cent for both 1928 and 1927, and 58 per cent in 1913. England and Wales were responsible for 243,279 tons, Scotland for 180,301 tons, and Ireland for 78,907 tons. There were 27 vessels of between 5000 and 10,000 tons launched and 11 vessels of 10,000 tons and upwards. The largest was the twin screw motorship *Georgic* of about 27,000 tons. Three steamers of over 20,000 tons each, all fitted with turbo-electric machinery, were also launched: *Strathnaver*, 22,547 tons; *Strathaird*, 22,544 tons; and *Monarch of Bermuda*, 22,424 tons. There were nine steamers of 77,243 tons and 21 motorships of 164,979 tons for the carriage of oil in bulk launched during the year. Steamers fitted for burning oil fuel, launched during the year, amounted to nearly 210,000 tons while 12 vessels with a total tonnage of 117,550 tons were to be fitted with steam turbines, four of which, of 73,623 tons, were to have electric drive. In addition, two vessels of 16,176 tons were launched with a combination of reciprocating engines and low-pressure steam turbines. The 37 motorships, aggregating 227,910 tons, represented more than 84 per cent of the steam tonnage launched, and the largest, the *Georgic*, already referred to, was the largest motorship launched in the world during the year.

During the year the National Shipbuilders' Security, Ltd., formed in 1930 by the coöperation of practically all the shipbuilding companies in Great Britain to acquire and dismantle redundant yards, functioned actively, and by the end of the year more than 71 berths were scrapped, involving 12 establishments with an annual capacity of 500,000 tons.

**UNITED STATES.** *Lloyd's Register of Shipping* record for 1931 gives an output of 205,865 tons launched in the United States, an amount 40,822 tons lower than for 1930 and 18.5 per cent of the total output outside Great Britain and Ireland. Of the tonnage launched, 45 vessels of 196,707 tons were built on the Atlantic and Gulf Coasts, 10 vessels of 5520 tons on the Pacific Coast, and two vessels of 3638 tons on the Great Lakes, this latter being the smallest amount recorded since the first issue of *Lloyd's* returns. The largest vessel of the year launched was the *Manhattan*, a turbine vessel of about 30,000 tons built at Camden, N. J., while the *President Coolidge*, a turbo-electric vessel of 21,936 tons, was built at Newport News, Va., and the *Mariposa* and the *Monterey*, turbine vessels of 18,000 tons, were launched at Quincy, Mass. Six other vessels of between 8000 and 10,000 tons also were launched during the year. Including the vessels named, 13 turbine steamers of 145,234 tons were launched in the United States during 1931, making a total of five vessels of 51,936 tons in which electric drive was employed and a total tonnage of 48,424 tons with internal-combustion engines. Five oil tankers of 37,561 tons were launched, four of which, of 36,027 tons, were motorships. Of the 20 steamers launched during 1931, 14 of 147,279 tons were fitted for burning oil fuel.

**ITALY.** The output for 1931, 165,048 tons, was 77,339 tons higher than for 1930 and was the highest recorded since 1926. There were included the two largest vessels launched in the world

during the year, namely, the quadruple screw turbine steamers *Rex*, of 50,100 tons, launched at Genoa, and *Conte di Savoia*, of 46,000 tons, launched at Trieste. There were 24 vessels of 107,165 tons, out of the 33 launched, built on the Adriatic coast. The motorships launched included the quadruple screw vessel *Neptunia*, of about 20,000 tons, and two tankers of 16,379 tons.

DENMARK. The tonnage launched in 1931, 125,974 tons, was 11,256 tons less than in 1930. The motorship tonnage of 116,765 tons included a larger output of motorships than any other country, outside Great Britain and Ireland.

HOLLAND. Outside of vessels intended exclusively for river navigation, there were launched in 1931, 120,296 tons, or 32,776 tons less than in 1930.

SWEDEN. The high record of 1930 was not equaled, but otherwise the output, 112,703 tons, was the largest amount ever launched in Sweden. There were 15 motorships of 107,766 tons, of which 13 were over 6000 tons, the largest being a tanker of 10,400 tons.

GERMANY. A decrease of 141,623 tons, or over 57.5 per cent, was recorded in the output for the year of 58 vessels of 103,934 tons launched. There were four vessels of 8702 tons, fitted with

\* Returns are not available as regards Germany and Austria-Hungary for the war period (1914-18) nor as regards Germany for 1919 and 1920.

a combination of reciprocating steam engines and low-pressure turbines, and 32 vessels of 79,995 tons, fitted with oil engines, of which eight were between 6000 and 8500 tons. There were nine tankers launched of 65,881 tons, only one of which, of 1094 tons, was a steamer.

FRANCE. The output for 1931, 103,419 tons, was 2502 tons more than in 1930 and included five vessels exceeding 9000 tons. The turbine steamer *Champlain* of 28,912 tons, the motorship *Aramis* of about 15,500 tons, and the turbine steamer *Colombie* of 13,719 tons were the largest. Two other turbine steamers of 7400 tons were launched.

JAPAN. The output for 1931, 83,721 tons, registered a decrease of 67,551 tons as compared with 1930. There were launched in 1931, 39 motorships of 77,065 tons, which was 92 per cent of the total output for the year. Four of the motorships were between 6000 and 10,000 tons each. Three tankers, all motor-driven, of 20,434 tons, also were launched.

At the end of 1931 there was under construction in the various countries tonnage as follows: Great Britain and Ireland, 400,505 tons; United States, 207,837 tons; Italy, 178,287 tons; France, 164,440 tons; Germany, 103,981 tons; and Sweden, 95,380 tons.

SHIPPING. According to the annual report of the U. S. Commissioner of Navigation for the fiscal year ended June 30, 1931, the Merchant Marine of the United States, at that date, including all kinds of documented craft, comprised 25,471 vessels of 15,908,256 gross tonnage, of which 1998 seagoing vessels of 9,922,771 gross tonnage were of 1000 tons or over compared with 2105 vessels of 10,233,125 gross tons on June 30, 1930. The accompanying table gives the ownership of seagoing tonnage at the end of the fiscal year 1931 compared with one year previously.

AMERICAN MERCHANT MARINE ON JUNE 30, 1931

Ownership and date	Steel		Wood		Total

July 1, 1931 .....	397	2,239,153	...	.....	397	2,239,153
Total, 1930 .....	1,927	9,871,284	482	610,961	2,409	10,482,245
Total, 1931 .....	1,865	9,634,704	400	497,753	2,265	10,132,457

Of the gross total of the American Merchant Marine in 1931, 1001 vessels of 5,488,939 gross tons were engaged in foreign trade and 1264 vessels of 4,643,518 gross tons in coasting trade. The United States foreign trade reached its greatest volume on June 1, 1921, when a total of 10,699,596 gross tons were enrolled, and from that time there had been a gradual decline, until on June 1, 1931, it amounted to only 5,623,300 gross tons, or a falling off of 5,076,296 gross tons, due principally to the scrapping of large vessels belonging to the U. S. Shipping Board, and to changes from foreign to coasting trade. Since June 1, 1921, the coasting trade, exclusive of the trade on the Great Lakes, increased 2,092,472 gross tons, while the total seagoing tonnage in the same period had decreased 2,983,824 gross tons. During the fiscal year, 1931, 1302 vessels of 386,906 gross tons were built and documented, and on July 1, 1931, there were building or under contract to build in

American shipyards for private ship-owners, 105 vessels of 358,904 gross tons. This new tonnage included 7 steel passenger steamers of 63,155 gross tons; 3 steel steam ferries of 8118 gross tons; 6 steel steam tankers of 49,390 gross tons; 1 steel passenger motorship of 9180 gross tons; 1 steel cargo motorship of 1112 gross tons, and 5 steel motorship tankers of 44,407 gross tons, aggregating 178,138 gross tons. These figures include only steel, steam, and motor vessels of 1000 gross tons and over, and of this total, 161,700 gross tons were seagoing. The total horse power of these vessels was 116,120. See SHIPBUILDING.

The International Convention on Load Lines held at London in 1931, and referred to in the 1930 YEAR BOOK, was ratified by the United States Senate on Feb. 27, 1931. On Sept. 2, 1931, the law requiring load lines on American vessels became effective, and these regulations were in close accord with the conclusions reached by the world's leading load-line experts at the London Conference of 1930. In the United States Merchant Marine there were approximately 1500 vessels subject to this law, and up to July 1, 1931, 1189 of these had applied for load lines and 479 load-line certificates had been issued.

The Fifteenth Annual Report of the U. S. Shipping Board, covering the fiscal year 1931, stressed the continued liquidation of the Government's merchant fleet. Sales of vessels during the year 1930-31 had reduced the Board's holdings to 390 vessels, as compared with a total of 2546 vessels acquired by the Board since its inception. Of the 390 vessels, only 138 were in active operation on June 30, 1931. During the fiscal year 73 vessels were sold for a cash price of \$1,088,680. The extent of this liquidation was further shown by the Board's annual budget, which had been reduced from \$17,000,000 in 1928 to \$5,950,000 for the year ended June 30, 1931. According to the re-

port the Government's retirement from the field of active ship operations was marked by a corresponding rise in the proportionate amount of tonnage held by private American interests. Of the 1734 American ships of 1000 gross tons or over, registered on June 30, 1931, a total of 1341 ships, aggregating 7,200,000 gross tons, was, the report discloses, privately owned, while 394 (this number includes five vessels belonging to the Panama Railroad Steamship Line), aggregating 2,200,000 gross tons, were still in the hands of the Government.

The beneficial effects of the Jones-White Act in stimulating activity in American shipyards, were shown by advances made on construction loans during the year totaling \$28,704,786.65, as contrasted with \$20,384,100 for the fiscal year 1930. Contracts for 16 seagoing commercial vessels of approximately 122,000 gross tons were placed, and 19 vessels of 166,000 gross tons were delivered

during the year. The larger part of the tonnage under construction was due to mail contracts entered into with shipowners by the Postmaster General under the provisions of the Merchant Marine Act of 1928. At the close of the fiscal year, the number of ocean mail contracts signed since the passage of the Merchant Marine Act of 1928, stood at 41, with positive or conditional requirements for the construction of 61 new vessels (including five completely rebuilt vessels), and betterments or substitutions affecting 35 vessels. The estimated cost of the new vessels was \$283,000,000, and of the betterments \$8,000,000.

**WORLD SHIPPING.** The principal factors in world shipping during the year 1931 included a further decline in the value of overseas trade and its inevitable consequence, an increase in idle tonnage, although this tendency was at a slower rate than in 1930. Freights declined as a result of the lack of employment of shipping, while passenger fares also were reduced in many trades. One feature of the year was the large number of ocean liners included in the idle tonnage, which was not confined to cargo vessels or tramps. The liners in service were being operated with the greatest possible efficiency through quicker turn-arounds and other devices. The accompanying table from *Commerce Reports* shows in detail the idle steam and motor shipping of the principal maritime countries on December 31 of the three years 1929-31:

IDLE STEAM AND MOTOR SHIPPING OF THE

\* Exclusive of the whaling fleet, totaling 282,000 gross tons, the bulk of which was idle.

† Latest figures available October 15. French idle shipping on Dec. 31, 1931, totaled 743,000 gross tons.

On Dec. 10, 1931, Great Britain and Northern Ireland, Canada, Australia, New Zealand, Union of South Africa, the Irish Free State, and Newfoundland signed a merchant shipping agreement dealing with such vital measures for commerce in the British Commonwealth as registry, standards of safety, port regulations, certificates of officers, and similar subjects which had been under discussion since the report of the Conference on the Operation of Dominion Legislation and Merchant Shipping Legislation held in 1929. This agreement, which applied to all territories administered under the authority of the

government of any part of the commonwealth, was of importance as emphasizing the formal basis of political conditions developed under the Statute of Westminster. See GREAT BRITAIN under *History*.

**SHIPWRECKS.** See SAFETY AT SEA.

**SHOCK.** See SURGERY, PROGRESS OF.

**SHOES, SHOE INDUSTRY.** See BOOTS AND SHOES.

**SHOOTING.** An Ohio clergyman, the Rev. Garrison Roebuck of McClure, O., was the surprise of the Grand American trapshooting championships held at Vandalia, Ohio, in 1931. This man, who had not shot over traps more than a dozen times in his life, broke ninety to tie for the lead with two other gunners and then won the shoot-off. Carl Maust gave a splendid exhibition in winning both the Class AA championship, the ultimate world's title in trapshooting, and the North American clay target championship in the same tournament. He broke 548 out of 550 clay disks. In the AA division Maust broke 188 birds in a row, missed at 189, and then went on to the two-hundredth without another miss. The following day Maust duplicated the 199 score, but was tied by three other gunners. Maust then broke 150 straight in the shoot-off. Champions in the other trapshooting events were Class A—Fred Barlow, Newark; Class B—C. F. Booher, Dayton; Class C—J. W. Paddock, Rock Island, Ill.; Class D—Mrs. H. E. Grigsby, Oklahoma City.

In the women's events Miss Jeanette Jay, 18-year-old girl from Waverly, Ia., captured the North American title defeating Mrs. Grigsby in the shoot-off. Miss Jay also won the women's division title in the Grand American handicap. In the women's doubles Miss Alice Crothers broke seventy-seven for the title.

Clyde Mitchell, professional from Milwaukee, won the international open title with 199, and Earl Donohue of Minneapolis won the professional clay target title with the same score. Gus Payne of Oklahoma City won the North American doubles crown and Steve M. Crothers, of Pennsylvania, won the title of champion of State champions.

The national individual rifle title was taken at the annual championship at Camp Perry, O., by Lieut. Emerson F. Sloan, attached at Vancouver, Washington. He compiled a score of 286 out of a possible 300. With a score of 2809 out of a possible 3000, the U. S. Marine Corps won the team title for the second consecutive year and for the eleventh time since the matches were inaugurated. In the President's Cup match, Sergeant Reginald Herin, of the Mississippi National Guard, captured the honors with a score of 145 out of 150.

The United States team at the famous English matches at Bisley was unsuccessful, losing to the British small bore squad, 3927 to 3925. For the third time Sergt. A. G. Fulton, of the Queens Westminsters, captured the gold medal for the King's Prize. Fulton had also conquered in 1912 and 1926.

Sergeant John Carlson, U. S. Infantry, Fort Missoula, Mont., won the national pistol shooting championship, triumphing in a huge field with a score of 277 out of a possible 300. The national team championship for pistol shooting went to the U. S. Cavalry team, which defeated the Marines, 1261 to 1256. The Marines had held the team title previously for four straight years.

**SHORTT, ADAM.** A Canadian political economist, died in Ottawa, Ont., Jan. 14, 1931. He was born in Kilworth, Ont., Nov. 24, 1859, and was educated at Queen's University, Kingston, from which he was graduated in 1883, and also at Glasgow and Edinburgh universities. He was professor of philosophy at Queen's from 1885 to 1889, lecturer in political science from 1889 to 1892, and professor of political science from 1892 to 1908. In 1908 he was appointed Dominion Civil Service Commissioner, and in 1917 chairman of the Board of Historical Publications. He wrote *Imperial Preferential Trade from a Canadian Point of View* (1904); *Documents Relating to the Constitutional History of Canada, 1759-79* (with A. G. Doughty, 1907); *Lord Sudenham* (in the "Makers of Canada Series," 1908).

**SIAM, si-ám.** An independent monarchy in southeastern Asia. Capital, Bangkok; reigning king in 1931, Prajadhipok, of Sukhodaya.

**AREA AND POPULATION.** With an area of 200,149 square miles, Siam supported a population of 11,506,207 at the census of 1929, as compared with 9,207,355 in 1920. There were some 10,000,000 of the Thai people, or original Siamese, nearly 1,000,000 Chinese, and a considerable Malay element in the south. Migration statistics for the five years ending in 1930 showed arrivals of 182,265 at Bangkok and on the southern frontier, and departures of 133,635. Bangkok, the chief port and principal city, had about 600,000 inhabitants in 1929.

**EDUCATION.** About half of the population is said to be literate. During the school year 1928-29, there were 558,151 pupils in primary schools, 14,829 in secondary schools, and 1637 in special schools. Chulalongkorn University is situated at Bangkok.

**PRODUCTION.** Agriculture is the main occupation, there being 7,104,000 acres, or 6 per cent of the total area, under cultivation in 1928-29. Rice is the leading crop, the production of cleaned rice in 1929 totaling 5,315,000,000 pounds. The other chief crops are corn, sesame, peas, cotton, tobacco, and pepper. The large teak forests are second only to rice as a source of wealth; about 120,000 logs are saved annually in Bangkok sawmills. Sticklac is another forest product. Tin is the most important mineral, production (metal content) in 1930 being estimated at 11,354 metric tons (8027 in 1929). Tungsten, lignite, copper, iron, antimony, zinc, and coal are found also. Rice milling is the principal manufacturing industry and is mostly in the hands of Chinese.

**COMMERCE.** In the calendar year 1931 Siam's imports and exports declined about 37 and 29 per cent, respectively, from the 1930 level. Exports were valued at 133,082,000 bahts (1 baht equaled \$0.44), compared with 182,590,000 bahts in 1930, and imports at 110,044,000 bahts, compared with 174,761,000 bahts in 1930. Rice, tin ore, and teak wood were the chief exports; cotton piece goods, machinery, sugar, cigarettes, and kerosene the leading imports. Trade was credited chiefly to Singapore and Hong Kong, but the United Kingdom supplied directly 16.9 per cent of all imports in 1929-30. Imports from the United States in 1931 were \$1,306,000 (\$2,365,000 in 1930) and exports to that country \$263,000.

**FINANCE.** Budget estimates for the fiscal year ended Mar. 31, 1931, placed revenues at 106,593,000 bahts (1 baht equaled \$0.4424 at par) and expenditures at 106,534,000 bahts. The

1931-32 estimates were: Revenues, 94,806,000 bahts; expenditures, 94,346,000 bahts. A balanced budget was maintained in 1929-30, but revenues and treasury balances declined. About 20 per cent of the budget was devoted annually to defense. The public debt on Mar. 31, 1931, totaled \$11,092,000 (\$53,979,000), compared with \$11,385,000 on the same date of 1930. The entire debt was floated in London.

**COMMUNICATIONS.** The state railway system, representing an investment of more than \$90,000,000 up to 1930, is one of the most efficient in the Far East. Miles of line in operation in 1930 numbered 1794, and 120 miles were under construction. Highways in 1931 consisted of 771 miles of state roads, including some 625 miles of hard-surfaced roads. About 550 miles of road were under construction. Air lines operated from Bangkok to various cities in the kingdom. At Bangkok, which handles 85 per cent of the foreign trade, a total of 1013 vessels, of 1,145,922 net registered tons, entered in 1929-30, and 1003 ships, of 1,136,889 tons, cleared.

**GOVERNMENT.** Executive power is vested in the King, who is assisted by a consultative council of four elder statesmen of the royal household, and by an advisory cabinet council consisting of the ministers of state and other high officials. The cabinet council functions as the legislative arm of the government.

**HISTORY.** Developments of outstanding interest in Siam during 1931 were the visit to the United States of the King and Queen of Siam; the organization of a department of commercial intelligence, with a long-time programme covering commercial and agricultural development; establishment of weekly air-mail and telephone service to Europe; important increases in the tariff schedules; the entrance of Siam into the international tin-restricting scheme; the imposition of new immigration regulations, including a tax; and the amalgamation of the Ministries of War and Marine. An amendment was also passed to the currency act, providing for the disposal of surplus silver currency held by the Treasury.

The King and his entourage made his headquarters while in the United States at Ophir Hall, estate of Mrs. Whitelaw Reid, near White Plains, New York. There he underwent a successful operation for the removal of a cataract. In an interview with American reporters on April 27, King Prajadhipok announced that he planned to pave the way for the gradual introduction of representative government in Siam. He indicated that the first step would be to allow his people to vote for municipal officials. The King ended his visit to the United States July 28, 1931.

Consult Eldon R. James, "Siam in the Modern World," *Foreign Affairs*, July, 1931; Wilbur L. Williams, "Siam," *Foreign Policy Reports*, vol. vii, No. 7, June 10, 1931.

**SIAMESE TWINS.** See Zoölogy.

**SIBERIA.** A general term applied to the vast area of northern Asia extending from the Ural Mountains to the Pacific and from the Arctic Ocean to Manchuria, Mongolia, and Soviet Central Asia. Siberia is divided as follows into administrative units of the Russian Socialist Federated Soviet Republic, the largest of the seven republics forming the Union of Soviet Socialist Republics. The units extend from west to east in the order listed in the table given on page 734.

## SIBERIA: ADMINISTRATIVE UNITS \*

	Area in square miles	Population 1926
Ural Area <sup>b</sup> .....	660,000	6,800,020
Western Siberian Area <sup>c</sup> .....	503,650	7,202,754
Eastern Siberian Area <sup>c</sup> .....	1,877,420	2,608,666
Yakutsk Republic .....	1,519,760	288,845
Far Eastern Area .....	900,740	1,291,850
Total .....	4,961,570	18,191,685

\* As reorganized by the All-Russian Executive Committee on July 20, 1930.

<sup>b</sup> Includes a small section of European Russia.

<sup>c</sup> Area and population estimated as of 1926 following division of the former Siberian Area into Eastern and Western Siberian Areas on July 20, 1930.

Approximately 90 per cent of the population is engaged in agriculture and stock raising, with mining, lumbering, hunting, and fishing as other leading occupations. Siberia is one of the world's most important sources of furs. The Soviet Government is actively undertaking the exploitation of its virtually untouched mineral, forest, and fishery resources. The Trans-Siberian railway traverses all except the Yakutsk Republic. See UNION OF SOVIET SOCIALIST REPUBLICS; EXPLORATION.

**SIERRA LEONE**, sê-ër'â lê-ô'nê. A British colony and protectorate on the west coast of Africa situated between French Guinea on the north and Liberia on the southeast. The approximate area of the colony is 4000 square miles and the population, according to the census of 1921, 85,163, of whom 1161 were Europeans. The chief city is Freetown, with a population in 1921 of 44,142. Freetown is the chief seaport in West Africa, being a coaling station and the headquarters of the British Imperial forces in West Africa. Vessels entered and cleared in the foreign trade in 1929 aggregated 4,812,566 tons. In the year 1930 exports totaled £1,206,046; imports £1,424,175, revenue, £942,972; expenditure £805,725. The net public debt Jan. 1, 1931, was £1,990,173. Main railway lines open to traffic in 1929 totaled 310 miles. Platinum and gold are mined and hematite and chromite deposits of commercial value have been discovered.

The adjoining protectorate has an area of 27,000 square miles; population, according to the census of 1921, 1,456,148, of whom 1,450,903 were natives. The chief exports are palm kernels,

kola nuts, palm oil, and ginger. Governor and Commander-in-chief in 1931, Arnold W. Hodson.

**SILESIA**, sl-ê'sha. The term applied to (1) a part of the Province of Moravia and Silesia in Czechoslovakia, including the former Austrian crownland of Silesia and a small section of Germany ceded by the Versailles Treaty; area, 1708 square miles; estimated population Jan. 1, 1929, 735,532, (2) a county of Poland, including 1241 square miles detached from German Upper Silesia following a plebiscite in 1921 and Teschen Silesia, detached from Austria by the St. Germain Treaty; total area, 1633 square miles; population at the census of 1921, 1,124,967, and (3) the two Prussian provinces of Lower Silesia and Upper Silesia, the respective areas of which on Apr. 1, 1925, were 10,276 and 3746 square miles; respective populations on the same date, 3,132,328 and 1,379,278. For the question of the German minority in Polish Silesia, see POLAND and GERMANY under *History*.

**SILK**. The 1931 raw silk crop of the world showed a decline from 1930 and was considerably below that of 1929, which was the largest on record. However, the silk industry suffered the familiar conditions of continued high production with reduced consumption, resulting in the fall of prices of raw silk to new levels for all time towards the close of the year. In Japan the year 1931 witnessed increasing production and exports, with stocks in Japanese ports increasing moderately in consequence. Whereas Japanese raw silk had sold at the end of 1929 around \$4.65 per pound and at \$2.70 per pound at the end of 1930, at the close of 1931 corresponding prices were in the neighborhood of \$1.95. The trend of prices during the first half of 1931 was lower, with a recovery during the summer and a fairly steady level during the autumn. As Japan's financial situation developed, leading to the forsaking of the gold standard on Dec. 13, 1931, prices continued to drop.

During 1931, Yokohama and Kobe, the main ports in Japan, exported 553,600 bales of raw silk, of which 537,815 went to the United States and 15,785 to Europe. In 1930 total exports from these ports were 473,882 bales of which 455,727 went to the United States and 18,516 to Europe. In 1931, the total exports from Canton, China,

\* Estimated.

<sup>b</sup> The total production of raw silk in Asia is an unknown quantity, therefore export figures have been used.

<sup>c</sup> Excludes tussah silk.

The exports from Canton and Shanghai during the season 1930-31 were 10,263,833 pounds. The Japan crop was estimated at 98,957,000 pounds.

amounted to 46,570 bales as against 60,470 bales in 1930, of which 30,845 went to America and 15,727 to Europe in 1931, while in 1930, 37,580 bales went to America and 22,890 to Europe. The total imports from China into the United States in 1931 were 86,502 bales as compared with 92,850 in 1930, and 98,723 in 1929.

The raw silk imports into the United States during the calendar year 1931 aggregated 605,919 bales as against 549,884 bales in 1930; 661,611 bales in 1929, and 566,378 in 1928. During 1931 the imports accordingly were 10.02 per cent greater than in 1930. The deliveries of raw silk to United States mills in 1931 totaled 594,889 bales as against 582,226 bales in 1930 and 619,747 bales in 1929, the increase of 1931 over 1930 in the mill deliveries being 2.02 per cent. Stocks at warehouses on Dec. 31, 1931 were 69,460 bales compared with 58,430 bales on Dec. 31, 1930.

#### See TEXTILE INDUSTRY.

**SILVER.** The world production of silver in 1931, according to the Annual Review of Handy & Harmon of New York City, fell to 196,100,000 oz., as against a total of 246,800,000 oz. in 1930, a shrinkage of 20½ per cent. This company estimated the production of the world as follows: United States 31,400,000 oz.; Mexico 88,900,000 oz.; Canada 20,400,000 oz., and South America 19,700,000. The shrinkage from 1930, expressed in percentage, was approximately as follows: United States, 38 per cent; Mexico, 15½ per cent; Canada, 22 per cent; South America, 16 per cent, and all other sources combined, 13½ per cent. The total amount of silver arising from demonetization and Indian Government sales during 1931 came to 59,500,000 oz., the review stated, against 71,500,000 oz., in 1930.

#### AVERAGE PRICE OF SILVER, 1921-31

1926 ...	62.106	28.686			

The U. S. Bureau of the Mint, with the cooperation of the Bureau of Mines, issued the accompanying statement of the preliminary estimate of refinery production of silver in the United States during the calendar year 1931.

Comparison with 1930 production indicated a decrease in 1931 of 17,070,180 ounces of silver. Comparison with the year of largest production, 1915, when silver amounted to 74,961,075 ounces, gave a reduction of 43,993,457 ounces.

Exports of silver from the United States in 1931 totaled \$26,485,000 and imports were \$28,604,000, leaving an excess of imports of \$2,179,000. In 1930, exports were \$55,157,000 and imports \$42,761,000; in 1929, exports were \$83,407,000 and imports \$63,940,000.

The total silver production of the Dominion of Canada in 1931 was estimated at 20,403,771 fine ounces valued at \$5,984,109 as against 26,435,935 fine ounces valued at \$1,089,376 in 1930, there being a decline of 23 per cent in production and of almost 50 per cent in value. The record of silver production in Canada was made in 1910 with 32,869,264 fine ounces.

The output of silver in Ontario in 1931 was estimated at 7,036,222 fine ounces as against 10-

#### PRODUCTION OF SILVER IN THE UNITED STATES IN 1931

\* Value at 29¢ per ounce, the average New York price of bar silver.

205,638 fine ounces in 1930, while that in British Columbia was 8,339,989 fine ounces as against 11,836,632 fine ounces in 1930.

The production of Mexico, the world's leading producer in 1931, was estimated at 88,900,000 ounces or a decline of 15½ per cent from 1930, when the production was about 105,411,000 ounces. This was a matter of considerable economic importance for Mexico, as the export of silver bullion is one of the most important sources of wealth of that Republic, and naturally her national income and commercial position in the markets of the world was seriously affected. A number of the mines were forced to close but many were kept open through government action in order to avoid an increase of unemployment. See MEXICO.

**SIMMONS, EDWARD (EMERSON).** An American painter, died in Baltimore, Md., Nov. 17, 1931. He was born in Concord, Mass., Oct. 27, 1852, was graduated from Harvard in 1874, and studied painting under Lefebvre and Boulanger in Paris. His work was free and sure in execution and possessed much charm of color. Among his mural paintings are those in the Massachusetts State House, the Minnesota and South Dakota State Capitols, the Appellate and Criminal Court buildings in New York City, the Congressional Library in Washington, the Waldorf-Astoria Hotel in New York City, and the Court Houses in Des Moines, Iowa, and Mercer, Pa. He was the author of *From Seven to Seventy: Memories of a Painter* (1922).

**SIMMONS COLLEGE.** A nonsectarian college for women in Boston, Mass., founded in 1899. The enrollment on Nov. 1, 1931, was 1558 distributed among the following schools: Household economics, 261; secretarial studies, 481; library science, 234; general science, 90; social work, 232; store-service education, 62; public-health nursing, 181; landscape architecture, 12; physical education, 5. There was an enrollment of 219 in the 1931 summer session. The faculty numbered 160. The productive funds of the institution amounted to \$3,381,133 and the income for the year was \$502,352. The library contained

49,533 volumes. President, Henry Lefavour, Ph.D., LL.D.

**SIMPSON, SIR WILLIAM JOHN RITCHIE.** A British physician, died in London, Sept. 20, 1931. Born in 1855, he attended Aberdeen University and was graduated with the M.D. degree from Cambridge in 1880. After serving as lecturer in hygiene at Aberdeen, he went to India in 1886 as Health Officer of Calcutta, where he remained until 1897. In 1900 he was appointed member of the government commission to inquire into dysentery and enteric in South Africa, and the following year became chief commissioner to deal with the outbreak of plague in Capetown and Cape Colony. In 1902 he was transferred to Hong Kong, China, as government commissioner to inquire into the causes and continuance of plague there, and in 1906 reported on the sanitary condition of Singapore. He returned to Africa in 1908 to deal with the outbreak of plague on the Gold Coast, and visited East Africa, Uganda, and Zanzibar in 1913-14 to report on plague and health conditions, the Gold Coast and Ashanti in 1924 to report on the sanitary condition of the mines and mining villages, and Northern Rhodesia in 1929 to report on enteric fever, dysentery, and malaria. At the time of his death he was director of tropical hygiene at the Ross Institute and Hospital for Tropical Medicine in London, editor of the *Journal of Tropical Medicine*, and a member of the advisory committee to the Secretary of State for the Colonies on medical and sanitary matters. He was knighted in 1923. His publications include *Cholera and Maritime Quarantine* (read at the International Hygiene Congress, 1891); *Etiology of Cholera* (read at the First Indian Medical Congress, 1894); *A Treatise on Plague* (1905); and *Maintenance of Health in the Tropics* (1916).

**SINGAPORE.** See STRAITS SETTLEMENTS; BRITISH MALAYA.

**SKATING—SPEED.** Fred Stack, Canadian, won the national title at Oconomowoc, Wisconsin, succeeding Allan Potts of Brooklyn as the champion. He also captured the North American indoor laurels, with Ross Robinson of Toronto, second. Robinson, Canadian champion, carried off the North American outdoor title as well as the Eastern United States crown. Both these United States titleholders were scheduled to represent Canada in the Olympics at Lake Placid in February, 1932. Bert Taylor won the Metropolitan and New York State championships and after a skate-off with Ray Murray, youthful New Yorker, Allan Potts won the Middle Atlantic States title. In Chicago Stack set a new amateur world's record for five miles when he skated the distance in 15:42½.

Miss Elsie Muller, veteran, won the North American women's championship crown at Chicago, but was defeated by Miss Lillian Corke of Yonkers in the Middle Atlantic championships. Miss Jean Wilson, of Toronto, gained the women's outdoor North American title.

**FIGURE SKATING.** Miss Sonja Henie, 19-year-old Norwegian girl, and Karl Schafer, of Vienna, both retained their titles as world's figure skating champions. Miss Henie won an easy conquest at Berlin in March to win her fifth consecutive world's title. Schafer, who first won in 1930 at New York City, was hard pressed by Roger F. Turner, United States champion, for the fourth straight year. Miss Maribel Vinson, of Winchester, Mass., won the United States women's title

for the fourth straight season as well as the British championship at London. The national senior pair championship went to Miss Beatrix Loughran and Sherwin C. Badger of New York for the second time. Joseph K. Savage, of New York, captured the men's junior crown and the women's junior title went to Miss Margaret Bennett, of Indianapolis. The world's pair figure skating championship was awarded to Miss Baby Rotter and Laszlo Szollas of Hungary and the North American pairs championship went to Mrs. Constance Wilson Samuels and Montgomery Wilson, of Toronto. Montgomery Wilson also won the North American men's championship.

**SLAVERY.** See HONG KONG; LIBERIA under *History*; ETHIOPIA.

**SLAVIC STUDIES.** See PHILOLOGY, MODERN.

**SLAVONIA.** See CROATIA AND SLAVONIA; YUGOSLAVIA.

**SLOVAKIA.** A Province of Czechoslovakia. See CZECHOSLOVAKIA under *Area and Population*.

**SLOVENES.** See YUGOSLAVIA under *History*.

**SMELTING.** See METALLURGY.

**SMITH, HOKE.** An American lawyer and former U. S. Senator, died in Atlanta, Ga., Nov. 27, 1931. He was born in Newton, N. C., Sept. 2, 1855, and was educated at Chapel Hill in a school of his father's. On removal to Atlanta, he studied law and was admitted to the Georgia bar in 1873, becoming one of the most successful lawyers in the State. He also was proprietor from 1887 to 1896 of the *Atlanta Journal*, which became a power in Georgia politics. President Cleveland made him Secretary of the Interior in his second cabinet, where he served acceptably for three years (1893-96). In 1906 he was elected Governor of Georgia, but was defeated for reelection in 1908. Two years later, however, he was chosen governor again by an overwhelming majority for the term 1911-13. In July, 1911, he was elected U. S. Senator by the Georgia Legislature to fill the unexpired term of A. S. Clay, but continued to serve as governor until the assembling of Congress in December. Re-elected to the Senate for the term 1915-21, he was a supporter of President Wilson, but differed with him over the entry of the United States into the League of Nations. He practiced in Washington from 1921 to 1924, and in 1923 represented the Government of Peru in litigation with Chile.

**SMITH, CAPTAIN JOHN, ANNIVERSARY.** See CELEBRATIONS.

**SMITH, GEORGE OTIS, CASE OF.** See LAW, PROGRESS AND DEVELOPMENTS under *Other Causes Célèbres*.

**SMITH COLLEGE.** A nonsectarian college for women in Northampton, Mass., founded in 1871. The enrollment for the autumn of 1931 was 1878, including 101 graduate students, 13 non-collegiate students, 33 juniors studying in France, 5 juniors studying in Spain, and 8 juniors studying in Italy. The registration in the 1931 summer session was 189, schools in music and social studies being conducted. There were 245 faculty members. The productive funds amounted to \$8,295,280, and the income from funds was \$325,313. The library contained 181,900 volumes. President, William Allan Neilson, Ph.D., LL.D., L.H.D., Litt.D.

**SMITHSONIAN INSTITUTION.** An organization founded in 1846 according to the terms of the will of James Smithson of England, who, in 1826, bequeathed his property to the United States of America "to found at Washington,

under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men."

The affairs of the institution are administered by a board of regents, whose membership consists of the Vice President, the Chief Justice, three members of the Senate, and three members of the House of Representatives, together with six other persons, other than members of Congress, two to be residents of the city of Washington and the other four of different States. The chancellor of the institution in 1931 was Chief Justice Charles Evans Hughes.

The enterprises supported wholly by Congressional appropriations, but administered by the Smithsonian Institution, include the National Museum, the National Gallery of Art, the Bureau of American Ethnology, the International Exchange Service, the National Zoological Park, the Astrophysical Observatory, and the U. S. Regional Bureau of the International Catalogue of Scientific Literature. It also administers the Freer Gallery of Art.

During 1931 an appropriation of \$10,000 was made by Congress for preliminary architectural plans of the extensions to the natural history building of the U. S. National Museum, authorized by that body in 1930. There was also completed the new reptile house of the National Zoological Park, which was formally opened to the public on Feb. 27, 1931. A bequest of approximately \$50,000 was received from the estate of James Arthur to promote knowledge of the sun, and there was carried out during the year application of improved methods of solar radiation research at the stations of the Astrophysical Observatory, located on Table Mountain, California, and Mount Brukkaros, South West Africa.

The institution and the government bureaus under its direction published during 1931, 98 volumes and pamphlets, of which 205,711 copies were distributed to libraries, educational institutions, and individuals. The unrestricted income of the institution, averaging about \$75,000, was derived from interest on its endowment funds, which in 1931 amounted to a little more than \$1,100,000. Secretary, Dr. C. G. Abbot; assistant secretary, Dr. Alexander Wetmore.

**SNUFF.** See **TORACCO**.

**SOCCER.** The New York Yankees captured national honors in the annual cup competition of the U. S. Football Association in 1931, winning the Eastern championship rather easily and then defeating the Chicago Bricklayers in the national championship final.

Two visits to the United States by foreign teams made the season noteworthy. The famous Glasgow Celtics lived up to their reputation, winning nine games, tying one, and losing three. The three defeats, at the hands of the Yankees, Fall River and Pawtucket, came in the nature of surprises. The Racing Club of Madrid, coming over in October, was not as successful. Three games were won, a like number lost and two tied.

Defeating the German-Americans in the final, the Prague Football Club won the New York State Association cup. The University of Pennsylvania and Army teams were strongest in the intercollegiate ranks.

In England the following teams were the winners: English Cup, West Bromwich Albion; English League, Arsenal of London; Scottish Cup, Glasgow Celtics; Scottish League, Glasgow

Rangers; Irish League, Glentoran; Dominion Cup, Westminster Rangers.

**SOCIAL INSURANCE.** See **MATERNITY PROTECTION**; **OLD AGE PENSIONS**; **UNEMPLOYMENT**; **WELFARE WORK**; **WORKMEN'S COMPENSATION**.

**SOCIALISM.** **INTERNATIONAL ACTIVITIES.** The fourth congress of the Socialist Workmen's (Amsterdam) International, which met in Vienna July 27, 1931, was attended by more than 600 representatives of 34 Socialist parties in all parts of the world. A number of other international Socialist organizations met in Vienna at the same time, including 70,000 European workers who assembled for the Socialist Olympiad. The solidarity of the French, Belgian, and German Socialists was affirmed by Emile Vandervelde, Belgian Socialist leader, and other speakers. M. Vandervelde reiterated the demand of the Second International for the restriction of reparation payments to direct damage done to civilian populations in the War, the cancellation of all other war debts, and disarmament.

**SOCIALISM IN THE UNITED STATES.** In a report to the Socialist party of America covering 1931, Executive Secretary Clarence Senior reported an increase in the party membership and the establishment of 96 new locals or branches. Minor Socialist gains were recorded in municipal elections held during the year. Although the party's vote in Reading, Pa., increased, the Socialist ticket was defeated by a fusion of Republicans and Democrats. A Socialist resolution for an amendment to the Federal Constitution authorizing the U. S. Congress to establish uniform labor laws throughout the country was defeated in the Pennsylvania House of Representatives by a vote of 102 to 79. Other party activities during the year included the establishment of a national press bureau in Washington, unemployment relief work among the miners of Western Pennsylvania and Eastern Ohio, the introduction of unemployment relief and other social measures in various State legislatures, and agitation for the release of Tom J. Mooney (See **CALIFORNIA**). The executive secretary reported that bills making it difficult for minority parties to appear on ballots had been introduced in many State legislatures and that in Illinois, Ohio, and several other States the position of the Socialist party had, in consequence, been weakened. See **NEW YORK** under *Political and Other Events*.

**SOCIALISM IN OTHER COUNTRIES.** The Socialist movement in Great Britain, Australia, New Zealand, and Germany sustained severe electoral setbacks during 1931, due partly to financial stringency in the national finances and the relatively heavier burden of social services. A similar tendency was noted in the Scandinavian countries. In Germany, Austria, and Finland the Socialist groups were confronted with armed and hostile Fascist organizations. In France, on the other hand, the tide of public sentiment was reported to be swinging toward the Socialist and Radical Socialist parties, particularly the latter. See the articles on each country under *History*; also **COMMUNISM**, **TRADE UNIONS**.

*temporary Social Movements* (New York, 1930); Harry W. Laidler, *Concentration in American Industry* (New York, 1931).

**SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR.** An international association, of which the Association for Labor Legislation is the American section, created in 1925 by amalgamating three former allied organizations, the International Association for Labor Legislation, the International Social Insurance Committee, and the International Association on Unemployment. The general assembly met at Paris, Oct. 19-22, 1931, with Dr. Karl Renner, former Chancellor of Austria, presiding. Following reports from the various national sections a resolution was adopted calling for the formulation of a convention establishing principles of international law in regard to migrations; a resolution was adopted for the consideration of wage levels at the 1933 general assembly; a third resolution recommended study of seasonal unemployment in the building trades, and further consideration was to be given to the respective functions of relief and insurance in providing against social risks. The association publishes a periodical, entitled *L'Avenir du Travail*, edited by the general secretary, A. Boissard, at the international headquarters maintained at Basel, Switzerland. See LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.

**SÖDERBLOM, THE MOST REV. LARS OLOF JOHNATHAN (NATHAN).** A Swedish prelate of the Lutheran church and ecclesiastical historian, died in Upsala, July 12, 1931. He was born in Trönö, Jan. 15, 1806, and was educated at Hudiskväll and the University of Upsala. After serving as pastor of the Swedish church in Paris from 1894 to 1901, he became in 1901 professor of relative history at the University of Upsala in 1912 professor of comparative religions at the University of Leipzig. In 1914 he was made Archbishop of Upsala, pro-chancellor of the University of Upsala, and Primate of Sweden. In 1925 he was one of the leaders of the Christian Conference on Life and Work held in Stockholm and two years later was one of the moving spirits of the World Conference on Faith and Order in Lausanne, Switzerland.

He was elected to the Swedish Academy in 1921, and received the Nobel Peace Prize for 1930 in recognition of his untiring efforts to unify the churches of northern Europe in the cause of international peace. His works include *Främmande religionsurkunder* (4 vols, 1908); *Religionsproblemet* (2 vols., 1910); *Natürliche Theologie und allgemeine Religionsgeschichte* (1913); *Ur Religionens historia* (1915); *On the Character of the Church of Sweden* (1915); *Religionen och staten* (1918); *När stunderna väla* (4 vols., 1921); *Christian Fellowship* (1923), also in German, Swedish, and Dutch; *Kristenhetens Moete* (1926); *Kristi Pinns Historia* (3d ed., 1928); *Die Einheit der Kirche und der päpstliche Stuhl* (1928); *The Church and Peace* (1929); *Tal och Skrifter* (published in 7 volumes, 1929-30).

**SOILS.** Land classification, valuation, and adaptation, soil erosion and moisture conservation, soil chemistry, soil fertility, soil physics, soil microbiology, and the relation of soil colloids to soil dynamics were among the more important topics receiving special consideration by soil investigators in 1931.

The trend toward more discriminating use of soils in the United States became widespread and culminated in a National Land Utilization Conference which was called by the Secretary of Agriculture and the Association of Land Grant Colleges and Universities. The recommendations growing out of this conference included strengthening the administration of public lands to obtain conservation and rehabilitation of the grazing ranges of the public domain, more efficient watershed protection, centralization and protection of State school lands, the making of an economic inventory of land resources, strengthening the administration of the several homestead acts to provide for supervision of land available for homemaking, the classification of lands opened for homestead entry, and the withdrawal of marginal and submarginal lands from homestead entry; readjustment of land taxation for more equitable distribution of the tax burden, the licensing and regulation of land development enterprises, the confining of reclamation activities to the finishing of projects under way and the rehabilitation of deficient water rights on lands now cultivated and occupied, the development of a coordinated Federal and State programme to govern the utilization of the extensive areas of marginal lands, public retention acquisition of lands not adapted for private utilization, the undertaking of a programme of soil conservation, land classification, and the initiation of a study of decentralization of industry and its effect on land utilization.

*The Report of the Secretary of Agriculture for 1931* pointed to the need to adjust the national agricultural policy, particularly the land policy, to the changing conditions and outlook. This implies an economic classification of land resources which should be readjusted from time to time to conform to fundamental changes in economic conditions. Developments unfavorable to agriculture during 1930 were reflected by severe declines in farm real estate values in nearly all parts of the country. According to this *Report*, not since 1922 had land values dropped in any year to such an extent as during the year ended Mar. 1, 1931. The index of estimated value per acre for the United States as a whole decreased from 115 per cent of the pre-war level to 106 per cent.

The sections reporting the greatest declines in farm land values, relative to 1930 levels, were the West North Central and West South Central States, the decline averaging 11 per cent. The East North Central and South Atlantic groups reported average declines of 9.4 per cent, the East South Central 8.6 per cent, the Middle Atlantic 4.7 per cent, the Mountain States 2 per cent, the Pacific States 1.4 per cent, and the New England States 0.8 per cent. The States reporting the greatest percentage of decline were Arkansas, North Carolina, Missouri, South Carolina, and Iowa. An appreciable and rather general demand for farm lands to rent resulted from the influence of urban unemployment.

The Bureau of Chemistry and Soils continued

the nation-wide inventory of the soil fertility resources of the United States. The soil survey continued to furnish a valuable basis for the classification, selection, and economic adaptation of soil types. This practice continued to be world wide and the United States retained the lead in such work. During the year the Department of Agriculture conducted soil-survey work in 85 separate areas distributed over 30 States and two insular territorial possessions. Thirty-nine of these areas were completed. Detailed surveys aggregating 28,530 square miles and reconnaissance surveys to the extent of 14,014 square miles were covered during the year, bringing the total acreage for the detailed survey to over 528,000,000 and the reconnaissance survey to nearly 400,000,000, according to the *Report of the Chief of the Bureau of Chemistry and Soils for 1931*.

Continued progress was made by the several State organizations cooperating with the U. S. Department of Agriculture in the proper correlation and classification of soils. The Department of Agriculture also extended the soil survey into mountainous areas and into the areas of the national forests to a greater extent than ever before. The information obtained is of value in determining the distribution of the areas where different kinds of timber or different species of grasses may be grown most successfully.

Continued progress was made in the classification of muck and peat soils. A detailed survey and classification of peat soils in the Erie-Ontario Basin and other areas of New York State was carried out and three principal series of organic soils and 12 type profiles were established and described. Information also accumulated regarding means of turning unprofitable, submarginal peat lands to commercial and industrial uses other than farming. Marked progress was made in the comparison and correlation of profile data and the work in peat investigation and its service steadily expanded. Interest was growing in the characteristics and possible economic utilization of the alluvial lands in various parts of the United States and a compilation was made of these areas and a study begun of their general character.

Soil impairment by erosion and runoff continued to be recognized as one of the most important problems confronting American agriculture. The investigations of the Department of Agriculture were expanded by the establishment of three additional erosion experimental stations in defined major soil regions. The work already in operation was enlarged and considerable information accumulated on soil and water losses under various controlled conditions of soil type, slope, and character of rainfall. This made it possible to interpret the basic principles of erosion, runoff, and water penetration with sufficient clearness to permit the practical application of the results in the planning, installing, and perfecting of erosion control and water conservation methods of both engineering and agronomic types.

It was learned that the rate of soil removal on some types of land, occupying moderately steep slopes, is so rapid as practically to preclude its conservation when used for clean-tilled crops except under systems of strip farming supplemented by terracing, or terracing supplemented by soil-saving crops grown in rotation with the clean-tilled crops. Strip subsoiling also

gave promise as a means of soil and water conservation and the effectiveness of substantially built graded terraces was demonstrated on the rolling parts of the red plains of Oklahoma, not only in slowing down erosion but in rehabilitating erosion-denuded land.

New light also was thrown on the function and importance of forest litter and leaf mold in runoff prevention which pointed to a number of possibilities for vegetative erosion control. The reconnaissance erosion survey of the United States was continued, an area of 27,114,240 acres, covering all or part of 70 counties in the drainage basin of the Brazos River being completed. Measurements of the annual losses of soil by erosion were continued and extensive field observations in 34 States indicated that the topsoils of 115 important types of farm land average only nine inches in depth and are being washed away at the rate of seven inches in about 30 years. A soil saving cultivator was developed by the Bureau of Chemistry and Soils and the Kansas Agricultural Experiment Station which gave promise of causing more of the rainfall to sink into the soil, thereby reducing erosion.

The demand continued for more accurate and specific information regarding the fertilizer requirements of crops on soils of known character, and soil fertility studies continued to concentrate in that direction with particular reference to the needs of cotton, potatoes, sugar beets, small fruits, citrus fruits, truck crops, nuts, peaches, and sugar cane. Soil fertility and fertilizer investigations covering the influence of fertilizer composition and ratio on the shape, quality and yield of potatoes were completed. Additional evidence was obtained of the crop producing and economic value of some of the newer concentrated fertilizers, but the necessity again was emphasized of exercising precaution in placing and distributing these materials on soils subject to leaching.

Results obtained during the year indicated that, on such soils where systematic rotations are not practiced, the continued use of the relatively pure fertilizer salt mixtures may create serious deficiencies of minor elements like manganese, boron, copper, iodine and similar elements. The evidence continued to accumulate that the addition of calcium, magnesium, and a number of the heavy metals such as nickel, copper, zinc, and manganese to concentrated fertilizers increases the yields of crops on most soils. This was particularly true with such crops as cotton and tomatoes on soils of the Atlantic and Gulf Coastal Plains.

The relation of soil reaction to crop production continued to receive much attention, with particular reference to its influence on the prevalence and severity of certain crop diseases and on crop yields. The investigations of cotton root rot were continued and expanded to provide for trials of new fertilizers, more comprehensive tests of phosphate sources and particle sizes of new fertilizers, experiments leading to a more practical and economical system of fertilizer usage, and the extension of tests on the effects of subsoiling and deep tillage. Evidence continued to accumulate that soils low in phosphoric acid are conducive to cotton root rot and that the increase in yield of cotton and the acceleration of maturity resulting from the use of fertilizer mixtures containing combinations of phosphate

and nitrogen may constitute effective means of offsetting and evading losses due to root rot. Late summer subsoiling in conjunction with a rotation crop also developed into a successful means of reducing root-rot infestation according to the Bureau of Chemistry and Soils and the Texas Agricultural Experiment Station.

Laboratory studies were in progress to determine the maximum field moisture carrying capacity of the horizons of each soil profile, with a view to the correlation of this property with field data. Basic information also accumulated regarding the physical and chemical character of soils which erode badly. A study of field percolation rates was completed showing that percolation in the field is governed to a much greater extent by holes, cracks, and crevices than by the mechanical composition of the soil. The capacity of the soil to disperse in water and to fill such cracks is the most important factor in regulating the rate of water percolation through soils. Important information continued to accumulate, especially at the State agricultural experiment stations, relating to the functions and behavior of soil colloids, with particular reference to base exchange phenomena and availability of soil nutrients to plants.

Work was carried almost to completion on soil colloids as semipermeable membranes by the Bureau of Chemistry and Soils, indicating a general relationship between the osmotic pressure developed with soil colloids as membranes and the major chemical constituents of the colloids.

**BIBLIOGRAPHY.** Advances in the knowledge of the sciences of soil technology, microbiology, and fertility appear currently in *Soil Science*, published in Baltimore, Md., and in *Journal of the American Society of Agronomy*, published at Geneva, N. Y. Recent books on these subjects are E. Blanck, *Handbuch der Bodenlehre II* (Berlin); F. E. Bear, *Soil Management* (New York, 1931); S. A. Waksman and R. L. Starkey, *The Soil and the Microbe* (New York, 1931); *Recherches Chimiques sur les Sols Podzolises-Leur Amelioration* (Toulouse, 1930); and A. B. Hulbert, *Soil: Its Influence on the History of the United States* (New Haven, 1930). See **FERTILIZERS**.

**SOLAR PHYSICS**. See **PHYSICS**.

**SOLOMON ISLANDS**. A group of islands in the western Pacific, lying to the eastward of Papua. The southern islands of the group (Guadalcanar, Malaita, Ysabel, San Cristoval, New Georgia, Choiseul, Shortland, and numerous smaller ones) are known as the British Solomon Islands and are under the protection of Great Britain. The land and sea area of the British Solomon Islands is about 375,000 square nautical miles; population, 150,000 natives and 447 Europeans (December, 1929). Headquarters of the British Resident Commissioner are at Tulagi.

The northern islands of the Solomon group (Bougainville, Buka, and adjacent small islands) were formerly German possessions and now form part of the Territory of New Guinea under Australian mandate. The area of this group is about 4100 square miles and the native population of patrolled areas was 38,619, in 1929. See **NEW GUINEA**.

**SOMALILAND**, ITALIAN. See **ITALIAN SOMALILAND**.

**SOMALILAND**, sō-mā'lē-lānd, **PROTECTORATE**. A British territory on the African coast of the Gulf of Aden, bounded by Italian

Somaliland, Ethiopia, and the French Somali Coast. Area, about 68,000 square miles; population estimated at 344,700, mostly Mohammedan and entirely nomadic except for permanent settlements on the coast. The capital and chief port is Berbera, with about 30,000 inhabitants. Stock raising is the main occupation in the interior. Governor in 1931, Sir H. B. Kittermaster, appointed Jan. 26, 1926.

**SORGHUM**. See **HAY**.

**SOUND PICTURES**. See **MOTION PICTURES**; **PHOTOGRAPHY**.

**SOUND STUDIES**. See **PHYSICS**.

**SOUTH, UNIVERSITY OF THE**. A Protestant Episcopal institution for the higher education of men in Sewanee, Tenn., founded in 1857. The enrollment for the autumn term of 1931 was 248, of whom 232 were registered in the college and 19 in the theological school. The faculty had 28 members, exclusive of student assistants. The income from productive funds was \$64,500, while the receipts from all sources totaled \$316,190. The library contained 44,671 volumes. President, Benjamin Ficklin Finney, LL.D.

**SOUTH AFRICA, UNION OF**. A self-governing dominion of the British Commonwealth of Nations. Capital, Pretoria; seat of the legislature, Cape Town.

**AREA AND POPULATION**. The area and population of the Union by Provinces is shown in the accompanying table:

AREA AND POPULATION BY PROVINCES

Province	Area, square miles	Non-European 1921	European	
			1921	1931
Cape of Good Hope ...	276,536	2,132,110	650,609	748,455
Natal .....	35,284	1,292,560	136,838	177,424
Transvaal ..	110,450	1,544,151	543,485	695,963
Orange Free State ....	49,647	440,271	188,556	205,324
Total ..	471,917	5,409,092	1,519,488	1,827,166

Of the total white population in 1931, more than 55 per cent were of Dutch origin and about 36 per cent were British. No enumeration of the colored and native population was made in connection with the census of Europeans taken in May, 1931. However, the total population in 1930 was estimated at 8,014,000, of which 1,799,000 were Europeans and 6,215,000 non-Europeans (5,438,700 natives, 188,800 Asiatics, and 587,500 mixed and other colored persons). The 1931 census showed a gain of about 9 per cent in the European population in five years; Transvaal, the fastest growing area, gained 14 per cent. The urban white population increased in all Provinces, but only Transvaal reported a rural increase. For the European population, the average annual number of births from 1926 to 1930 was 45,421 and of deaths 16,912, the respective rates per 1000 inhabitants being 26.1 and 9.6. Immigrants in 1930 numbered 7101 and emigrants 5699; of these 5904 and 4623, respectively, were Europeans.

The estimated total population of the chief cities in 1930, with 1931 census figures of the white population in parentheses, was: Johannesburg, 330,595 (205,544); Cape Town, 264,892 (146,249); Durban, 116,215 (86,296); Pretoria, 74,821 (61,627); Port Elizabeth, 62,824 (43,748); Benoni, 48,700; Bloemfontein, 47,714 (28,361).

**EDUCATION**. In 1930 there were 703,786 stu-

dents in state and state-aided schools (other than schools of higher education), of which 358,786 were Europeans and 345,000 non-Europeans. A total of 7155 students were enrolled in the 10 institutions of university rank, the principal ones being the universities of Cape Town, Stellenbosch, Witwatersrand, and Transvaal University College (Pretoria).

**PRODUCTION.** Of about 10,000,000 acres under cultivation in 1930, approximately 60 per cent was devoted to cereals, with corn dominant. The yields of the chief crops in 1930-31, with 1929-30 figures in parentheses, were (in bushels except as indicated): Wheat, 10,180,000 (11,140,000); barley, 1,046,000 (2,007,000); oats, 5,920,000 (10,289,000); corn, 61,254,000 (80,382,000); potatoes, 4,635,000 (8,063,000); sugar cane, 2,798,000 short tons in 1929-30; tobacco (Europeans only), 12,000,000 pounds (13,000,000); cotton, 5,736,000 pounds (5,750,000). The wine production in 1929-30 was 19,720,000 gallons; groundnuts, 20,390,000 pounds. Livestock in 1929 included 10,518,000 cattle, 804,000 swine, 45,012,000 sheep, and 7,894,000 goats. Wool production for the season ended July 30, 1930, was 307,000,000 pounds, the largest recorded; mohair production was 9,338,000 pounds.

Mineral production in 1930 was valued at £58,985,000 (£60,599,000 in 1929). The Union is the chief gold and diamond producing region of the world. The value of output of the principal minerals in 1930 was: Gold, £45,520,000; diamonds, £8,341,000; coal, £3,497,000; copper, £502,000; asbestos, £341,000; platinum, £299,000. Gold production in 1931 was estimated at 10,874,145 fine ounces (10,716,351 fine ounces in 1930), valued at £45,772,843 (see GOLD). With the completion of a connecting railway line, important manganese deposits at Postmasburg were brought into production in 1930. Vanadium and chrome are also produced. For the year ended June 30, 1929, manufacturing establishments employed 217,660 workers and 934,515 horse power, producing commodities valued at £113,441,000, of which £54,619,000 represented the value added in process of manufacture.

**COMMERCE.** Foreign trade declined approximately 20 per cent in 1930, as compared with 1929, imports showing the greatest decrease. Imports were valued at £64,559,000 (£83,467,000 in 1929) and exports at £67,931,000 (£80,943,000 in 1929). In 1931, according to preliminary returns, imports were valued at 52,975,000 South African pounds and exports at 71,936,000 South African pounds (\$4.8665 at par). The 1930 exports were marked by large decreases in the value of wool and diamond shipments and the increase of nearly 300,000 ounces in gold bullion. The volume of exports was only slightly lower than in 1929. Gold bars, wool, diamonds, corn, and hides and skins, in the order named, were the chief exports. The United Kingdom furnished 44.7 per cent of all imports (43.3 in 1929) and purchased 74.3 per cent of all exports (68.8). Respective shares of the United States were 15.3 and 1.8 per cent. The total value of goods imported in 1931 was £52,974,882 (South African pounds of \$4.8665); exports amounted to £71,936,571 and the excess of exports to £18,961,689 (provisional figures).

**FINANCE.** The fiscal year ending Mar. 31, 1931, closed with a net deficit of £1,212,000, compared with a surplus of £300,000 for the preceding fiscal year. According to estimates, receipts in

1930-31 were about £28,300,000 and expenditures £30,000,000; for 1931-32, budget estimates were reported at £27,513,000 and £29,389,000, respectively. To meet the 1930-31 deficit and the 1931-32 estimated expenditures, new taxation aggregating £2,160,000 was imposed, but an accumulated deficit of £780,000 was anticipated at the end of March, 1932. The Government of the Union remained on the gold standard throughout 1931, despite abandonment of gold by Great Britain. It also declined to accept the British Government's offer of a moratorium on its debt, the payments on which totaled about £337,500 annually. The gross debt of the Union on Mar. 31, 1930, was £249,651,000 and the net debt was £232,091,000. Of the gross debt, £155,997,000 was external and was all floated in London.

**COMMUNICATIONS.** The railway mileage in 1930 was 13,284, all government owned except 400 miles of private line. For the year ended Mar. 31, 1931, the government railways reported operating revenues of £24,321,854 and expenditures of £19,308,4444, compared with £28,130,549 and £20,878,539, respectively, for 1929-30. Access to the west coast of Africa from the South African railway system was made possible in 1931 by the extension of the Benguela Railway to meet the Katanga Railway in the Belgian Congo. Highways in 1930 extended 85,598 miles, of which 680 miles were macadam. In 1930, 1579 vessels, of 5,415,000 net registered tons, entered South African ports in the foreign trade and 1601 vessels, of 5,447,000 tons, cleared. Durban is the chief port, handling 42 per cent of the volume of all imports and 72 per cent of the total exports in 1930.

**GOVERNMENT.** The executive power is vested in a governor-general, appointed by the Crown, who acts through an executive council of ministers, each in charge of a department. Legislative power rested (1931) in a parliament, consisting of a senate of 40 members, of whom eight were nominated by the governor-general-in-council and 32 by the Provinces (eight each), and a house of assembly of 148 members, distributed among the Provinces as follows: Cape of Good Hope, 58; Transvaal, 55; Natal, 17; and Orange Free State, 18; the basis of suffrage being the same as that existing in each Province at the time of the formation of the Union. The executive council in 1931 was composed as follows: Prime Minister and Minister of External Affairs, General J. B. M. Hertzog; Interior, Health, and Education, Dr. D. F. Malan; Mines and Industries, A. P. J. Fourie; Railways and Harbors, C. W. Malan; Finance, N. C. Havenga; Justice, O. Pirow; Defense and Labor, Col. F. H. P. Creswell; Agriculture, Gen. J. C. G. Kemp; Lands, P. G. W. Grobler; Posts and Telegraphs and Public Works, H. W. Sampson; Native Affairs, E. J. G. Jansen.

The composition of the Assembly, following the elections of June, 1929, was: Nationalists, 78; South African party, 61; Labor (Creswell), 5; Labor (National Council), 3; Independent, 1. Governor-General and Commander-in-Chief in 1931, Earl of Clarendon, appointed January, 1931.

**HISTORY.** The refusal of General Hertzog's Nationalist Government to follow the example of Great Britain in abandoning the gold standard (Sept. 21, 1931) gave rise to the major political issue of 1931. The predominant British financial interests, merchants, and the producers of pri-

mary products vigorously opposed the Government's policy, which seriously dislocated South Africa's foreign trade. On the other hand, the Government was able to save some £2,500,000 on each of its semi-annual interest payments in London as a result of the 30 per cent depreciation in sterling. Preservation of the gold standard was also favored by the Afrikaaner, or Boer, majority of the white population as a step toward the elimination of South Africa's dependence upon the British financial system. Earlier in the year there had been strong evidence of a revival of the Afrikaner movement for the establishment of a republic and the break with sterling was in line with republican wishes.

The conflict over the gold standard thus tended to emphasize the schism between the Boer and British elements in the population. But it also cut across racial lines. There were many Afrikaners among the farmers and wool producers, who were unable to sell their products in either non-gold standard countries, owing to exchange losses, or in gold standard countries, which could buy more advantageously in Australia and other countries with depreciated currencies. To conciliate the farmers, the Government on October 29 established an export subsidy of 10 per cent on all primary exports except golds, diamonds, and sugar. The subsidy was paid out of a special primage duty of 5 per cent ad valorem on all imports. In November the Government called a special session of Parliament, which approved its monetary policy and the export subsidy on November 25 by a vote of 78 to 53. The Government thereupon affirmed its intention of remaining on the gold standard permanently. At the close of the year, however, a strong opposition campaign was under way, led by Gen. Jan Christiaan Smuts, head of the South African party.

Earlier in the year the Government found it necessary to intervene on behalf of many farmers reduced to desperate straits by the collapse of agricultural prices. A bill was passed by Parliament providing for the raising of an internal loan of \$25,000,000 with which to guarantee farmers' debts up to an individual maximum of \$5000. During the summer General Hertzog told the Nationalist Party Congress at Pretoria that the Government had decided upon the gradual abolition of the system of provincial councils. His primary objective was the centralization of financial control of the Provinces in the Union Government. The increase in the European population revealed by the census of May, 1931, involved important changes in parliamentary representation. The House of Assembly was to be expanded to its maximum of 150 members provided for under the Act of Union, with Cape of Good Hope having 61 seats, Transvaal 57, Natal 16, and the Orange Free State 16. Consult Jan H. Hofmeyr, *South Africa* (London, 1931). See MILITARY PROGRESS.

**SOUTH AMERICA.** See under the various South American countries; EXPLORATION.

**SOUTH AMERICAN LITERATURE.** See SPANISH-AMERICAN LITERATURES.

**SOUTHAMPTON, ENGLAND, HARBOR IMPROVEMENTS.** See PORTS AND HARBORS.

**SOUTH AUSTRALIA.** A state of the Australian Commonwealth, occupying the south central part of the continent. Area, 380,070 square miles; population, 495,160 at the census of 1921, as compared with an estimate of 582,127 on Jan.

1, 1931. Adelaide, the capital and largest city, had 324,420 inhabitants on the latter date, a decrease of 478 during 1930. Births in 1930 exceeded deaths by 5133, but 3277 more emigrants left the State than the number of immigrants entering. Accordingly the total estimated increase for 1930 was 1856, compared with 923 in 1929 and 14,761 in 1926.

Education is free and compulsory. In 1929, there were 1067 public schools, with 93,029 pupils, and 189 private schools, with 16,087 pupils. There is a State university at Adelaide. The value of production in 1928-29 aggregated £36,177,658, divided as follows: Crops, £13,152,360; manufactures (value added in process), £12,163,066; pastoral, £5,615,431; dairying, £1,842,364; minerals, £1,032,952; fisheries, game, poultry, forestry, etc., £1,317,546. Wheat is the principal crop; production in 1930-31 was estimated at 34,871,000 bushels from 4,120,000 acres (23,345,093 bushels in 1929-30). Barley, oats, hay, and grapes are other leading crops. Wine production in 1929-30 totaled 12,188,651 gallons. The wool output in 1930 was 67,300,881 pounds from 5,500,000 sheep.

The value of direct oversea imports for the year ended June 30, 1930, was £9,228,785; of direct oversea exports, £15,009,496; for 1930-31, imports were £3,911,596 and exports £10,067,986. Wool, wheat, flour, minerals, meats, wine, fruits, hides, and leather are the leading exports. The State faced a critical financial situation in 1931 (see AUSTRALIA under *Finance and History*). For the fiscal year ended June 30, 1930, revenue totaled £10,551,061 and expenditure £12,176,840. In the same year the net State loan expenditure was £2,493,287. The total net debt June 30, 1930, was £93,977,794, or about \$787 per capita. The budget for 1930-31 estimated receipts at £12,764,050 and expenditures at £12,747,583. There were 2536 miles of government-owned railway open for traffic in the fiscal year 1929-30, which reported a net loss for the year of \$8,747,630, bringing the cumulative deficit to \$154,385,287.

Executive power is vested in a governor appointed by the Crown and an executive council composed of six Ministers responsible to Parliament and the Chief Justice of the Supreme Court. Parliament consists of a legislative council of 20 members and an assembly of 46 members elected for three years. The Assembly elected Apr. 5, 1930, was composed of 30 Laborites, 13 Liberals, 2 Country party members, and 1 Independent. Governor in 1931, Sir Alexander G. A. Hore-Ruthven. Premier, Treasurer, and Minister of Education, L. L. Hill (Labor). See AUSTRALIA.

**SOUTH CAROLINA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,738,765, in 1920 it was 1,683,724. The native whites became the predominant part of the population, increasing to 938,774 (1930), from 812,137 (1920); while the Negroes decreased to 793,681 (1930), from 864,719 (1920). The scattering of foreign-born whites diminished to 5266 (1930), from 6401 (1920). There were, in 1930, 959 Indians. The urban population—those living in places of at least 2500 inhabitants—increased sharply to 371,080 (1930), from 293,987 (1920). The rural fell off slightly to 1,367,685 (1930), from 1,389,737 (1920).

Of 687,721 persons reported as in the gainful occupations in 1930, 344,641 or almost exactly one half, were in agriculture, 152,224 farmers

included; in manufacturing and mechanical industries were 145,174, whereof 74,196 were in cotton mills; in trade were 49,172; in domestic or personal service, 68,131; in transportation, 30,189; in professional service, 28,459.

Charleston, the most populous city, had 62,205 inhabitants (1930), 67,957 (1920); Columbia, the capital, 51,581 (1930), 37,524 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1931	1,940,000	1,015,000*	.....
	1930	2,173,000	1,001,000*	.....
Corn	1931	1,608,000	22,994,000	\$10,117,000
	1930	1,531,000	22,200,000	19,980,000
Tobacco	1931	98,000	70,070,000*	6,448,000
	1930	116,000	98,600,000*	11,832,000
Oats	1931	378,000	9,450,000	8,688,000
	1930	344,000	7,912,000	5,855,000
Hay, tame	1931	244,000	178,000*	2,118,000
	1930	200,000	144,000*	2,707,000
Sweet potatoes	1931	53,000	3,180,000	2,067,000
	1930	49,000	4,655,000	8,724,000
Potatoes	1931	25,000	3,550,000	2,486,000
	1930	21,000	2,885,000	3,866,000

\* Bales.    ♢ Pounds    ° Tons.

**MINERAL PRODUCTION.** The chief feature of the State's mineral industry, the quarrying of stone, was less active in 1929, the output for that year falling to 1,067,060 short tons, from 1,278,190 tons for 1928; by value, to \$1,702,575 (1929), from \$2,203,863 (1928). Clay products, next in importance, attained a value of \$1,252,817 for 1929 and \$1,462,055 for 1928. The raw clay extracted, which did not all go into the State's clay products, was valued at \$896,472 for 1929 and \$1,000,103 for 1928. The total value of the mineral production of the State was \$3,592,112 for 1929; for 1928, \$4,045,849.

**MANUFACTURE.** Figures gathered by the Federal Census in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 1658. These establishments employed 108,000 wage earners (a decrease of 0.4 per cent from the number employed in 1927). The wages paid these earners amounted to \$73,231,687 (1.6 per cent less than payments of 1927 for wages). Materials for manufacture, plus fuel and purchased electricity, cost \$227,103,083 (an excess of 10 per cent over these costs for 1927). The manufactured product attained the value of \$385,339,461 (exceeding the total for 1927 by 7.5 per cent). Value added by manufacture was estimated as \$158,236,378. Columbia, among the manufacturing centres, had 67 establishments, 3769 wage earners, a wage total of \$3,404,850, and a product of \$18,107,816. Charleston had 54 establishments, 2770 wage earners, a wage bill of \$2,619,304 and a product of \$19,765,055.

**FINANCE.** State expenditures of the year ended Dec. 31, 1930, as reported to the United States Department of Commerce, were: for maintenance and operation of governmental departments, \$14,211,250 (of which \$3,857,284 was for local education); for interest on debt, \$2,354,867; for permanent improvements, \$13,602,972; total, \$30,170,940 (of which \$15,578,935 was for highways, \$2,226,268 being for maintenance and \$13,352,667 for construction). Revenues were \$21,331,317. Of these, property and special taxes formed 26.5 per cent; departmental earnings and remuneration to the State for officers' services, 6.5; sale of licenses, 59.9 (including gasoline sale

taxes amounting to \$6,108,624). The State's funded debt outstanding on Dec. 31, 1930, was \$56,859,658. Net of sinking fund assets, it was \$56,478,741. On a property valuation of \$415,390,125 were levied in the year State taxes of \$2,803,192.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 3779.67. There had been brought into operation, during the year preceding, 3 miles of line, but 2.28 miles had been abandoned.

**EDUCATION.** There were enrolled in the academic year 1930-31, in the public schools of the State, 461,813 pupils, of whom 240,091 were white and 212,722 were colored. The reported enumeration of inhabitants of school age being 637,613 (339,736 white and 333,877 colored), the percentage of enrollment was 73 for whites, 64 for the colored and 69 for all. Those enrolled in elementary schools or grades numbered 202,231 whites and 203,816 Negroes: 406,047 in all. In high schools were enrolled 46,800 whites and 8006 Negroes: 55,766 in all. The year's current expenditures for public school education totaled \$11,005,845 for white schools, \$1,566,471 for colored and \$12,572,316 for all. Teachers' salaries averaged, by the year, \$967 for whites, \$315 for Negroes, and \$739 for all teachers.

**LEGISLATION.** The General Assembly held a regular biennial session, the longest since 1871, concluding on May 9, after a duration of 118 days. Rigid measures of retrenchment were adopted. The appropriation bill as enacted and signed imposed reductions in the salaries of practically all State employees. The Attorney General and the State Tax Commission were authorized by the Legislature to settle a pending litigation over taxes of the Southern Railway Company for not less than \$240,000, or not quite three-fifths of the total sought for income taxes as due for the years 1921-25. The annual appropriations were reduced by some \$1,275,000, to the neighborhood of \$10,000,000.

**Special Session.** Called in special session to deal with the excess of cotton, the Legislature met on September 14 and adjourned on the 24th. It passed an act to prohibit the planting of cotton in the State in 1932, as a measure to reduce the oversupply, provided that 75 per cent of the cotton area of the United States be likewise put under prohibition.

**POLITICAL AND OTHER EVENTS.** A dam, 7338 feet long, across the Saluda River, 14 miles northwest of Columbia, creating a reservoir of the capacity of 763,000,000 gallons and serving a hydro-electric plant of the Associated Gas and Electric Company, built by the J. G. White Company, was completed for service.

**OFFICERS.** Governor, Ibra C. Blackwood; Lieutenant-Governor, James O. Sheppard; Secretary of State, W. P. Blackwell; Treasurer, J. H. Scarborough; Budget Secretary, Walter E. Duncan; Attorney General, John M. Daniel; Comptroller-General, A. J. Beattie.

**JUDICIARY.** Supreme Court: Chief Justice, Eugene S. Blease; Associate Justices, Thomas P. Cothran, John G. Stabler, Jesse F. Carter, Milledge L. Bonham.

**SOUTH CAROLINA, UNIVERSITY OF.** A non-sectarian State institution of higher education in Columbia, chartered in 1801 and opened in 1805. The enrollment for the autumn session of 1931 totaled 1660, of whom 1067 were men and 593 women. The registration for the summer

session was 484. The faculty, including instructors, numbered 103. The appropriation by the General Assembly of the State of South Carolina was \$375,000 for the fiscal year. There were 110,000 volumes in the libraries. In the fall of 1931 the school of education occupied its new building, erected at a cost of \$300,000; this building was also to house the university high school. Acting President, Leonard T. Baker, A.M., LL.D.

**SOUTH DAKOTA. POPULATION.** According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 692,849; in 1920 it was 636,547. In composition, it was: native white, 603,805 (1930), 536,756 (1920); foreign-born white, 65,648 (1930), 82,391 (1920); Negro 646 (1930), 832 (1920); Indian, 21,833 (1930); Mexican, 816 (1930); and a scattering of Asiatics. The rural population, 561,942 (1930), 534,675 (1920), remained over five times the urban; but the latter, the dwellers in communities of at least 2500, rose to 130,007 (1930), from 101,872 (1920). Of 247,678 reported in 1930 as gainful workers, 130,786 were in agriculture, 28,902 in trade, 22,229 in manufacturing and mechanical industries, 17,936 in transportation, and 20,257 in professional service. The capital is Pierre. The most populous city, Sioux Falls, had 33,362 inhabitants (1930), 25,202 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1931	4,837,000	25,192,000	\$10,312,000
	1930	5,146,000	82,336,000	38,698,000
Hay, tame	1931	1,195,000	558,000*	4,464,000
	1930	1,178,000	1,076,000*	9,146,000
Wheat	1931	2,796,000	15,891,000	7,580,000
	1930	3,808,000	45,279,000	21,001,000
Oats	1931	1,745,000	20,068,000	4,415,000
	1930	2,385,000	70,358,000	14,775,000
Barley	1931	1,833,000	16,680,000	5,338,000
	1930	1,987,000	42,720,000	12,389,000
Flaxseed	1931	185,000	462,000	541,000
	1930	702,000	3,299,000	4,388,000
Potatoes	1931	54,000	2,160,000	972,000
	1930	58,000	3,654,000	3,471,000
Rye	1931	373,000	2,723,000	899,000
	1930	414,000	6,293,000	1,673,000

\* Tons.

**MINERAL PRODUCTION.** About three-fourths of the State's total of mineral production, measured by value, was derived in 1929 from the output of gold, essentially from the working of the Homestake mines. The production of gold increased conspicuously to 406,297 fine ounces for 1930, from 312,328 for 1929; by value, to \$8,398,900 (1930), from \$6,456,400 (1929). There was a subsidiary production of silver amounting in either year to less than \$50,000 in value. The yield of stone rose to 250,440 short tons for 1929, from 172,360 for 1928; by value, to \$635,890 (1929), from \$451,869 (1928). The total value of the State's mineral production was \$8,914,334 for 1929; for 1928, \$9,443,488.

The production of mines in South Dakota in 1931 was estimated at \$8,848,000 in gold and 109,000 ounces of silver, by the U. S. Bureau of Mines, as against \$8,418,008 in gold and 105,236 ounces of silver in 1930. The Homestake mine, at Lead, Lawrence County, the largest producing gold mine in the United States, was operated continuously. For 1930, this company's report showed 1,364,456 tons mined; the proceeds from gold-silver bullion by amalgamation followed by cyanidation of sands and slimes were

\$8,426,195; the dividends paid were \$2,009,280.

**MANUFACTURE.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 618 (nearly 10 per cent above the number for 1927). These establishments employed 6518 wage earners (17.4 per cent more than had been employed in 1927). Their wages totaled \$8,085,912 (19 per cent in excess of the total for 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$75,167,023 (nearly 19 per cent above the corresponding cost for 1927). The manufactured product of 1929 was valued at \$97,768,846 (an excess of 17.8 per cent over the 1927 total). Value added by manufacture was estimated as \$22,601,823. Sioux Falls had 75 establishments, 2393 wage earners, a wage total of \$2,794,414, and a product of \$47,170,805.

**FINANCE.** State expenditures of the year ended June 30, 1930, as reported to the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$9,489,270 (of which \$1,722,400 was for local education); for conducting public-service enterprises, \$625,672; for interest on debt, \$2,825,570; for permanent improvements, \$3,742,083; total, \$16,682,595 (of which \$5,344,172 was for highways, \$2,358,782 being for maintenance and \$2,985,390 for construction). Revenues were \$19,779,229. Of these, property and special taxes formed 27.3 per cent; departmental earnings and remuneration to the State for officers' services, 7.7; sale of licenses, 34.0 (including gasoline sales taxes amounting to \$3,749,134). The State's funded debt outstanding on June 30, 1930, was \$55,594,023. Net of sinking fund assets, it was \$10,795,814. On a property valuation of \$1,744,499,116 were levied in the year State taxes of \$5,279,476.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 4237.87. No additions of line had been made during the year preceding, while the operation of 49.58 miles had been given up.

**EDUCATION.** As reported in 1931, the number of persons of school age in the State was 214,503. The number of those enrolled as pupils in the public schools was 165,624. Of these, 134,286 were in common schools or elementary grades, and 31,338 in high schools. For the academic year 1929-30, the expenditures for public-school education totaled \$19,213,611. The annual salaries of teachers averaged \$1282.39.

There was installed on July 1, 1931, according to State superintendent Giffen, a uniform system of accounting in all the public schools. The law for the certification of teachers was practically rewritten by the Legislature.

**CHARITIES AND CORRECTIONS.** As administered in 1931, the activity of the State in the care and custody of persons was in the hands of the State Board of Charities and Corrections. This board was composed of three members, appointed by the Governor, one every three years. It governed and controlled the State's seven charitable and penal institutions. These, with their populations as reported in December, 1931, were: State Hospital for the Insane, Yankton, 1450; School and Home for the Feeble-Minded, Redfield, 520; State Penitentiary, Sioux Falls, 548; School for the Blind, Gary, 60; School for the Deaf, Sioux Falls, 120; Training School (reformatory), Plankinton, 150; State Tuberculosis Sanitarium, Custer, 300.

**LEGISLATION.** Among the enactments of the

regular biennial session of the Legislature was one for the construction of an annex to the Capitol Building; a commission was created, with the Governor as chairman, to supervise the work. Another measure heavily increased the license fees on heavy motor trucks and added an estimated 60 per cent to the allotments of revenue to counties for the construction and maintenance of highways. As a step to encourage the development of municipal utility plants, the power was given to municipalities to pledge the future earnings of such plants in order to secure the capital needed for them. By another measure, raising to 65 per cent, from 55, the vote necessary to approve the sale of a municipally owned public utility, the tendency of municipalities to sell out to private corporations was discouraged.

The State's representation in the Federal Congress having been reduced to two Representatives, from three, by the new reapportionment, the Legislature redistricted the State in accordance with the change. The old First and Second districts, having a combined population of some 550,000 and comprising the territory east of the Missouri River, were merged into a new First District; the old Third district, west of the river, with a population of some 175,000 became the new Second District.

**POLITICAL AND OTHER EVENTS.** The last band of the Hutterite sect, which had migrated to the State in 1874, abandoned their Wolf Creek colony and departed for Canada on September 6. The Hutterites had at one time 17 colonies in South Dakota containing some 4000 members, who had left Russia to be rid of the obligation of military service. A particularly severe pest of grasshoppers did great damage to crops in the Rosebud area of the south-central part of the State during the summer, infesting an area of 100 by 125 miles.

**OFFICERS.** Governor, Warren Green; Lieutenant-Governor, O. K. Whitney; Secretary of State, Elizabeth Coyne; Treasurer, A. C. Goodhope; Auditor, William M. Dunn; Attorney-General, M. Q. Sharpe; Superintendent of Public Instruction, F. C. Giffin.

**JUDICIARY.** Supreme Court: Presiding Judge, Samuel C. Polley; Judges, Dwight Campbell, E. D. Roberts, Frederick A. Warren, H. B. Rudolph.

**SOUTH DAKOTA, UNIVERSITY OF.** A State institution of higher education in Vermilion, founded in 1882. The enrollment for the autumn term of 1931 was 984 and for the summer session, 432. The faculty and staff numbered 145. The operating income for the year was \$488,405. The library contained 72,500 volumes. President, Herman G. James, J.D., Ph.D.

**SOUTH DAKOTA STATE COLLEGE.** A State college of agriculture and mechanic arts in Brookings, founded in 1882. The enrollment for the summer session and the autumn of 1931 was 1288; summer school, 272. The teaching staff was equivalent to 87 full-time teachers. The productive funds of the college amounted to \$508,744. The income for 1930-31 was \$1,032,390. The library contained 44,740 bound volumes and 15,000 pamphlets. President, Charles W. Pugsley, D.Agr.

**SOUTHERN CALIFORNIA, UNIVERSITY OF.** An institution of higher education for men and women in Los Angeles, Calif., founded in 1879. It comprises the following schools and colleges: Letters, arts and sciences, music, dentistry, phar-

macy, graduate, religion, law, speech, commerce and business administration, education, social welfare, architecture, engineering, medicine, international relations, philosophy, merchandising, public administration, and university college. The enrollment for 1930-31, including summer session and extension classes, was 16,185. In the autumn of 1931, there were 550 members on the faculty. The endowment was \$1,717,000, the income from tuition and fees, \$1,737,968, and other income, \$286,450. There were 142,000 volumes in the library. In 1931 construction of a new library building was begun. President, Rufus B. von Kleinsmid, Sc.D., J.D.

**SOUTH GEORGIA.** See FALKLAND ISLANDS.

**SOUTH MANCHURIA RAILWAY.** See MANCHURIA; KWANTUNG; JAPAN under *History*.

**SOUTH ORKNEYS.** See FALKLAND ISLANDS.

**SOUTH-WEST AFRICA.** A former German protectorate, administered since Dec. 17, 1920, by the Union of South Africa under a mandate from the League of Nations; bounded by Angola, the Atlantic Ocean, Cape Providence of the Union, and Bechuanaland Protectorate. Area, 322,394 square miles; population, at the census of 1926, 24,115 Europeans and about 234,790 natives; estimated in 1930, 30,404 Europeans and 261,117 natives. Capital, Windhoek, with 4602 European and 13,753 native inhabitants.

In 1929, there were 63 Government schools, with 3623 pupils, and 56 private schools, with 1368 pupils. The country is generally too dry for agriculture, and mining and stock-raising are leading industries. Imports in 1930 were valued at \$10,325,770; exports, \$12,745,400. The budget for 1930-31 estimated revenue at £707,000 and expenditure at £1,516,710, including a loan expenditure of £623,890.

Executive power is delegated by the Governor-General of the Union of South Africa to an administrator with full authority to legislate. The Constitution conferred on the territory in 1925 provided also for an executive committee, an advisory council, and a legislative assembly. Administrator in 1931, A. J. Werth.

**SOVIET CENTRAL ASIA.** A region in Central Asia, including the territory formerly known as Russian Turkestan, and extending from the Caspian Sea to Mongolia and Sinkiang and from Siberia to the northern boundaries of Afghanistan, and Persia. Administratively it is divided into the following soviet socialist republics and autonomous areas affiliated with the Soviet Union:

#### SOVIET REPUBLICS OF CENTRAL ASIA

<i>Republics</i>	<i>Area, sq. miles</i>	<i>Population</i>
Turcoman S. S. R. ....	189,658	1,030,500
Uzbek S. S. R. ....	75,598	4,525,000
Tadzhik S. S. R. ....	54,826	745,200
Kara-Kalpak Aut. Area ....	46,320	370,000
Kirghiz A. S. S. R. ....	60,000	1,000,000

Soviet Central Asia also includes the southern part of the Autonomous Kazak Republic, which, like the Kirghiz Republic and the Kara-Kalpak Autonomous Area, is a part of the Russian Socialist Federated Soviet Republic. The figures given for both area and population are rough estimates. See UNION OF SOVIET SOCIALIST REPUBLICS.

**SOVIET RUSSIA.** See UNION OF SOVIET SOCIALIST REPUBLICS.

**SOVIET UNION.** See **UNION OF SOVIET SOCIALIST REPUBLICS.**

**SPAIN.** A former constitutional monarchy of southwestern Europe, proclaimed a republic on Apr. 14, 1931. Capital, Madrid.

**AREA AND POPULATION.** Continental Spain has an area of 190,050 square miles; including the Balearic and Canary Islands, the total area is 196,607 square miles, or about one-third less than that of Texas. The population on Jan. 1, 1930, was estimated at 22,760,854, as compared with 21,338,381 at the census of 1920. The density of population is about 113 per square mile, compared with 338 for Italy and 40 for the United States. Births in 1929 totaled 653,571; deaths, 407,411; marriages, 168,337. Emigrants in 1929 numbered 97,465, but the outward flow was largely offset by Spaniards returning from foreign countries. The excess of emigrants over immigrants declined from 72,653 in 1913 to about 1186 in 1927. Emigration is principally to Spanish America. The principal cities, with the estimated population on Jan. 1, 1930, are: Madrid, 825,471; Barcelona, 775,272; Valencia, 272,129; Seville, 217,924; Bilbao, 160,501; Málaga, 160,228; Zaragoza, 157,399; Murcia, 156,458; Granada, 109,001; Cartagena, 101,493.

**EDUCATION.** At the census of 1920, 45.46 per cent of the population could neither read nor write. Elementary education is free for the most part. In 1928, there were 23,690 public and about 6000 private elementary schools, with a total of approximately 3,200,000 pupils. For secondary instruction, there were 65 schools, with 77,347 students; and for higher education, 11 universities, with 39,719 students. Barcelona, Granada, Madrid, Murcia, Oviedo, Salamanca, Santiago, Seville, Valencia, Valladolid, and Zaragoza each has a university.

**PRODUCTION.** Spain is predominantly an agricultural country, although two-thirds of the country is so dry that crops are problematical or impossible without irrigation. The area under cultivation in 1925 was 47,823,000 acres, or 38.3 per cent of the total area; about 7 per cent of the land under crops was irrigated. The total value of field crops and products of vines and orchards was \$1,425,428,000 in 1929. Cereals, rice, potatoes, and sugar beets are leading crops.

Spain is normally the leading olive-producing country of the world. Citrus and other fruits, figs, nuts, garden truck, esparto, flax, hemp, and silk are other products. Livestock in 1928 included 19,370,443 sheep, 4,773,366 swine, 3,659,639 cattle, 1,153,874 mules, and 598,306 horses. See **AGRICULTURE** under *World Agriculture*.

Together with extensive mineral and water-power resources, Spain's agricultural and forest products furnished the basis for a considerable industrial development during and after the World War. There is an exportable surplus of copper, iron, lead, zinc, manganese, mercury, and pyrite, and adequate amounts for domestic use of tungsten, barite, fluorspar, graphite, gypsum, talc, and soapstone. British capital controls most of the valuable mineral deposits. The output of the principal minerals in 1930, in metric tons, was as follows: Coal and lignite, 7,559,000; pig iron, 685,800; lead, 122,300; zinc, 10,700.

Cork is the most important forest product, the exports normally totaling about 84,000 metric tons with a value of about 155,000,000 pesetas (1 peseta equals \$0.193 at par). In the period 1909 to 1928, the value of crude minerals mined

increased from 202,327,000 to 422,976,000 pesetas while the value of products fabricated from crude minerals advanced from 250,529,000 pesetas to 1,295,314,000 pesetas. Cotton goods, paper, glass, sugar, cork products, and silk are the other principal manufactured products. The hydroelectric power industry leads all others in invested capital, with an aggregate of about 1,500,000,000 pesetas (about \$220,200,000) in 1929. In 1931, there were 800 weaving mills, with 2,380,000 spindles and 80,000 looms, employing 110,000 persons. The mining, manufacturing, and commercial industries were seriously affected during 1931 by the world-wide economic depression and political disturbances in Spain. A prolonged drought reduced agricultural yields.

**COMMERCE.** Spain's exports in the calendar year 1930 were valued at \$443,800,000, as compared with \$406,900,000 in 1929, while the value of imports declined to \$472,300,000 from \$528,200,000 in the preceding year. The excess of imports over exports, which stood at \$121,300,000 in 1929, was reduced in 1930 to \$28,500,000. The balance of visible trade is normally unfavorable, but is offset to a considerable extent by emigrant remittances, expenditures of foreign tourists, etc. The six leading export commodities in 1930 were: Oranges, \$62,795,000; olive oil, \$56,171,000; wine, \$45,172,000; fruits and nuts, \$44,458,000; cotton manufactures, \$24,092,000; and cork manufactures, \$17,297,000. The United States, United Kingdom, France, and Germany, in the order named, were the chief sources of imports, while France, the United Kingdom, and the United States were the leading export markets.

**FINANCE.** Preliminary returns on the budget covering the calendar year 1930 indicated a surplus of 38,000,000 pesetas (about \$4,435,000 at the average exchange rate of \$0.1167). The ordinary budget as revised at the end of April, 1930, estimated revenues for the year at 3,670,000,000 pesetas and expenditures at 3,997,798,000 pesetas. The extraordinary budget, introduced in 1926 to provide for public improvements, was suppressed in 1930. There was an annual deficit in the combined ordinary and extraordinary accounts for the years 1923-24 to 1929 inclusive, the deficit for 1929 totaling 323,789,000 pesetas and that for 1928, 249,904,000 pesetas. Revenues for the calendar year 1931 were estimated at 3,753,654,000 and expenditures at 3,690,945,000 pesetas. Preliminary results showed a deficit for 1931 of 199,000,000 pesetas, exclusive of the railway fund which had an estimated deficit of 372,000,000 pesetas in October, 1931.

As a result of continued deficits in the budgets, the national debt increased steadily from 11,881,600,000 pesetas in 1921 to 20,234,451,000 pesetas at the beginning of 1930. There was practically no foreign debt. See *History*.

**COMMUNICATIONS.** On Jan. 1, 1929, there were 10,281 miles of railway line in operation, of which 7311 miles were wide-gauge steam, 2539 miles narrow-gauge steam, and 270 electric railways. The highway system, under the Primo de Rivera régime, became one of the best in Europe. Highways in use or under construction in 1925 totaled 54,117 miles, of which 37,833 miles were state highways, 6126 miles provincial highways, and 10,158 local roads. In 1929, there were 54 airports in the country and air lines radiated from Madrid to Barcelona, Seville, and Biarritz; another line connected Seville and Larache. The Spanish Telephone Company operated 212,360

telephone stations at the end of 1930, an increase of 22 per cent over 1929. On Jan. 22, 1931, radio-telephone service was inaugurated between Spain and the Canary Islands, and on Oct. 24, 1931, the service was extended to Majorca.

**ARMY AND NAVY.** See **MILITARY PROGRESS**; **NAVAL PROGRESS**.

**GOVERNMENT.** The Constitution of 1876 vested executive power in the King, acting through a responsible ministry, and legislative power in the Cortes, or Parliament, consisting of the Senate and the Chamber of Deputies. The Cortes was dissolved by royal decree Sept. 16, 1923, and parliamentary government was dispensed with until the overthrow of King Alfonso on Apr. 14, 1931. A provisional republican government was established the same day, composed as follows: Prime Minister, Alcalá Zamora; Foreign Affairs, Alejandro Lerroux; Justice and Worship, Fernando de los Rios; War, General Azana; Marine, Casares Quiroga; Finance, Indalecio Prieto; Interior, Miguel Maura; Education, Marcelino Domingo; Public Works, Señor Albornoz; Labor, Largo Caballero; Economy and Communications, Martínez Barrios. A constituent Cortes was convened July 14, 1931, which spent the remainder of the year drawing up a new Constitution (see below under *History*).

#### HISTORY

**FALL OF THE MONARCHY.** Alfonso XIII, proud repository of the sovereign power wielded by his Bourbon and Hapsburg ancestors for five centuries, was driven into exile Apr. 14, 1931, by a virtually bloodless republican revolution. His throne was the price exacted by Alfonso's subjects for his absolutist tendencies, and particularly for what they conceived to be the two supreme sins of his 29-year reign. Firstly, he was charged with responsibility for the annihilation of 10,000 Spanish soldiers by Riff warriors at Anual, Morocco, in 1921. Secondly, he was accused of sanctioning the six-year dictatorship of Gen. Primo de Rivera, in violation of his oath to the Constitution, in order to evade an accounting for the Moroccan disaster.

Discontent with the monarchy, coupled with profound economic and social unrest, had kept Spain in a state of ferment throughout the previous year. From the beginning of 1931 it was evident that the crushing of the Jaca revolt of the previous December (see 1930 YEAR BOOK) had intensified rather than diminished revolutionary sentiment. Premier Berenguer, who had been chosen by Alfonso on Jan. 30, 1930, to liquidate the dictatorship, made repeated but unsuccessful efforts to conciliate republican sentiment. The martial law clamped down on all Spain after the December revolt was lifted, except in Madrid and Saragossa, on Jan. 24, 1931. The result was an immediate renewal of student riots and strikes and on February 4 all universities were closed for one month by royal decree.

The crux of the political situation lay in the demand of all parties and classes, except part of the aristocracy, the higher clergy, and the army, for the election of a Cortes (parliament) to draft a new constitution. It appeared certain that such a Cortes would not only bring up again the question of the King's responsibility for the Moroccan disaster but also would drastically curtail his powers. Alfonso chanced revolution rather than submit. The election decree issued by his Prime Minister on February 8 provided for the election

in March of a parliament to function only in conformity with the existing constitution.

The decree aroused a furor, especially among the anti-monarchists. The Socialists, the federation of labor, the Catalanian Left wing groups, and the Reformists agreed to abstain from voting. The Liberal leader, Count Romanones, Francisco Cambo, chief of the Catalan monarchists, and Marquis Alhucemas, Left Liberal head, gave notice that when the new Parliament met they would ask for the convocation of a constituent assembly. On February 14, the King signed a decree cancelling the elections, and the Berenguer Cabinet resigned. Faced with a Cabinet crisis in which his throne hung in the balance, the King suspended all constitutional guarantees. For two hectic days he conferred with one political leader after another in an effort to form a new Ministry. Finally, on February 16, he turned reluctantly to Don José Sanchez Guerra, a former Conservative Prime Minister, who accepted the task of forming a Cabinet. Sanchez Guerra, had demanded a Cortes with complete authority to determine whether Spain should have a monarchical or republican government. His delegation by the King to form a Cabinet implied Alfonso's acceptance of Sanchez Guerra's programme. On February 18, however, Alfonso changed his mind and again postponed the crisis by a third resort to dictatorship. He called on Admiral Juan Bautista Aznar, who assembled a royalist Cabinet, reestablished the censorship, and concentrated troops in Madrid.

**THE MUNICIPAL ELECTIONS.** The Aznar Government, on February 19, made a new attempt to salvage the monarchy through a return to constitutionalism. It announced that provincial and municipal elections would be held April 12, followed by the convening of a Cortes authorized to modify the constitution but not to abolish the monarchy. The stabilization of the peseta and possible autonomy for Catalonia were listed as other problems for the consideration of the Cortes.

Although few appeared to realize it in advance, the fate of the monarchy hung directly upon the outcome of the municipal elections. In preparation for the elections, the Government restored all constitutional guarantees for the first time in seven years. Freedom of the press, of speech, and of public assemblage was maintained throughout the campaign. The republicans eagerly seized the opportunity to broaden their propaganda among the people. They joined forces with the Socialists under an agreement concluded February 22 and laid careful plans for taking control of the government at the first favorable opportunity. Their powerful attack on the monarchy was led by Míeto Alcalá Zamora, a Minister in three monarchist Cabinets, who had turned republican in 1923 upon the establishment of the dictatorship.

The fervor of the republican campaign was heightened by the trial by court-martial at Jaca March 12 to 17 of 77 persons charged with participation in the December uprising. While crowds outside cheered the prisoners, the judges imposed sentence of death upon Capt. Salvadore Sediles and life imprisonment upon four others. The King immediately commuted the death sentence. A few days later, in Madrid, occurred the trial of the civilian members of the abortive provisional republican government of December. The defendants, including Alcalá Zamora, head

of the provisional junta, seized the occasion to press their charges against the monarchy. Their defense was that "in countries where there is no justice or legal authority, there can be no rebels." The defendants were sentenced to six months and one day's imprisonment. Released on parole immediately, they played a prominent part in the republican campaign.

The elections of April 12 resulted in a victory of the republican, socialist, and other anti-monarchist groups in 40 of the 50 Provinces of Spain. Returns issued by the Home Office gave the monarchists 22,150 seats in the municipal councils to 5875 for the republicans. The monarchist seats, however, were mainly in the small villages, which exert little influence upon the nation. The republicans triumphed in all of the large cities except Barcelona, where the Catalan Separatists won a majority, and in Cádiz, where the monarchists captured all seats. Even in Madrid, the republicans secured 30 seats, against 20 by the monarchists.

The unexpectedly overwhelming victory of the republican cause emboldened Alcalá Zamora and his colleagues to address a manifesto to the nation declaring that the election constituted a mandate for the republic and that they would strive energetically to bring it into being. Demonstrations against the King on the day following the election resulted in some places in skirmishes with the police. On April 14, the Aznar Cabinet resigned, and while the King and his advisers consulted anxiously with various political leaders, news came of the declaration of a republic at Barcelona, San Sebastian, Saragossa, Cordova, Granada, Huelva, Almeria, and other cities. The republicans rejected the King's offer to step down in favor of his son. Apparently Alfonso wavered between an effort to crush the opposition and acceptance of the will of the nation. As late as 6.45 P.M., Admiral Aznar stated that martial law would be established. But within two hours the King had renounced his power and Alcalá Zamora was announcing to the nation by radio from the Home Office the birth of the republic.

Alfonso did not formally abdicate. Realizing that his further presence in Spain meant civil war and bloodshed, he left it to the nation to decide by democratic methods whether he should ever return. That night he drove to Cartagena, taking ship to France and then to England. In London, he settled down patiently to await developments in Spain. Meanwhile he was not in need. The Provisional Government announced May 21 that the private fortune of the royal family, much of it deposited in foreign banks, amounted to \$8,497,417. By an overwhelming vote of the Constituent Cortes on Nov. 20, 1931, Alfonso was declared an outlaw, to be shot on sight if he ever returned to Spain.

**THE PROVISIONAL REPUBLIC.** Transition from monarchy to republic took place with an orderly efficiency astounding to foreign observers. The shadow cabinet, formed by the anti-monarchist coalition in anticipation of the crisis, was immediately recognized as the governing power throughout Spain (for membership, see under *Government* above). Peace and order such as Spain had not known for years reigned for three weeks after the advent of the republic. Among the first acts of the Cabinet was the issuance of a proclamation announcing elections in June for a Cortes authorized to draft a new constitution. Before the end of April, the provisional

régime had been recognized by the principal powers, including the United States, and Spanish diplomatic posts abroad had been filled by adherents of the republic.

Functioning by decree, the Cabinet arrested General Berenguer for his part in the execution of two leaders of the Jaca revolt, deprived all Cabinet officers appointed during the dictatorship of their pensions, and threw open the royal parks and large estates to the public. Amnesty was granted all political prisoners of the monarchy, and all exiles were invited to return to Spain. To safeguard Spain's natural resources from further control by foreign financial interests the Government assumed control of water power. It decided not to use a \$60,000,000 foreign loan negotiated March 26 by the monarchy with American and European banking interests for the purpose of stabilizing the peseta. The confiscation of ex-King Alfonso's personal property throughout Spain was ordered May 13.

The Provisional Government was confronted with many difficult problems. It faced the danger of both Communism and of monarchist reaction, the necessity for drastic readjustment of the intimate relations of Church and State, and the demands of Catalonia and the Basque Provinces for a federal instead of the unitary republic desired by the rest of Spain. The antiquated system of land tenure and farming methods pressed for reform. All the land was held by about 3,400,000 owners, including some 277,000 of the landed aristocracy on whose large estates the tenants were not far removed from serfdom. Overloaded with loyalist officers, the army constituted another menace to the republic as well as a heavy drain on the treasury. The weakness of the peseta and the precarious financial condition of the treasury upon the advent of the republic taxed the resources of the provisional régime.

The final decision upon the most fundamental problems was left to the Cortes, which convened July 14. In its few months of life, however, the Provisional Government drastically reduced the army, introduced full liberty of conscience in religious matters and education, and drew up plans for agrarian reform and for the betterment of the condition of industrial workers. It also prepared the draft of a new constitution to be submitted to the Cortes, together with a full record of transactions under and by the dictatorship, to allow the placing of responsibility. The army and navy were reorganized, the top-heavy officer personnel of the army being reduced from 22,000 to 7000. See **MILITARY PROGRESS.**

Provision was made for the opening of 30,000 new elementary schools within a year and plans were outlined for the reorganization by the Cortes of the system of university and secondary education. Another decree prohibited the further creation of ranks of nobility and provided that existing titles should carry no civic privileges. On June 4, about 1600 cathedrals, churches, castles, and other "historic and artistic monuments belonging to the nation's artistic treasures" were placed under the supervision of the Fine Arts Committee of the Ministry of Education, although actual ownership of them continued in the hands of those formerly in possession.

In Spanish Morocco (see **MOROCCO**), where the transformation from monarchical to republican control had been marked by fighting between republican forces and the Foreign Legion and unrest among the natives, a civilian high com-

missioner took the place of his military predecessors. The Moroccan military budget was cut from 300,000,000 to 100,000,000 pesetas (from about \$60,000,000 to \$20,000,000, calculated at par). The question of the retention of Morocco was left to the Cortes.

**ANTI-CLERICAL RIOTS.** The orderliness of the nation under the Provisional Government was broken on May 11 and 12, when mobs in Madrid and half a dozen other important cities burned convents, churches, and other ecclesiastical buildings, causing damage estimated at several million dollars. The outbreaks were preceded by a pastoral letter issued May 7 by Cardinal Segura y Saenz, Primate of Spain, urging all Catholics to vote only for candidates who would protect the interests of the Church. Minister of Justice de los Rios protested against the letter, on the ground that it constituted interference in politics, and demanded the recall of the primate, who was summoned to Rome immediately. Compulsory religious education in the public schools was abolished by a government decree May 8. On May 11, a gathering of monarchists to open their campaign for the June election was broken up by republican rioters, several monarchist noblemen being severely beaten. Inflamed by this incident, apparently, small groups of men and youths burned seven of the 170 convents in Madrid, from where the anti-clerical rioting spread to other cities. In most cases, both the police and the crowds looked on in apparent indifference. Martial law was declared in Madrid on May 12, but it was several days before the epidemic of attacks on church properties in other cities was ended.

The attacks upon church property involved the government in a serious controversy with the Vatican. On May 15, the Papal Nuncio delivered an energetic protest, stressing the failure of the government to afford adequate police protection. Two days later, Miquel Maura, Minister of the Interior and himself a devout Catholic, ordered the expulsion from Spain of the Bishop of Vitoria for alleged interference in politics. The proclamation of religious liberty throughout Spain on May 22 was considered by the Vatican a violation of the concordat governing relations between Spain and the Holy See. Cardinal Primate Segura returned to Spain June 12, but three days later was officially expelled by the government on the ground that his presence threatened to disturb public order. There had been an increasing number of clashes between Catholics and radicals in various parts of Spain. The Vatican again protested, asking that the Cardinal be readmitted. The request was rejected.

Despite these developments, the Provisional Government made no move to disestablish Roman Catholicism as the State Church, this problem being left by mutual consent to the Cortes. The State continued its contributions to the Church, which under the monarchy aggregated from 50,000,000 to 60,000,000 pesetas (\$9,650,000 to \$11,580,000 at par) annually. This policy aroused the ire of the Socialists and radicals and brought the two devout Catholic members of the Cabinet—Provisional President Alcalá Zamora and Minister of Interior Maura—into disfavor.

**THE CATALAN PROBLEM.** No less menacing to the future of the republic than the dispute with the Church was the problem of reconciling the claims of Catalan nationalism with the desire of republican leaders for a strong central govern-

ment for all Spain. For 400 years Catalonia (q.v.) had fought unsuccessfully to regain its ancient autonomy from the absolute kings of Spain. A Catalan republic was proclaimed early on the day of the collapse of the monarchy. Controversy between Barcelona and Madrid and among the Catalans themselves as to the form Catalan autonomy should take and its relations to the Spanish republic commenced immediately. The Madrid government conceded the right of Catalonia to its own language, flag, national anthem, and Cortes but insisted that the Catalans recognize the superior authority, and particularly the right of taxation, of the central government. The majority opinion in Catalonia held out for the right to make its own regional laws, the administration of civil and penal law according to the ancient Catalan code, a separate system of education, the power of imposing and collecting taxes for both the regional and central governments and of transmitting the latter sums to Madrid.

Elections for the regional Cortes were held May 24 and the first Catalan Generalidad Assembly in 400 years convened in Barcelona June 9, charged with the framing of a State constitution. The plan of Francisco Macia, Provisional President of Catalonia, was to present a completed constitution to the Spanish Cortes for either acceptance or rejection. This led the Madrid Government to join forces with the conservatives and moderates in Catalonia in demanding that the Catalan constitution be worked out in conference between representatives of Catalonia and of the other Spanish Provinces. On June 19, it was announced that the preliminary draft of the Spanish constitution prepared by the Madrid Government for submission to the Cortes provided for a unitary instead of a federal republic. Angered by the report, Catalan separatists rioted in Barcelona, where representatives of the Central Government remained in control. The Madrid Government inaugurated an open drive to break the power of Macia in Catalonia, sending Foreign Minister Llerroux to Barcelona on June 21 to introduce a coalition ticket in opposition to the candidates aligned with the Catalan leader.

**BASQUE MOVEMENT FOR AUTONOMY.** The Catalan demand for the establishment of a federal government at Madrid was reinforced by agitations for autonomy in various other historical regions, particularly in the Basque Provinces (q.v.) in northwestern Spain. Thirty thousand Basques from 1500 towns and villages gathered at Estella June 14 and approved a statute establishing the four Basque Provinces as a separate State within the Republic. The Basque statute likewise required ratification by the Spanish Cortes to become effective. It authorized the Madrid Government to control international affairs, including customs and monetary matters, the national debt, the telegraph and postal systems, and mercantile and penal laws. Inter-State disputes were admitted to be under Madrid's jurisdiction. But virtually all other powers, including taxation, defense, and control of the economic and political affairs of the region, were reserved to the proposed council-general, or legislative assembly, of the Basque State. Less vigorous movements for autonomy developed also in the Provinces of Valencia, Alicante, and Castellon, forming the ancient historical region of Valencia, the Balearic Islands, and Andalusia.

**THE GENERAL ELECTION.** With these important issues awaiting final decision by the Constituent Assembly, scheduled to convene July 14, the general election of June 28 for members of the Cortes drew near in an atmosphere of increasing tension. More than a thousand candidates, representing some 25 political parties, entered the lists for the 470 seats. Of these, 120 represented the Republican Right Wing under Alcalá Zamora and Señor Maura. The Socialist-Republican Alliance entered 115 candidates, the Socialists 104, the Catholic Party 58, the Communists 22, and the Monarchists only 6.

The extreme radical groups, particularly the powerful Syndicalist labor union (*Sindicato Unico*) and the Communist party, made a determined effort to swing the revolution sufficiently to the Left to enable them to wrest control from the more conservative Socialist-Republican leaders. Strikes and labor rioting reached alarming proportions. Inflammatory appeals were broadcast urging workers to prevent "the sabotage of the revolution." On May 28 Syndicalist workers seized the great street-car foundry and steel plant at Saragossa and held it throughout the day against Government troops, before withdrawing. Labor disorders were marked by armed clashes and a number of deaths. Runoff contests of the April 12 municipal election, held on June 1, resulted in disorders and bloodshed in many Provinces, but served to confirm the overwhelming Republican sentiment of the nation.

It became evident that the extremist element was getting out of hand as a result of the Provisional Government's policy of moderation and its effort to guarantee to all political parties the fullest scope for election propaganda. The Cabinet accordingly adopted more severe measures to curb the excesses of Communists, Syndicalists, and Monarchists. But it was not altogether successful. At Oviedo on June 19 a mob of 10,000 radicals stormed the Compoamor Theatre, where Melquiades Alvarez, leader of the important Reformist (liberal Monarchist) party, was holding a campaign rally. Troops were called out to restore order after one person was killed, 16 injured, and Señor Alvarez himself had narrowly escaped death. Two days later the Reformists withdrew from the election.

With cities and towns littered with handbills and campaign posters and echoing to the noise of torchlight parades and mass meetings, the final days found Spain in the grip of intense excitement. On the eve of the elections occurred an abortive revolt at the Seville military airdrome, which was nipped in the bud by General Sanjurjo, head of the Civil Guard and special envoy of the Madrid Government.

Although marked by sporadic rioting, in which some 10 persons were killed, the elections of June 28 were on the whole orderly and admittedly fair. The verdict of the April municipal elections, which overthrew the Monarchy, was overwhelmingly confirmed, while the defeat of all Communist candidates allayed the fears of those who believed that Spain was headed toward a dictatorship of the proletariat. The Liberal, Radical, and Socialist coalition, which had controlled the Provisional Government, made a clean sweep of most of the Provinces and all members of the Government were elected. The Socialists, headed by Finance Minister Indalecio Prieto, captured 113 seats, thus forming the largest party group. There were 86 Radical deputies,

under the aggressive leadership of Minister of Foreign Affairs Alejandro Lerroux; 54 Radical Socialists under Minister of Labor Marcelino Domingo; 41 Catalan members owing allegiance to Colonel Macia; 25 members of War Minister Manuel Azana's Accion Republicana; and a fairly strong grouping of Right Republicans under Provisional President Alcalá Zamora and Minister of Interior Miguel Maura.

In Catalonia, Colonel Macia's autonomist party, with the backing of the revolutionary *Sindicato Unico*, scored a decisive victory, as did the autonomist candidates in the Basque Provinces. The Basque delegation of 10 deputies included five priests. The Monarchists won but five seats.

**AFTERMATH OF THE ELECTION.** The Provisional Government immediately turned its attention to plans for the convening of the Constituent Assembly July 14. With commendable foresight it had previously appointed committees to prepare a draft constitution and a project for land reform for submission to the Cortes. The draft constitution, published June 29, provided in general for a liberal republican system of government, similar in many respects to that of the United States.

The Socialists were deterred from breaking away from the Republican-Socialist coalition by a wave of Syndicalist violence which swept the country following the general election. It became evident that only a firm stand by the Government could prevent the Syndicalists and Communists from undermining its entire accomplishments. The coalition accordingly agreed to present a united front against the extremists pending the adoption of a Constitution and the inauguration of a strictly constitutional régime. It was the Socialists, acting through their *Union General de Trabajadores*, who formed the main bulwark of the new Republic against deliberate efforts of the *Sindicato Unico* to precipitate a workers' revolution before the end of the year.

The Syndicalists were not affiliated with the Communist International, as was the Spanish Communist party. They sought to take violent control of the land, factories, and workshops and to form a proletarian state along partly communistic and partly anarchistic lines. Victorious in the general election in Catalonia through their alliance with Colonel Macia, they now attempted to undermine the Government throughout Spain by a series of general strikes, attacks upon religious institutions, and resistance to governmental authority. At Corunna and Manresa, birthplace of the Jesuit order, anti-religious riots were quelled on July 2 and 4. A nationwide telephone strike was called for July 6, the Syndicalists demanding virtually complete control of the Compañia Telefónica Nacional, a subsidiary of the American-controlled International Telephone and Telegraph Company. Dockhands in Barcelona walked out the same day, and in various cities other Syndicalist strikes caused a temporary paralysis of business. In all places, however, Socialist workers resisted the strike appeal and remained to assist employers in furnishing emergency telephone and other services. Armed clashes between Syndicalist strikers and Socialist workers frequently ensued. The strikers cut a number of telephone trunk lines, badly paralyzing the service.

A nation-wide general strike was called by the *Sindicato Unico* on the eve of the convening of

the Cortes. The Government met the threat effectively by arresting radical agitators throughout the country; later Syndicalist headquarters in all the Provinces were closed, and a Government decree made it illegal to strike unless 10 days' notice was given. In Seville and the surrounding province a series of armed encounters between strikers and police, in which 30 were killed and 200 wounded, was followed by the declaration of martial law on July 22. By the end of the month the Syndicalist offensive had been repulsed almost everywhere and order was restored. At no time was the Government in serious danger of collapse. Business and commerce throughout the country was seriously disrupted, however. Thousands of workers were on the verge of starvation in Southern Spain and in Barcelona and vicinity the stoppage of industry was followed by widespread suffering.

**THE CONSTITUENT CORTES.** Republican enthusiasm reached its height when the 470 Deputies assembled in the historic Chamber of Deputies in Madrid July 14 to draft the new Constitution. But the Cortes did not begin to function until July 28, when the examination of the Deputies' credentials was completed. Then the Provisional Government formally resigned, but on receiving (July 30) an overwhelming vote of confidence and approval of its reforms, Alcalá Zamora's Cabinet reassumed its governmental functions.

One of the first problems to cause dissension in the new Cortes was that of the relations of Church and State. On August 6 the parliamentary commission appointed to frame a constitution for submission to the Cortes decided upon a clause providing for the expulsion of the religious orders and the confiscation of church property. The Catholics launched a vigorous campaign for the defeat of the measure and on August 15, simultaneously with the publication of the commission's draft constitution, the Bishops of Spain issued a pastoral letter urging Catholics to defend their rights in the new Constitution. The anti-clerical forces struck back on August 20 with a governmental decree prohibiting the sale, transfer, or mortgage of church properties. This action was intended to forestall the sale of the Church's extensive property and security holdings previous to the settlement of the question by the Cortes. It followed the alleged interception of a letter from Cardinal Segura y Saenz in France instructing the Spanish clergy to dispose of their holdings. The decree was immediately protested by the exiled primate, whose recall by the Vatican was then demanded by the Provisional Government. In the Basque Provinces and Navarre, strongholds of clericalism, there were menacing anti-Government demonstrations. The Government was obliged to suppress many Basque newspapers and to send 28,000 troops into the disaffected Provinces.

As a peace offering the Papal Nuncio in Madrid announced September 30 that the Vatican had accepted Cardinal Segura y Saenz's resignation as Primate of Spain. Despite this, the Cortes on October 13 voted 287 to 41 to end the centuries-old union of the Spanish State and the Roman Catholic Church, a union dating back to the reign of Ferdinand and Isabella and the expulsion of the Moors. The following day the Cortes by a vote of 178 to 59 accepted Article XXIV of the new Constitution, which drastically restricted the activities of church orders and provided for the expulsion of the Jesuit order.

Although approving the separation of Church and State, Provisional President Alcalá Zamora resigned in protest against the adoption of Article XXIV. A new Provisional Government was immediately formed by Manuel Azana, who retained his former post of Minister of War. Only one new figure appeared in the Azana Government—that of Jose Giralt as Minister of Marine. Cesares Quiroga, the former Minister of Marine, was shifted to the important Interior portfolio in place of Miguel Maura, another devout Catholic, who resigned. The religious and the governmental crisis was marked by anti-clerical demonstrations in Madrid, by the withdrawal of the Basque representatives from the Cortes, and by increasing unrest in the north of Spain. The quiet assurance given by Premier Azana that "the Government will know how to protect itself if the republic is attacked" and his reputation for forceful action contributed to the subsidence of the crisis. Article XXIV ended State support of the Church, made it impossible for religious orders to teach, expelled the Jesuits, and by forbidding other religious orders to take part in industry and commerce made it difficult for them to continue. The property of churches and religious orders, other than Jesuits, was not seized, and freedom of worship was guaranteed.

**THE BARCELONA STRIKE.** On September 3 there broke out in Barcelona a great strike which partly eliminated two leading obstacles to the successful organization of a Spanish republic—the possibility of a violent social upheaval and the reluctance of Catalonia to cooperate with the republican leaders at Madrid. A split in the ranks of the *Sindicato Unico* on September 1 lessened the danger of a social revolution. But the events at Barcelona demonstrated that the republican régime was more than able to smash revolutionary outbreaks; furthermore they indicated that the Catalan autonomist leaders were dependent upon aid from the rest of Spain to end class warfare and anarchy.

For three days, September 3-5, Barcelona was in the grip of a revolutionary general strike which aimed at the establishment of a Soviet government and the taking over of factories and other industries by the radical workers. About 10,000 troops of the Madrid Government were rushed into the city and more than two score persons were killed and many injured in ensuing clashes before order was restored.

**THE REGIONAL SETTLEMENT.** The people of Catalonia in a plebiscite held August 2 voted almost unanimously in favor of a statute for Catalan autonomy. On August 14, Colonel Macia presented the statute to the Provisional Government in Madrid, with the demand that it be incorporated in the new Constitution. He received a cool reception in Madrid, but President Alcalá Zamora on August 18 presented the Catalan statute to the Cortes with a statement that the presentation signified "peace and accord." There was little peace in the Cortes, however, when the final vote on that section of the Constitution defining regional rights was taken September 26. Twice the Catalan delegates arose to withdraw from the Cortes—once when the socialists pressed their demand for central control of labor affairs and again when Finance Minister Prieto insisted upon national control of the Catalan fiduciary system and Bourse.

Meanwhile in Barcelona troops of the Madrid Government were mobilized to prevent an at-

tempt to establish an independent republic which it was feared would follow the withdrawal of the Catalan delegates from the Cortes. However, the Cortes finally approved a compromise clause which designated Spain as "an integral republic with ample facilities for regional autonomy." It was agreed that the interpretation of this phrase and the determination of the final status of regions desiring autonomy should be postponed until after the Constitution was completed.

OTHER CONSTITUTIONAL PROVISIONS. Other clauses of the Constitution approved by the Cortes in October and November extended the suffrage to women of 23 years and older, authorized divorce by mutual consent, and established Castilian as the official language to be taught in all primary and secondary schools while permitting autonomous regions to teach the regional language as well. A land law code provided for the expropriation and ultimate socialization of lands, industries, or other properties "when the interests of national economy dictate," but not without payment to the owners. On October 27, the Cortes voted 140 to 83 in favor of a parliament of but one chamber. It was decided (October 29) that the President was to be chosen by an electoral college, elected by direct suffrage, and by an equal number of Deputies from the Cortes, meeting in joint session. He was to be elected for six years and invested with broad powers. A popular referendum on any question except foreign affairs and the religious articles of the Constitution was made mandatory on petition of 15 per cent of the electorate. On November 3, the Cortes took the revolutionary step of incorporating in the Constitution Spain's obligations under the League of Nations as a fundamental principle of the republic. It decreed that war might be declared by the President only if such action was in accord with the law of the League, if it was beyond question defensive, and if the dispute had first been submitted to arbitration by the League. It was further stated that no treaty regarding war might be made except in conformity with the general laws of the League. The new flag adopted consisted of three horizontal bands of red, yellow, and dark purple, with a coat of arms in the centre.

Nine days behind its scheduled date, the Cortes completed voting on the Constitution (December 1) and eight days later it approved the basic law in its entirety. However, the civil rights and liberties chapters of the Constitution were suspended, pending enactment of legislation to put the Constitution into full effect. On December 10 Alcalá Zamora was elected Constitutional President by the Cortes, receiving 362 votes out of a possible 466. He was formally inaugurated the following day. On December 15 a new Cabinet was formed by Señor Azana, who had submitted his Government's resignation to President Alcalá Zamora on December 12. Other members of the new Cabinet were: Foreign Affairs, Luis de Zulueta (Independent); Finance, Jaime Carner (Catalan party); Justice, Alvaro de Albornoz (Radical Socialist); Navy, Jose Giral (Republican Action); Interior, Santiago Casares Quiroga (Gallegan); Public Instruction, Fernando de los Rios (Socialist); Labor, Francisco Largo Caballero (Socialist); Agriculture, Industry, and Commerce, Marcelino Domingo (Radical Socialist); Public Works, Indalecio Prieto (Socialist).

THE CURRENCY AND EXCHANGE PROBLEM. Throughout the year, the Provisional Govern-

ment was harassed by the declining exchange value of the peseta, with the consequent disruption of industry and commerce and lowering of the standard of living. The peseta (par value \$0.193) was circulated mostly in the form of notes of the semi-private Bank of Spain, the sole bank of issue. The peseta had never been on the gold standard and even before the World War there were noteworthy fluctuations in its value. The average exchange value declined from \$0.1659 in 1928 to \$0.1468 in 1929, \$0.1167 in 1930, and to \$0.0880 for August, 1931, the lowest point in the twentieth century. A slight recovery was noted in subsequent months, the average rate for October being \$0.0896. In its efforts to meet the exchange and currency crisis, the Government came into conflict with the directors of the Bank of Spain and on November 1 the Cabinet voted to introduce a bill placing the bank more completely under the control of the Government. It was disclosed that \$60,000,000 in gold had been shipped to the Bank of France since the founding of the Republic as security for loans.

OTHER EVENTS. The loans floated by the Provisional Government in France offered one indication of the orientation of Spain in the direction of France and away from Italy. In November a new commercial treaty was concluded with France which was highly favorable to French imports. The United States Ambassador to Madrid on November 11 protested to Foreign Minister Lerroux against Spain's decision not to grant "most-favored-nation" rights to the United States in connection with the French treaty. On Dec. 23, 1931, the Spanish tariff, already the highest in Europe, was raised to new high levels, as a result of tariff increases by Great Britain and France. Don Jaime of Bourbon (q.v.), Carlist pretender to the throne of Spain, died in Paris Oct. 2, 1931.

#### SPANISH-AMERICAN LITERATURES.

Again we remind our readers that the facts here presented must not be considered exhaustive, nor must the omission of some of the countries be taken as evidence that they produced nothing in 1931. Gloria Bayardo, celebrated elocutionist, has collected *Cien poemas escogidos*, which are the poems she recites. Some critics claim that these one hundred poems represent the best of the best poets in all Spanish America. Of very great value is *Spain and Spanish America in the Libraries of the University of California: A Catalogue of Books: II, The general and departmental libraries*.

ARGENTINA. Again Argentina offers materials of interest in several fields. *Fiction*. Manuel Gálvez (author of *Los caminos de la muerte* and *Humaitá*) completes his epic trilogy in prose, *Escenas de la guerra del Paraguay*, with the powerful *Jornadas de agonía* (great fiction and real history), and produces also *Miércoles Santo* (keen study of sundry characters passing through the confessional on Good Friday); Pedro

Echagüe, *Dos novelas regionales* (the first, *La rinoonada*, is more historical, the second, *La Chapaney*, is richer, more profound and more original in its concept); Rafael Cano, *Del tiempo de Naupa* (well written realistic, even naturalistic, treatment of provincial customs of Northern Argentina); Carlos M. Lastra, *Un muchacho cualquiera* (story of an average Argentine boy, whom the author depicts as typical of the nation).

Victoria Gucovsky, *El Santo de la Higuera* (extremely fine study of the poorer classes in the Province of Córdoba; the author is unexpectedly masculine in the painting of scenes between men, but her finest qualities show up in her pictures of child-life among the proletariat of the cities); Delgado Fito, *Hijos de Pobres* (wholly interesting, sort of biography); and Jacinta and Matilde Cordone, *Cuentos* (their first book—short stories with great depth of feeling, which give promise of even better work later). The *El Cristo invisible* of Ricardo Rojas, which raised a great discussion, has appeared in an English translation by Webster E. Browning, with an introduction about the author and the work by Robert E. Speer.

**Drama.** Two Argentine theatrical companies had very successful seasons in the mother country: that of Azucena Marzani, and that of Enrique Rosas, who is successful not only as actor but also as author. Armando Discépolo and Rafael J. de Rosas produced very successfully in Barcelona the three-act play *Giacomo* (fine contrasts between persons who dream only of money, and the person who in the midst of adversity preserves his illusions of other days of splendor and happiness). José J. Podestá, aged and popular actor, produced his memoirs entitled *Medio siglo de farándula* (important contribution to the history of the Argentine national drama, which he considers as beginning with the pantomime *Juan Moreira*, first played in 1884).

**Poetry.** Rafael Jijena Sánchez (author of *Achalay*, in which already the voice of the land was heard), *Versos simples* (which is even more healthily of the soil—sturdy Argentine, with roots in the lyricism of fifteenth-century Spain); José Carlos Mauhó and Adolfo Capdevielle, *Antología de la poesía femenina argentina* (95 poetesses are represented by works printed without comment, leaving to others the study of their several merits); Leopoldo Velasco, *El triunfo del ensueño* (60 sonnets, 10 décimas, and 20 other compositions—very spiritual, especially the *Sonetos bíblicos*—the author knows his Bible); and Teófilo Hiroux Funes, *Angulo de sombra* (many types of verse).

**Erudition.** Julia García Games (publicist), *Como los he visto yo* (very important studies at first hand of more than a dozen contemporary Chilean writers—promises a second series); Carlos F. Melo (Director of the Biblioteca Nacional de Buenos Aires), *La resurrección de Ocitanía* (solid study of the Félibrige movement headed by the great Provençal poet Frédéric Mistral); José A. Merediz, *La transformación española de "El Greco"* (serious study to be used in addition to that of M. B. Cossio); Juan Carlos Rébora (author of a brilliant series of studies: *La Familia*, *El Estatuto de la Mujer*, and *La Emancipación de la Mujer*) has added a worthy fourth volume: *La Herencia* (a juridico-philosophical study by a philosophical thinker and jurist); and Hugo Wast, *Confidencias de un novicista* (a recital of personal experiences).

**BOLIVIA.** The Academia Boliviana, Correspondiente of the Academia Española de la Lengua, elected to membership Daniel Sánchez Bustamante (a great publicist, statesman, and author), and Daniel Salamanca and Juan Francisco Bedregal (distinguished authors).

**CHILE.** Francisco Contreras published three important works: *Rubén Darío, su vida y su obra*; *Valéry Larbaud, son oeuvre*; and *L'esprit de l'Amérique Espagnole*. In the Academia Chilena, Correspondiente of the Academia Española de la Lengua, there have been several changes: to fill the vacancy caused by the death of the great bibliographer José Toribio Medina, Alberto Edwards was elected; and the death of Crescente Errázuriz, Archbishop of Santiago de Chile brought about the election of Tomás Thayer Ojeda, to fill his seat in the Academy, and the choice of the renowned philologist, Miguel Luis Amunátegui Reyes, to succeed him as Director.

**CUBA.** José Antonio Ramos (whose *Coaybay* won the Premio Minerva of Habana in 1927) published *Las impurezas de la realidad* (not quite equal to the earlier work). Francisco Navarro, *La rebelión del hombre: Un drama futuro—Desequilibrio, en dos cuadros—Despertar, en dos cuadros*. Graziella Barinaga y Ponce de León (who published in 1927 (see YEAR BOOK for 1927) a careful study of *Fray Candil*) turned to verse in a beautiful volume *De la fuente infinita*. The learned Director of the Academia Nacional de Artes y Letras de Cuba, José Manuel Carbonell, continuing his studies of early Cuban authors (see YEAR BOOK for 1929), published *Los poetas de "El Laúd del Desterrado,"* which treats of Quintero, Teurbe Tolon, Santacilia, Turla, Castellón, and Zenea.

The publicist and jurisconsult Diego Vicente Tejera (*hijo*) continued his studies with *Delito de lesiones*. Eliseo Giberga, *Obras* (vol. i contained his *Discursos políticos*; vol. ii, his *Discursos parlamentarios* previous to Cuba's independence), vol. iii, *Estudios, artículos, entrevistas, y manifestos políticos*, and vol. iv, *Trabajos jurídicos y literarios*. Ignacio José de Urrutia y Montoya, *Obras*, vols. i and ii (published by the Cuban Academy of History).

**DOMINICAN REPUBLIC.** Samuel Montefiore Waxman, *A Bibliography of the Belles-Lettres of Santo Domingo*.

**ECUADOR.** Leonidas Pallares Arteta, whose *Mis nietos* appeared in 1929, published vol. ii of his *Obras*. José María Velasco Ibarra took his seat in the Academia Ecuatoriana, Correspondiente de la Academia Española de la Lengua, reading a discourse on *Joás Enrique Rodó*. Modesto Chavez Franco, *Crónicas del Guayaquil Antiguo*.

**GUATEMALA.** Two new members entered the Academia Guatemalteca, Correspondiente de la Academia Española de la Lengua: the jurisconsult, Luis Beltranena; and the journalist, Federico Hernández de León. Also Arturo Castillo was elected vice Miguel Angel Urrutia, recently deceased.

**MEXICO.** Too late for last year's account we learned that the poet Balbino Dávalos and the humanist Ezequiel A. Chávez had taken their seats in the Academia Mexicana, Correspondiente de la Academia Española de la Lengua. This year Carlos González Peña took his seat. Jesús Guzmán y Raz Guzmán published Tomo II of his important *Bibliografía de la reforma, la intervención, y el imperio*. The distinguished diplomat, Alfonso Reyes, published *El testimonio de Juan Peña*

(an autobiographical episode related with great charm and providing much food for thought). Also Balbino Dávalos, *La rima en la poesía clásica latina*; Carlos González Peña, *Luis G. Inclán en la novela mexicana*; Alvaro Leonor Ochoa, *En las sendas del monstruo*; Jefferson Rea Spell, *The Life and Works of José Joaquín Fernández de Lizardi*; and Felipe Teixidor, *En Libris y Bibliotecas de México*, and Roberto Ramos, *Bibliografía de la Revolución Mexicana*, which were respectively numbers 20 and 21 of *Monografías bibliográficas mexicanas*.

NICARAGUA. Two new members took their seats in the Academia Nicaragüense, Correspondiente de la Academia Española de la Lengua: the celebrated poet Santiago Argüello, and the erudite and cultured teacher and publicist Pablo Hurtado. Jerónimo Aguilar Cortés published an original novel *Ramón Díaz*.

PANAMA. Dr. Pablo Arosemena, *Escritos*, 2 vols. (state papers, discourses, and studies by this outstanding diplomat, statesman, and quondam president); Nicolás Victoria J., vol. 2 of his *Escritos* (series of discourses, articles, and essays); Juan Antonio Susto and Simón Eliet edited the former's work *La Vida y La Obra del Dr. Gil Columbe*. The Instituto Nacional de Panamá published the very important volume *Documentos Históricos sobre la Independencia del Istmo de Panamá* (which every American should read so that he might have a more solidly grounded opinion on this question). Hector Conte Bermúdez, *La Creación de Bolivia y La Constitución Boliviana en el Istmo de Panamá* (very readable, well-documented, short presentation of this important question).

PERU. In the purely literary field few works have come to hand: César Vallejo, *Tungsteno* (novel of advanced social tendencies in a Peruvian atmosphere); Xavier Abril, *Hollywood* (literary prose of a distinctly renaissance spirit); and Felipe Sassone (who, despite his long residence in Spain, belongs to Peru), *La Maricastaña* (creation of a very admirable type of womanhood—unusual topic beautifully handled—a great triumph for the author and for the actress Hortensia Gelabert); *Adán, o el drama empieza mañana* (one of his best works), and *Un momento* (performed by Rosario Pino and Emilio Thuillier). Angélica Palma wrote a delightful work, *Fernán Caballero, la novelista novelable*.

Peruvian production in the field of the essay on sociology, history and economics has been intense because of the interest of the younger generation in studying national problems, especially those related to the Peruvian farmer. Jorge Basadre, *Perú, Problema y Posibilidad* (a beautiful work wherein the history of Peru, in the service of the social interpretation of to-day, indicates the courses this nation will pursue); Uriel García, *El nudo Indio* (studies the Peruvian Andes and the farmer therein, making a brilliant exposition of the landscape and the soul of the Inca of to-day).

URUGUAY. Justino Zavala Muniz, *Crónica de Reja* (novel, giving a very fine penetrating study of Uruguayan life). Arturo Scarone, Director of the Biblioteca Nacional of Montevideo, *Bibliografía de Rodó* (two very fine volumes); Alfred Coester, *Tentative Bibliography of the Belles-Lettres of Uruguay*.

VENEZUELA. Arturo Uslar Pietri (one of the most promising of the new generation in Venezuela, whose first work was *Barrabás y otros*

*relatos*), *Las Lanzas Coloradas* (an historical novel treating an episode in the War of Independence; and J. Gil Fortoul, *Historia Constitucional de Venezuela* (a new edition published by order of the President of Venezuela on the occasion of the centenary of Bolívar's death).

The Academia Venezolana, Correspondiente de la Academia Española de la Lengua, suffered several losses through death: Jesús Semprún (great, vigorous, and profound critic, editor of *Cultura Venezolana*); B. Tavera Acosta (historian, archæologist, linguist, corresponding member of the Academy of History of Madrid, and Senator of the Republic); and Juan E. Arcia (Secretary of the Venezuelan Academy). On the other hand, two members-elect took their seats: Juan José Abreu, and José Manuel Núñez.

SPANISH LANGUAGE. See PHILOLOGY, MODERN.

SPANISH LITERATURE. For the sixth year in succession, the dramatic output for 1931 ran ahead of that of the other branches; but this year fiction crept up on erudition, until they seemed to be about on a par.

DRAMA. Forty years ago *Realidad* by B. Pérez Galdós failed, but it was successfully revived this year by the great Argentine actress Lola Membrives. Interesting and very successful revivals of plays of the Golden Age were as follows: Antonio and Manuel Machado reworked Lope de Vega's *El perro del hortelano*, which was excellently played by María Guerrero, junior; Margarita Xirgu was very successful with Calderón de la Barca's auto, *El Gran Teatro del Mundo* and Tirso de Molina's historic play *La Prudencia en la mujer*; and two splendid revivals in the Plaza de la Armería in the open air—Calderón de la Barca's *El Alcalde de Zalamea*, by the great Enrique Borrás and his company, and Calderón's *La Vida es sueño*, by the celebrated Ricardo Calvo and his company.

The older generation was still active, as witness J. Benavente, *De muy buena familia* (a great success), *Literatura* (successful, but less dramatic), and *Cuando los hijos de Eva no son los hijos de Adán* (vigorous, clamorous success, but so different from last year's calm and placid triumph, *La melodía del jazz-band*, that it seems to be by a different author); the Álvarez Quintero brothers, *El peligro rosa* and *Madracelva* (poetic drama, glorification of maternity, written almost wholly in romances, first performed by Lola Membrives on the forty-second anniversary of the first performance in Seville of their first play: *Egrima y amor*); Manuel and Antonio Machado, *La prima Fernanda* (political satire, verse play, excellently performed by Irene López Heredia); Eduardo Marquina, *Fuente escondida* (very successful verse comedy, played by Margarita Xirgu); Joaquín Dicenta, *Pluma al viento* (verse play); Carlos Arniches, *Vivir de ilusiones* (delightful); Luis Fernández de Ardevín and Valentín de Pedro, *Manon Lescaut* (very successful), and *Estampa romántica*; Manuel Linares Rivas, *Déjate querer, hombre!* (although successful, it adds nothing to his reputation), and *Todo Madrid lo sabía* (daring defense of adultery as a sacrifice for the benefit of others); Pedro Muñoz Seca, *Todo para ti* (very successful), and with Pérez Fernández, *Mi padre* (light comedy, very funny and risqué); Ramón del Valle-Inclán, *Farsa y licencia de la reina castiga*, and *El embrujado* (extraordinary success); Luis de Vargas, *El reloj de oro*, and *La de los claveles dobles*; José

Fernández del Villar, *Mi casa es un infierno* (great success), and *Los Reyes Católicos* (keen satire on modern courtship in small towns); Pilar Millán Astray, *Los amores de la Nati* (one of her great successes, performed by the company of the young María Guerrero and Fernando Díaz de Mendoza); Francisco Serrano Anguita, *Papá Gutiérrez* (excellently performed), *Juan de las Viñas* (political satire not related to the immediate present, acted by Eugenia Zuffoli and Juan Bonafé), and *Tierra en los ojos* (great success, plot based on Santa Teresa's words: "The earth in our eyes prevents our seeing God.")

FICTION. Some of the older authors continued active: Pío Baroja, *La venta de Mirambel* and *Los confidentes audaces* (both belonging to the series *Memorias de un hombre de acción*); Concha Espina, *Copa de horizontes* (short stories from many lands, excellent technique and psychology); Azorín, *Pueblo* (*novela de los que trabajan y sufren*); V. Blasco Ibáñez, *El fantasma de las alas de oro* (posthumous work); José Francés, *Rostros de las nieblas* (collection of stories written between 1925 and 1930); W. Fernández Flórez, *El malvado carabel*; Francisco Camba, *Machicha Monroy* (very highly praised); Pedro Mata, *Chamberí*; Alfonso Hernández Catá, *Manicomio* (book of short stories); and Matilde Muñoz, *La virgen muerta* (intense picture of life in a fishing village).

Others who were favorably received were: Ramón María Tenreiro, *La ley del pecado* (tragic, excellent, lofty moral); Artemio Precioso, *Los españoles en el destierro*; César M. Aronada, *La turbina* (beautiful); Felix del Valle, *El camino hacia mi mismo* (interesting moral); Antonio de Hoyos, *Seguro contra naufragio*; Luis de Oteyza *Antictpolis* (keen study of life in New York, as a form of living to which all great cities will have to come); José de Burgos Mira, *Monstruosidad* (new treatment of the *Don Juan* legend, with prologue by José Francés); Darío Fernández Flórez (young writer), *Inquietud* (very successful book of novels); Adolfo Botín y Polanco, *Virazón*; José M. Salaverría, *La virgen de Aránzazu*; Manuel Bueno, *Poniente solar* (beautiful); Herminio Madina-veitia, *De la casta del Cid*; and Eduardo Barriobero y Herrán, *Historia ejemplar y atormentada del "Caballero con la mano al pecho."*

In addition to those already cited, there were five other women who call for attention: Leonor Canalejas, *Ignacio* (*historia novelada*); Luisa Carnés, *Natacha* (very interesting study of women in the hands of fate); Julia García Herberos, *Sor Angélica* (tragic, powerful, with lofty ideals); Sofía Casanova, *Como en la vida* (interesting); and Rosa Arciniega de Granda, *Engranajes* (highly praised).

POETRY. Spain still does much of her best verse in the drama. Of non-dramatic verse the following may be noted: Fernando Valera, *Salmos de la noche espiritual* (exquisite verse and heartwarming content); Maruja Vidal, *Los látigos invisibles* (beautiful); Emilio Carrere, *Pandercetas de España* (very highly praised verse-etchings, inspired by profound feelings); Alfonso Camín (an Asturian), *Antología poética* (contains 130 poems that give a clear idea of his literary personality); Concha Menéndez Cuesta, *Canciones de mar y tierra* (praised as though from a born poet); Jesús Cancio (montañés), *Romancero del mar* (beautiful); and

Ángel Lázaro, *El molino que no muele* (highly praised).

ERUDITION. Among the most interesting productions are these: Conde de Romanones, *Salamanca, conquistador de riquezas, gran señor* (life of José de Salamanca y Mayol, man-of-affairs, financier and statesman); Ramón Gómez de la Serna, *Azorín* (useful, long list of outstanding contemporaries with dates and photographs); Pedro Bach y Rita, *The Works of Pere Torroella* (careful study of important bilingual Catalan writer of second half of fifteenth century); Barbara Matulka, *The Novels of Juan de Flores and their European Diffusion* (lengthy study of late fifteenth century Spanish author); W. S. Hendrix, *Las rimas de Bécquer y la influencia de Byron*; Julián Paz, *Catálogo de la colección de documentos inéditos para la historia de España* (2 vols.); Abubéquer de Tortosa, *Lámpara de los Príncipes* (translation by Maximiliano Alarcón, 2 vols.); Adolfo Posada, *Hacia un nuevo dorchio político—reflexiones y comentarios*; Luis Araquistain, *El ocaso de un régimen* (bitterly anti-monarchical, suppressed by the Government); Gabriel Maura Gamazo, *Bosquejo histórico de la dictadura* (fifth, corrected edition of this important work); Alejandro Lerroux, *Pequeñas tragedias de mi vida* (first volume of mémoires of one of the most important personages in the Republican Government); Manuel Azaña, *Plumas y palabras* (mémoires and studies by the provisional President of the Spanish Republic); Marqués de Villa-Urrutia, *Eugenia de Guzmán, Emperatriz de los franceses*; Juan de Castro, *El duque de Alba* (instructive short life of the Great Duke of Alba), and *Evocaciones de la gran guerra*.

SPANISH ACADEMY. Ignacio Bolívar, the great naturalist, read his entrance discourse (*El lenguaje de la historia natural*), and took his seat, vice E. Gómez Baquero. The great dramatist Eduardo Marquina was unanimously elected, vice Pedro Novo y Colsón, the naval expert, dramatist, and historian, who died early in the year. Later, the journalist, José Francos Rodríguez, also died. The Spanish Academy awarded the Duke de Alba Prize to Justo García Soriano, for his *Vocabulario del dialecto murciano*. The Fastenrath Prize was awarded to Emilio García Gómez, professor at the University of Granada, for his *Un texto árabe occidental de la leyenda de Alejandro*. The "Piquer" Prize was awarded to Francisco Serrano Anguita for his comedy *Manos de plata*.

NECROLOGY. Aside from the deaths just mentioned, the following must be listed: Courtenay De Kalb (q.v.) (scholarly American Hispanist and mining engineer); Enrique García Álvarez (great comic author, master of the *género chico*); Emilio Mesejo (popular actor, creator of the rôle of Julián in the *Verbena de la paloma*); Pierre Paris (great French Hispanist, archaeologist, and Director of the Institut Français in Madrid); Mario Méndez Bejarano (author of *Vida y obras de Don José Blanco y Crespo*); José Zahonero (author and journalist); Ramón Godo Lallana, Conde de Godo (illustrious Catalan journalist and financier); and Santiago Rusiñol (the beloved Catalan painter, dramatist, and poet of *melancolía*). **SPENCER, ANNA GARLIN.** An American minister and sociologist, died in New York City, Feb. 12, 1931. She was born in Attleboro, Mass., Apr. 17, 1851, and early became engaged in newspaper work, being a contributor to the Providence (R. I.) *Journal* from 1869 to 1878. Following her marriage to the Rev. William H. Spencer in 1878, she was associated with him as writer, teacher, and occasional preacher in Unitarian churches in Haverhill, Mass., Florence, Mass., and Troy, N. Y. In 1891 she was ordained to the Unitarian ministry and was installed as minister of the Bell Street Chapel, Providence, R. I., which she had organized two years previously. Later removing to New York City, she was associate leader of the Society for Ethical Culture from 1903 to 1909 and associate director and staff lecturer at the New York School of Philanthropy from 1903 to 1910. She was also director of the Institute of Municipal and Social Service in Milwaukee during 1910-11.

In 1913 she became Hackley professor of sociology and ethics at the Meadville (Pa.) Theological School, and in 1918 lecturer at the University of Chicago. From 1920 to 1928 she was special lecturer in social science at Teachers College, Columbia University, and at the time of her death was head of the division of family relations of the American Social Hygiene Association.

**SPENCER, ROBERT.** An American landscape painter, died by suicide in New Hope, Pa., July 11, 1931. He was born in Harvard, Neb., Dec. 1, 1879, and received his art training at the National Academy of Design school in New York City (1899-1901) and at the New York School of Art (1903-05), studying under Chase, DuMond, Henri, Garber, Francis Jones, and F. Luis Mora. He became a National Academician in 1920. Although catalogued as a landscapist, he was really a *genre* painter who portrayed the homely, intimate and, on the whole, romantic life of the people in whom he was interested. Among his works are "Building the Bridge" in the Metropolitan Museum of Art, New York City; "Along the Canal, New Hope" in the Detroit Institute of Arts; "The Huckster Cart" in the Art Institute of Chicago; "The Red Boat" in the Corcoran Gallery, Washington; "The Tower" in the Carnegie Institute, Pittsburgh; "The White Tenement" in the Brooklyn Museum; and "The Green River" in the Albright Art Gallery, Buffalo.

**SPIDERS.** See **ZOOLOGY: ENTOMOLOGY, ECONOMIC.**

**SPILLMAN, WILLIAM JASPER.** An American agricultural economist, died in Washington, D. C., July 11, 1931. He was born in Lawrence Co., Mo., Oct. 23, 1863, and was graduated from the University of Missouri in 1886, receiving the D. Sc. degree from Temple University in 1890. He was professor of agriculture at the Washington State College from 1894 to 1901. In 1902 he became associated with the U. S. Department of Agriculture as agrostologist in charge of grass and forage plant investigations in the Bureau of Plant Industry, and from 1915 to 1918 was chief of the Office of Farm Management. He then resigned to become editor of the *Farm Journal*, but reentered the Department of Agriculture in 1921.

In 1924 he was appointed agricultural economist in the Bureau of Agricultural Economics, becoming principal agricultural economist in 1928. His researches included special studies in

the heredity of plants, and he published in 1901, as a result of his independent discovery of Mendel's law of recombination, *Quantitative Studies on Distribution of Parental Characters in Hybrid Offspring*. In 1920 he discovered the mathematical form of the law of diminishing returns with relation to the results of the use of fertilizers on farms. He also edited the heredity section of the *American Naturalist* during the period 1908-15.

**STANFORD UNIVERSITY.** A nonsectarian institution for the higher education of men and women in Palo Alto, Calif., founded in 1891 in memory of Leland Stanford, Jr. The enrollment for the autumn quarter of 1931 was 3519 and for the summer quarter, 1135. The faculty numbered 558. The productive funds of the university amounted to \$30,500,000, and the budget income for the year, including fees, was \$3,073,000. The library contained 546,932 volumes (including the Hoover War Library). Acting president, Robert Eckles Swain, Ph.D., executive head of the chemistry department, who was appointed to serve during the leave of absence of Ray Lyman Wilbur.

**STATISTICAL ASSOCIATION, AMERICAN.** An organization founded in Boston in 1830 to foster an interest in statistics and to promote scientific methods of collecting and interpreting statistical data. Among the committees maintained during 1931 were: The joint advisory committee on the census; the committee on governmental labor statistics; the committee on institutional statistics; the committee on dependency and child welfare statistics; and the committee on the *Encyclopaedia of the Social Sciences* which, along with other societies, was engaged as an advisory and sponsoring body in the preparation of that work. The official publications are the *Journal of the American Statistical Association* and the *Annals of Mathematical Statistics*, each issued quarterly.

The association's ninety-third annual meeting was held in Washington, D. C., Dec. 28-30, 1931. The principal topics of discussion included: "The Depression: The Functioning of Gold"; "Future Population and Business Planning"; "Technological Change as a Factor in Unemployment"; "The Depression: Banks and Credit"; "Old Age in America"; "Measuring Unemployment"; and "Prospects for Prosperity." The officers of the association for 1932 were: President, Irving Fisher; vice presidents, Seymour L. Andrew, William L. Crum, Lowell J. Reed,

Horace Secrist, Leon E. Truesdell, and Mary van Kleeck; secretary-treasurer, Willford I. King; editor, Frank Alexander Ross. Headquarters are in the Commerce Building of New York University, 236 Wooster Street, New York City.

**STATISTICS. INDEX NUMBERS OF WAGES.** The U. S. Bureau of Labor Statistics prepared the following index numbers of wages per hour from 1840 to 1929. The year 1913 was used as the base year. These figures clearly indicate that there has been a general trend of hourly earnings upward. In the 90 years for which the figures have been prepared there has been an increase of fully 700 per cent.

**INDEX NUMBERS OF WAGES PER HOUR, 1840 TO 1929 (EXCLUSIVE OF AGRICULTURE)**

[On currency basis during Civil War period, 1913 = 100]

Year	Index number	Year	Index number
1840	83	1885	64
1841	84	1886	64
1842	83	1887	67
1843	83	1888	67
1844	82	1889	68
1845	83	1890	69
1846	84	1891	69
1847	84	1892	69
1848	85	1893	69
1849	86	1894	67
1850	85	1895	68
1851	84	1896	69

\* Subject to revision.

**REAL WAGES PER HOUR.** The U. S. Bureau of Labor Statistics computed the accompanying index of wages per hour from 1913 to 1929, using 1913 as a base. The table indicates that in 1917 money wages were 28 per cent higher than in 1913, while the cost of living was 42.4 per cent higher, making a real wage of 89.9. It will be observed that in 1929 the index figure for real wages, by contrast, was 136.4.

**NUMBER OF GAINFUL WORKERS.** According to the 1930 census, there were in the United States 98,723,047 persons 10 years of age and over, of whom 48,832,589 were returned as gainful workers or 49.5 per cent of the total in the group 10 years and over. Of the whole number of gainful workers, 38,053,795 were males and 10,778,794 were females. The percentage of male population 10 years and over gainfully employed in 1930

**INDEX NUMBERS OF WAGES PER HOUR, COST OF LIVING, AND REAL WAGES**

Year	Index numbers of— Wages per hour	Cost of living	Real wages
1913	100	100.0	100.0
1914	102	103.0	99.0
1915	103	105.1	98.0
1916	111	118.3	93.8
1917	128	142.4	89.9
1918	162	174.4	92.9
1919	184	188.3	97.7
1920	234	208.5	112.2
1921	218	177.3	123.0
1922	208	167.3	124.3
1923	217	171.0	126.9
1924	223	170.7	130.6
1925	226	175.7	128.6
1926	229	175.2	130.7
1927	231	172.7	133.8
1928	232	170.7	135.9
1929	233	170.8	136.4

was 70.2 per cent; the percentage of female population 10 years and over gainfully employed in the same year was 22.1 per cent. In 1910, 53.3 per cent of the population 10 years and over was gainfully employed; 81.3 per cent of the male population 10 years and over was gainfully employed; 23.4 per cent of the female population 10 years and over was gainfully employed. The accompanying table presents the gainful workers in the main industry groups by sex in the United States for 1930:

**GAINFUL WORKERS IN THE MAIN INDUSTRY GROUPS, BY SEX, FOR THE UNITED STATES, 1930**

Industry group	Male	Female	Per cent Male	Female
All industries	38,053,795	10,778,794	100.0	100.0
Agriculture	9,568,347	913,976	25.1	8.5
Forestry and fishing	260,876	3,249	0.7	...
Extraction of minerals	1,147,770	10,294	3.0	0.1
Manufacturing and mechanical industries	11,901,247	2,416,288	31.3	22.4

**STATUTE OF WESTMINSTER.** See GREAT BRITAIN under *History*.

**STEAMBOAT INSPECTION.** See SAFETY AT SEA.

**STEAM BOILERS.** See BOILERS, STEAM.

**STEAM ENGINES.** See POWER PLANTS and BOILERS.

**STEAM TURBINES.** There was little change of major importance in steam-turbine practice during 1931, but many improvements and refinements in design were evident and turbine performance showed still greater reliability. Maximum sizes were not increased and the 208,000-kilowatt cross-compound unit installed at State Line Station, near Chicago, still held the record for capacity. There were, however, several relatively large units, of 105,000 to 160,000 kilowatts capacity, installed or on order, and the 110,000-kilowatt, vertical-compound turbine-generator that was placed in service during the summer at the Rouge plant of the Ford Motor

Company established a record both as the largest 1400-pound machine and the largest turbine installed in an industrial power plant. Two other vertical compound units, each of 50,000 kilowatts, in which the high-pressure element is superimposed on the low-pressure element, were placed in service at Station A of the Pacific Gas & Electric Co., San Francisco. At the Charles R. Huntley Station in Buffalo there were installed two 80,000-kilowatt turbine-generators, which are the largest single-cylinder machines yet built.

In Europe, while sizes had not approached those in the United States, there was nevertheless a trend toward larger units of 50,000 to 75,000 kilowatts capacity. Foreign practice leads in the sizes of turbines of high rotative speed, several having been built of 50,000 kilowatts capacity to run at 3000 r.p.m., whereas the largest 3600 r.p.m. machine in operation in the United States is 15,000 kilowatts. One of 18,000 kilowatts is, however, being built.

Blading materials received much attention and numerous investigations were under way with the object of ascertaining the materials best suited to withstand erosion and corrosion and at the same time possessing the required strength to withstand the high rotative stresses. The advent of higher steam temperatures has introduced still another factor. In the two 160,000-kilowatt units installed at the Hudson Avenue Station in Brooklyn, N. Y., provision was made for draining moisture from each stage of the low-pressure elements with a view to minimizing the erosion of the low-pressure blading. Welding was gaining favor in both turbine and condenser construction, and three-stage blading was replacing that of a greater number of stages.

Under POWER PLANTS mention has been made of the two new mercury-steam installations, one at Schenectady, N. Y., and the other at Kearney, N. J. The mercury turbines in each case are of 20,000 kilowatts capacity, operating at a mercury pressure of 125 pounds per square inch and a temperature of 958° F. The former will be installed outdoors at the same elevation as the boiler, whereas at Kearney the turbine will be housed and installed at a higher elevation than the boiler, so that the condensed mercury will return by gravity to the boiler.

**STEEL.** See IRON AND STEEL.

**STELLAR CONSTITUTION AND EVOLUTION.** See ASTRONOMY.

**STEVENS INSTITUTE OF TECHNOLOGY.** A college of engineering in Hoboken, N. J., founded in 1870. The college offers an unspecialized course in the fundamentals of engineering to provide basic training for the practice of the profession in its several branches. The enrollment for the autumn of 1931 was 525, including 22 graduate students, and for the summer session of that year, 94. There were 65 members on the teaching staff. The productive funds amounted to \$3,300,000, and the income for 1930-31, including fees from students, was \$496,000. The library contained 30,000 volumes. President, Harvey Nathaniel Davis, Ph.D.

**STOCK EXCHANGE.** See FINANCIAL REVIEW.

**STOCKS AND BONDS.** See FINANCIAL REVIEW.

**STODDARD, JOHN L (AWSON).** An American lecturer and author, died near Merano, Italy, June 5, 1931. He was born in Brookline, Mass.,

Apr. 24, 1850, was graduated from Williams College in 1871, and later studied at Yale Divinity School. He traveled extensively and for nearly 20 years was one of the foremost lecturers in the United States on travel subjects. Among his publications are *Red Letter Days Abroad* (1884); *Glimpses of the World* (1892); *Stoddard Lectures on Travel Aboard and in America* (15 vols., 1898-1909); *The Stoddard Library, an Anthology* (12 vols., 1910); *Poems* (1911); and *Evening of Life* (1929). Following his conversion to the Roman Catholic Church, he wrote *Rebuilding a Lost Faith* (1921); *Two Arguments for Catholicism* (1927); *Life of St. Paul* (1928); and *Life of Pope Gregory the Great* (1929).

**STOKES, REAR ADMIRAL CHARLES FRANCIS, U. S. N., RET.** An American naval surgeon, died in Brooklyn, N. Y., Oct. 29, 1931. He was born in New York City Feb. 20, 1863, and was graduated from the College of Physicians and Surgeons of Columbia University in 1884. Entering the U. S. Navy as assistant surgeon in 1889, he was operating surgeon aboard the ambulance ship *Solace* during the Spanish-American War. From 1903 to 1906 he was personal surgeon to President Roosevelt. He commanded the U. S. Naval Hospital at San Juan, Porto Rico, during 1906-08 and the hospital ship of the Atlantic Fleet during its cruise around the world in 1908. In 1910 he was made surgeon-general and chief of the Bureau of Medicine and Surgery, with the rank of rear admiral. Following his retirement in 1917, he practiced in New York City.

**STORMS.** See METEOROLOGY.

**STRAITS SETTLEMENTS.** A crown colony of British Malaya (q.v.), comprising the Settlements of Singapore (including Christmas Island, Cocos or Keeling Islands, and Labuan), Penang (including Province Wellesley and the Dindings), and Malacca. The Settlements were divided by area and population (1928) as follows: Singapore, 281 square miles and 559,270 inhabitants; Penang, 571 and 342,023; Malacca, 720 and 194,342. Christmas Island (area 58 square miles; population 1421 in 1928) lies in the Indian Ocean 223 miles southeast of Java Head. The entire population is engaged in the production of phosphate of lime. Labuan, an island six miles off the northwest coast of Borneo, has an area of 36 square miles and a population of 6029 (1929). The Cocos or Keeling Islands (population about 800) lie 1161 miles southwest of Singapore. The total area of the Straits Settlements is 1571 square miles; population in 1931, 1,065,568, more than half of whom are Chinese.

The capital, Singapore, (population 445,778 in 1931) is one of the ten leading ports of the world. Penang (Georgetown), with 123,069 inhabitants in 1921, and Malacca, population 21,200, are the chief towns of the other two settlements. Immigrants from China (1929) totaled 293,167, from India 114,252; the excess of births over deaths was 12,558.

Foreign trade and production statistics are included in those for British Malaya. For 1930 state revenue declined to 32,408,000 Straits dollars and expenditure was 39,240,000 Straits dollars (1 Straits dollar exchanged at about \$0.56 U. S. in 1930). The public debt on Jan. 1, 1930, totaled £18,027,020, of which £9,355,000 represented loans to the Federated Malay States.

At the beginning of 1930, the Settlements had 7176 miles of highway (2040 miles of asphalt).

The net tonnage of merchant ships of over 50 tons entering and clearing Singapore in 1930 was 31,755,526.

The colony is administered by a Governor, assisted by a nominated Executive Council and a Legislative Council, all the members of which are *ex officio* or nominated except two elected by the Chambers of Commerce of Singapore and Penang. The Governor is also High Commissioner for the Malay States and British Agent for British North Borneo and Sarawak. Governor in 1931, Sir Cecil Clementi, appointed February, 1930.

**STRATTON, SAMUEL WESLEY.** An American physicist, died in Boston, Mass., Oct. 18, 1931. He was born in Litchfield, Ill., July 18, 1861, and was graduated from the University of Illinois in 1884. The following year he became connected with that institution as instructor in mathematics and in 1889 was appointed professor of physics and electrical engineering. In 1892 he was called to the University of Chicago, where he served successively as assistant professor, associate professor, and professor of physics until 1901. He then organized the U. S. Bureau of Standards in Washington, having previously interested Lyman J. Gage, then Secretary of the Treasury, in such a plan, and acted as director of that bureau during its notable development until 1923 when he became president of the Massachusetts Institute of Technology. In 1930 he was made chairman of the corporation of that institution.

During the Spanish-American War he served in the U. S. Navy with the rank of lieutenant, and during the World War was secretary of the committee for aeronautics and a member of the executive board of the National Research Council.

**STRAUS, NATHAN.** An American merchant and philanthropist, died in New York City, Jan. 11, 1931. He was born in Rhenish Bavaria, Germany, Jan. 31, 1848, and six years later went to the United States with his parents. After graduating from Packard's Business College in 1866, he was employed in his father's importing business in New York City. In 1887 he and his brother Isidor purchased the controlling interest of the department store of R. H. Macy & Co., and in 1893 they organized the department store of Abraham & Straus in Brooklyn. Following his brother's death on the *Titanic*, he devoted most of his time to philanthropic activities.

He had established and maintained in New York City, from 1892 to 1920, a system of distribution of sterilized milk for the children of the poor, and had extended his idea not only to other American cities but to other countries by installing pasteurization plants in England, Ireland, Germany, Palestine, Cuba, and the Philippines. After 1918 he devoted much of his fortune to rebuilding Palestine as a Jewish national home.

**STREETS.** See **ROADS AND STREETS.**

**STRIKES AND LOCKOUTS.** The accompanying tabulation indicates that, aside from the year 1928, the actual number of strikes in the United States reported in 1930 was less than for any other of the previous 15 years. The number of workers involved was also fewer for this year than for any other. The relative number of disputes and the relative number of employees on strike for each year from 1916 to 1930 is shown in Table I from the *Monthly Labor Review*, for which 1916 figures serve as a base.

Strikes occurred with greatest frequency in the coal mining, clothing, building, and textile indus-

# I. RELATIVE NUMBER OF DISPUTES AND OF EMPLOYEES INVOLVED, 1916 TO 1930

Year	Relative number of— Disputes	Employees
1916	100	100
1917	117	77
1918	88	78
1919	96	260
1920	90	91
1921	68	69
1922	29	101
1923	41	47
1924	33	41
1925	34	27
1926	27	21
1927	19	22
1928	17	22
1929	24	15
1930	17	10

tries, and over 90 per cent of the total number of persons involved during 1930 were to be found in these four groups. Industrial disputes continued to centre largely about the questions of wages, hours of employment, or recognition of the union. Strike settlements in 1930 showed a material loss to employees, when the figures are compared with the results in 1929. Forty-four per cent of the strikes in 1930 were settled in favor of the employers as against 40 per cent in 1929; 25 per cent of the strikes in 1930 were settled in favor of the workers as against 29 per cent in 1929; the number of strikes in which a compromise settlement was reached was 24 per cent in 1930 as compared with 25 per cent in 1929. In 1930, 41 per cent of all strikes were concluded in 6 days and 66 per cent in 14 days. Table II shows the relation of workers on strike to labor unions over the period 1916-1930.

Table III shows the number of workers involved in strikes over the period being discussed.

# III. NUMBER OF DISPUTES BEGINNING IN EACH YEAR FOR WHICH NUMBER OF EMPLOYEES IS REPORTED, AND TOTAL AND AVERAGE NUMBER INVOLVED, 1916 TO 1930

Year	Number of disputes	Number of employees	Average number of employees per dispute
1916	2,667	1,599,917	600
1917	2,325	1,227,254	528
1918	2,151	1,239,989	576
1919	2,665	4,160,348	1,561
1920	2,226	1,463,054	657
1921	1,785	1,099,247	616
1922	899	1,612,562	1,794
1923	1,199	756,584	631
1924	898	654,641	729
1925	1,012	428,416	423
1926	783	329,592	421
1927	734	349,434	476
1928	629	357,145	568
1929	903	230,463	255
1930	653	158,114	242

In 1930, 25,529 workers in the building trades were directly involved in industrial disputes; in the clothing industry the number was 54,177; in the metal trades, 2142; in the coal mining industry, 35,403; in the textile trades, 11,553. On the other hand, in the iron and steel industry, only 940 persons were involved in industrial disputes in 1930; in the lumber industry the number was 452; in printing and publishing it was 160; in transportation (steam and electric) it was 767. Table IV indicates the duration of disputes for the period from 1916 to 1930 being discussed.

## II. RELATION OF WORKERS TO LABOR UNIONS

Number of disputes

	1916	1917	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927	1928	1929	1930

1930 .....	667	12,292	18

Table V, from the *Monthly Labor Review* for February, 1932, shows that 817 industrial disputes occurred during the year ended Dec. 31, 1931, as against 653 in 1930, that the number of workers involved in industrial disputes rose to 277,553 from 158,114 in 1930, and the number of man-days lost increased to 6,463,785 from 2,730,368.

## V. INDUSTRIAL DISPUTES BEGINNING IN AND IN EFFECT AT END OF EACH MONTH, JANUARY, 1930, TO DECEMBER, 1931, AND TOTAL NUMBER OF DISPUTES, WORKERS, AND MAN-DAYS LOST IN THE YEARS 1927 TO 1931

Month and year	Number of disputes		Number of workers involved in disputes		Number of man-days lost in disputes existing in month or year

\* Preliminary figures subject to change.

Among the more important strikes of the year 1931 were the following:

**Bituminous Coal Miners.** The most important industrial dispute in recent years was the group of strikes carried on among bituminous coal miners in northern West Virginia, western Pennsylvania and eastern Ohio. Beginning in May, these strikes continued throughout the year and in West Virginia particularly took on all the aspects of class warfare, including armed conflict, wholesale arrests, and the trial and conviction of striking miners charged with homicide. These industrial disputes grew out of the depressed condition of the industry, unsatisfactory wages, and the low standards of living among the unemployed miners and their families.

While the formal demands of the striking miners included higher wages and the right to the check-off system, as well as union recognition and better working conditions, what was actually at the heart of the difficulty was the demand of the workmen for the right to proper liv-

ing conditions. The striking men were organized by the United Mine Workers of America (an A. F. of L. union) and a rival organization known as the National Miners' Union. The end of the year saw no cessation of the dispute and the failure of the Federal authorities to bring the issue to a conclusion was not among the least of the factors to elicit widespread public disapproval. The general charge that the law officers in the strike area, particularly in West Virginia, were openly working in the interests of the operators was popularly accepted as true with the result that the sympathies of the American people were plainly in support of the striking miners.

That the struggle was bound to end unfavorably for the miners was admitted in view of the fact that the bituminous coal industry was actually in a bankrupt condition, owing to the large opening of submarginal mines and accompanying over-production in recent years. There were too many men in the industry—operators as well as miners—with the result that profits on the one hand and the living wage on the other were impossible, unless a rigorous contraction first took place.

**Pocketbook Workers, New York City.** On May 28, 2500 pocketbook workers, members of the International Pocketbook Workers Union, went on strike, following negotiations with their employers for a new trade agreement. The manufacturers demanded a 25 per cent reduction in wages; the workers on their part sought a 40-hour week and the establishment of a system of unemployment insurance. A settlement was reached on June 10 when the workers voted to accept a new trade agreement which called for a 7½ per cent to 15 per cent wage reduction; the establishment of an unemployment insurance fund to be supported equally by the union and employers; an increase in the number of apprentices; and permission to the employers to discharge 10 per cent of their workers every six months.

**Hosiery Workers, Philadelphia.** In February, more than 3000 hosiery workers in some 85 plants went on strike in protest against the existence of open shop conditions. By the end of August the strike was practically over and was unsuccessful as far as the cause of the workers was concerned on account of low production in the industry for the preceding half year.

**Silk Workers, New Jersey.** Several hundred silk workers in Paterson, under the leadership of the National Textile Workers' Union, struck on July 22 for an 8-hour day, a 5-day week, increased wages, restoration of previous wage cuts, unemployment relief and insurance. Before the month was over the ranks of the strikers numbered some 1500 persons. An additional 6500 workers, affiliated with the Associated Silk Workers and the United Textile Workers, went on strike July 27, their demands including a 44-hour week with wage increases. On September 15, it was estimated that approximately 4000 workers had returned to their plants, based on recognition of the Associated Silk Workers and United Textile Workers Unions and a 44-hour week. A strike of some 3000 workers in Allentown, Pa., which began on May 1, was over by September 1. The workers had struck against wage reductions running up to 16½ per cent. Reports to the Department of Labor indicated that, except for recognition of the union, the strikers failed in their demand to have the wage cuts rescinded.

**Clothing Workers, New York City.** On July 29, some 30,000 men's clothing workers in New York City and vicinity went on strike in protest against the existence of sweat shop conditions and for the purpose of establishing a more perfect union control over the industry. Between the union and the New York Clothing Manufacturers' Exchange, the principal employing group, a trade agreement was effected the next day which called for the signing of a contract for two years ending June 30, 1933. The principal terms of this new agreement authorized the imposition of a penalty by the impartial chairman upon any manufacturer sending work to a non-union contracting firm and also gave permission to the employers to participate in fixing rates for each labor operation in the production of garments. By August 21, additional settlements had been made with independent proprietors and the strike was virtually over.

**Hosiery Workers, New Jersey.** In New Jersey in September some 8000 workers participated in an outlaws strike in protest against the inauguration of a new trade agreement which carried wage reductions from 30 per cent to 45 per cent. This agreement was signed on October 7 by the Full Fashioned Hosiery Manufacturers Association of America, an organization consisting of some 60 manufacturers, and the American Federation of Full Fashioned Hosiery Workers (an A. F. of L. union). The agreement called for the arbitration of all disputes and named an impartial arbitrator of the industry to serve for the term of one year. By October 12, most of these outlaws strikes had ended with the workers accepting the wage reduction provided for in the trade agreement.

**Textile Workers, Massachusetts.** In September, strikes broke out in practically every textile mill in Lawrence and vicinity against the announced intention of the op-

erators of carrying out a wage reduction of 10 per cent. By October, some 20,000 workers were on strike in Lawrence, Andover, North Andover, Dracut and Lowell. By October 18, all but one of the important mills involved were operating about 50 per cent capacity with approximately 10,000 workers and the strike was virtually over.

**GREAT BRITAIN.** Industrial disputes in Great Britain and Northern Ireland in 1930 showed a decline as compared with 1929. The number of disputes was 422, as against 431 in 1929; the number of workers involved was 308,700, against 533,800; and the duration (in working days) of all disputes during the year was 4,399,000, compared with 8,287,000 in 1929. The principal strikes during 1930 were in the coal-mining industry, where 148,600 workers were involved in 150 disputes lasting 663,000 days, and in the wool textile industry, where 122,200 workers were involved in seven disputes lasting 3,279,000 days. In the preceding year there were 35 strikes and lockouts in the cotton industry, involving 392,200 workers and lasting 6,642,000 days, and 153 industrial disputes in the coal-mining industry, involving 78,500 workers and lasting 576,000 days.

**CANADA.** In 1930, there occurred only 67 strikes and lockouts in the Dominion involving 13,768 workers. This was the lowest number since 1900, except for 1914 and 1915. The time lost in working days in 1930 was 91,797.

**SUDAN, ANGLO-EGYPTIAN.** See ANGLO-EGYPTIAN SUDAN.

**SUDAN, FRENCH.** See FRENCH SUDAN.

**SUEZ CANAL.** A still further heavy decline in traffic was shown in the preliminary report for 1931 of the Compagnie Universelle du Canal Maritime de Suez. During the year 5366 ships, with a gross tonnage of 41,743,051 and a net tonnage of 30,027,966, passed through the canal, as compared with 5761 ships, with a gross tonnage of 43,946,570 and a net tonnage of 31,668,769 in 1930. The movement of merchandise in 1931 was 25,332,000 metric tons, as compared with 28,511,000 metric tons in 1930. Total transit and navigation receipts amounted to 930,849,000 French francs in 1931, as compared with 1,037,720,000 French francs in 1930. (The French franc equaled \$0.0392.) The decrease in transit receipts during the year may be partly accounted for by the reduction in rates in September, 1930, from 7 to 6.65 gold francs per net ton for loaded vessels and from 4.50 to 3.3325 gold francs per ton for vessels going through in ballast. (One gold franc equaled \$0.193.) This reduction brought the tolls close to the pre-war rates for loaded ships (6.25 gold francs per ton in 1913) and below the pre-war rates for vessels in ballast. In 1931, largely on the insistence of British ship-owners, the company decided further to reduce the transit rates temporarily 10 per cent from Nov. 15, 1931, to July 1, 1932; the new rates were 6 gold francs per ton on loaded ships and 3 gold francs per ton on ships in ballast. The table on page 762 gives the preliminary figures for Suez Canal traffic for 1931 and the final comparative figures for several years earlier.

## SUEZ CANAL TRAFFIC

Year	Transits Number	Net tonnage Tons	Cargo traffic Metric tons	Tolls Gold francs*
1931	5366	30,027,966	25,332,000	930,848,000
1930	5761	31,668,759	28,511,000	1,037,720,000
1929	6274	33,466,014	34,516,000	1,115,920,000
1928	6084	31,906,000	32,622,000	221,090,000
1927	5544	28,965,000	29,524,000	208,650,000
1926	4345	20,743,245	21,860,000	162,613,850
1919	3986	16,018,802	18,973,000	136,969,015
1912	5373	20,275,120	25,444,000	132,929,341
1909	4239	15,407,527	19,924,000	117,754,888

\* One gold franc equals \$0.193.

† In French francs, each equaling \$0.0392.

**SUFFRAGE.** See JAPAN, TURKEY, SPAIN, and SOUTH AFRICA under *History*.

**SUGAR.** The world's sugar production in 1930-1931 according to estimates by Willett and Gray given in short tons was 32,098,796 tons comprising 13,098,014 tons of beet sugar and 19,000,782 tons of cane sugar. The same authorities in a preliminary estimate placed the production of 1931-1932 at 29,036,245 tons including 10,500,325 tons of beet sugar and 18,525,920 tons of cane sugar and representing a reduction of 9.5 per cent from the yields of the preceding year. In the beet sugar production this reduction amounted to 19.8 per cent and in the cane sugar production to 2.5 per cent. The yields of beet sugar in 1930-1931 in the leading countries not including the United States were reported as follows: Germany, 2,832,022 tons; Soviet Republics, 2,251,368 tons; France, 1,339,724 tons; Czechoslovakia, 1,260,773 tons and Poland, 886,985 tons. Similarly the cane sugar production was 3,559,360 tons in British India, 3,496,648 tons in Cuba, 3,184,160 tons in Java; 1,014,821 tons in Formosa and Japan; 1,008,000 tons in Brazil and 996,289 tons in Hawaii. The preliminary estimates for 1931-1932 placed the beet sugar yield at 2,408,000 tons in the Soviet Republics, 1,848,000 tons in Germany, 1,019,000 tons in France, 930,000 tons in Czechoslovakia, and 627,200 tons in Poland and the cane sugar production at 3,472,000 tons in British India, 3,360,000 tons in Cuba, 2,800,000 tons in Java, 1,092,000 tons in Brazil, 1,030,400 tons in Formosa and Japan and 1,008,000 tons in Hawaii. In the eight countries which are signatories to the Chadbourne agreement, the total production estimated for 1931-1932 was over 2,200,000 tons below that of 1930-1931. The Chadbourne agreement entered into during the year had for its purpose a reduction of production to bring prices to the producer to a more profitable basis. The countries adhering to the Chadbourne plan were Czechoslovakia, Germany, Poland, Belgium, Netherlands, Cuba, Java, and Peru. See CUBA.

In the United States the cane sugar production of Louisiana in 1931 as estimated by the Department of Agriculture was 156,000 short tons in comparison with 200,000 tons the year before. The cane crop of 1931 was 2,760,000 tons and of 1930, 3,101,000 tons. The acreage of sugar cane was 188,000 acres of which 154,000 acres were grown for sugar, 20,000 acres for sirup and 14,000 acres for cane to be used for planting. The cane area in 1931 was 188,000 acres and the average yield per acre 14.7 tons. The average farm price on December 1 was 3.60 per ton, making the total value of the cane crop \$9,948,000. The production of sugar cane sirup in eight States reporting was 14,859,000 gallons. At the average farm price on December 1 of 49.3 cents per gallon the total

value of the sirup produced was \$7,331,000. The estimate of sorgo sirup production in the 22 States reporting was 17,818,000 gallons, produced on 259,000 acres and at the rate of 68.8 gallons per acre. At the December 1 price of 43 cents per gallon this yield was valued at \$7,654,000.

The beet sugar production of the United States in 1931 was estimated at 1,117,000 tons compared with 1,208,000 tons the year before. The sugar beet crop was placed at 7,933,000 tons from 720,000 acres, the average yield being 11 tons per acre. The average sucrose content of the sliced beets was given as 15.97 per cent which was better than in the two preceding years. At the average farm price on December 1 of \$5.92 per ton the sugar beet crop was worth \$40,958,000.

The 1931 production of maple sugar in nine States reporting was estimated at 1,653,000 pounds from 12,218,000 trees. At the average farm value of 26 cents per pound on December 1 the total value of the crop was \$429,000. The maple sirup production was placed at 2,157,000 gallons which at the average farm price of \$1.72 per gallon on December 1 was worth \$3,715,000.

The exports of the United States in 1930-1931 according to preliminary estimates included 70,000 tons of sugar, 947,000 pounds of sirup and 7,466,000 gallons of molasses and the imports 1000 tons of beet sugar, 863,000 tons of cane sugar from the Philippine Islands and the Virgin Islands, 263,000 pounds of dextrose, lactose, and levulose, 9,157,000 gallons of edible molasses and 207,844,000 gallons of molasses for other than human consumption.

**SUICIDE.** See CRIME.

**SULLIVAN, JAMES.** An American educator, died in Albany, N. Y., Oct. 8, 1931. He was born in Baltimore, Md., Feb. 13, 1373, and was graduated from Harvard in 1894, receiving the Ph.D. degree in 1898. He also attended the Ecole des Chartes in Paris and the University of Berlin. After acting until 1899 as instructor in history and government at Harvard, he became teacher of that subject in New York City high schools. In 1916 he was appointed State historian and director of archives and history for the University of the State of New York, and in 1923 assistant commissioner for secondary education in New York State. From 1926 until his retirement in May, 1931, he was assistant commissioner for higher and professional education in New York State.

**SULPHUR.** Production, shipments, and exports of sulphur in the United States in 1931 showed marked decreases in comparison with 1930, according to the U. S. Bureau of Mines. Production amounted to 2,128,930 long tons, a decrease of 17 per cent from the record output of 2,558,981 tons in 1930. Shipments declined from 1,989,917 tons, valued at about \$35,800,000, in 1930, to 1,376,526 tons, valued at \$24,800,000, in 1931, or 31 per cent both in quantity and in value, and were the smallest recorded since 1922. As in 1930, Texas was the only sulphur-producing State. The average quoted price for sulphur was unchanged at \$18 a ton f.o.b. mines throughout the year. Open prices were \$1 to \$3 a ton higher and prices for sulphur exported were given as \$22 a ton f.a.s. Atlantic ports.

Exports of sulphur or brimstone in 1931 totaled 407,586 long tons, as against 593,312

tons in 1930, a decrease of some 31 per cent. Canada received 111,958 tons in 1931; Germany, 82,218 tons; France, 73,457 tons; United Kingdom, 23,635 tons; Australia, 21,362 tons; Netherlands, 20,524 tons; and New Zealand, 17,093 tons. Exports of crushed, ground, refined, sublimed and flowers of sulphur in 1931 were 27,197,699 pounds, a decrease from 35,870,359 pounds in 1930. No imports of sulphur and sulphur ore were recorded for the year 1931.

The world production of sulphur in 1930 was estimated at slightly more than 3,000,000 long tons. Italy produced 343,834 tons, of which 246,814 tons came from Sicily; Japan, 60,000 tons; Chile, 16,000 tons; and Spain, 10,000 tons. The sulphur mines of Italy were increasing their production.

**SUNDAY-SCHOOL UNION, AMERICAN.** A nonsectarian society organized in 1817 to establish and maintain Sunday schools in the rural and mountain sections of the United States and to publish and circulate moral and religious literature. Its board of managers and missionary force are composed of men representing many of the Protestant denominations. For the year ending Feb. 28, 1931, 818 schools were organized and 581 reorganized, with a total of 4428 teachers and 43,061 pupils. There were 217 young people's societies established; 166 preaching stations opened; 23 churches of various denominations organized; and 9 churches built. The organization maintained approximately 6000 Sunday schools in every State but two. The most important of its publications is the *Sunday-School World*. Another publication, *The Sunday-School Missionary*, is sent to all contributors to the work. The officers in 1931 were: President, E. Clarence Miller; vice presidents, James M. Snyder and Robert L. Latimer; secretary of missions, Elliott D. Parkhill; editor of publications, Arthur M. Baker; treasurer, John H. Talley. National headquarters are at 1816 Chestnut Street, Philadelphia, Pa.

**SURGEONS, AMERICAN COLLEGE OF.** A college or guild (not a teaching institution), organized in 1913 by some 500 surgeons of North America. Admission to fellowship is on the basis of merit only, with reference to professional ability and moral and ethical fitness. In 1931 fellows and honorary fellows, including representatives from practically every country of the world and from every branch of surgery, constituted a body of some 10,000 surgeons.

Opportunities for the advancement of knowledge in the field of surgery are afforded at the annual congress of the college where a scientific programme is combined with a series of clinics in local hospitals. There are also held throughout the year sectional meetings of the same character but on a smaller scale. The twenty-first annual congress was held in New York City Oct. 12-16, 1931, with an attendance of nearly 3000 surgeons. Conferences were held on graduate and undergraduate teaching of surgery, cancer clinics, industrial medicine and traumatic

surgery, ophthalmology and oto-laryngology, and hospital standardization.

The official journal of the college is *Surgery, Gynecology, and Obstetrics*. The officers for 1931-32 were: President, Dr. Allen B. Kanavel, Chicago; president-elect, Dr. J. Bentley Squier, New York City; vice presidents, Dr. Eldridge L. Eliason, Philadelphia, and Dr. Ross Millar, Ottawa; treasurer, Dr. Frederic A. Besley, Waukegan, Ill. Dr. Franklin H. Martin was director general and Dr. Malcolm T. MacEachern and Dr. Bowman C. Crowell, associate directors. Headquarters are at 40 East Erie Street, Chicago.

**SURGERY, PROGRESS OF.** Leading developments in surgery during the year 1931 are summarized in the following paragraphs dealing with topics selected as of unusual and general significance.

**APPENDICITIS AND PERITONITIS.** In the three and a half decades that have elapsed since Reginald Fitz of Boston made his classical studies on inflammation of the appendix vermiformis, which showed clearly its causative relationship to abscesses in the region of the cecum so often associated with peritonitis (a condition previously but poorly understood and called vaguely "typhlitis" or "peri-typhlitis"), the medical profession and for that matter even the laity, have become quite familiar with this disease and its frequent serious consequences. It did not take long for the importance of early operation to be recognized, and it is of course now advised by both physicians and surgeons. It is, therefore, somewhat disconcerting to find that the death rate from appendicitis has been increasing and that during 1930 it was one of the highest recorded in 20 years. A statistical chart prepared by Dr. Louis I. Dublin of the Metropolitan Life Insurance Company shows this rather graphically. He found that "the mortality rate has been increasing since 1911 at practically every age period, more so in childhood and in adult life after age 35 than at other ages. This fact has been observed for both males and females. . . . By comparison of the rate for the five latest years (1926 to 1930) with the one for the five earliest years (1911 to 1915), it is shown that fatal appendicitis among white males is now 20 per cent higher than formerly; and among white females, the appendicitis death rate is 16 per cent higher."

The cause of this alarming phenomenon is not at all clear. It is difficult to know whether there has been a real increase in the incidence of the disease, or whether fatal cases are more uniformly recognized and reported. Dr. John Homans of Boston suggests that the reason may lie "perhaps in the inherent difficulty, in many instances, of making a diagnosis, and in a false feeling of security, on the part of many persons, lay and medical, that the problem of appendicitis has been solved." At any rate, several factors important in increasing the mortality rate are well recognized, and a recent study from Philadelphia suggests very strongly that certain methods of public health propaganda may well serve to reduce the incidence of severe forms of the disease.

Dr. John O. Bowers, in an attempt to analyze the high death rate from acute appendicitis, reviewed a series of 5121 cases admitted to 27 different hospitals in Philadelphia (*Jr. Am. Med. Assn.*, 1931, vol. 1, p. 1461.) His first and most significant conclusion was that the percentage of mortality varied directly with the length of time

allowed to elapse between the onset of symptoms and operation. The untoward effect of delay in operating is well brought out by a comparison of the following statistical studies:

Series	Average age (years)	Hours elapsed before operation	Hours elapsed before operation in fatal cases	Death rate
1 (5,121 cases)	24.6	61.17	95.6	5.97%
2 (1,002 cases)	26.2	81.17	153.0	8.70%

The mortality rate is 45.5 per cent higher in the second group, which came to operation after a longer interval than the first. Of those who were operated upon within 24 hours of the onset of the disease, 1 in 39 died; within 48 hours, 1 in 17; within 72 hours, 1 in 13; and over 72 hours, 1 in 9. Peritonitis, either local or general, is responsible for death in over 99 per cent of the fatal cases, and other factors (anæsthesia, hemorrhage, heart failure) for less than one half of one per cent. Ninety-nine out of a hundred patients are safe, Bowers believes, if they are operated upon within 12 hours.

Perhaps the second most important factor in the production of a high death rate was the injudicious administration of cathartics and laxatives. (It is interesting that Fitz so long ago recognized the dangers of purgation in acute appendicitis.) Of the fatal cases in which a history concerning cathartics had been obtained, 98.4 per cent were found to have had a laxative of some sort. Bowers says: "It would be presuming too much to say that laxatives caused the death of all these patients, but delay and laxatives were the cause of most of them. Localization of the infection takes place when the intestines are quiet; increased peristalsis, increased intra-appendiceal tension, perforation, general peritonitis, overwhelming intoxication, and death follow the administration of laxatives." He found also that the death rate was higher in those with recurrent attacks than in those who were operated upon during the first attack; and further that in general the more experienced surgeons had a lower mortality than the less experienced ones.

Bowers outlines the following measures in a plan for the reduction of the mortality rate in acute appendicitis. First, the necessity of informing the public of the "dangers of delay in seeking medical advice and of the dangers of using laxatives in the presence of abdominal pain." Second, instruction to pharmacists and to pharmacy students regarding the necessity of inquiring of customers whether cathartics which are dispensed are to be used for the relief of abdominal pain. Third, a more intensive study on the part of the surgical staffs of general hospitals of the disease and its complication. And finally, a periodic survey of the results of treatment.

The results to be obtained by intelligent and intensive propaganda are suggested by the report, shown in the accompanying statistical study,

	Before letter	After letter	Reduction
Average time between onset of symptoms and operation	75.6 hours	56.8	24.8%
Percentage of perforations	45	24	46.6%
Mortality	5.41%	3.12%	42.3%

of one Philadelphia hospital, which sent a letter regarding the danger of delay and catharsis to all its former patients.

The recent study of Melleney and his co-workers at the Presbyterian Hospital in New York on the bacteriology of peritonitis, a condition most commonly encountered as a sequel of acute appendicitis, is of considerable interest and importance. By taking both cultures and smears from the peritoneal cavity at the time of operation, he was able to obtain a more exact idea of the organisms involved in the inflammatory process than most of the previous investigators.

Peritonitis is as a rule, he found, a polymicrobial disease—the most common organisms being the colon bacillus, the bacillus of Welch, and the green streptococcus, although in some cases only one organism is found. He was not able to correlate the severity of the infection with the type of bacteria present, but felt that in the common mixed infections the organisms might bear a symbiotic relationship to each other—that is, that the growth of one might favor the growth of the others. This problem, he feels, is a fertile one for further study.

Whether or not the appendix had perforated seemed to be the chief factor in determining the extent of the subsequent peritonitis. In those cases where the appendix had not ruptured at the time of operation (although it might be markedly inflamed or even gangrenous), there were as a rule few organisms, and the mortality rate was low; where rupture had occurred there were many organisms, the peritonitis usually proved to be severe, and the death rate was high.

The mortality rate also varied with the extent of peritonitis found at operation. Of those with a well localized peritoneal inflammation, none of his series died; of those with appendiceal abscess, one-sixth died; and of those with a generalized peritonitis, one-third died.

Melleney also found a high death rate in cases of peritonitis caused by perforation of abdominal viscera other than the appendix. He had several cases of perforation of the small intestine, which were all followed by a severe peritonitis, and those of the lower part of the small intestine (ileum) ended fatally. In contrast, the majority of patients with perforations of the large bowel recovered. Two patients with perforations of the gall bladder died.

In this series the severity of the inflammatory process seemed to vary directly with age. The mortality was especially marked in those over 40, while no patient under 20 died. (Melleney's cases did not, however, include infants or small children.) Melleney emphasized, as have others, the extreme importance of early operation as a prophylactic measure against the development of peritonitis following appendicitis.

STUDIES ON THE RESULTS OF TONSILLECTOMY. The question of the benefits to be expected from tonsillectomy has long been a moot one. In certain cases where the tonsils are obviously diseased and are the seat of frequently recurring attacks of inflammation, the indication for removal seems definite. There has been a growing tendency on the part of physicians in recent years, however, to advise "prophylactic" tonsillectomy in the hope of preventing certain conditions such as upper respiratory infections, rheumatic fever, and the infectious diseases of childhood. This whole problem has been the subject of editorial comment in the *Journal of the American Medical As-*

sociation on two occasions during the year (1931 V. 2, pp. 784 and 1893).

The first study mentioned was that of Selkirk and Mitchell of the University of Cincinnati College of Medicine, who made a detailed investigation of a series of children three years after tonsillectomy, comparing them carefully with a control group and considering such factors as age, sex, race, period after tonsillectomy, and others (*Am. Jr. Dis. Child.* 42: 9 July, 1931). They found that while there was a decrease in the incidence of colds, sore throats, and nasal obstruction in the group who had been operated upon, sinus infections, headache, and joint pains (possibly related to rheumatic fever) were more prevalent among them than among those who had not been subjected to tonsillectomy. They were frankly critical of previous reports of the beneficial results of tonsillectomy, which they felt were not in the main adequately controlled. The editor of the *Journal* concluded: "It would seem that the conclusions drawn from some of the studies, which are widely quoted as showing the effects of tonsillectomy, are decidedly open to question because of failure to consider other factors in evaluating the results."

Cunningham of the University of California studied the effects of tonsillectomy as shown by 14,000 women students examined on admission to the university during the last 10 years. Only white females under 35 years of age were included. She found that these women could be divided into three groups roughly equal in number. One-third had had tonsillectomy, another third had diseased tonsils at the time of examination, while the tonsils of the last third were apparently normal.

The incidence of physical signs of heart disease was smallest in the group with normal tonsils and about equal in the other two groups. The group who had had tonsillectomies gave a much higher percentage of histories of rheumatic fever than did the other two groups, which were about equal in this respect. As far as a history of diseases of the respiratory tract, otitis media, and the infectious diseases of childhood was concerned, the tonsillectomized group again showed the highest incidence. Tonsillectomy early in childhood did not decrease the frequency of occurrence of measles, mumps, chicken pox, whooping cough, influenza, or pneumonia, although it did seem to lower the incidence of scarlet fever and diphtheria.

As a result of studies such as these there "seems to be a growing tendency to question the value of tonsillectomy as a prophylactic measure against infectious diseases and as a cure for rheumatism, chorea, and carditis." They would seem to indicate "that tonsillectomy is a useful procedure, but the benefits, when a large control group is compared, are not so striking as could be desired."

Brief mention may be made of a report on tonsillectomy by means of electro-coagulation, a method which has had a considerable vogue in the last few years. Silvers (*Arch. Otol.* 12: 511, 1930) has detailed his experience with this procedure during the past six years. He finds it to be a safe and reliable one when complications contraindicate the usual operative method. He mentions as the advantage of electro-coagulation the fact that the procedure may be carried on in any desired number of treatments, the absence of any shock or pain, the prevention of hemorrhage, and the avoidance of anæsthesia. Among the dis-

advantages are the fact that the procedure cannot be completed in one treatment, that it is more expensive and time consuming, and that it requires a considerable degree of skill and experience with that particular technique. The method, while certainly applicable in selected cases, cannot be said to have the value or general usefulness of operative removal.

**SURGICAL SHOCK.** Blalock and others at the Vanderbilt University Medical School published several papers on the mechanism of the production of surgical shock which will probably change rather radically the general opinion as to the fundamental nature of this condition. Shock is seen as a rule after severe trauma, after extensive burns, and after serious injury to the central nervous system. Its most striking clinical features are extreme prostration and apathy, with very low blood pressure. Previous investigators, including such prominent physiologists as Cannon and Bayliss, have been of the opinion that the fall in blood pressure was the result of absorption of a toxin, probably similar in nature to histamin, from the traumatized tissues.

Blalock, in a series of interesting experiments, has shown that this is probably not the case in the first two types of shock, but that instead the local loss of blood plasma is the really important factor. In studying the effects of mild and severe trauma to an extremity, of trauma to the intestines, and of burns, in deeply anesthetized dogs (which were always sacrificed at the conclusion of the experiment), he found that there was a loss of fluid at or near the site of injury amounting to 1.6 per cent to 4 per cent of the total body weight. This fluid had the same chemical constituents as the blood plasma, and furthermore removal of equivalent amounts of whole blood in other animals, or of blood plasma, produced comparable drops in blood pressure.

These studies have definite therapeutic implications. If the symptoms of shock are caused by loss of fluids from the circulation, it is obvious that replacement of such fluids is indicated. For this purpose, blood transfusion serves best, although in the absence of a suitable donor the intravenous injection of normal saline solution is of considerable value. As a matter of fact, such measures as these already have a wide clinical usage. Blalock's work gives them a valid scientific basis. (Several papers in *Arch. Surg.* April, 1931; summary, *Jr. Am. Med. Assn.*, Dec. 12, 1931, p. 1794.)

Underhill at Yale studied especially the relation of loss of body fluids to burns. He found that in extensive burns the blood becomes highly concentrated, due to a loss of plasma brought about by increased permeability of damaged blood vessels of small size (the capillaries). He found that in burns involving one-sixth of the body surface as much as 70 per cent of the total body fluids might be lost. Certain secondary features associated with severe burns, such as ulcers of the stomach and intestine and hemorrhages in other parts of the body, are due, Underhill thinks, to an increase in the temperature of the circulating blood, which may amount in some instances to as much as several degrees Centigrade, rather than to the absorption of toxins from charred tissue as previously supposed. Early death from burns is probably directly due to extreme loss of blood plasma.

**DIAGNOSIS OF GALL BLADDER DISEASE BY DUODENAL INTUBATION.** There has been a revival of interest during the last two years in the

use of duodenal drainage as a means of study in diseases of the gall bladder and biliary passages. Since the work of Meltzer and of Lyon, it has been known that bile from the biliary ducts and also probably from the gall bladder may be obtained by introducing into the duodenum near the orifice of the common bile duct a solution of concentrated magnesium sulphate. Lyon used this method in the treatment of cases of chronic cholecystitis, so called "non-surgical drainage of the gall bladder," but its value as a therapeutic agent has never had a wide clinical acceptance. Recently observers have studied the composition of bile obtained in this fashion and have found that in cases of stone in the gall bladder or bile ducts it almost always contained crystals of cholesterol which could be easily identified under the microscope. It also usually contained masses of amorphous material, so called calcium-bilirubin pigment. Both of these substances are common constituents of gall stones.

Bockus and his co-workers in Philadelphia have reported the interesting results of their use of this method in a fairly large series of patients suspected of having gall stones and later operated upon (*Jr. Am. Med. Assn.* vol. i, 1931, p. 311). In 124 cases in which cholesterol crystals, calcium-bilirubin pigment, or both were found in bile obtained from a tube introduced through the mouth into the duodenum, the percentages of accurate diagnosis of gall stones were as shown in the following table.

In the presence of crystals alone .....	89%
In the presence of pigment alone .....	90%
In the presence of both .....	100%

In 148 cases of cholelithiasis proved at operation, a positive diagnosis of stone had been reached in 83.2 per cent by means of a study of bile obtained by duodenal intubation and in only 29.2 per cent by X-ray (oral cholecystogram). This is not, however, an absolutely accurate index of the value of the two methods for these reasons: First, because the cholecystogram may often indicate definite gall bladder disease without actually demonstrating calculi; and second, because with a different technique (that is, by administering the gall bladder dye for the X-ray test by vein instead of by mouth) a considerably higher percentage of cases of cholelithiasis may be recognized. There is no doubt, however, that this method of directly studying the bile is a useful one, particularly in cases where there is a discrepancy between the clinical picture and the roentgenological findings.

**NEW METHODS OF ABDOMINAL DIAGNOSIS BY X-RAY.** Certain of the newer aspects of roentgenological diagnosis in diseases of the abdomen are discussed in the *Journal of the American Medical Association* (Feb. 7, 1931, p. 443). A method for demonstrating the outline of the pelvis of the kidney by the intravenous administration of a dye has found wider usage, and has been pretty generally accepted as a valuable diagnostic agent, when for any reason cystoscopy with catheterization of the ureters and retrograde injection is contraindicated. This new dye, introduced by Swick and Von Lichtenberg as "uroselectan," has been accepted under the name "Iopax."

A useful method of diagnosing polypoid lesions and polyposis of the large bowel was emphasized in the United States by Weber.

Ordinarily the large bowel is studied roentgenologically by introducing an opaque substance (barium sulphate given as an enema) and watching its course through the colon with the fluoroscope. This shows the outline of the bowel and makes evident any deformities in contour. It does not, however, show non-deforming soft masses, such as polyps. If after the barium has been expelled, air is introduced in the colon, these masses coated with barium can be readily identified. Their diagnosis is of considerable importance, because they are definitely precancerous lesions.

Other observers have been able to diagnose the presence of an intestinal parasite, ascaris, the common round worm found in children, by the presence of string-like filling defects in the small intestine, after barium has been given by mouth.

Kirklin of the Mayo Clinic has established certain criteria for the diagnosis of papillomata and other tumors of the gall bladder by means of the cholecystogram, a method of examination now widely used in the diagnosis of chronic inflammation of the gall bladder and of gall stones. Of 20 cases diagnosed as tumor of the gall bladder by X-ray, four came to operation and in every case the diagnosis was correct.

**SIMPLE TEST FOR DIFFERENTIATION OF TYPES OF ARTERIAL DISEASE.** A point of considerable importance in the study of peripheral circulatory diseases (due to arterio-sclerosis, diabetes, thrombo-angiitis obliterans, or Raynaud's disease), both from the standpoint of prognosis and of treatment, is the relative importance of actual anatomical occlusion of the lumen of the vessel and of spasm of its muscular coats. If the poor circulation is due essentially to organic disease of the vessel wall, the outlook is poor and treatment is in the main palliative. If, on the other hand, the vascular obstruction is chiefly functional and due to vaso-constriction, the chance for permanent relief is much better and treatment is directed towards the relief of the spasm. This can be accomplished by exciting the nerve centres which carry vaso-constrictor fibres to the involved vessels. It has been known for some time that these vaso-constrictor impulses temporarily disappear when the temperature is elevated artificially (as done, for instance, by Brown of the Mayo Clinic by the injection of typhoid vaccine which causes a chill followed by hyperthermia), and also during general or spinal anaesthesia. By determining the extent of the rise in temperature of the affected extremity while spasm of the vessel wall is being temporarily inhibited, one may obtain an idea of the extent to which the circulatory impairment is caused by vaso-constriction—that is, limbs affected chiefly by actual occlusive arterio-sclerotic processes will show little rise in temperature, while those in which the lumina of the arteries is not organically compromised will show a considerable elevation of temperature.

Morton and Scott of the University of Rochester Medical School described a simple method of differentiating spasm and occlusion. They found that by injecting novocaine into the posterior tibial nerve as it passes the ankle—a comparatively easy procedure—they could block the vaso-constrictor fibres to the area supplied by that nerve, that is, the sole of the foot. By a series of determinations on normal individuals they established the degree of temperature rise which might be expected. By comparing the rise

actually obtained in patients with circulatory diseases of the feet with the normally expected one, they were able to judge pretty accurately the rôle vaso-constriction played, and what value they might expect from excision of the vaso-constrictor nerve centres in the lumbar spine. Their test may be used with ambulatory patients and offers a valuable aid in clinical diagnosis. (*Jr. Am. Med. Assn.* Oct. 24, 1931, p. 1212.)

**TREATMENT OF ANGINA PECTORIS BY PARAVERTEBRAL ALCOHOL INJECTION.** Laewen, in Germany, tried in 1922 the use of novocaine, injected through the back in such a way as to be deposited along the sensory nerve roots to supply the heart, in the treatment of the severe attacks of cardiac pain known as angina pectoris. Although the anæsthetic effect of this drug is short lived, his results and those of others who soon made further use of this method suggested that this form of attack might be a favorable one. In 1926 Swetlow, in the United States, suggested the use of the injection of alcohol in a similar fashion, in the hope of obtaining permanent degeneration of the nerve fibres carrying the pain impulses. Since then a number of patients have been treated in this fashion (particularly by Swetlow, and by White and others at the Massachusetts General Hospital). Levy and Moore of the Presbyterian Hospital in New York summarized the results of previous writers and reported the results in nine of their own cases (*Arch. Int. Med.* July, 1931, p. 146).

The whole problem of angina pectoris is an exceedingly puzzling and complicated one, and that as yet there is no very definite knowledge of the mechanism which causes the agonizing attacks of pain which these patients suffer. Nor for that matter is the route pain fibres coming from the heart traverse absolutely established, although their course is roughly known. Again it must be understood that relief of pain by destroying nerve tracts does not affect the underlying pathological process, which often ends fatally. It might, however, make the remaining days of the sufferer more endurable.

Moore and Levy studied 66 cases—57 from the literature and nine of their own. Of 49 of these in which adequate data were available, they found that 51 per cent obtained complete or almost complete relief from pain. Improvement was observed in 34 per cent, while in the remaining 15 per cent the procedure gave no relief whatsoever. The duration of relief from pain was quite variable. Their most successful injection gave complete relief for 16 months. Most of the patients, following injection, have a painful neuritis of the chest wall lasting as long as six weeks. (There is of course no comparison of the intensity of this pain with the agonizing paroxysms of angina.) They conclude: "Paravertebral injection of alcohol offers a reasonably good hope of some relief to patients with paroxysmal cardiac pain. Final judgment as to its value and limitations must be reserved until more cases have been observed over a longer period of time."

**SURINAM**, sŭ'rĭ-nām', **DUTCH GUIANA**, gĕ-ā'nā. A possession of The Netherlands on the north coast of South America lying between French Guiana on the east and British Guiana on the west, bounded on the south by Brazil. Area, 54,291 square miles; population, Dec. 31, 1929, about 151,350, inclusive of Negroes and Indians in the forests. Paramaribo, the capital, had 46,953 inhabitants. In 1929, there were

4331 births, 2032 deaths, and 460 marriages. Among the chief products are sugar, cacao, bananas, coffee, rice, maize, rum, cotton, bauxite, gold, and balata. In 1930 imports increased by 6 per cent to 9,188,476 florins and exports declined by about 19 per cent to 8,399,803 florins (1 florin equals \$0.402 at par). United States statistics showed exports to Surinam in 1930 of \$867,000 (\$897,000 in 1929) and imports from Surinam of \$1,538,000 (\$1,171,000). Local revenues are insufficient to meet expenditures and Holland provides an annual subvention. The budget for 1931 estimated expenditure at 8,165,000 guilders, local revenue at 4,744,000 guilders, and the subvention at 2,855,000 guilders (1 guilder equals 0.4020 at par). A total of 216 vessels of 244,794 registered tons entered the ports in 1929. Paramaribo is a regular stop on the weekly air service connecting Miami and Buenos Aires. The executive authority rests with a governor and an assisting council, both nominated by the Crown. Governor in 1931, Dr. A. A. L. Rutgers, appointed Apr. 1, 1928.

**SURREALISTES.** See FRENCH LITERATURE.  
**SVALBARD (SPITSBERGEN).** An Arctic archipelago under Norwegian sovereignty, situated from 240 to 480 miles north of Norway between 10 and 35 degrees east longitude and 74 and 81 degrees north latitude. Area, about 25,000 square miles; population, 749 in winter of 1927-28; administrative headquarters, Green Harbor. Coal deposits on West Spitsbergen, estimated at 8,000,000,000 tons, are mined the year round. Exports in the summer of 1929 totaled 236,000 metric tons.

**SWAIN, GEORGE FILLMORE.** An American civil engineer, died in Ashland, N. H., July 1, 1931. He was born in San Francisco, Calif., Mar. 2, 1857, and was graduated from the Massachusetts Institute of Technology in 1877, subsequently studying three years at the Royal Polytechnic School in Berlin, Germany. Upon his return he settled in Boston, where he served as instructor in civil engineering at the Massachusetts Institute of Technology from 1881 to 1883, assistant professor from 1883 to 1887, and professor from 1887 to 1914. He was a member of the Boston Transit Commission from 1894 to 1918, being chairman during 1914-18.

In 1909 he became professor of civil engineering at Harvard, retiring as professor emeritus in 1929. He was the author of "Report on the Water Power of the Atlantic Watershed" in vol. xvii of the *Tenth United States Census; Conservation of Water by Storage* (1915); *The Young Man and Civil Engineering* (1922); *Strength of Materials* (1924); *Fundamental Properties of Materials* (1924); and *Stresses, Graphical Statics and Masonry* (1927).

**SWARTHMORE COLLEGE.** A nonsectarian institution for the higher education of men and women in Swarthmore, Pa., founded in 1864 by the Society of Friends. The 1931-32 enrollment was 566. The teaching staff numbered 75. The total endowment was \$7,500,000. The library contained 76,000 volumes. President, Frank Aydelotte, LL.D.

**SWAZILAND**, swā'zē-lānd. A British protectorate in the southeastern corner of Transvaal Province, South Africa. Area, 6704 square miles; population at the 1921 census, 112,951 (2205 Europeans). Capital, Mbabane. The Resident Commissioner, appointed by the British High Commissioner to South Africa, represents the

British Crown. Resident Commissioner in 1931, T. Ainsworth Dickson, appointed October, 1928.

**SWEDEN.** A constitutional monarchy occupying the eastern and larger part of the Scandinavian peninsula. Capital, Stockholm; reigning sovereign in 1931, King Gustaf V.

**AREA AND POPULATION.** With a gross area of 173,174 square miles (land area, 158,510 square miles), Sweden had a population at the census of 1930 of 6,141,516, as compared with 5,904,489 in 1920. For the five years 1925 to 1929, births averaged 99,274 annually and deaths 73,445, the rates per 1000 inhabitants being 16.3 and 12.1, respectively. During the same period immigrants averaged 5613 annually and emigrants 12,461. The chief cities, with their 1930 populations, are: Stockholm, 502,207; Göteborg, 243,690; Malmö, 127,870; Norrköping, 61,710; and Helsingborg, 56,123.

**EDUCATION.** Of a total of 872,691 children of school age (7 to 14 years) in 1929, 753,421 were attending school. There were in addition 29,054 students in Government high schools and 7947 in the four universities, besides the enrollment in private and technical schools.

**PRODUCTION.** About one-half of the population is engaged in agriculture. Cultivated land in 1930 totaled 9,193,000 acres, or 9.1 per cent of the total land area. The aggregate value of field crops in 1930 was equivalent to \$258,108,000; the chief crops in order of value were hay, oats, wheat, potatoes, and rye. Barley, sugar beets, and forage roots are other important crops. Iron, coal, and arsenic are the chief mineral products, the output of iron ore in 1929 being 11,408,000 metric tons; coal, 390,975 tons. The value of all industrial production in 1929 was estimated at 5,677,000,000 kronor (\$1,521,436,000). The output of the principal industries in 1930 was: Pig iron, 456,800 metric tons (489,700 in 1929); steel, 602,900 tons (693,900); wood pulp, 2,145,000 tons (2,540,000); ships (launched), 131,898 gross tons (107,246). Machinery, margarine, textiles, and matches are other important manufactured articles. Water power resources are estimated at 15,300,000 horse power, of which 1,544,000 horse power were developed in 1929. All Swedish export industries were forced to reduce production in 1931. See **UNEMPLOYMENT**.

**COMMERCE.** According to preliminary figures for 1931, imports totaled 1,439,400,000 kronor and exports 1,127,400,000 kronor (1 krona equaled \$0.2680 at par), against 1,663,797,000 kronor and 1,549,925,000 kronor, respectively, for 1930. In 1930, Germany maintained its position as the chief supplier of Swedish imports, followed by the United Kingdom and the United States, while in the export trade the United Kingdom ranked first, Germany second, and the United States third. Exports in order of value were wood pulp, sawn wood, iron ore, machinery (other than electric), iron and steel, and electric machinery. Coal and coke, iron and steel, nonferrous metals, coffee, fruits and nuts, and gasoline were the chief imports.

**FINANCE.** The budget for the fiscal year ended June 30, 1932, as adopted by Parliament, balanced at 874,254,000 kronor (\$234,300,000), as compared with the 1930-31 estimates balancing at 813,367,000 kronor (\$217,982,000). At the end of the 1930-31 fiscal year, there was a budget surplus of 12,200,000 kronor. Expenditures during the year for amortization of debt totaled 31,900,000 crowns, and the cash fund at the end of

the year was 75,900,000 kronor. All Swedish state enterprises were operated at a profit in the calendar year 1930, the aggregate income being 454,540,000 kronor, expenditures 341,770,000 kronor, and profit 112,760,000 kronor. The national debt on June 30, 1931, was 1,846,000,000 kronor, an increase of 45,000,000 kronor since June 30, 1930.

**COMMUNICATIONS.** At the beginning of 1931, there were 10,482 miles of railway line, of which 4164 miles were state owned. Electrification of the trunk line from Stockholm south to Trelleborg and several important feeder lines was authorized by Parliament on Feb. 4, 1931. Highways extended 47,139 miles, of which 1678 miles were paved or oiled. Planes operated by civil air lines flew 258,308 miles in 1930, carrying 3172 passengers and 265,650 pounds of mail and goods. The merchant marine on June 30, 1930, consisted of 1417 vessels, of 1,623,038 gross tons capacity; earnings of the merchant marine during 1930 totaled 296,100,000 kronor (323,900,000 kronor in 1929). In 1929, 33,841 vessels, of 18,022,000 net registered tons, entered the ports in foreign trade, and 33,876 vessels, of 18,068,000 tons, cleared.

**GOVERNMENT.** Executive power is vested in the King, who acts through a responsible ministry known as the Council of State, at the head of which is the Minister of State, or Premier. Legislative power is in the Diet (Riksdag) of two chambers. Premier in 1931, Carl Gustav Ekman (People's party), who assumed office June 7, 1930. The standing of the parties in the Lower Chamber following the election of September, 1928, was: Social Democratic, 90; Conservative, 73; People's, 28; Agrarian, 27; Communist, 8; Liberal, 4; total, 230. In the Upper Chamber, there were 54 Social Democrats, 50 Conservatives, 23 People's party members, 17 Agrarians, 5 Liberals, and 1 Communist; total, 150.

**HISTORY.** Swedish developments during 1931 were marked particularly by the abandonment of the gold standard on September 28, following similar action by the British government a week earlier, and a clash between troops and strikers at Adalen May 14, in which six strikers were killed and five wounded. The Swedish krona had been closely linked with the pound sterling and the depreciation of the pound added to the already strained exchange position of the Bank of Sweden. Restriction of foreign exchange transactions was placed in effect November 19 by the Governor of the Bank of Sweden.

The clash between strikers and troops was said to have been the first such encounter since 1848 in which blood had been shed. It followed a long struggle between striking mill workers and their employers in northern Sweden and the employment of strikebreakers to load wood pulp for shipment to the United States. According to the report of a Government committee of inquiry, the troops, when threatened with attack, fired into the ground and ricocheting bullets caused the fatalities. The incident was followed by strikes in numerous parts of the country and by Communist-led demonstrations in Stockholm May 19, in which 40 persons were wounded.

A split in the Conservative party ranks occurred early in the year and on March 3 the formation of a new "Free Rights" party was announced by the dissenting minority. The group was led by Dr. Arne Forsell, a member of the Diet. The new party obtained little support in

the Stockholm municipal election on March 19, in which the Socialists continued their recent gains at the expense of the Conservatives and Liberals. On April 11, both houses of the Diet ratified the Oslo pact, signed in December, 1930, under which Norway, Sweden, Denmark, the Netherlands, and Belgium agreed not to increase tariffs without first consulting the other signatories. On July 12 occurred the death of Archbishop Nathan Söderblom (q.v.), noted Swedish churchman and peace leader. See NAVAL PROGRESS.

**SWEDENBORGIANS.** See NEW JERUSALEM, CHURCH OF THE.

**SWEDISH LITERATURE.** See. SCANDINAVIAN LITERATURE.

**SWIMMING.** Swimming records were shattered with great regularity in 1931. Since the International Amateur Swimming Federation would not meet until June, 1932, world's records were not officially charted.

Miss Katherine Rawls, of Hollywood, Calif., was an unknown when the women's outdoor championships started at Bronx Beach, New York, in July, but lowered two world's records. First Miss Rawls defeated Miss Eleanor Holm of the Women's Swimming Association in the 300-meter medley race, traversing the distance in 4:45½ against the existing record of 4:49½. Then in the 220-yard breaststroke event Miss Rawls scored conclusively over Miss Margaret Hoffman, of Scranton, Pa., lowering the world's standard from 3:17 to 3:13½. Miss Helene Madison of Seattle, Wash., again headed the list of women swimmers, slashing her own and other records 26 times in free-style events. Outstanding among these races was the cutting of the 100-meter and 440-yard free-style marks from 1:08 to 1:06 and 5:48½ to 5:31. Miss Joan McSheehy of New York University and Whitinsville, Mass. did the 200-meter backstroke in 3:02½ as compared with the American record of 3:03½. That was slower than the world's record attributed to Miss Holm of 2:58½.

Important among the men's performances during 1931 were the lowering of the 800-meter relay figures for club fours to 9:21½ from 9:27 (the Olympic standard is 9:36½) by a Hollywood A. C. four and for national teams from 9:20½ to 9:17 by a quartet made up of Maiola and Manuella Ralili, Johnny Howland, and James Gillhula; the shattering of the time for 400-meter backstroke from 5:48½ to 5:31 by George Kojac, of the New York Athletic Club; and the lowering of the 220-yard breaststroke mark from 2:48½ to 2:44½ by Leonard Spence, also of the New York A. C. One of the most important occurrences of the year was the defeat of the United States team in an intercountry meet with Japan at Tokyo in August, 40 to 21.

Miss Georgia Coleman of the Los Angeles Athletic Club won both the outdoor and indoor national diving championships and Michael Galitzen (Mickey Reilly) gained men's honors.

The Hollywood Athletic Club was supreme in men's water sports, winning both the indoor and outdoor national team titles. The New York Athletic Club captured both the indoor and outdoor water polo crowns. The Women's Swimming Association topped all competitors in women's team events, outdoors and indoors. Miss Madison was the premier woman performer, and Clarence Crabbe was the outstanding swimmer among men, in the amateur championships.

George Kojac of Rutgers University was the individual star of the intercollegiate season, lowering the college mark for 100-yard free style to 0:52½, the 220-yard to 2:142½, and the quarter-mile record to 4:55, besides helping his teammates lower the existing college mark for the 400-yard relay to 3:38½. John Schmeiler of the University of Michigan bettered the world's record for 200-yards breaststroke when he thrashed the distance in 2:31½. This was ½ of a second faster than the mark set by Walter Spence in 1927.

The University of Michigan won the National Collegiate championship meet as well as in the Western Conference race, but the Yale University team, easy victor in the Eastern Intercollegiate League and a nonparticipant in the N. C. A. A. meet, was generally recognized as one of the finest collegiate contingents ever assembled. Stanford University won premier honors in the Pacific Coast Conference race. In college water polo, Navy, Dartmouth, and Pennsylvania ended the season in a tie for the Intercollegiate Swimming Association lead and Illinois and Northwestern went through the Big Ten campaign undefeated. Stanford defeated all foes on the West coast.

In the professional ranks George Young of Toronto won the \$15,000, 15-mile Canadian National swim at Toronto, Ont., covering the distance in 8 hours, 8 min. and 26 secs. Bill Goll of New York was second and Warner Anderson of Sydney, Nova Scotia, third. These three were the only swimmers in the starting field of 180 to finish, because of the extreme coldness of the water. In the 10-mile women's swim at Toronto, Miss Margaret Rainor, of Philadelphia, 1930 winner, won in 4:50:44, with Mrs. E. H. Gary of New York, second, and Miss E. McGarry, of New York, third. Thirty-three started in this race.

**SWINE.** See LIVESTOCK.

**SWITZERLAND.** A federated republic in the centre of Europe, bounded by Germany on the north, France on the west, Italy on the south, and Austria on the east. Capital, Bern (Berne).

**AREA AND POPULATION.** With an area of 15,940 square miles, Switzerland had a census population on Dec. 1, 1930, of 4,077,099, as compared with 3,886,099 on Dec. 1, 1920. The estimated population of the principal cities at the census of 1930 was: Zurich, 245,600; Basel, 147,200; Geneva, 131,700; Bern, 111,100; Lausanne, 75,600. Births in 1930 numbered 69,855; deaths 46,939; marriages, 32,132; excess of births over deaths, 22,916. Except for the period during and immediately following the World War, both birth and mortality rates have shown a steady decline since 1900. Of the 1920 population, 2,750,622 spoke German, 824,320 French, 238,544 Italian, 42,940 Romansch, and 23,894 other languages. In the same year, Protestants comprised 57 per cent of the population, Roman Catholics, 41 per cent; Jews, 0.5 per cent.

**EDUCATION.** For the school year 1929-30, there were 4368 primary schools, with 471,867 pupils; 610 secondary and lower middle schools, with 59,374 pupils; and 198 higher middle schools of various kinds, with 20,143 pupils. There are also various complementary, vocational, trade, and art schools. The seven universities, with their enrollments in 1929-30, were: Basel, 1050; Zurich, 1601; Bern, 1365; Geneva, 925; Lausanne, 823; Fribourg, 607; and Neuchâtel, 276.

**PRODUCTION.** The arable land aggregates about

1,250,000 acres and was divided in 1920 among some 212,290 peasant proprietors. Of a total working population of 1,950,000, 26 per cent were engaged in agriculture and 44 per cent in industry. Forest land in 1928 totaled 2,225,000 acres; grass land and pasturage, about 4,143,000 acres. Dairying and cattle-raising are the principal agricultural occupations. Livestock in 1931 included 1,609,073 cattle, 924,271 swine, 140,023 horses, 3689 mules, 183,838 sheep, and 235,827 goats. Cereals, potatoes, fruit, sugar beets, and wine grapes are grown. The value of all agricultural production in 1930 was placed at 1,385,000,000 francs (1 franc equals \$0.193 at par), as compared with 1,479,000,000 francs in 1929.

Salt, iron ore, and manganese are the chief minerals produced. There were in 1929, 8514 manufacturing establishments, with 309,083 employees and a motive power of 1,754,844 horse power, engaged in the production of a wide variety of products. Machinery, textiles, chemicals, watches, and clocks were the principal lines. Swiss watchmakers produce about 90 per cent of the world output and export 95 per cent of their production. Most Swiss industries in 1930 and 1931 were badly depressed as a result of reduced demands for their products in foreign markets. Exports of watches and watch movements declined 24 per cent in value in 1930, compared with 1929, whereas by total number the decline was 15 per cent. In 1931 the value of watch and watch movement exports was nearly 50 per cent less than in 1930 and there were grave doubts as to the future of the industry, which in 1929 gave employment to 57,000 workers.

COMMERCE. While exports in 1930 declined to 1,767,502,000 francs from 2,104,454,000 francs in 1929, imports slumped less sharply to 2,664,202,000 francs from 2,783,848,000 francs in 1929. The adverse balance of trade, which was 679,394,000 francs in 1929, increased to 896,700,000 francs in the following year. Precious metals are not included in the above totals. Leading imports, in order of value in 1930, were: Cereals, mineral substances, iron work, silk goods, woolen goods, animal food substances, cotton goods, and chemicals. The chief exports, in order of value, were silk goods, clocks and watches, machinery, cotton goods, and animal food substances. Preliminary trade returns for 1931 placed exports at 1,348,000,000 francs and imports at 2,251,000,000 francs, leaving an adverse balance of 903,000,000 francs. This was offset by about 400,000,000 francs expended in Switzerland during the year by approximately 1,000,000 tourists, export of water power, returns on oversea investments, etc. Trade is carried on chiefly with Germany, Great Britain, France, and the United States.

FINANCE. According to the *Statistisches Jahrbuch der Schweiz* for 1930, actual receipts for that year totaled 433,106,234 francs, as compared with the budget estimate of 383,000,000, while expenditures amounted to 426,374,014 francs, as against the estimate of 382,780,000. The actual surplus was 6,732,220 francs (about \$1,293,000), as compared with an actual surplus of 23,990,767 francs in the previous year. The budget for 1931 estimated receipts at 395,500,000 francs and expenditures at 403,200,000 francs, the estimated deficit being 7,700,000 francs. The national debt at the beginning of 1931 totaled 4,919,138,000 francs, of which 2,825,899,000 francs represented the debt of the Federal Railways. A year earlier the total debt stood at 4,901,729,000 francs and

the railway debt at 2,829,179,000 francs. The Swiss franc has a par value of \$0.192948 United States currency; in 1930 the average exchange value was \$0.1938. The 1932 budget estimates placed expenditures at 418,000,000 francs and revenue at 9,000,000 francs less.

COMMUNICATIONS. The Swiss Federal Railways during 1930 operated about 1828 miles of line, carried 127,137,000 passengers (126,550,000 in 1929) and 18,782,000 metric tons of freight, and earned gross receipts of 418,546,000 francs (431,358,000 francs in 1929). About 67 per cent of the system is electrified. Highways extended about 9233 miles in 1930.

GOVERNMENT. Legislative authority is vested in a parliament of two chambers—the Council of States and the National Council. The Council of States is composed of 44 members, two delegates being chosen and paid by each of the 22 cantons. The National Council consisted of 198 members elected by the direct suffrage of the people; by changes effected in August, 1930, the term of the National Council was extended to four years (from three years) and the membership was fixed at the rate of one for every 22,000 electors, making a total of 187 members. The Federal Assembly delegates chief executive authority to a Federal Council of seven members elected for three years. The chief magistrates are the President of the Confederation and the Vice President of the Council, who are elected by the Federal Assembly for one year. President in 1931, Dr. H. Hüeberlin; Vice President of the Council, Dr. Giuseppe Motta.

HISTORY. Economic conditions in Switzerland suddenly became severe in the third quarter of 1931, partly as a result of the financial crises in Germany, Austria, and Great Britain, all important markets for Swiss industry. Bad weather during the summer reduced the number of tourists, depressing the important hotel industry and curtailing earnings of the Government railways. These losses, plus heavy contributions of the Government to the watch industry, to banks, and to agriculture, and the necessity for relief for the 20,000 unemployed (estimated in October) caused a considerable budget deficit. Government coöperation in the merger of two leading Geneva banks reopened the old controversy about state control of banks, causing uneasiness in financial circles. The watch industry was reorganized through the formation of a superholding trust, toward which the Government contributed 6,000,000 francs without interest. It also secured representation on the board of directors through a loan of 7,000,000 francs.

The general election of Oct. 25, 1931, resulted in losses by the bourgeois groups in the National Council. The standing of the parties following the election, with the previous representation in parentheses, was: Radical Democrats, 52 (58); Social Democrats, 49 (50); Catholics, 44 (46); Agrarians, 30 (31); other parties, 12 (13). The new Council contained 11 fewer members than its predecessor. The total popular vote rose from 804,607 in 1928 to 849,800, of which the Social Democrats captured 240,572, a gain of 25,141; the Radical Democrats, 230,698, a gain of 10,563; the Catholics 183,765, a gain of 11,249; the Agrarians 131,285, a gain of 4324; and the Communists, 15,831, a gain of 1013. On Dec. 17, 1931, Dr. Giuseppe Motta (Catholic) was elected President for 1932. He held the same post in 1915,

1920, and 1927. Vice President for 1932, Edmund Schulthess (Radical Democrat). See UNEMPLOYMENT.

**SWOPE PLAN.** See UNEMPLOYMENT.

**SYMPHONY ORCHESTRA.** See MUSIC.

**SYNDICALISM.** See SPAIN under *History*.

**SYNTHETIC COTTON, SYNTHETIC RUBBER, ETC.** See CHEMISTRY, INDUSTRIAL.

**SYRACUSE UNIVERSITY.** A nonsectarian institution of higher learning for men and women in Syracuse, N. Y., founded in 1870. The 1931 autumn enrollment was 5423; the extension school enrollment was 1474, and the summer session enrollment was 2287. The faculty numbered 632 for the year 1930-31. The productive funds of the university amounted to \$5,082,623, while the income for the year was \$1,922,104. The library contained 198,774 volumes and more than 75,000 pamphlets. Chancellor, Charles Wesley Flint, D.D., LL.D.

**SYRIA.** A mandated territory of France in western Asia, bounded by the Mediterranean on the west, Palestine on the south, Iraq on the east, and Turkey on the north. The total area is about 60,000 square miles, with a population in 1929 of 2,831,022, divided administratively as follows: Republic of Syria (population, 1,696,638), Republic of Lebanon (862,618, including 342,388 Christians and 292,247 Moslems); Latakia, formerly Alawiyya (286,920); and Jebel Druze (51,780). Comprised within the Republic of Syria is the autonomous Sanjak of Alexandretta. The population is mainly of Arabic origin. Arabic is the chief language and about 1,514,755 are Moslems in religion. The principal towns are Damascus, the capital of the Syrian Republic, with 193,912 inhabitants; Aleppo, 177,313; Beirut (Beyrouth), capital of Lebanon and seat of the central government, 134,655; and Homs, 52,792.

**EDUCATION.** Public elementary schools in 1929 numbered 610, with 47,702 pupils; private elementary schools, 1441, with 97,754 pupils; public secondary schools, 15, with 2058 pupils; private secondary schools, 58, with 11,491 pupils. There are some 17 public and private lycées, with 1447 pupils, and two universities at Beirut, one American, with 1521 students in 1931, and one French, with 450 students in 1929. A Syrian university at Damascus had 402 students (1929).

**PRODUCTION.** Agriculture and livestock raising are the principal occupations, there being about 7719 square miles under cultivation. Yields of the chief crops in 1930, in metric tons, with figures for 1929 in parentheses, were: Wheat, 527,400 (443,300); barley, 480,000 (519,600); corn, 43,200 (41,800); oranges, 33,000 (44,000); lemons, 36,000 (40,000); olives, 32,800 (85,600); grapes, 162,000 (not available); olive oil, 6500 (16,900); potatoes, 34,000 (57,800). Other products are bananas, prunes, pears, apples, licorice root, silk cocoons, cotton (2230 metric tons in 1930), chick peas, tobacco, hemp, sugar cane, and sesame. Sheep in 1929 numbered 2,239,000.

**COMMERCE.** Imports in 1930 were valued at 63,526,300 Syrian-Lebanese paper pounds (\$49,804,600), compared with 72,998,400 pounds (\$57,230,700) in 1929, while exports totaled 22,663,900 pounds (\$17,708,500), as against 25,506,080 pounds (\$19,996,800) in the previous year. The Syrian-Lebanese pound exchanged at \$0.784 in 1930. Imports declined 13 per cent in value from 1929 and export values 11.1 per cent. The adverse trade balance for the year totaled 40,862,400 Syrian-Lebanese pounds, compared with 47,492,-

320 pounds in 1929. Imports in 1930 came chiefly from France (15.3 per cent of the total), the United Kingdom (11.3), Italy (8.4), Turkey (7.8), and the United States (7.2). The United States in 1929 ranked second as a source of imports. Exports in 1930 went chiefly to Egypt (20.4 per cent of the total), France (19.1), Palestine (18.1), Italy (6.3), the United States (6).

**FINANCE.** Preliminary returns for 1930 placed Government receipts at 18,694,920 Syrian-Lebanese pounds, expenditures at 16,578,740 pounds, and the surplus at 2,116,180 pounds. Final returns for 1929 were: Receipts, 24,126,100 Syrian-Lebanese pounds; expenditures, 20,025,800 pounds; surplus, 4,100,300 pounds. Estimates for 1931 balanced at 18,311,240 Syrian-Lebanese pounds. Revenues for the Republic of Syria in 1931 were estimated at 10,545,950 pounds (12,748,210 in 1930) and expenditures at 8,957,630 pounds (10,567,190). By an agreement signed Jan. 19, 1929, Syria assumed 10,870,000 Turkish gold pounds (\$47,938,000) of the Ottoman Debt.

**COMMUNICATIONS.** Railway lines in operation in 1930 totaled 548 miles, while highways consisted of 1450 miles of macadam, 70 miles of graded or drained dirt and gravel roads, and 3900 miles of unimproved dirt roads. There is an extensive motor traffic across the Syrian desert between Beirut and Bagdad (15,227 passengers were carried in 1929). A weekly air-mail service operates between Beirut and Marseilles.

**GOVERNMENT.** The Constitution of the Syrian Republic adopted May 14, 1930, granted the republic powers equivalent to those of an independent state, except that control of foreign relations and similar functions were retained by France conterminous with her exercise of the mandate. There is a legislature, elected for four years, which in turn elects a president for a term of five years. The president must always be a Moslem. The Constitution of the Republic of Lebanon, as modified May 8, 1929, vests executive power in a president elected for six years by the Chamber of Deputies, and legislative power in the Chamber, composed partly of elected delegates and partly of presidential appointees. Latakia and Jebel Druze, with capitals at Latakia and El Suweda, respectively, are administered by French governors, assisted by partly nominated and partly elected councils. A French army is in occupation of the entire country, however, and final power rests with the French High Commissioner. High Commissioner in 1931, Henri Ponsot, appointed Oct. 12, 1926.

**HISTORY.** Indications that France was preparing to follow Great Britain's example in Iraq and renounce its mandate over Syria multiplied during the year. A report that France was about to renounce the mandate and conclude a treaty of alliance with Syria was published by the Havas News Agency late in August, but was declared "inexact and premature" by Paris officials. However, the French Government reported to the League of Nations mandates commission that it would be prepared to terminate the Syrian mandate "at a not very distant date." High Commissioner Ponsot, speaking before a Syrian conference May 28, cautiously suggested a unification of the several Syrian states in preparation for the admission of Syria as a member of the League of Nations.

Decrees issued Nov. 19 and 20, 1931, by the High Commissioner paved the way for the election in January, 1932, of legislative bodies for

the Syrian State provided for in the organic statute of May, 1930. A consultative council of 11 members was established to assist the High Commissioner in putting the statute into effect and the government of the Syrian Republic was reorganized pending the establishment of the 1930 Constitution. Violence and bloodshed marked the electoral campaign, the chief issue being whether Syria should remain a republic or become a monarchy.

A 70-year agreement between the Lebanese Government and the Iraq Petroleum Company, governing the construction and operation of a pipeline from the Mosul oil fields in Iraq to one of the Lebanese ports, was ratified by the Lebanese Parliament in May. Toward the end of April, violent anti-Italian demonstrations at Tripoli, a Lebanese port near Beirut, cost the lives of five gendarmes engaged in protecting the Italian Consulate. Seventeen other gendarmes and ten demonstrators were wounded. The disturbances arose in connection with alleged Italian atrocities against the Moslems in Cyrenaica (q.v.). Dissensions within the Greek Orthodox community resulted in the election of two rival Patriarchs of Antioch early in 1931 in succession to Patriarch Gregory IV, who died Nov. 29, 1928. In part, the dispute was traceable to a movement in Lebanon for a self-governing Greek Orthodox Church independent of control from Damascus. See *ARCHAEOLOGY*.

**TADZHIKISTAN**, TAJIKISTAN, or TADZHIK SOCIALIST SOVIET REPUBLIC. See *SOVIET CENTRAL ASIA*.

**TAIWAN**. See *FORMOSA*.

**TALKING PICTURES**. See *MOTION PICTURES*.

**TANGANYIKA** (tān'gān-yē'ka) **TERRITORY**. An African territory administered by Great Britain under a mandate of the League of Nations, formerly German East Africa. Area, about 374,000 square miles. The native population (mainly of mixed Bantu race) was estimated at 4,794,000 in 1929 (4,107,000 at census of 1921). Preliminary returns of a census of non-natives taken in April, 1931, showed 5189 male and 2974 female Europeans, a total of 8163, compared with 2447 in 1921. There were 23,288 Indians, 1727 Goanese, 7000 Arabs, and 877 other non-natives. Capital, Dar-es-Salaam, with a population of 25,000. The capital and Tanga are the chief seaports.

The principal export crops are sisal (exports of 45,728 tons valued at £1,485,593 in 1929), coffee, cotton, ground-nuts, copra, grains, and sisim. Bananas, tea, tobacco, and numerous vegetables are produced also. Livestock in 1929 included 4,867,444 cattle, 2,134,490 sheep, and 2,906,638 goats. Diamonds, gold, salt, mica, and tin are mined. There are 4071 square miles of forest land, much of it containing valuable timber. Imports in 1930 were valued at £3,982,605 and exports at £2,897,938, including a transit trade of £2,552,113. Revenue in 1929-30 amounted to £1,992,675 and expenditure to £2,084,898. Budget estimates for 1930-31 placed revenue at £1,833,590 and expenditure at £2,192,431.

In March, 1931, an air-mail line between Croydon, England, and Mwanza, Tanganyika, was inaugurated. The territory is administered by a governor assisted by a nominated executive council. A legislative council of 13 official and 10 non-

official members was constituted Oct. 1, 1926. Governor in 1931, Lieut.-Col. Sir George Stewart Symes, appointed January, 1931. For the British Government's proposal for the union of Tanganyika, Kenya, and Uganda, see under *KENYA*.

**TANGIER**. See *MOROCCO*.

**TANNER**, JOSEPH ROBSON. A British historian, died in Aldeburgh, Suffolk, Jan. 15, 1931. He was born in Frome, Somerset, July 28, 1860, and attended St. John's College, Cambridge, where he was appointed Fellow in 1886, assistant tutor in 1895, and tutor in 1900. In 1907 he was made a member of the council of the university. He was lecturer on history at St. John's College from 1883 to 1921 and was also lecturer on Indian history to the Indian Civil Service students from 1885 to 1893. He had been joint editor of the *Cambridge Medieval History* since 1918. An authority on Samuel Pepys, his publications include *Samuel Pepys and the Royal Navy* (Lees Knowles lectures, 1920); *Mr. Pepys, an Introduction to the Diary* (1925); *Private Correspondence of Samuel Pepys, 1679-1703* (1926); *Pepys's Naval Minutes* (1926); and *Further Correspondence of Samuel Pepys, 1662-1679* (1929). He was distinguished for his work on English constitutional development, publishing *Tudor Constitutional Documents, 1485-1603* (1922); *English Constitutional Conflicts, 1603-1689* (1928); and *Constitutional Documents of the Reign of James I* (1930).

**TARIFFS**. See *CANADA*, *GREAT BRITAIN*, *SPAIN*, *FRANCE*, and *ITALY under History*.

**TASMANIA**, tāz-mā'nī-d. A state of the Australian Commonwealth, consisting of the island of that name and several small islands. Area, including the island of Macquarie (170 square miles), 26,215 square miles; population, according to the census of 1921, 213,780; estimated on Jan. 1, 1931, 220,644, an increase of 1579 during 1930. In that year births numbered 4786; deaths, 1948; and the excess of emigration over immigration, 1250. Capital, Hobart, with a population including suburbs (Jan. 1, 1930), of 57,500.

In 1928, 499 state primary schools provided free and compulsory education to 31,977 pupils; 65 private schools had 6566 pupils. The University of Tasmania enrolled 233 students, and five high schools and three technical schools, 3151. Agricultural and pastoral products in 1928-29 had an estimated net value of £5,307,080, manufactures £3,555,294, mineral products £1,518,464. Minerals produced in 1930 were valued at £1,103,157. Copper, silver and lead, tin, gold, and coal are the chief minerals exploited. In 1929-30, there were 845 factories employing 10,820 workers whose output was valued at £8,560,452 of which £3,562,225 included the value added in process of manufacture.

Direct overseas imports in 1929-30 were valued at £1,834,530 and exports at £2,970,913; for 1930-31, imports were £790,902 and exports £2,317,472. Refined metals, preserved fruits, wool, and confectionery are the leading exports. For the fiscal year ended June 30, 1930, revenue totaled £2,956,272 and expenditure £2,981,992, including net loan expenditure of £146,853; for the 1931-32 budget, see *Australia under Finance*. The net state public debt on June 30, 1930, was £22,080,849.

Executive power is vested in a governor, acting through a responsible ministry, and legisla-

tive power in a parliament of two houses. Governor in 1931 (vacant); Premier and Treasurer, J. C. McPhee, whose Nationalist Government was retained in office following its victory in the election of May 9, 1931. In the election, in which greater freedom for Tasmania under the Commonwealth Federation was an outstanding issue, voting was compulsory for the first time in the history of the state. The Nationalists won about 18 seats out of 30 in the House of Assembly; the Labor party opposition held the remainder. See AUSTRALIA.

**TAXATION.** The rapid progress of the economic depression brought during 1931 many changes of considerable importance in the field of taxation, while even more extensive alterations were evidently likely to be the result of the modifications of budget conditions which proceeded from inability on the part of tax contributors to keep up their payments on the same scale as in the past. On the one hand, large new demands were made for additional funds, to be used in giving employment and relieving distress, while, the ordinary resources of supply having shown their inadequacy, there was a drift toward the renewal of old and abandoned forms of taxation, as well as toward the accentuation of types of taxes that had been found to be undesirable in ordinary times, on account of their so-called "nuisance" character. During the year there were legislative sessions in 44 States, while in 14 of these States tax commissions, previously appointed, made report of their investigations and findings. At the close of the year there was still doubt in many minds whither, and how far, the new tendencies in taxation and the effort to enlarge State revenues for so-called "social purposes" would lead the nation.

**STATE INCOME TAXES.** While the definite impetus to enlargement of income taxes did not appear with full force in some of the States until toward the end of the year, so that final action was pushed forward into 1932, it was evident comparatively early in 1931 that the demand for enlargement would be strong in many directions. Advance in rates occurred in six States. Oregon, where a former rate of 5 per cent was enlarged to 8 per cent on corporations; Wisconsin, where a change in method of measuring income was introduced largely with the purpose of raising rates indirectly, and where an additional advance of one half of 1 per cent was made in individual incomes up to \$12,000 with a full 1 per cent in all above that amount; Oklahoma, where there was an advance on all incomes above \$5000 by amounts ranging from three-fourths of 1 per cent to 5 per cent on the largest incomes (over \$100,000); North Carolina, where there was an advance of 1 per cent for corporations and from slightly less to a figure about the same for individuals, according to size of income; Georgia, where the rate was made an independent one of 1 to 5 per cent instead of being dependent on Federal rates (thus a practical increase); and Missouri, where a 1 per cent increase was enacted. In New York it was proposed by the Governor that an addition of 50 per cent of its own amount be made in the State income tax in order to provide relief for the unemployed (later raised to 100%), while similar action was taken elsewhere. On the whole, the income tax upon individual incomes has continued to take deeper and deeper root. Three States (Vermont, Utah, and Idaho)

introduced the corporation income tax during 1931. Rates were fixed at 1 to 4 per cent in Idaho and Utah, and in Vermont at 2 to 4 per cent.

**INHERITANCE TAXATION.** New introduction of inheritance taxation occurred during 1931 in Florida and Alabama, while six other States entered into the arrangements allowed by federal law whereunder an income-tax State may be credited with 80 per cent of the total amount collected by the Federal government. In general, the tendency during the year was distinctly toward the notion of enacting inheritance tax rates on a basis of equality with those of the Federal government, the proceeds of the tax then to be shared between the two grades of government in the manner provided by law. Extended rearrangement of inheritance taxation occurred in Indiana, with large changes in rates and readjustments on different grades of income. In Indiana and in Iowa advances of rates occurred, while in Delaware there was a small reduction. Readjustments further took place in sundry other States, owing to Supreme Court decisions which tended to alter the administration or working of the tax; and several States entered into reciprocity arrangements with others, whereby the various governments concerned undertook to establish identity in the treatment of one another's citizens as to inheritance taxation.

**SALES TAXES.** In view of the general outcry for more sources of revenue, and the consequent search for means of getting funds, the revival of sales tax agitation was to be expected. Nevertheless, the actual introduction of the tax has not been as widespread as had been anticipated. North Carolina was the only State during the year to introduce the measure for the first time, a graduated tax on wholesale and retail dealers amounting to about one-tenth of 1 per cent on gross sales being provided. Tobacco sales taxes were established in Texas and Ohio, while in one or two States rates were cut down and in Georgia, after a three years' trial, the sales tax was entirely abolished. Excise taxes on various products such as oleomargarine and others were introduced, not however, it would seem, primarily for revenue purposes, in 14 agricultural States. Taxation upon "luxuries" has been debated for a long time, but not a great deal of progress was made during 1931, save with a half-hearted license-tax on cosmetics. In some cases, the latter taxes were intended to be prohibitory, and in others producers of revenue.

A form of taxation which has increased popularity is that on electric power. Excise taxes were placed by Vermont, Idaho, and South Carolina on electricity in proportion to kilowatt hours used. Value of franchises on the part of gas and electric companies affords the basis of utility taxation in New Hampshire, where such taxation was introduced during the year. Rates on telephone lines were enlarged in Wisconsin, and adjustments of rates on various public service companies were made in several States, including Wisconsin and North Dakota. Gasoline taxation continued popular and advances in rate were made in varying amounts in Massachusetts, North Carolina, North Dakota, Washington, Wisconsin, Maine, Arkansas, Kansas, and Arizona, while redistribution of proceeds and administrative changes were undertaken elsewhere.

**SPECIAL TAXES.** There was a renewed effort to subject transportation to special taxes during the year and, in accordance with this tendency,

new taxes were levied on all common carriers in Pennsylvania, Kansas, Michigan, Wyoming, Colorado, Alabama, and Georgia. This was in addition to previous taxes on registrations, franchises, and other elements in transportation. Taxes on trucks and on registrations generally were announced in Wisconsin, South Dakota, Illinois, Florida, New Mexico, and Nebraska, while readjustments took place in other States. On banks, the long-standing controversy about taxation showed but little alteration. In several States minor changes in rates took place, but the general problem of mutuality of arrangements between the Federal government and the States continued under advisement, with some States sending representatives to discuss the subject with Congress during the winter of 1931. Two States, Florida and Alabama, introduced the chain store tax, but elsewhere the fact that the subject was still under investigation by the Supreme Court of the United States temporarily halted the movement toward generalizing this form of taxation.

**INTANGIBLE PROPERTY.** Some ground was gained by intangible property taxation in 1931, although the obvious difficulties and disadvantages of this type of taxation restrained other States from experimenting further with it. However, Oregon after experience with an unconstitutional law, adopted a new intangible tax at 8 per cent. Florida adopted a tax of five mills and Ohio established a similar tax of varying amounts in lieu of an income tax. Constitutional amendments were to be presented at next elections in three States with reference to a plan of income taxation alternating with intangible property taxation. Corporation franchise taxation was slightly modified in a number of other States, although nowhere in as striking or fundamental a way as in those already named.

**STATE TAX COMMISSIONS.** The general progress toward the establishment of State tax commissions on a permanent, instead of a temporary basis, which had been previously noted, continued during the year. Tax commissioners or boards of tax appeals were appointed in 1931 in several States, and investigation of taxes and methods of enlarging yield became more and more active in most States. Reorganization of financial practice

of the income tax in retroactive form, owing to a deficit estimated at \$2,150,000,000 to June 30. Conditions which gave rise to this situation were indicated by the Secretary of the Treasury in his annual report at the close of the year, as follows:

Receipts from taxation were \$818,200,000 less in 1931 than in 1930, while receipts from all other sources declined \$42,800,000. Receipts from taxation, strictly speaking, represent that portion of the Government revenue which is derived from authorized levies upon the people primarily to secure funds for the conduct of Government activities. Such levies are composed of customs duties, income taxes, and miscellaneous internal revenue taxes. . . . Taxes on the income of individuals and corporations furnish more than half of the receipts. In the fiscal year 1931 income taxes amounted to \$1,860,400,000 as compared with \$2,411,000,000 in 1930, a decline of \$550,600,000. The receipts from back taxes increased about \$6,600,000, from \$231,500,000 in 1930 to \$238,100,000 in 1931.

Receipts from current income taxes on corporations were \$891,500,000 in 1931 as compared with \$1,117,800,000 in 1930, a decline of \$226,300,000. Over 90 per cent of this decrease was due to lower collections in the second half of the fiscal year. Collections during the first half of the year, which were based on 1929 incomes, decreased only \$19,700,000, or about 4 per cent as compared with the corresponding period of the fiscal year 1930. Although the decline in business activity began in the middle of 1929, corporation incomes for that year showed sufficient increase to offset largely the effect of reduction in the tax rate applicable to incomes for 1929. In the second half of the fiscal year 1931, however, collections, which were based on calendar year 1930 incomes, began to reflect the full effect of the depression and showed a decline of \$206,600,000, or 38 per cent from the corresponding period of the preceding year.

Comparison of indicated collections for the full calendar year 1931 with collections in 1930, after adjustment for differences in tax rates on incomes for these two periods, discloses a decline of approximately 45 per cent in taxable incomes of corporations between 1929 and 1930. The further marked recession in business activity which has taken place during the calendar year 1931 will be reflected in income tax collections during the calendar year 1932, and will thus affect both the fiscal years 1932 and 1933. It may be observed that when recovery in business commences, Federal income tax collections will display a corresponding lag in reflecting increased taxable incomes.

Concentration of income tax burdens was continued in depression as in time of greater prosperity. The following table shows the number of returns, amount of tax, and percentage of change for the calendar years 1928 and 1930 by major net income classes as published in the preliminary Statistics of Income for these years.

COMPARISON OF THE NUMBER OF RETURNS AND THE AMOUNT OF INCOME TAX FOR THE CALENDAR YEARS 1928 AND 1930, INDIVIDUAL RETURNS OF NET INCOME OF \$5,000 AND OVER

[Returns filed to Aug. 31, 1929 and 1931, respectively. For sake of comparability with available figures for 1930, preliminary rather than final figures are used for 1928]

Net income classes (thousand dollars)	Number of returns		Income tax (thousand dollars)		Percentage decrease	
	1928	1930	1928	1930	Number of returns	Income tax
5-10 .....	561,114	505,715	21,345	16,591	9.9	22.8
10-100 .....	859,576	251,490	409,058	208,133	80.1	49.1
100 and over .....	15,780	6,152	700,341	287,716	61.0	66.1
Total .....	986,470	763,357	1,130,743	462,440	18.5	59.1

and assignment of specific duties to tax bodies and commissions took place in several States, notably in Maine. The general field of investigation produced several tax reports by special commissions.

**FEDERAL TAX RECEIPTS.** While no new legislation on taxation was adopted during the year by the federal government, the close of the year brought strong recommendation from the President and from the Treasury for an enlargement

**TAXONOMY.** See BOTANY; ZOÖLOGY.

**TAYLOR, DEEMS.** See MUSIC under *Opera*.

**TEACHING.** See EDUCATION in THE UNITED STATES.

**TELEGRAPH.** The most interesting development in the telegraph field was the introduction and rapid growth of Teletypewriter service by which any subscriber may write out a letter on a typewriter and have the message delivered in type in the correspondent's office coincident with

the original typewriting. Each subscriber has a typewriter transmitter and a printer for receiving and these are connected through a "central" as are subscribers' telephones to all other similar subscribers on this system. To send a message, the sender types the call number of the desired correspondent and as soon as the line is connected through, he starts to type as if writing an ordinary letter, each stroke of the typewriter printing a similar symbol in the distant office. The message was charged for on the basis of the time the circuit was in use.

Another new device was the automatic printer concentrator, by which the various channels of a multiplex system may be repeated and sent out over individual single wires for distribution to points not on the multiplex line. Printing telegraph circuits are used. This would give many small offices in outlying towns direct connection with the large centres.

Carrier-current circuits were added to the New York-Washington line so that 40 new telegraph channels were provided on the previous four-wire system.

In cable telegraphy, a high speed duplex cable was put into service between Newfoundland and the Azores. Cable printers were added to three cables to South America and two of the fastest cables from New York to London were equipped with printers. The speed of the fastest transatlantic cable of the Commercial Cable Company was increased by 30 per cent and converted to two-channel operation. The new building for the International Telephone & Telegraph Co. on Broad Street, New York, was completed and housed what was said to be the largest cable and radio operating centre in the world.

**TEL-EL-AMARNA.** See ARCHAEOLOGY.

**TELEMETERING.** See ELECTRICAL TRANSMISSION AND DISTRIBUTION.

**TELEPHONY.** During 1931 overseas telephone service was further extended to bring additional regions of the world into voice communication with telephone users in the United States. These extensions included—Latvia, the whole of Italy (instead of merely northern Italy, Rome, and Vatican City which were previously accessible), the principal cities of Rumania, Rio de Janeiro (Brazil), the Canary Islands, Bermuda, the Hawaiian Islands, the Islands of Java and Sumatra in the Dutch East Indies, and the Island of Sicily. There were approximately 35,900,000 telephones in service throughout the world on Dec. 31, 1931; and about 92 per cent of these could be reached from any telephone connected with the Bell System in the United States. Ship-shore service was extended to additional liners during 1931, and plans were under way for the establishment of such service to tugboats and other small craft in the harbors of New York, Boston, San Francisco, Seattle, and Los Angeles.

On Dec. 23, 1931, a telephone conversation between Washington and Honolulu was established with a personal exchange of greetings between Secretary Ray Lyman Wilbur of the U. S. Department of the Interior and Governor Lawrence M. Judd. Wire working between Washington and San Francisco some 3000 miles, and a short wave radio channel from San Francisco to Honolulu, 2500 miles further, were employed.

The severe depression in general business during 1931 was felt to a relatively limited extent by the telephone industry in the United States. There

was a decline during the year of about 1½ per cent in the number of telephones in service, but the mileage of telephone wire and the total investment in telephone plant and equipment showed increases. On Dec. 31, 1931, the total telephones in the United States numbered about 19,900,000 with 85,000,000 miles of telephone wire in service. Telephone plant and equipment represented a total investment at that date of more than \$4,700,000,000. Telephone traffic averaged 82,500,000 conversations a day during 1931. Of these, about 79,200,000 were local conversations and the remaining 3,300,000 were toll conversations. By the end of 1931, nearly one-third of all the telephones in the United States were served from dial system central offices. In the Bell System, about one-fifth of the subscribers' telephones were of the handset type.

During 1931 continued progress was made in extending the telephone cable network, notably in the completion of cable extensions from Chicago and St. Louis to Omaha and Kansas City. Tape-armored cable, laid directly in the ground without conduits, was extensively utilized in residential areas in order to keep the telephone lines out of sight. An additional submarine telephone cable connecting the United States with Cuba was placed in service during the year. The cable is non-loaded. Whereas the three previously existing cables on this route provided one telephone channel each, the new cable afforded three such channels. Paragutta, an improved insulating material developed by Bell System research workers, was used in the construction of this cable.

In the latter part of 1931, the Bell System inaugurated switched teletypewriter service. This service utilized methods similar to those used in long distance telephony. See TELEGRAPH.

**TELESCOPES.** See ASTRONOMY.

**TELETYPEWRITER.** See TELEGRAPH.

**TELEVISION.** During 1930 and 1931 television was slowly but steadily progressing. The essential features of television transmission and reception remained unchanged. The main progress was in the improvements in mechanical and electrical details.

The Bell Telephone Laboratories constantly strove to improve the quality of the picture. They successfully demonstrated two-way television over a distance of several miles, using wire transmission. The so-called flying spot scanning method was used with a 72-hole disk giving a 72-line picture. A transmitter and receiver were mounted in the same booth so that the two persons communicating could see each other's faces as they carried on their conversation. To demonstrate the quality of the picture, two people known to each other but unaware of their proposed meeting were connected by this two-way television. They could easily recognize each other. A further demonstration was had in the ability of experienced persons to read each other's lips or converse by means of hand signs.

Although these things were possible with the system demonstrated, the quality of the picture was far from that desired. The detail was sufficient only for transmitting the face or hand satisfactorily. Full-length pictures of persons were still disappointing. To improve the quality of the picture, it was necessary to increase the number of lines making up the picture. If this was done by increasing the number of holes in the scanning disk, the practical difficulties increased

extremely rapidly. The largest number of holes used at the end of 1931 was 120, hardly double the number used two years earlier. The two main difficulties limiting the number of holes that could be used successfully were the inability of the electrical equipment to transmit satisfactorily the higher frequency variations, and the increased amount of light necessary at both the transmitting and receiving ends.

One method tried to overcome these difficulties was that of making use of several television channels at the same time. The Bell Telephone Laboratories used three channels and could thus transmit a 108-line picture with the facilities equivalent to three 36-line systems. This was actually done by having a disk with prisms to direct the light at either end to the proper photo-cell or neon tube of the three necessary. The three channels were operating simultaneously so that three lines of the picture were being transmitted at the same time. This method overcame sufficiently the difficulties due to using a large number of holes with one channel, but introduced a new one which was that of making the three channels exactly the same. This proved to be just as serious as the difficulties in the one-channel system. Also, of course, the amount of equipment necessary was increased almost threefold. In spite of the technical possibilities of this three-channel system, the 72-line single-channel system previously mentioned was the most successful system demonstrated.

The systems just discussed gave pictures a few inches in size, which could be viewed by only a very few persons. In order to project a larger picture, the flying-spot method was applied to receiving. The scanning disk carried lenses in place of the usual holes, and focused the light from a very intense point-source neon lamp on a screen in the proper position. This type of neon lamp was called a crater lamp. It was similar in its operation to the usual lamp, the difference being that the glow was concentrated in a crater in the electrodes, giving a very intense but small light.

The General Electric Company produced large pictures in the same manner, but with a different source of light. They used a high-intensity source of white light and passed it through a Kerr light cell and then projected it on a screen with the lens-scanning disk. The variations of light intensity were given by the Kerr light cell, which when properly arranged controlled the amount of light passing through according to the electrical impulses impressed on it. The resulting picture was in black and white, rather than the usual pinkish picture given by the neon lamp. The use of this projection television was very strikingly demonstrated at Schenectady, when a group of 700 Rotarians was addressed by several of its members speaking in another building, their pictures being projected by television on a screen before the audience. The quality of these projected television pictures was the same as that obtained in the smaller pictures, since the number of lines which could be used was limited in the same way.

In the first successful television systems, the object to be transmitted was relatively small, such as a person's face. This limitation of size was due to the flying-spot method of scanning, where a spot of light was projected onto the object and moved over it in the proper manner by the scanning disk. Large objects at a distance or

in strong light, such as actors on a stage or outdoor scenes, could not be transmitted by this method. Improvements in the sensitivity of photo-cells have made it possible to use the direct scanning method which is fundamentally the more desirable. In this method, an image of the object, whatever it may be, was projected by a lens system, as in a camera, onto the scanning disk, which then allowed the photo-cell to receive light only from the proper point in the image. With this method, the scanning device of the transmitter was pointed at the object to be transmitted, whether it be large or small, near or far. Several successful demonstrations were made of this method.

The most recent attempts at improving television were the use of the cathode ray tube for receiving. This tube operated entirely electrically and, therefore, eliminated many of the mechanical problems of other systems. The spot on the screen was moved across the picture in the proper way by electrical means, and varied in intensity so as to give a picture. The use of the cathode ray tube opened up a new line of study for improvements.

There were several commercial television receivers on the market which could be used to receive entertainment from the sufficiently large number of television broadcasting stations. These transmitters and receivers lack the quality obtained in the Bell Laboratories demonstrations, since they use 60-line scanning with 20 pictures per second. The scanning disks of the transmitters and receivers were synchronized by using synchronous motors running from the same alternating current supply or alternating current systems which were interconnected. These television broadcasting stations were using shorter and shorter wave lengths. One main reason for this was that television stations required almost 10 times the frequency band required by the usual sound-broadcasting station. This meant that if the existing broadcasting channels were used for television, hardly over one-tenth of the existing number of stations could be used without serious interference. This difficulty due to congestion was overcome by using shorter wave lengths, but, of course, introduced new problems which were being studied.

**TEMPLE, SIR RICHARD CAENAC.** A British soldier and Orientalist, died in Territet, Switzerland, Mar. 5, 1931. He was born in Allahabad, India, Oct. 15, 1850, and was educated at Trinity Hall, Cambridge. He joined the Royal Scots Fusiliers in 1871, serving in the Afghan Campaign (1878-79) and the Burma War (1887-89). In 1890, having served as deputy-commissioner of Burma, he was assigned to special duty with the Government of India to frame the Code of Cantonment Regulations and to report on the local taxation of railways. The following year he was chosen official president of the Rangoon municipality and port-commissioner at Rangoon, and in 1894 was appointed chief commissioner of the Andaman and Nicobar Islands and superintendent of the penal settlement at Port Blair. He retired to England in 1903.

Sir Richard made many important contributions to the study of Indian anthropology, philology, and folk-lore. During 1883-87 he edited the *Panjab Notes and Queries* and from 1884 onwards, the monthly *Indian Antiquary*. He also presented the British and other museums with valuable Oriental objects. He wrote *Anda-*

*manese Language* (with E. H. Man, 1877); *Legends of the Panjab* (3 vols., 1883-90); *Government of India* (2 vols., 1911); *Anthropology as a Practical Science* (1914); *Word of Lalla the Prophetess* (1924); *Drake's World Encompassed* (1926); *Cult of the Peacock* (with R. H. W. Empson, 1928); and *The Mystery and Mental Atmosphere* (1929).

**TEMPLE UNIVERSITY.** A coeducational institution of higher learning in Philadelphia, Pa., founded in 1884. It comprises three undergraduate colleges, nine professional schools, and an extension division. The 1931 autumn enrollment was 11,900. The faculty had 728 members. The income totaled \$1,916,000. During 1931 a medical school and a student recreation centre, each costing about \$1,000,000, were added to the group of university buildings. The Oak Lane Country Day School also became a part of the institution and was to serve as a laboratory school in the development of progressive policies in education. The library contained 61,807 volumes; for it a gift of \$270,000 was received during the year. President, Charles E. Beury, LL.D.

**TENNESSEE. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,616,556; in 1920 it was 2,337,885. Native whites numbered 2,125,553 (1930), 1,870,515 (1920); foreign-born whites, 13,066 (1930), 15,478 (1920); Negroes, 477,646 (1930), 451,758 (1920). There were but 291 inhabitants of other races (1930), chiefly 161 Indians. The gain in population over the decade was slightly greater for the urban dwellers, the inhabitants of communities of at least 2500, than for the State as a whole; the urban group increased to 896,538 (1930), from 611,226 (1920). The rural population was 1,720,018 (1930), 1,726,659 (1920).

Of 958,209 persons reported as in gainful occupations in 1930, 376,623 were in agriculture, of whom 234,027 were farmers. In manufacturing and mechanical industries, inclusive of building, were 197,038; in trade, 110,025; in transportation, 74,207; in domestic and personal service, 99,503; in professional service, 49,453. Memphis, the most populous city, had 253,143 inhabitants (1930), 162,351 (1920); Nashville, the capital, had 153,866 (1930), 118,342 (1920); Chattanooga, 119,798 (1930), 57,895 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1931	2,872,000	71,800,000	\$27,284,000
	1930	2,788,000	39,032,000	36,300,000
Cotton	1931	1,105,000	605,000*	.....
	1930	1,225,000	977,000*	.....
Hay, tame	1931	1,256,000	1,175,000*	12,925,000
	1930	1,188,000	770,000*	15,477,000
Tobacco	1931	152,000	127,528,000*	11,478,000
	1930	157,800	126,698,000*	18,625,000
Potatoes	1931	57,000	3,021,000	2,568,000
	1930	41,000	2,419,000	3,024,000
Sweet potatoes	1931	68,000	5,440,000	2,992,000
	1930	54,000	4,536,000	4,082,000
Wheat	1931	252,000	4,410,000	2,886,000
	1930	202,000	2,222,000	2,222,000

\* Bales.    \* Tons.    \* Pounds.

**MINERAL PRODUCTION.** Coal mining was only moderately less active in 1930, the quantity mined being 5,103,000 short tons, as against 5,405,464 short tons for 1929; the coal mined in 1929 had a total value of \$9,122,000. The production of

coke, however, was heavily cut, to 125,912 short tons for 1930, from 209,166 tons for 1929; by value, to \$523,813, from \$1,086,374. The small production of native iron ore was greatly curtailed in 1930 and the production of native iron ore was greatly curtailed in 1930 and the production of pig iron, largely from native ore, fell to 42,197 long tons for 1930, from 104,895 for 1929; by value, to \$828,716 (1930), from \$1,938,238 (1929). The activity of cement mills was reduced, their shipments declining to 3,822,598 barrels for 1930, from 4,537,601 for 1929; and to the value of \$5,315,693 (1930), from \$5,576,235 (1929). The quantity of stone produced in 1929 was 2,419,070 short tons; in 1928, 2,335,530 tons. Its average price was fairly high, so that its total value was \$8,043,006 for 1929 and \$7,288,666 for 1928. Clay products attained \$3,695,837 for 1929, and for 1928, \$4,030,251. The output of phosphate rock tended to increase, attaining 633,939 long tons for 1929 and 577,095 for 1928; by value, \$3,097,104 (1929) and \$2,856,850 (1928). Lime and sand and gravel were produced in each case in excess of the value of \$1,000,000 for 1929. The total value of the State's mineral production was \$40,719,706 for 1929; for 1928, \$39,216,757.

**MANUFACTURE.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 2846 (35 per cent above their number for 1927). These establishments employed 126,921 wage earners (exceeding the number for 1927 by 10.4 per cent). Wages paid these earners totaled \$114,077,559 (an excess over 1927 of more than 12 per cent). Materials for manufacture, plus fuel and purchased electricity, cost \$387,620,698 (more by 10 per cent than these items had cost for 1927). The manufactured product had a total value of \$706,053,577 (exceeding that of 1927 by 15 per cent). Value added by manufacture was estimated at \$318,432,879. Memphis had 424 establishments, 15,590 wage earners there employed, a wage total of \$16,391,721, and a product of \$161,323,679; Nashville, 263 establishments, 14,982 wage earners, a wage total of \$15,115,872, and a product of \$108,939,314; Chattanooga, 225 establishments, 18,100 wage earners, \$17,652,443 of total wages, and a product of \$103,017,490.

**FINANCE.** State expenditures of the year ended June 30, 1930, as reported to the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$22,147,348 (of which \$5,099,277 was for local education); for interest on debt, \$4,011,019; for permanent improvements, \$36,617,714; total, \$62,806,279 (of which \$40,867,178 was for highways, \$6,356,104 being for maintenance and \$34,511,074 for construction). Revenues were \$34,222,306. Of these, property and special taxes formed 14.5 per cent; departmental earnings and remuneration to the State for officers' services, 8.4; sale of licenses, 64.3 (including gasoline sales taxes amounting to \$10,165,723). The State's funded debt, both outstanding and net, on June 30, 1930, was \$37,204,026, of which \$13,850,000 was for highways. On a property valuation of \$1,842,480,665 were levied in the year State taxes of \$3,684,961.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 3939.69. Additional line of 7.69 miles had been put in operation during the year preceding, but 29.84 miles of line had been abandoned.

**EDUCATION.** For the academic year 1929-30 the number of the inhabitants of school age was stated as 717,476. There were enrolled as pupils in the public schools 627,747. Of these, 558,056 were in common schools or elementary grades, and 69,691 were in high schools. The year's expenditures for public school education totaled \$25,572,422. Salaries of teachers, by the year, averaged \$860.

Legislation of 1931 provided for the creation of junior high schools, of which the courses might extend through divers grades from as low as the seventh through as high as the tenth, and of senior high schools of higher grades to correspond.

**LEGISLATION.** The regular biennial session of the State Legislature was prolonged to July 2, chiefly on account of the struggle over the proposed impeachment of Governor Horton. It had been alleged that he had complicity with the bankers Luke Lea and Rogers Caldwell in the irregularities that brought on the banking failures of 1930 and the loss thereby of part of the State's deposits of \$6,658,118 in the failed institutions. Soon after the convening of the legislative session an investigating committee was instituted. E. H. Crump of Memphis, a powerful political leader, took an important part in the effort to carry through the proceedings against the Governor. The investigating committee continued its inquiries for months, while the Legislature took recess to await the outcome. The committee's findings were eventually received in May and turned over to a special legislative committee charged to consider whether an impeachment should be undertaken. This committee, in its turn, reported in favor of impeachment, on May 28. The House then debated the matter for some 10 days and rejected, in detail all the eight specific counts in the draft of the articles of impeachment that had been filed with it. The chief of these charges were: Conspiracy of the Governor with Lea and Caldwell, involving the discharge of non-complying officials and the unlawful handling of State money; failure to require the lawful bond on the State's deposits; wilful violation of law in permitting deposit of bridge funds in the Bank of Tennessee, alleged to be insolvent at the time.

The laws of the session included a provision that the State pay for the rights of way of State highways and assume some \$5,000,000 of county bonds for highways taken into the State system. Butter substitutes were subjected to a tax of 10 cents a pound and license for their sale was required. A new code, the first compilation of statutes subsequent to 1858, was adopted, to go into effect in 1932. Heavy penalties were put upon drunken drivers. Armistice Day was declared a State holiday. The game and fish law was made uniform for all counties and in addition to hunters, already subject to license, fishermen were required to have licenses. Bonds to the total of \$14,000,000 were refunded. Control over highway funds and the regulation of deposits of State money was vested in the State Treasurer.

A proposal to give the Smoky Mountain Park commission the power of eminent domain failed to pass. A bill for the repeal of the State's law against the teaching of evolutionism, the so-called monkey law, was rejected in the House.

**Special Session.** A special session was held in the autumn to deal with financial and economic emergency. The State faced a running deficit of

\$10,000,000 for the year, it had soon to refund some \$14,000,000 of maturing obligations, and it could find no takers for its offered bonds when the Legislature convened on November 16. Governor Horton informed the Legislature of the situation and it was decided then to adjourn without conclusive action, with a view to reconvening later and to the preparation of plans for balancing the State budget in the meantime by cuts in expenditure and the drafting of new taxation.

A second emergency of the Legislature cut down the State expenditures by some \$3,000,000 and increased the gasoline tax to 7 cents a gallon, from 6 cents. The proceeds of this increase were to retire an issue of \$5,000,000 of bonds made chiefly for the benefit of schools. A registration tax was placed on automobiles and motor busses and trucks using the State highways were subjected to a mileage tax. The rate of the tobacco tax was increased. An income tax that might produce \$3,000,000 if held constitutional was also enacted.

**POLITICAL AND OTHER EVENTS.** As a result of his part in the affairs of the Bank of Tennessee, Rogers Caldwell, president of the investment banking house of Caldwell and Company was indicted in both Federal and State courts, with others concerned in the banking collapse of November, 1930, which had carried away some \$6,650,000 of the State's funds. Caldwell was convicted in the Davidson County criminal court on July 6 of fraudulent breach of trust in connection with a charge that worthless collateral had been put up as security required against the deposit of certain State funds in the bank. The conviction involved imprisonment for not over three years.

The State's loss of funds through banking failures coupled with the check to revenue due to adverse times, depleted its treasury, and left it at the end of August unable to pay on \$2,000,000 of warrants for educational apportionments to the public schools. The United States Supreme Court in a decision of April 13 ruled that the State's graduated tax on motor busses, varying according to the capacity of the vehicle and the length of its route, was unconstitutional.

**OFFICERS.** Governor, Henry H. Horton; Treasurer, Hill McAlister; Comptroller, Roy C. Wallace; Secretary of State, Ernest N. Haston; Auditor, P. H. Williams; Attorney-General, L. D. Smith; Commissioner of Education, P. L. Harned.

**JUDICIARY.** Supreme Court: Chief Justice, Grafton Green; Associate Justices, A. W. Chambliss, Colin P. McKinney, W. H. Swiggert, William L. Cook.

**TENNESSEE, UNIVERSITY OF.** A State institution of higher education, nonsectarian and coeducational in Knoxville, with colleges of medicine and dentistry and schools of pharmacy and nursing in Memphis, and a junior college in Martin, founded in 1794. The total enrollment was 5993 in 1931. The faculty numbered 224. The endowment funds of the university amounted to \$452,748; the income for the year 1930-31 was \$2,928,087. There were 119,231 bound volumes in the libraries. President, H. A. Morgan, LL.D.

**TENNIS.** Following the footsteps of those other California masters—Maurice McLoughlin and William Johnston—came a 20-year-old tennis player in 1931—H. Ellsworth Vines, Jr. This lanky youngster, sensational to a degree in 1930, but not unbeatable, came East at the start of

the summer season, and immediately proceeded to overcome all opposition and to win 14 major tournaments, including the national singles championship at Forest Hills. He showed a repertoire of strokes that is still being compared favorably to those of W. T. Tilden, 2nd, and Henri Cochet, and the experts said that when Cochet fell, Vines would be the man who would bring the masterful Frenchman, who had been on the top of the tennis world for the past six years, to his knees. Cochet did not meet Vines in 1931, but Vines defeated almost every other ranking player in the world. In the semi-final at Forest Hills he downed Frederick Perry, the youthful English star, and in the final defeated George M. Lott, United States player.

Before Vines came out of the West to startle the East with the brilliance of his play, the Davis Cup, emblematic of the world championship, had been retained for another year by the French. The United States sent a young and hopeful team to attempt to wrest the trophy from Paris, but was defeated in the final round by England's players—H. W. (Bunny) Austin and Frederick Perry. This defeat at the hand of England was a tremendous surprise to the American players and the public which had been led to believe that Sidney B. Wood, Jr., Frank Shields, George Lott, and John Van Ryn were invincible. In the challenge round at the Roland Garros Stade in Paris, Cochet's mastery beat back the English. The defeat of the Americans at Paris was all the more surprising following their brilliant showing on the Wimbledon court a week previous. There Wood and Shields, playing excellent tennis, had beaten Perry and Jean Borotra, respectively, to gain the finals. Shields sprained his ankle and defaulted to his countryman.

The year 1931 was also distinguished by the return to active competition of Mrs. Helen Wills Moody. The Californian, after a year's retirement, made her way through all opposition, never meeting defeat in singles play, winning back her national crown, and proving unbeatable in the Wightman Cup matches, which the United States women won from an invading band of English players, and all other tournaments that she entered.

John Van Ryn and Wilmer Allison teamed to win the national doubles title, and the national women's doubles crown went overseas when Miss Betty Nuthall and Mrs. Eileen Bennett Whittingstall of England won at Forest Hills.

W. T. Tilden, 2nd, champion of seven other years, turned professional and played Karel Kozeluh (Czechoslovakian) many matches, one was held before a tremendous crowd at Madison Square Garden, New York. Later Vincent Richards joined the troupe and the company made an extended tour of the United States and Europe.

Keith Gledhill of Stanford University won the Intercollegiate championship and Bruce Barnes and Karl Kamrath of the University of Texas paired to gain the doubles title.

Other title winners were: National clay court singles, Ellsworth Vines; National boys' singles, Frank Parker of Milwaukee; National girls' singles, Miss Ruby Bishop of Pasadena; National public parks singles, George J. Jennings, Jr., of Chicago; Wimbledon women's singles, Fraulein Cilly Aussem of Germany; national indoor singles, Jean Borotra of France, who also captured the French singles championship; Jean

Borotra and Christian Boussus, French invaders won the national indoor doubles tournament.

**TERRY, BENJAMIN STITES.** An American historian, died in Chicago, Ill., Oct. 30, 1931. He was born in St. Paul, Minn., Apr. 9, 1857, and was graduated from Colgate University in 1878 and received the Ph.D. degree from the University of Freiburg in 1892. He also studied at the Hamilton and Rochester theological seminaries, and on ordination to the Baptist ministry in 1881 held pastorates in Perry and Fairport, N. Y. In 1885 he became professor of history at Colgate University, and from 1892 to 1925 was professor of English history at the University of Chicago. He was a fellow of the Royal Historical Society and of the American Geographical Society. His writings include *A History of England from Earliest Times to Death of Victoria* (1901); *A History of England for Schools* (1903).

**TEXAS. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 5,824,715; in 1920 it was 4,663,228. The native whites numbered 4,185,095 (1930), 3,557,646 (1920); foreign-born whites, 98,396 (1930, Mexicans excluded), 360,519 (1920, Mexicans included). Mexicans numbered 683,681 in 1930. Negroes, 854,964 (1930), 741,604 (1920). Among members of other races were 1001 Indians and 703 Chinese in 1930. The urban population (dwelling in communities of 2500 or over) were 2,389,348 (1930), 1,512,689 (1920). The rural, 3,435,367 (1930), 3,150,539 (1920).

Of 2,207,118 reported in 1930 as gainful workers, 842,001 were in agriculture, 488,697 being farmers and 198,760 farm laborers for hire. In manufacturing and mechanical industries were 343,779, which included 88,856 in the building industry. In trade, 305,880; in domestic and personal service, 226,026; in transportation, 191,615; in professional service, 130,120; in mineral extraction, 52,023, which included 44,341 workers at petroleum and natural-gas wells. City populations were: Houston, 292,352 (1930), 138,276 (1920); Dallas, 260,475 (1930), 158,976 (1920); San Antonio, 231,542 (1930), 161,379 (1920); Fort Worth, 163,447 (1930), 106,482 (1920); El Paso, 102,421 (1930), 77,560 (1920); Austin the capital, 53,120 (1930), 34,876 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton ....	1931	15,421,000	5,270,000*	.....
	1930	16,950,000	4,038,000*	.....
Corn .....	1931	5,236,000	94,248,000	\$30,159,000
	1930	4,684,000	74,144,000	54,125,000
Grain sorghum .	1931	3,871,000	60,000,000	17,400,000
	1930	3,593,000	35,930,000	23,354,000
Wheat ....	1931	3,635,000	57,433,000	23,548,000
	1930	3,029,000	31,804,000	22,263,000
Oats .....	1931	1,764,000	59,976,000	11,995,000

\* Bales.   † Tons.

**MINERAL PRODUCTION.** The State's wells produced more petroleum than those of any other State of the Union in 1930 and yielded the highest total by value. Production was 289,965,000 barrels (1930) and 296,876,000 (1929); by value, \$288,100,000 (1930, estimated) and \$322,520,000 (1929). The relatively low value of about \$1 a barrel for 1930 was due to a general excess of oil and to the failure of public restriction of the petroleum industry in the face of the emergence of important new sources in the State. The production of natural gas, last reported by the Bureau of Mines for 1929, was 464,928,000 M cubic feet, as against 301,990,000 M for 1928; in value, \$67,474,000 (1929), \$51,316,000 (1928). There were obtained in 1930, from natural gas, 489,700,000 gallons of gasoline; in 1929, 419,485,000. These quantities were valued at \$23,300,000 (1930, estimated), \$26,561,000 (1929). The coal mines production fell to 836,000 short tons for 1930, from 1,100,668 for 1929 when the product was valued at \$1,600,000. Cement mills shipped 6,792,346 barrels in 1930 and 7,083,572 in 1929; by value, \$10,782,444 (1930), \$11,805,779 (1929). Sulphur, of which Texas had almost a monopoly, yielded 2,435,483 long tons, valued at \$43,811,000, in 1929. Clay products attained \$6,010,179 for 1929 and \$6,176,802 for 1928. The yield of gypsum was 520,519 short tons for 1929 and 509,472 for 1928; in value, \$3,440,287 (1929), \$3,094,145 (1928). The total value of the State's mineral production was \$495,819,500 for 1929; for 1928, \$378,616,955.

**MANUFACTURES.** Federal Census figures gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 5187 (27 per cent above the number of establishments for 1927). These employed 131,503 wage earners (exceeding those employed in 1927 by 12.6 per cent). The wages paid them totaled \$147,888,053 (more by 13.5 per cent than those paid in 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$997,932,276 (18 per cent more than these items had cost for 1927). The manufactured product attained the value of \$1,449,801,916 (20.2 per cent more than the total for 1927). Value added by manufacture was estimated at \$451,869,640. Houston had 429 establishments, employing 16,225 wage earners, paying wages of \$20,237,285, and producing \$144,752,821; Dallas, 535 establishments, 12,082 wage earners, wage payments of \$13,630,181, and product of \$142,529,820; Fort Worth, 229 establishments, 6771 wage earners, wage payments of \$8,273,495, and product of \$113,582,214.

**FINANCE.** State expenditures in the year ended Aug. 31, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$70,505,710 (of which \$29,778,460 was for local education); for interest on debt, \$213,601; for permanent improvements, \$38,057,085; total, \$103,776,396 (of which \$46,769,996 was for highways, \$12,562,865 being for maintenance and \$34,207,131 for construction). Revenues were \$111,408,561. Of these, property and special taxes furnished 26.9 per cent; departmental earnings and compensation to the State for officers' services, 3.6; sale of licenses, 542.5 (in which was included a gasoline sale tax that produced \$30,514,976). Funded debt outstanding on Aug. 31, 1930, totaled \$4,397,200. Net of sinking-fund assets, the debt was \$4,372,267. On an assessed valuation of

\$4,328,212,712 the State collected in the year ad valorem taxes of \$29,864,668.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 17,068.76. There had occurred during the year preceding the largest total addition of mileage to operation scored in that period in any State, 230.90 miles having been added. The number of miles on which operation had been given up during the year was 52.78. In 1931 were built 155.18 additional miles of first and 1.3 of second track.

**EDUCATION.** The number of State's inhabitants of school age was reckoned as 1,566,861 for the academic year 1931-32. Those enrolled as pupils in the public schools in the year 1929-30 numbered 1,308,028. Of these, 1,071,895 were in common schools or elementary grades, and 235,838 were in high schools. Salaries of teachers, by the year, averaged \$1137 for the whites, \$637 for the colored, and \$1079 for all.

A law passed to appropriate \$2,500,000 yearly from the State's general revenue for distribution among financially weak schools was contested on the ground of constitutionality and was upheld in 1931 by the State Supreme Court. The same court upheld the system rendering the expense of county supervision of schools a charge on all school districts, even those of the larger cities. The State's per capita apportionment of \$17.50 for public schools was kept up in spite of efforts to do away with it under the pressure for public economy.

**CHARITIES AND CORRECTIONS.** Full control over the State's eleemosynary institutions, under the system operating in 1931, lay in the State Board of Control, which also performed other duties, such as making up the budget for all State institutions and departments, serving as custodian of State property and functioning as a board of parole for inmates of reformatories. This board was composed of three members. Each governor might appoint one member at the outset of the Governor's second year of full term. Apart from duties as a board of control, the board maintained a division of child welfare to deal with the interests of the unprotected children of the State. The total of inmates of these institutions was 14,568.

**LEGISLATION.** The Forty-Second Legislature held three sessions. The first of these, the regular biennial session continued until May 23. It was the first session to operate under an amendment of the State constitution raising the pay of members to \$10 a day and allocating the initial 30 days to the introduction of bills, the second 30 to committee work and the final 60 to the final disposition of measures. These arrangements were reported largely to have been suspended and a severe congestion of bills at the end of the session thus to have been brought about.

An act of the session limited the amounts of warrants or similar forms of indebtedness that county commissioners or city governments might issue as lawful charges upon such subdivisions. A revision of the gasoline tax was effected, with regard to the manner of its collection; points of first distribution at refineries and wholesalers of gasoline shipped into the State were required to pay the tax, with a view to collecting on some 50,000,000 gallons estimated to have escaped the impost. Appropriation bills to a total of nearly \$53,000,000 were passed. A resolution for an amendment of the constitution to permit an issue

of \$212,000,000 of State highway bonds failed in the House. The statute allowing holders of defaulted municipal bonds to throw a city into receivership, which had been considered as threatening to Cisco, was repealed. Acts severely limiting loads of motor trucks and requiring certificates of necessity for trucks acting as common carriers were passed; they were regarded by their opponents as calculated to check the practice of hauling cotton to the seaboard points by motor truck.

**Special Session.** For the purpose of dealing with the excessive production of petroleum in the East Texas field, Governor Sterling called a special session, which convened on July 14. Soon thereafter was announced a Federal court decision, affecting petroleum proration orders of the State Railroad Commission, that State control of economic waste was against the State constitution. Accordingly the Legislature in adopting a measure for conserving petroleum and natural gas, specifically restricted conservation to the prevention of physical waste, which was defined. The powers of the commission for checking divers forms of this physical waste were detailed. They included power to sue and recover penalties of \$1000 for each day of certain violations. The measure was enacted, but without what had been deemed adequate funds to enable the Railroad Commission to proceed with its enforcement.

**Second Special Session.** Recalled into session (September 8 to October 3) the Legislature passed an act prohibiting the planting of cotton in 1932 or 1933 by any farmer upon more than 30 per cent as much land as had been cultivated to all crops in 1931. County and district attorneys were to file injunction suits in case of infraction and to seek penalties up to \$100. A bill to redistrict the State for the election of Federal Representatives failed of passage.

**POLITICAL AND OTHER EVENTS.** After the special session of the Legislature had passed a law for the conservation of petroleum, Governor Sterling by executive act, similar to that of Governor Murray of Oklahoma, proceeded to shut down the production of the East Texas field. He called out a cavalry brigade of the National Guard, sent troops into the field to serve against a constructive "insurrection," and issued on August 17 a proclamation of martial law in Rusk, Smith, Gregg, and Upshur counties, requiring the shutting down of all the 1631 petroleum wells of the East Texas field. It was reported that in the final rush of production prior to closing, petroleum sold as low as five cents a barrel. The State Railroad Commission thereafter drew up a proration order allowing each well to produce not more than 225 barrels a day in the East Texas field. On September 5 the field was allowed to resume production on this basis, which cut down to about one-third the rate of production of what had been the heaviest producer among the oil fields of the country.

Attorney-General Allred brought suit on November 12 against 15 of the chief petroleum producing and refining companies in the State, for forfeiture of their charters on the ground that in operating under a "code of ethics" approved in 1929 by the Federal Trade Commission they had bought up filling stations, thus restraining commerce and violating the State's anti-trust laws.

**Election.** In the 14th Congressional district, at a special election to fill the vacancy caused by the death of Representative H. M. Wurzbach, the

State's only Republican in the House, a Democrat, Richard M. Kleberg, was elected on November 24.

**OFFICERS.** Governor, Ross S. Sterling; Lieutenant-governor, Edgar E. Witt; Secretary of State, Jane Y. McCallum; Treasurer, Charlie Lockhart; Comptroller, George H. Sheppard; Attorney-General, James V. Allred.

**JUDICIARY.** Supreme Court: Chief Justice, C. M. Cureton; Associate Justices, T. B. Greenwood, William Pierson.

**TEXAS, UNIVERSITY OF.** A State institution of higher education in Austin, with a medical branch in Galveston and a college of mines and metallurgy in El Paso. The main university was opened in 1883. For the autumn term of 1931 the enrollment at the main university totaled 5878. In addition there were 459 enrolled in the medical branch (327 in the college of medicine and 132 in the college of nursing) and 643 in the college of mines and metallurgy. There were 453 members on the faculty.

The endowment resources of the institution amounted to \$28,000,000, and the income from legislative appropriation, fees, and income from trust and special funds was placed at \$2,941,360. The libraries contained 387,701 volumes. The women's gymnasium was completed during the year at a cost of \$401,000, the chemistry building at a cost of \$851,000, and Waggener Hall, an office and recitation building, at a cost of \$351,000. President, Harry Yandell Benedict, Ph.D., LL.D.

**TEXAS TECHNOLOGICAL COLLEGE.** A State coeducational institution in Lubbock, Texas, opened in 1925. The enrollment for the summer session of 1931 was 1556 students and for the autumn of 1931, 2319 students. The faculty numbered 135 members. The appropriations for the year 1931-32 amounted to \$462,300. There were more than 50,000 volumes and pamphlets in the library. President, Paul Whitfield Horn, M.A., LL.D.

**TEXTILE INDUSTRY.** The textile industry in the United States during 1931 suffered in the wide-spread depression and was marked by general demoralization. According to the authoritative Annual Review in *Textile World* (New York), on which the accompanying information is largely based, the activity of the various mills was 5 per cent above 1930 on the basis of fibre consumption, and in particular wool and rayon showed large gains. So far as production and demand were concerned, the prevailing depression had but slight effect, but the low prices and the meagre returns to the mill-owners, were most discouraging.

The consumption of wool (q.v.) for the entire year was estimated at 513,743,129 grease pounds as against 430,103,818 pounds in 1930, or an increase of about 20 per cent, and had it not been for dullness in the carpet industry, the increase would have been even greater, as worsted production in particular enjoyed the best demand since the postwar days. With a better demand for domestic wool, wool-dealers enjoyed a measure of prosperity during 1931 and the combs and worsted spindles operated at almost the highest rate of capacity since the postwar boom. Notwithstanding the increased demand for wool in women's wear, which developed during the year, the prices were not commensurate with the business activity, so that manufacturers failed to

reap the profits which otherwise they might have enjoyed.

Cotton consumption was greater by about 5 per cent or 23,000 bales in 1931 over 1930, but the spread between spot cotton and print cloth, approximately 18 cents at the beginning of the year, declined to 11.5 cents at the end, notwithstanding that stocks of cotton goods diminished during the year, along with an increase in unfilled orders. While there was an increase of orders in 1931 over 1930, production was less, but the yarn market at the end of the year seemed to be more favorable.

Sales and shipments of carded cotton cloths during 1931 exceeded production by respective percentages of 3.6 and 2.5, according to the Association of Cotton Textile Merchants of New York. Output for the year totaled 2,784,402,000 yards as compared with 2,819,723,000 yards in 1930. Sales and shipments equaled 2,891,299,000 and 2,858,146,000 yards respectively, as against 2,774,712,000 and 2,916,774,000 yards during 1930. See COTTON.

The deliveries of raw silk to the mills increased in 1931 over 1930 averaging over 49,500 bales per month against 48,000 in the previous year, and showing the best average on record with the exception of 1929, when the figure was 51,000 bales. There was a decline in the average operation of spindles in 1931 over 1930 but there seemed to be a maintenance of deliveries of finished goods. In the rayon (q.v.) industry, while the competition among the leading manufacturers had diminished, there were not adequate profits in the opinion of many, notwithstanding the record domestic consumption of rayon given at 154,350,000 bales. Progress was made in cutting the stocks in hosiery, while knit underwear went through the year under satisfactory conditions with a decline of stocks, primarily due to coöperation among the various manufacturers of the industry.

**THEATRE.** Although 1930 was recorded in the last YEAR BOOK as undistinguished, generally unprofitable and, in many quarters, altogether disastrous where the theatre was concerned, 1931 proved considerably worse on every count. This, obviously, was but a perfectly natural reflection of the nation-wide, or, more exactly, world-wide, depression that had spread to nearly every form of enterprise. Greatly reduced patronage, coupled with a marked over-supply of playhouses, especially in New York, the hub of the American theatre industry, was not conducive to the best efforts of the playwrights, and the frantic efforts of the producers and theatre owners to keep their houses open resulted in an extraordinary output of poor plays and an astounding number of consequent failures.

One of the chief causes of lamentation on the part of the managerial offices was the pronounced falling off of business along the once profitable "road," and for this condition the prevalent depression cannot be held wholly, or perhaps even mainly, responsible. The smaller cities and towns long ago began to realize that New York's stamp of approval on a play was by no means a guarantee of merit. The result appears in the growth of the Little Theatre movement, the notable increase in the number of local stock organizations, and the turn to talking pictures of the better class as a source of intelligent and desirable entertainment.

The year, from the New York viewpoint, got off to a poor start, its very first offering, a romantic drama entitled *Colonel Satan*, by Booth Tarkington, proving but short-lived. The chief cause of its failure was presumably the hopelessness of attempting to make a glamorous figure of its central character, Aaron Burr. But immediately thereafter the dramatic output assumed a more substantial quality, so that January actually became the outstanding month

UNITED STATES FOREIGN TRADE IN TEXTILES AND TEXTILE FIBRES  
[From *Textile World*]

	Exports		Imports

Rayon or other synthetic textiles .....	5,907,505	3,848,763	8,375,656	4,743,093
Miscellaneous textile products .....	18,064,678	12,447,947	20,760,223	19,297,027
Total .....	\$639,907,354	\$423,626,550	\$600,708,414	\$411,735,937

NOTE.—Included in the total imports are articles ordinarily dutiable, imported free, to the value of \$474,151 in 1930 and \$376,970 in 1931. This accounts for failure of totals, as given above, to check with addition of sub-classifications.

One of the world developments that affected German and French exports more than American manufactures was the adoption by Great Britain of an ad valorem duty of 50 per cent on all the principal types of textile manufactures. The effect of this measure could not be accurately anticipated but it was stated that a group of British mills proposed to buy up and scrap about 10,000,000 spindles and restrict production to the most efficient plants and machinery. See the articles entitled BUSINESS REVIEW; SILK; and WOOL.

of the twelve. A noteworthy feature was a new play by the capable George Kelly, *Philip Goes Forth*, pleasantly satirizing the upstart school of youthful playwrights and taking a good-natured fling at the lack of substance in the bulk of the recent drama. A young actor, Harry Ellerbe, created a favorable impression in the title rôle. The piece ran for just short of 100 performances. Surpassing this in popularity came Philip Barry's *Tomorrow and Tomorrow*, which was one of the season's most notable productions.

**"IF BOOTH HAD MISSED"**

A Scene from the Original Production by the Morningside Players of Columbia University. This play won the Second Annual Long Play Tournament in the Little Theatre Contest at New York, May, 1931

**"THE CAT AND THE FIDDLE"**

A leading musical play of 1931

**"MOURNING BECOMES ELECTRA"**

Alice Brady and Alla Nazimova in a Scene from "Homecoming," one of Eugene O'Neill's Trilogy

**"THE BARRETTS OF WIMPOLE STREET"**

Katherine Cornell as Elizabeth Barrett and Brian Aherne as Robert Browning

**NOTABLE PLAYS OF 1931**

Only moderate success attended a revival of Schnitzler's *Anatol*, originally done some 18 years previously by Winthrop Ames under the full title of *The Affairs of Anatol*, with the then youthful John Barrymore as the debonair philanderer. This character was assumed in 1931 by Joseph Schildkraut, who lacked the lightness of touch essential to its most effective portrayal.

For the second time in that season the Theatre Guild resorted to melodrama when it offered *Green Grow the Lilacs*, by Lynn Riggs, a romantic folk play of the primitive life on the prairies in the Indian Territory of three decades ago, the present Oklahoma. On the same evening Eva Le Gallienne's Civic Repertory organization staged a praiseworthy and popular revival of the old favorite, *Camille*, from the French of Dumas, fils. Miss Le Gallienne herself successfully essayed the part of Marguerite Gautier. This was the final addition to the Civic Repertory bill before its voluntary suspension for a year.

The year's first direct importation, and one of its most delectable, was Noel Coward's London hit, *Private Lives*, in which was developed in characteristically scintillating and hilarious fashion the situation of a divorced couple meeting again, after five years, at a continental hotel where each has just arrived at the outset of a new honeymoon. Mr. Coward in person and the no less British Gertrude Lawrence were priceless in the two main rôles. The close of January brought also another foreign drama in an adaptation from the Italian of Pirandello's *As You Desire Me*, a notably interesting work discussing, but without reaching any definite conclusion, the question of whether an individual's identity, or ego, is determined by the body or the spirit. Judith Anderson contributed a vivid portrayal of the central figure, The Unknown One.

The high spot of February was the presentation by Katharine Cornell of Rudolf Besier's *The Barretts of Wimpole Street*, already an established success of considerable duration in London. The play depicts, of course, a climactic period in the life of that family of Barretts of which the outstanding member was the poetess, Elizabeth, and is concerned primarily with the romantic circumstances of her release from intolerable domestic conditions through her love for and marriage to Robert Browning, who figures as hero of the piece. The play aroused the serious interest of theatre-goers, and ran, with a short intermission, throughout the year. Miss Cornell herself was the Elizabeth Barrett and gave a well-conceived and appealing performance.

*Doctor X*, a mystery melodrama, endured for ten weeks. A musical concoction of the Hollywood school, *America's Sweetheart*, by the accomplished triumvirate, Field, Rodgers, and Hart, maintained its popularity for four months. A success of the previous year, *Topaze*, by Marcel Pagnol, was presented in its original French form a few times by a touring French company—an interesting if unsuccessful experiment. Another drama from the Italian, *A Woman Denied*, by Gennaro Mario Curci, ran for a month with McKay Morris impersonating an artist and Mary Nash a siren. February brought also revivals of *Death Takes a Holiday* and *Gods of the Lightning*, the latter based on the famous Sacco-Vanzetti case, which were worth reviving, and Dreiser's *An American Tragedy*, which was not.

March proved a busy if not especially distinguished month in the theatre. Its most salient

feature was a new comedy by Rachel Crothers, a clean and entertaining play entitled *As Husbands Go*, which was classed in the final reckoning as among the more notable achievements of the season of 1930-31. *Give Me Yesterday*, a "dream play" by A. A. Milne, was not generally regarded as one of Mr. Milne's most appealing works, but nevertheless ran for over two months.

For the first time since its original presentation by William Gillette in 1903 Sir James Barrie's *The Admirable Crichton* was resuscitated by that habitual delver into the past, George C. Tyler. But not even a so-called "all-star" cast, containing the names of Walter Hampden (in the title rôle), Fay Bainter, Effie Shannon, Ernest Glendinning, Estelle Winwood, and Hubert Druce (whose death occurred during the run of the revival), was able to efface the memory of the earlier production. Then came Channing Pollock's *The House Beautiful*, an earnest plea in dramatic form for simple, honest living and loving, steadfast faith and allegiance to worthy ideals. The play's run was slightly over 100 performances.

In March also the Theatre Guild tempted fate by presenting a translation of the late Hans Chlumberg's resentful *Miracle at Verdun*, a fantastic drama portraying the resurrection, after 20 years, of the men who died in the World War, and their reaction to conditions as they find them in the light of the principles for which they gave their lives.

The Theatre Guild, reviving Bernard Shaw's *Getting Married*, encountered a similar experience to that which was currently befalling *The Admirable Crichton*—its cast, though imposing, was not up to that of the first American production of the comedy in 1916, which was headed by William Faversham and Henrietta Crosman, and the theme was found to have lost most of its novelty, daring, and timeliness.

April was marked by an increasing number of quick failures and by short-lived revivals of various successes of recent years. A run of five weeks duration was the lot of a revival of *Peter Ibbetson* in the stage version of du Maurier's exquisite story made years ago by John N. Raphael with the assistance of Constance Collier. Dennis King was distinctly acceptable in the rôle of Peter.

Like a voice from the past came the announcement, and in due course the production, of a new drama by the French playwright, Henry Bernstein, who long ago gave us such theatrically effective pieces as *The Thief* and *Samson*. The new one was entitled *Melo* and presented an interesting variation of the domestic triangle theme.

Possibly because the story from which the play was taken was too familiar to permit of the essential element of suspense, a dramatization of Frances Noyes Hart's popular murder-mystery, *The Bellamy Trial*, failed utterly. And only limited success attended the production of *Brass Ankles*, a rather forbidding drama on the unpleasant topic of miscegenation by Du Bose Heyward, co-author with his wife of the well-known Negro play, *Porgy*, notwithstanding able efforts by Alice Brady, Ben Smith, and Lester Lonergan.

The national Little Theatre competition for the Belasco Cup, which had been a spring event for several seasons, was not held in 1931, but the second annual Long Play Tournament for a cup offered by the Theatre Arts Magazine and a prize of \$1000 by Samuel French, Inc., was conducted

under the auspices of the Manhattan Little Theatre Club in mid-May. There were five contestants. The winners were the Morningside Players of Columbia University, who presented a conjectural drama by Arthur Goodman entitled *If Booth Had Missed*, in which was hazarded a guess as to what might have befallen Abraham Lincoln had John Wilkes Booth been unsuccessful in his murderous assault. The piece was subsequently announced for professional production.

On May 15 death terminated the long and eventful career of David Belasco (q.v.) dean of American theatrical managers.

On the first night in June The Players Club presented as its annual classic revival Congreve's sparkling old comedy, *The Way of the World*. As usual, a cast bristling with important names was assembled, headed by those of Fay Bainter and Walter Hampden. The attraction was, of course, limited to the customary single week. The same evening brought the *Third Little Show* with Beatrice Lillie and Ernest Truax as its stars. The revue endured throughout the summer. A racy and fairly ingenious comedy of the alcoholic school by Barry Connors, entitled *Unexpected Husband*, lasted into the summer; likewise a revival, under the new appellation of *A Regular Guy*, of Patrick Kearney's erstwhile box-office failure but "succès d'estime," *A Man's Man*.

With June commenced, too, the long run of *The Band Wagon*, which outlasted the year. This was a revue, mainly by George S. Kaufman and Howard Dietz, and one of the liveliest, most variegated, and most generally entertaining on record. July brought but two new items to the menu of the theatres, the Ziegfeld *Follies*, resuming a series discontinued in 1927, and another of a more haphazard nature, organized on a coöperative basis by the columnist and dramatic critic, Heywood Brown, and called, suggestively, *Shoot the Works*.

By the end of July, when normally a new season is commencing, only 12 of New York's 50 or 60 theatres were open; and even this small number included three attractions of the vintage of 1930 whose runs had continued uninterruptedly—*The Green Pastures*, *Once in a Lifetime*, and *Grand Hotel*. But outside of the city, both in the suburbs and as far from home as the Berkshires, Newport, Cape Cod, and central Maine, more summer stock companies were starting up than ever before, many of them subscribing to a fairly systematized arrangement whereby visiting stars, especially selected for individual rôles, played those rôles in association with one company after another—a modern adaptation of a system in vogue throughout the country when the American theatre was still young.

The Pulitzer Prize for the season 1930-31 was awarded to Susan Glaspell's *Alison's House*, the play founded on the life of Emily Dickinson, the poetess, thereby quite reasonably giving rise to considerable adverse criticism of the judges.

When the fall season eventually arrived a veritable avalanche of new plays was let loose upon a public not in the best frame of mind to receive them. Nevertheless the deluge continued more or less steadily until the inevitable lull that always precedes the Christmas season. While the majority of the new offerings were of very inferior quality and deserved the swift fate that was meted out to them, more than a few merited a better reception than fell to their lot.

A melodrama entitled *Three Times the Hour*,

whose chief claim to novelty was that its three acts were supposed to be taking place simultaneously under one roof, found but scant favor. This particular form of novelty appeared to be a dangerous experiment, for when it cropped out again, a little later, in an uncommonly appealing and optimistic work by no less a personage than John Galsworthy called *The Roof*, involving six scenes of simultaneous action, the result was the same.

The Civic Light Opera Company, which had hitherto confined its activities to the highly popular Gilbert and Sullivan revivals, now turned its attention to notable works of more recent vintage by a variety of composers—*The Merry Widow* (Lehar), with Donald Brian back in his original rôle of Danilo; *The Chocolate Soldier* (Strauss); *The Geisha*, an old Daly's Theatre success of 1896, bringing back James T. Powers, of its pristine cast, at the age of 69; *The Chimes of Normandy* (Planquette); *Naughty Marietta* (Herbert); and *The Firefly* (Friml), with an occasional week of *The Mikado* interspersed.

Chester Erskin, who had acquired some fame as a stage director, ventured unsuccessfully to combine production and direction in *I Love an Actress*, adapted, also by the same hand, from the Hungarian of one Laszlo Fodor. Mr. Erskin figured again as director of the Theatre Guild's first offering of the season, a slight, airy, satirical comedy from the French of Alfred Savoir entitled *He*, which was one of the Guild's most positive fiascos.

*The Breadwinner*, a labored and repetitious effort by the often brilliant Somerset Maugham, served for little more than to introduce Marie Lohr, well-known English actress, to American audiences at the head of an imported British company that included the popular A. E. Matthews. Another newcomer from London was Charles Laughton, who arrived in tow of an uncommon type of thriller called *Payment Deferred*, a play so harrowing and exhausting to the observer that its limited career, despite excellent acting on the part of both Mr. Laughton and his wife, Elsa Lanchester, was readily understandable.

At the end of September a promising new producing organization came officially into being. The Group Theatre it called itself, and in a sense it was an offshoot of the Theatre Guild. After long and careful preparation it emerged with an interesting and truly creditable presentation of a serious and thoughtful play by Paul Green, author of one of the Pulitzer Prize dramas. The new one, *The House of Connelly*, had earlier been slated for production by the Guild itself, but was turned over to its protégée. It depicted the impending annihilation through decay of an old Southern family which was subsisting on the bare remnants of its departed fortune and prestige, a fate avoided in the end by the union of the son of the house with a girl of less blue but more red blood and initiative. Weeks later it offered a second play, entitled *1931-*, by Claire and Paul Sifton, which proved so graphic and grim a picture of unemployment that the public would not stand for it.

With October London sent over another of its outstanding successes in the dramatization of J. B. Priestley's popular novel, *The Good Companions*, a stage version made by the author himself in collaboration with Edward Knoblock. Next came the first of two new comedies by the

dependable Elmer Rice, *The Left Bank*, an interesting though dispassionate arraignment of the American expatriates who scorn their native heath from the vantage ground of Paris' Latin Quarter. Katherine Alexander, Horace Braham, Donald Macdonald, and Merle Maddern were still giving point to Mr. Rice's pertinent animadversions when the year ended. Still another new producing group, the New York Repertory Company, sponsored by Lawrence Langner, a director of the Theatre Guild, opened its first regular season with a revival of Dion Boucicault's old melodrama, *The Streets of New York*, treating the piece in the spirit of mock sincerity which habitually emphasizes the ridiculousness of the antiquated situations and effects of the old-time thrillers as contrasted with those of to-day.

*Two Seconds*, by Elliott Lester, an unusual offering in 21 scenes depicting what flashes through the memory of a condemned man in the moments just before his execution, attracted interest for a number of weeks. *The Guest Room*, by Arthur Wilmurt, provided for a similar period a medium for the eccentric comedy of Helen Lowell, assisted by Beverly Sitgreaves. Robert Loraine brought over from London his production of Strindberg's grim and forbidding drama, *The Father*, as presented there by him over 250 times in recent seasons, but, despite his own impressive playing and that of Haidee Wright and Dorothy Dix in his support, two or three weeks was the extent of New York's patronage. Then came the second play of the season from the pen of the Hungarian Laszlo Fodor, adapted this time by the Hattons, and called *A Church Mouse*, a slipant and tasteless thing made endurable—and for an incredibly long run—by the skillful and redeeming performance of Ruth Gordon. Another British importation, *Lean Harvest*, by Ronald Jeans, met with only limited favor.

The first new musical comedy of the fall, *Everybody's Welcome*, proved to be nothing out of the ordinary, and was quite overshadowed by a rival attraction, *The Cat and the Fiddle*, a romantic offering of exceptional delicacy and charm, for which Jerome Kern furnished the music and Otto Harbach the book. A French comedy by Edouard Bourdet, which achieved a notable hit on home ground as *Le Sexe Faible*, was found rather distasteful to New York when brought over, via London, as *The Sea Fable*, with a mainly English cast including Helen Haye, Mrs. Patrick Campbell, Ronald Squire, and Derek Williams, late of *Journey's End*. Maurice Browne, the British producer, felt that the fanciful play known as *The Unknown Warrior*, which had failed once in America, deserved another chance, which he proceeded to give it in the form of special matinee presentations, but with the former result.

In view of the enormous success of *Once in a Lifetime*, it was inevitable that other plays should attempt to capitalize the evidently profitable idea of holding up to ridicule the seemingly haphazard methods of the magnates of the talking-picture industry. Such a piece promptly came to light in *Wonder Boy*, by Edward Chodorov and Arthur Barton, which, though lacking the biting wit of George S. Kaufman, depicted perhaps even more hilarious doings, yet failed to come anywhere near duplicating the fortunes of its prototype. Later another work of similar order, concerned mainly with the publicity end of the game and entitled *Louder, Please!*, encountered correspondingly limited favor in spite of a spirited

performance by the capable Lee Tracy. *Sing High, Sing Low*, by Murdock Pemberton and David Boehm, lampooned the back-stage aspect of grand opera with much the same result.

Once again the expansive and jovial Nikita Balieff, aided and abetted by his faithful sponsor, Morris Gest, tempted fate in New York with his *Chauve-Souris*, but in a new guise, with a bill no longer consisting of a multitude of diversified and highly colored features but, instead, of three long items including ballet, drama, and opera bouffe derived respectively from Mozart, Pushkin, and Offenbach, among others. In the final number Balieff himself appeared for the first time as a performer. But the public did not take kindly to the new order of things.

Then came what in many, probably most, quarters was regarded as the event of the year in the theatre—the production by the Theatre Guild of Eugene O'Neill's long-heralded trilogy entitled, collectively, *Mourning Becomes Electra*; individually, *Homecoming*, *The Hunted*, and *The Haunted*. In this work O'Neill deliberately set himself the well-nigh superhuman task of transplanting the spirit, the austerity, and something of the form of Greek tragedy to a setting in puritanical New England in the period immediately following the Civil War. For his purpose he borrowed the favorite theme of Æschylus, Euripides, and Sophocles—the stark legend of Electra and her brother, Orestes, and the vengeance wrought by them on their faithless mother, Clytemnestra, for the murder of their father, Agamemnon—and fashioned his own adaptation to parallel the story rather closely, introducing for good measure, and for its sensational effect, a suggestion from another ancient Greek source, the Œdipus myth. The result is a sordid but undeniably gripping study of inherited weak and evil traits of character, complicated by a linked trail of murders and suicides, with Electra, or her modernized counterpart, emerging in the end as a solitary, majestic, and rather pathetic figure. Opinions varied, of course, as to the artistic merit of the playwright's achievement, but the consensus of judgment, even of those who had credited O'Neill with previous "masterpieces," was that it represented the climax of his accomplishment to date. But there was virtually no dispute as to the excellence and effectiveness of Philip Moeller's staging of the trilogy, and the exceptional opportunities it afforded Alice Brady, in the Electra rôle, Alla Nazimova as the mother, Earle Larimore, Lee Baker and Thomas Chalmers for flights of histrionism to which they rose with full credit.

October ended with the launching of two deserving but ill-fated ventures—*East Wind*, an ambitious operetta by Sigmund Romberg, Oscar Hammerstein, 2d, and Frank Mandel, boasting a cast of well-known musical comedy favorites, and *The Venetian*, by Clifford Bax, a costume play of the sixteenth century, constructed around the historical character of Bianca Capello, and acted by an English company. November, on the other hand, opened coincidentally with two successes—*Cynara*, a London hit by H. M. Harwood and R. F. Gore-Browne, in which was sympathetically developed a novel, sophisticated, and tragic phase of the oft-recurring triangle theme, and *The Laugh Parade*, mainly by and with Ed Wynn, a fact that speaks volumes. But Peter Arno's satirical musical concoction, *Here Goes the Bride*, which had loomed large in the public prints prior to its

production, met a speedy and decisive rebuff on the ground of its lack of humor. Norman Bel Geddes, well-known designer of scenic effects, now undertook to inject radical reforms into the traditional methods of staging Shakespeare's *Hamlet*. Innovations were so marked as greatly to distract attention from the main "thing," and, despite Raymond Massey's intelligent playing of the title rôle, Celia Johnson's uncommonly satisfying Ophelia, and the long-familiar Horatio of Leon Quartermaine, the production carried but briefly.

Then once more was a series of misadventures alternated with an equal number of substantial hits, starting with Elmer Rice's second contribution to the season, *Counsellor-at-Law*. S. N. Behrman, noted for his clever comedies and scintillating dialogue, again made good with his *Brief Moment*, an up-to-date treatment of the subject of caste.

Importance and tone were added to a still distinguished season by Ethel Barrymore's revival of Sheridan's ever-delightful comedy, *The School for Scandal*, in which she repeated her fascinating portrayal of Lady Teazle, first seen some years back in one of the earlier annual offerings of The Players, on which occasion her uncle, the late John Drew, was the Sir Peter.

For members of a calling so traditionally superstitious as that of the stage, the Actor-Managers were rash indeed to attempt a comeback on Friday, the 13th of November, in an extremely modern piece by Cutler Hatch entitled *If Love Were All*. If they profit by the experience they will be more cautious another time. But three days later the Theatre Guild scored another decided hit with Robert E. Sherwood's buoyant, racy and impudent comedy, *Reunion in Vienna*, in which Alfred Lunt and Lynn Fontanne disported themselves with captivating abandon.

Passing swiftly over such productions as the annual engagement of the Chicago Civic Shakespeare Society, headed by Fritz Leiber, which, notwithstanding the participation of some distinguished players did not succeed in duplicating its good showing of the previous year; *The Lady with a Lamp*, a London success by Reginald Berkeley, written around the personality of Florence Nightingale and engagingly played here by Edith Evans and Patricia Collinge; and several other equally decisive failures, the month's final New York hit is found to have been the Molnar play translated as *The Good Fairy*.

But in November there occurred also an event that brought much needed lustre to the year's record in the theatre—the return to the stage of Maude Adams, who, prior to her retirement in 1918, had held for more than 20 years the enviable position of America's best beloved and most popular actress. She selected the rôle of Portia in Shakespeare's *The Merchant of Venice* for her new début, and in her production of the comedy was associated with Otis Skinner, whose sterling portrayal of Shylock had long been familiar. Although the tour opened in Cleveland, Ohio, it was recognized as an occasion by the press generally, many newspapers in New York and elsewhere treating it as front-page news. Both stars were greeted with affectionate enthusiasm, and their visits to Newark and the other cities and towns along their route assumed the nature of ovations.

For the benefit of the younger school of players who had never seen it, to say nothing of those elders who remembered it fondly, the

dramatization of Louisa M. Alcott's *Little Women* was resuscitated for a series of matinees.

Virtually nothing further took place in the theatre in New York until Christmas week, between which time and the close of the year some 16 or 17 novelties and revivals were pitchforked onto the stage to collect what they could of the holiday shekels. A revival of Noel Coward's mad-cap *Hay Fever*, with Constance Collier as its outstanding feature, settled down to indications of repeating its record of several years back. The one musical offering of the dying year seemed destined to be not only remembered but still alive and active long after 1931 was all but forgotten. Its title was *Of Thee I Sing*; its authors, George S. Kaufman and Morrie Ryskind; its composers, the brothers George and Ira Gershwin. As a travesty on national government and political campaign methods, disrespectful truly but too good-natured to be scurrilous, it proved not merely mirth-provoking but positively hilarious.

The theatre in Europe was, of course, correspondingly affected by the widespread depression, but in most of the important producing centres was better prepared to withstand it by virtue of a characteristically larger interest in standard drama and greater dependence upon revivals of established successes.

In London Besier's *The Barretts of Wimpole Street*, first presented in 1930, ran throughout 1931. The most prolific dramatist of the year was John van Druten, with three new plays—*After All*, which failed in New York but was a hit at home, *London Wall*, and *There's Always Juliet*. Many of the outstanding productions, especially those of the first half of the year, have already received mention in connection with their exportation to New York, but there were numerous other British successes that did not cross the Atlantic. Among them was *The Improper Duchess*, by J. B. Fagan, a light, racy trifle lampooning certain American customs. O'Neill's *Strange Interlude* was received with but mild interest and lasted only a few weeks. *Who Goes Next?*, a war play acclaimed as comparable with *Journey's End*, and *Good Losers*, by Michael Arlen and Walter Hackett, found only moderate favor. One importation of a New York triumph, *Strictly Dishonorable*, collapsed speedily where another, *Five Star Final* or, to give it its English title, *Late Night Final*, scored heavily. By spring the London bills contained a considerable showing of favorite pieces by Shaw, Galsworthy, Milne, Ibsen, Maugham, and Shakespeare. Then along came a new playwright, C. L. Anthony (a woman's pseudonym), with a delicately pathetic romance, *Autumn Crocus*, which became one of the year's notable successes. *The Church Mouse*, adapted by Benn Levy from the same Teutonic source as the piece of similar title in New York, was produced and acted by Sir Gerald du Maurier. A musical comedy, *White Horse Inn*, likewise from the German, found high favor. *The Years Between*, a rather powerful topical drama on a purely English subject, was the work of an American, Edward Poor Montgomery. O'Neill's *The Hairy Ape* was staged in May with the Negro actor and singer, Paul Robeson, in the title rôle. The same month witnessed the successful launching of the dramatization of Priestley's *The Good Companions*, Ronald Jeans' *Lean Harvest*, *The Crime at Blossoms*, a satirical piece, and an English version of the latest Lehar operetta, *The Land of Smiles*, with Richard Tauber, "the German Caruso," sing-

ing the leading part in his own tongue. Two American entertainers, Ruth Draper and Cornelia Otis Skinner, both met with British approval, the latter with her novelty, *The Wives of Henry VIII*.

Shortly after the summer lull, Vicki Baum's *Grand Hotel* was offered in London in an adaptation by Edward Knoblock, different in some respects from the version seen in New York, and regarded as more interesting from the standpoint of its staging than for the drama itself. *Counsel's Opinion*, a light comedy by Gilbert Wakefield, was a pleasant feature of the new season, and *The Nelson Touch*, by Neil Grant, an exciting through improbable one. The presentation of an impressive work of Dr. James Bridie called *The Anatomist* was followed by Noel Coward's big hit of the year, *Cavalcade*, an elaborate spectacle, with music, portraying significant episodes of the past three decades of English history from a patriotic standpoint.

In Dublin, Sheridan's *The Critic* proved entertaining in a revised, up-to-date version, and a powerful tragic drama came to light in *Bride*, by one Ulick Burke, a pseudonym. Another gripping work was *The Rune of Healing*, a peasant play by John Guinan, while a new and promising playwright was discovered in the person of John Kirkwood (Mrs. Kirkwood Hackett, ex-actress), who aroused genuine interest with *13 Belgrave Square*, picturing a house divided against itself. Still another new dramatist appeared in the young Earl of Langford, whose successful piece, *The Melians*, drew an analogy between the history of Ireland and that of the ancient dwellers on the island of Melos.

Paris signified the opening of a new year by welcoming Jacques Copeau back to the Vieux-Colombier as a producer after an absence of almost 10 years. With him came a newly enlisted acting organization styling themselves Les Quinze. During the season they brought out a new play on the subject of Noah and the Flood, and another dealing with the Roman (and Shakespearean) legend of Luciece. The year was especially notable for the completion, or continuance, of some amazingly long runs, including those of the two plays of Marcel Pagnol—*Topaze*, which quit after three and a half years, and *Marius*, which rounded out a career of more than 800 performances, yet failed miserably in New York under the title *Marseilles*. *Le Scæz Faible*, another New York disaster, reached approximately the 500 mark. As in London, revivals were an important feature of the theatre, including an effective one of *Le Roi*, by de Caillavet and de Flers. But there were also numerous new offerings of note, among them *Terrain Vaguc*, a symbolic dream play by J. V. Pellerin; a French version of a German chronicle of the famous Dreyfus case; Alfred Savoir's *La Petite Catherine*, dealing, of course, with Catherine of Russia; a light and entertaining trifle by de Croisset, called *Pierre ou Jack*; a moderately amusing revue by Rip; Bernard Shaw's *The Apple Cart* in French; and a melodrama of the cinema entitled *The Beautiful Red Danube*. Saint-Georges de Bouheliér's historical drama of the French Revolution, *Le Sang de Danton*, was regarded as of uncommon importance.

The year in Berlin got under way with Molnar's *Die Fee*, to be done later in New York as *The Good Fairy*, followed in February by Karl Vollmoeller's *Cocktail*, a comedy fitted with a musical score by Ralph Benatzky and a plot reminiscent of Elinor Glyn's lurid romance, *Three Weeks*. A

slightly Gilbertian operetta, picturesquely titled *The Blue Shirt of Ithaca*, had a book by Karl Roessler, with lyrics set to music gleaned from various little-known works of Offenbach. *Amphytrion 38*, by the Frenchman Giraudoux, proved more literary than dramatic as a free Gallic treatment of a Greek myth, more or less in the spirit of the American John Erskine. Emmerich Kalman, composer of *Countess Maritza*, turned out a new one, *Spring on Montmartre*, well supplied with intriguing dance airs yet not up to the standard set by the earlier work. Two such unequivocal American hits as *The Royal Family* and *Strictly Dishonorable* were utter fiascos when done into German. Perhaps the most engaging novelty of the year was Carl Zuckmayer's *The Captain of Kopenick*, a comedy based on an amusing incident of fairly recent local history. *Yesterday and Today* proved a moderately stirring analytical drama of a phase of life in a girls' boarding school. Ernst Pentzoldt won favorable attention for his historical drama of the youthful Don Sebastian, *The Portuguese Battle*.

The dullness of the Summer period was dissipated in August by Max Reinhardt's characteristically lavish presentation of Offenbach's *La Belle Helene* and Millocker's *Du Barry* was put forth as another of several revivals of the operettas of an earlier day, a process similar to the one going on simultaneously in New York. Incidentally the early fall brought a number of recent American hits—*Young Love*, *Rebound*, *The Vinegar Tree*—and one American failure in the dramatization of Ernest Hemingway's story, *A Farewell to Arms*, called, in the German version, *Kat*.

Outstanding features of the mid-winter season in Vienna were four dramas dealing with historical personages—Bruckner's *Elizabeth of England*, Savoir's *Little Catherine*, *The Kingdom of God in Bohemia* by Franz Werfel, and Hans Saksman's *The House of Rothschild*, introducing not only the five famous brothers of that name but also Metternich and Franz Josef. In addition, Arthur Schnitzler contributed a new historical romance in verse, *The Path to the Pool*, strictly Viennese in its appeal. A mature work by Oscar Straus, *The Peasant General*, disclosed music of a higher and less popular grade than that of his earlier operettas, but a minimum of humor. In Budapest the hit of the year was achieved by a new playwright, Emery Halasz, with a piece called *How Long Will You Love Me?* on the familiar topic of infidelity. Meanwhile conditions in the theatre of Russia appeared more nearly normal than elsewhere on the continent, with evidences of actual prosperity in both Leningrad and Moscow. In Stockholm the majority of the dramas offered during the year were from other countries than Sweden, with a fair representation from America. In September much interest was aroused by the announcement of a forthcoming production of *The Green Pastures* in Swedish.

**THEOSOPHICAL MOVEMENT, THE.** The year 1931 marked the centenary of the birth of Mme. H. P. Blavatsky, who restated, under the name of Theosophy, the ancient teachings regarding the three-fold evolution, spiritual, mental, and physical, the laws under which it proceeds, and the necessity for each man to progress by his own efforts through many lives on earth

to the perfection attained by the Buddhas and Christs of the race. Several centennial editions of importance were issued by various Theosophical bodies in different parts of the world. Among these were photographic reprints of the original edition of Madame Blavatsky's monumental first book, *Isis Unveiled* and her *Key to Theosophy* and *Theosophical Glossary*; a compilation of her most significant articles on occultism, published under the title *Raja Yoga or Occultism*; and a volume entitled *H. P. B.: In Memory of Helena Petrovna Blavatsky*, a collection of tributes to Madame Blavatsky by some of her pupils.

**THEOSOPHICAL SOCIETY, AMERICAN.** The American section of the Theosophical Society, a world-wide organization founded in 1875 by Mme. Helena P. Blavatsky and Col. Henry S. Olcott. World headquarters were later established at Adyar, India, near Madras. In 1931 branches existed in 47 nations, on six continents. The American Theosophical Society had, in 1931, 209 local lodges. The president of the society was Sidney A. Cook. Headquarters are in Wheaton, Ill.

**THERMOTEL.** See DYNAMO ELECTRIC MACHINERY.

**THIRD DEGREE.** See CRIME.

**THIRD INTERNATIONAL.** See COMMUNISM.

**THOMSON, tôn'sôn', CÉSAR.** A Belgian violinist, died in Lugano, Switzerland, Aug. 24, 1931. He was born in Liège, Belgium, Mar. 18, 1857, and attended the Liège Conservatory, studying under Léonard, Wieniawski, Vieuxtemps, and Massart. On graduation at the age of 16 he made successful tours through Spain and Italy and became in 1879 concert-master of the Bilse Philharmonic Orchestra in Berlin. In 1882 he was appointed professor of violin at the Liège Conservatory, holding this position until 1897 when he succeeded Ysaie (q.v.) at the Brussels Conservatory. He toured North America in 1894 and South America in 1903. During the World War he made his headquarters in Paris, and in 1924 came to the United States as a member of the faculty of the Ithaca Conservatory of Music.

**THURINGIA, thû-rin'jî-â.** See GERMANY.

**THURSBY, EMMA CECILIA.** An American coloratura soprano, died in New York City, July 4, 1931. She was born in Brooklyn, N. Y., Feb. 21, 1857, and studied in the United States. She made a successful tour of the United States and Canada in 1875. In 1878-79 she was warmly received in England, singing at the Philharmonic, with Leslie's Choir, and at the Crystal Palace, and during the next two years made an extended concert tour on the continent, singing before the Emperor of Germany and other royalty. In 1896 she established herself as a teacher in New York City. Her last concert tour was in 1903 when she visited Japan and China.

**THYRATHON.** See ELECTRICAL INDUSTRIES.

**TIBET, ti-bét' or tib'et.** A central Asian territory extending eastward from the Pamirs to the border of China; nominally under the suzerainty of China. Area, estimated at 463,200 square miles; population, approximately 2,000,000. Capital, Lhasa, with a population of 15,000 to 20,000. The temporal ruler of the country is the Dalai Lama, or Living Buddha. In June, 1931, armed forces of the Dalai Lama were reported to have invaded the newly created Chinese Province of

Sikong, formerly part of Szechuan, which borders Tibet on the east, and to have seized a large part of the Province, including the cities of Kanyu, Chamhwa, Chunhsia, and Lihwa. Consult Sir Charles Bell, "Tibet's Position in Asia Today," *Foreign Affairs*, October, 1931, See CHINA.

**TICKS.** See ENTOMOLOGY, ECONOMIC.

**TIMBER CONSERVATION BOARD.** See FORESTRY.

**TIN.** Estimates of tin production in 1931 gave a total of 148,010 long tons, as against 173,210 tons in 1930. The 1931 production was estimated for the following countries: Federated Malay States, 52,000 tons; Bolivia, 31,400 tons; Dutch East Indies, 27,800 tons; Siam, 12,700 tons; China, 7200 tons; Nigeria, 7100 tons; Burma, 1700 tons; Unfederated Malaya, 1350 tons; Australia, 1300 tons; Great Britain, 460 tons. See BOLIVIA.

**TIBOL, té-rôl'.** A former crownland of Austria-Hungary, divided between Italy and the Republic of Austria by the Treaty of St. Germain.

**TITTONI, têt-tô'né, TOMMASO.** An Italian statesman and diplomat, died Feb. 7, 1931, in Rome where he was born Dec. 16, 1855. He received his education at the universities of Rome and Oxford. In 1886 he was elected a member of the Chamber of Deputies, where he represented Civitavecchia until 1895. He was appointed prefect of Perugia in 1897 and of Naples in 1900, and in 1901 was elected to the Senate. In 1903 he was appointed Minister of Foreign Affairs in the Giolitti Cabinet and, with the exception of a short interval as Ambassador to Great Britain in 1906, held this portfolio until 1910. He then became Ambassador to France, resigning from this post on Italy's entry into the World War to become Minister of State. Premier Nitti gave him the portfolio of Foreign Minister in 1919 and that of first delegate to the Paris Peace Conference, but he was obliged to resign the same year on account of ill health. He was later appointed delegate to the Council and Assembly of the League of Nations, but his health again did not permit him to act. In 1920 he was chosen president of the Senate, holding this office under the Fascist régime until 1928. He was first president of the Italian Academy in 1928, and in 1929 was created Count of Manziani. A volume of his speeches, *Sci anni di politica estera, 1903-09, discorsi* (1912), was translated into English as *Italy's Foreign and Colonial Policy* (1914). He also wrote *Who Was Responsible for the War?* (1918); *Conflitti politici e riforme Costituzionali* (1919); *Per la guerra e per la pace* (1919); *Modern Italy* (published by the Williamstown Institute of Politics, 1922); *Discorsi e scritti* (1924); *International Economic and Political Problems of the Day and Some Aspects of Fascism* (edited by Baron di San Severino from Tittoni's writings and addresses, 1920); and *Questioni del Giorno* (1928).

**TOBACCO.** The tobacco crop of the United States in 1931 was estimated at 1,610,098,000 pounds, about 1.5 per cent less than the record crop of 1930, but 4.7 per cent more than in 1929. The acreage harvested totaled 2,019,000 acres, compared with 2,101,000 in 1930, while the 1931 average acre yield was 797 pounds, 19 more than in 1930. Material acreage reduction in flue-cured areas was nearly offset by increases in the fire-cured and air-cured sections. The estimated production by types was for flue-cured, 657,715,000 pounds; fire-cured 197,267,000; air-cured, light,

mostly Burley, 496,495,000; air-cured, dark, 71,657,000; cigar types, 185,524,000, comprising filler 91,857,000, binder 84,873,000, and wrapper 8,794,000; and miscellaneous, 1,440,000 pounds. The average farm price per pound, December 1, was 9.7 cents, compared with 12.9 in 1930; the estimated total farm value was \$156,097,000 versus \$211,102,000 in 1930 and \$286,104,000 in 1929. See *ENTOMOLOGY, ECONOMIC*.

Production of tobacco in leading producing countries of the world, as reported in December, 1931, by the International Institute of Agriculture, with available statistics, totaled 1,893,531,000 pounds as compared with 1,927,708,000 in the previous year. After the United States with its 1,610,098,000 pounds came Japan with 155,757,000; Greece, 98,767,000; Bulgaria, 54,784,000; Canada, 48,230,000 (versus 36,717,000 in 1930); Czechoslovakia, 27,778,000; and Algeria, 20,283,000. In the year 1930-31, Porto Rico produced 35,344,000 pounds; Germany, 46,408,000; and Union of South Africa, 13,700,000 pounds. The 1930 crop of the Philippine Islands was reported to be 99,207,000 pounds; of France, 47,106,000; Hungary, 70,547,000; Yugoslavia, 33,561,000; and Rumania, 53,012,000 pounds. The crop of Cuba in 1931 totaled 80,707,000 pounds (82,153,000 pounds in 1930).

Collections from Internal Revenue taxes on tobacco in the United States for the fiscal year 1931, as reported by the Commissioner of Internal Revenue amounted to \$444,276,502.62, a decrease of \$6,062,557.88, or 1.34 per cent compared with the previous year, the first decrease since 1921.

The prominent position that the cigarette has gained in the tobacco industry was shown by the Commissioner of Internal Revenue who reported that in the calendar year 1930, there were manufactured 123,802,186,217 cigarettes weighing less than 3 pounds per 1000, over 1,400,000,000 more than in 1929. A slight setback in consumption was indicated in 1931, cigarettes numbering 113,449,048,000; cigars numbering 5,318,892,000, a decrease of 571,000,000; manufactured tobacco 327,995,000 pounds, a decrease of 80,000,000 pounds; snuff 39,543,000, a reduction of 600,000 pounds. Exports of leaf tobacco declined from 579,704,000 pounds in 1930 to 524,498,000 pounds in 1931, the decrease being general in most all classes. Consult also *Tobacco Markets and Conditions Abroad* (weekly); *United States Tobacco and Its Markets* (1931),—both U. S. Department of Commerce; *Tobacco* (weekly) (New York); A. Flügel, *Tabakindustrie und Tabaksteuer* (Jena, 1931); T. J. Woolfer, *The Plight of Cigarette Tobacco* (Chapel Hill, N. C., 1931). See *WOMEN IN INDUSTRY*.

**TOBAGO.** See *TRINIDAD*.

**TOGOLAND**, or Togo, tō'gō. A former German protectorate in West Africa; divided between Great Britain and France Sept. 30, 1920, as mandated territory of the League of Nations; situated between Dahomey and the Gold Coast. Total area, 34,933 square miles; total population, about 730,000 natives and 477 Europeans.

The *Gold Coast Gazette* of Jan. 13, 1931, announced that the British and French Governments had definitely approved the boundary between the two mandated areas fixed by an Anglo-French commission, appointed in 1927.

**TOLEDO, UNIVERSITY OF THE CITY OF.** A municipal, coeducational institution of higher learning in Toledo, Ohio, founded in 1872. The enrollment for the autumn of 1931 totaled 2465, of

whom 1654 were day-session and 811 late-afternoon and evening-session students. The faculty had 70 full-time and 36 part-time members. The income for the year amounted to \$577,900. The library contained 28,000 volumes. President, Henry John Doermann, Ed.D.

**TOLL BRIDGES.** See *BRIDGES*.

**TONGA OR FRIENDLY ISLANDS.** A British protectorate consisting of three groups of islands lying east of Fiji in the Pacific. Area, about 385 square miles; population (estimated in 1929), 26,809 Tongans, 436 Europeans, 202 half-castes, and 213 other Pacific islanders. Capital, Nukualofa. Queen in 1931, Salote. High Commissioner, Sir Arthur G. M. Fletcher.

**TONGKING (TONKIN),** tōn'kên. See *FRENCH INDO-CHINA*.

**TONSILLECTOMY.** See *SURGERY, PROGRESS IN*.

**TOBNADO.** See *METEOROLOGY*.

**TORONTO, UNIVERSITY OF.** An institution of higher education in Toronto, Ont., Canada, founded in 1827 and supported by the provincial government. The 1931 autumn enrollment was 7362. The faculty numbered 849 members. The total expenditure for the year 1930-31 for salaries and maintenance was \$2,797,185. Total benefaction received during the year amounted to \$756,789. The library contained 263,056 volumes and 94,626 pamphlets. President, Sir Robert A. Falconer, K.C.M.G., D.Litt., LL.D., D.D., D.C.L.

were affiliated with the Amsterdam International. The table on page 789 presents this membership by countries, showing that the Amsterdam International was largely a European organization and that the American Federation of Labor has continued its policy of non-affiliation. The American Federation of Labor has advanced the following two objections to affiliation: "The constitution of the International Federation of Trade Unions abrogates the principle of complete autonomy for national trade union federations, and the affiliation would place upon the A. F. of L. a heavy expense which it is not prepared to meet."

The accompanying table shows the trade affiliations of members of the Amsterdam International, based upon registrations with the international secretariats of their respective trade or industry.

MEMBERSHIP OF INTERNATIONAL TRADE SECRETARIATS, DEC. 31, 1929

<i>Trade or occupation</i>	<i>Membership</i>
Building workers .....	1,009,771
Clothing workers .....	256,839

Transport workers .....	2,250,000
Total .....	13,669,222

\* End of 1928.

The fifth Congress of the International Federation of Trade Unions took place in Stockholm during July, 1930, and was attended by 129 representatives and fraternal delegates. Among the fraternal delegates were representatives from Japan, Australia, New Zealand, India, and Egypt. The economic programme which the Congress adopted concerned itself with both international and national matters. In the first, resolutions called for the creation of an international economic board, the control of trusts and syndicates, the abolition of tariff restrictions, the establishment of economic courts to settle economic conflicts between countries, and the equalization of wages by fixing international minimum standards of working conditions. In the second, there were resolutions calling for the creation of safeguards for the workers against rationalization, the transference to other activities of employees separated from their jobs, the participation of the trade unions in processes of rationalization, and the payment of unemployment benefits without limits as to time.

The Congress indorsed the cooperative movement and also called for the formation of na-

tional economic councils with trade union representation. The social political programme adopted by the Congress called for the insurance of all workers against illness, invalidity, old age, death, unemployment, maternity, accident, and occupational diseases; vacations; protective measures for women and children; the technical and professional education of apprentices; freedom of meetings and unions; liberty to strike; arbitration courts; special courts for the settlement of other disputes between employers and workers; and the right of the workers to a voice in the conduct of the factories. The Congress finally decided on the removal of its headquarters from Amsterdam to Berlin. See SOCIALISM.

**BRITISH TRADES UNION CONGRESS.** The sixty-third annual meeting of the British Trades Union Congress was held at Bristol Dec. 7-11, 1931, with 589 delegates representing a trade union membership of 3,719,401 in attendance. In 1930 the trade union membership affiliated was 3,744,320. The Congress went on record as approving the tendency manifesting itself in the country toward a planned and regulated national economy. Other resolutions called for the organization of the iron and steel industry and the transport industry under a national authority and for the introduction of nationalization of mines and minerals. Other measures carried at this session demanded a working week of 40 hours without any reduction in weekly wage; payment of wages for statutory holidays and for a two weeks' annual vacation; for improvement in the workmen's compensation law; for the reestablishment of the national agricultural wages board; for the creation of a national rural housing board; and for the ratification of the international labor office convention regulating hours of work in commerce and in offices. See GREAT BRITAIN under *History*.

**CANADIAN TRADES AND LABOR CONGRESS.** The forty-seventh Trades and Labor Congress of Canada was held at Vancouver Sept. 20-25, 1931, with 250 delegates representing a membership of 191,137 in attendance. Among the resolutions carried by the convention were the following: A 5-day week and a 6-hour day as a partial solution of the economic depression; amendments to the Quebec minimum wage act in order to insure adequate production for all industrial and commercial female workers; the adoption of national health insurance and the adoption of old age pensions as a Federal measure; lowering of the age at which persons become eligible for old age pensions to 65 years; the regulation of motor transportation; complete abolition of private fee-charging employment agencies. Tom Moore was reelected president of the Congress and P. M. Draper was continued as secretary-treasury.

In Canada in 1930 there were 322,449 members of trade union organizations of whom 203,478 belonged to international craft unions, 23,724 belonged to the one big union, 3741 belonged to the Industrial Workers of the World, 57,168 belonged to Canadian central labor organizations, 9338 belonged to independent units, 25,000 belonged to national Catholic unions. There were 84 (American) international craft organizations with branches or members in the Dominion, 13 having 5000 or more members in Canada.

**FRENCH GENERAL CONFEDERATION OF LABOR.** The twenty-first National Congress of the French Confédération Générale du Travail was held in

Paris, Sept. 15-19, 1931, with 1341 delegates representing 2359 trade unions in attendance. Chief among the questions before the Congress was that of trade union unity arising from the secession by the left wing of the Confédération in 1921 and its independent formation under the name of Confédération Générale du Travail Unitaire. A resolution calling for union between the C. G. T. and the C. G. T. U. was defeated by a large majority. However, another resolution favoring unity of action of all trade unions under the aegis of the C. G. T. U. was adopted. Another resolution indorsed the country's social insurance system. However, certain reforms were called for, including provisions for home workers; medical and pharmaceutical benefits to persons whose sickness lasted more than 6 months; continuing unemployment-guaranty provisions after Jan. 1, 1932; and increasing the wage limit for compulsory and voluntary insurance to 2500 francs. To relieve the unemployment situation the Congress went on record as favoring the following measures: The establishment of a 40-hour, 5-day working week; paid vacations; extension of the school period; and the lowering of the age limit for pensions. The Congress also demanded improvements in the laws relating to the payment of a dismissal wage, a weekly rest period, and safety and sanitation of working places.

**JAPAN.** At the close of June, 1930, there were 4,774,047 workers employed in Japanese factories, mines, the transportation and communication industries, and in casual and other employments. Of this number, 342,379 were affiliated with 650 trade unions.

**TRANSCAUCASIAN SOCIALIST FEDERATED SOVIET REPUBLIC.** One of the seven constituent republics of the Soviet Union, occupying the region between the Caspian and Black seas south of the Caucasian Mountains and north of Persia and Turkey. It is divided into the three republics of Armenia, Azerbaijan (Azerbaidzhan), and Georgia (q.v.). Azerbaijan includes the autonomous area of Nagorny Karabakh; Armenia, the autonomous republic of Nakhichevan; and Georgia, the Abkhaz and Adjar autonomous republics, and the autonomous area of Yugo-Osetia. See ARMENIA, AZERBAIJAN, GEORGIA, and UNION OF SOVIET SOCIALIST REPUBLICS.

**TRANSFORMERS.** See DYNAMO ELECTRIC MACHINERY.

**TRANS-JORDAN.** An Arab territory in Asia Minor; under British protection as a part of the Palestine Mandate, although governed by a local Arab administration under Amir Abdullah Ibn Hussein, elder brother of King Feisal of Iraq. It is bounded on the north by Syria, on the west by Palestine, on the south by the Gulf of Akaba and the Hejaz, and on the southeast and east by Iraq. The area is uncertain; the partly nomadic population is estimated at 260,000, of whom 220,000 are Arab Moslems, 30,000 Arab Christians, and 10,000 Caucasian elements. Arabic is the official language. Capital, Amman, with 12,000 inhabitants. Agriculture and stock raising are the chief occupations.

The estimated Government revenue in 1929-30 was £359,345, including a grant-in-aid from the British Government of about £74,000. The High Commissioner for Palestine and Trans-Jordan, whose headquarters are in Jerusalem, is represented at Amman by a British Resident. Resident in 1931, Lt.-Col. C. H. F. Cox.

**TRIBAL STUDIES.** See ANTHROPOLOGY.

**TRINIDAD.** A West Indian island north of the mouth of the Orinoco River, constituting, with Tobago, a British colony. Area of Trinidad, 1862 square miles; of Tobago, 114; total population, according to the census of 1921, 365,913; estimated at end of 1929, 403,275, largely natives of African descent or East Indians. Capital, Port of Spain, with 67,877 inhabitants.

Cacao, sugar, coffee, coconuts, bitters, and copra are the chief export crops. The 114-acre pitch lake produced 219,003 tons of asphalt in 1929. Trinidad in 1929 was ranked second in oil production within the British Empire, the output being 305,047,821 imperial gallons. Imports during the year 1929 were valued at £5,954,000 and exports (excluding reexports) at £7,122,000. Petroleum, cacao, sugar, and asphalt were the leading exports. Revenue in the same year amounted to £1,870,553; expenditure, £1,613,810; public debt, £3,153,221. Governor in 1931, Sir Alfred Claud Hollis. See BRITISH WEST INDIES.

Despite vigorous opposition by the Roman Catholic clergy, a divorce measure was passed by the Legislative Council Dec. 15, 1931, by a majority of 11 votes after five years of controversy.

**TRINITY COLLEGE.** An institution for the higher education of men in Hartford, Conn., founded by members of the Protestant Episcopal Church in 1823 as Washington College and changed to Trinity College in 1845. For the autumn term of 1931 the enrollment was 426. There were 44 members on the faculty. The endowment fund of the college was \$3,328,256, and the income totaled \$232,210. There were approximately 150,000 volumes and 40,000 pamphlets in the library. During 1931 a new chapel, dormitory, and dining hall were under construction. President, Remsen B. Ogilby, Litt.D., LL.D.

**TRINITY COLLEGE,** DURHAM, N. C. See DUKE UNIVERSITY.

**TRIPOLITANIA,** trêp'ô-lê-tâ'nyâ. The western district of the Italian colony of Libia on the north African coast. Area, estimated at about 342,000 square miles; population at the 1921 census, 550,000 natives and 20,716 Europeans (including 18,093 Italians). Capital, Tripoli, with about 70,000 inhabitants. Agriculture along the coastal zone, sponge and tunny fisheries, and the manufacture of tobacco products and articles for domestic consumption are the leading occupations. Imports in 1930 totaled 215,266,000 lire; exports, 36,136,000 lire (1 lira equals \$0.0526 at par). Local revenue for 1930-31 was estimated at 86,000,000 lire; the Italian state contribution, 205,900,000 lire; civil expenditure, 112,621,000 lire; military expenditure, 178,667,000 lire. Governor of Italian Libia in 1931, Marshal Pietro

Badoglio, whose headquarters were in Tripoli. See CYRENAICA.

**TUFTS COLLEGE.** A nonsectarian institution for the higher education of men and women in Medford, Mass., founded in 1852. The registration for the autumn term of 1931 was 1967. There were 473 faculty members. The productive funds of the college amounted to \$8,503,896, and the income for the year was \$885,731. The library contained 100,647 volumes. President, John Albert Cousens, LL.D.

**TULANE UNIVERSITY OF LOUISIANA, THE.** An institution of higher education in New Orleans, founded in 1834. Although the professional schools are coeducational, there is a separate undergraduate department for women. The total enrollment for the autumn of 1931 was 3181. The productive funds for the fiscal year ending Aug. 31, 1931, amounted to \$10,097,575; the income for the year to \$1,298,391; and gifts and bequests to \$424,090. The library contained 150,698 volumes. President, Albert Bledsoe Dinwiddie, Ph.D., LL.D.

**TUNIS (TUNISIA).** A French protectorate in North Africa, situated on the Mediterranean coast east of Algeria, west of Tripolitania, and north of the Sahara and Libian deserts. With an area of about 48,300 square miles, Tunis at the census of 1926 had a population of 173,281 Europeans (89,216 Italians, 71,020 French, and 8396 Maltese) and 1,986,427 natives (1,932,184 Arabs and Bedouins, 54,243 Jews). The capital city, Tunis, had 185,996 inhabitants in 1926.

**PRODUCTION.** Agriculture is the principal industry, there being 7,325,000 acres of tillage land as well as 2,550,000 acres of cork and pine forest, 11,720,000 acres of pasture, and 88,707 acres of vineyards. Wheat, barley, oats, olive oil, dates, almonds, oranges, lemons, pistachios,alfa grass, cork, and henna are other products. Livestock (1929) included 2,460,714 sheep, 498,144 cattle, 88,632 horses, 155,842 camels, and 1,664,926 goats. Phosphate, lead, zinc, and iron were taken from 55 mines in 1930 in the following quantities: Phosphate rock, 2,511,000 tons; iron ore, 828,000 tons; lead ore, 27,180 tons.

**COMMERCE.** Imports in 1929 were valued at 2,026,247,000 francs and exports at 1,641,274,000 francs (1 franc equals \$0.0392 at par). Exports, in order of value, were cereals, minerals and building stone, crude metals, beverages and wines, hides, fruits and seeds, live animals. France furnished 1,293,000,000 francs of the total imports and took 669,705,000 francs worth of exports.

**FINANCE.** The budget for 1930 estimated total receipts and expenditures at 518,690,900 francs and 518,024,905 francs, respectively. The public debt in 1928 stood at 542,051,000 francs.

**GOVERNMENT.** The Government is under the direct supervision of a French Minister Resident-General, acting on behalf of the French Foreign Office. He is assisted by a ministry of 11 department heads, 8 of whom are French and 3 Tunisians. There is an army of occupation of

25,000 men, supported by native regiments and the Foreign Legion. French Resident-General, Minister of Foreign Affairs, and President of the Council of Ministers in 1931, M. Manceron.

**TUNNELS.** In previous years the most important and most interesting tunneling operations have been in the highway and railroad fields. The recent remarkable growth of great water supply and power constructions, however, involved many tunneling operations not only of special technical interest but in many cases of the first magnitude.

At the Hoover Dam, on the Colorado, four great by-pass tunnels were being driven, each 50 ft. in diameter. The Owyhee project of the Reclamation Bureau involved two tunnels, one 3.56 and another 4.21 miles long. See DAMS.

In the East, the deep distribution tunnel No. 2 under New York City is a major tunneling operation, while the joining of the Swift and Ware Rivers in the new Boston water supply also involves the Coldbrook-Swift aqueduct tunnel, 10.4 miles long. Even in Greece a new supply was to be brought to Athens through an aqueduct which requires the construction of a difficult  $8\frac{1}{2}$ -mile tunnel—the longest of its kind in Europe.

These works are, of course, all land tunnels but in them two distinct types of work are to be noted. The majority pass through reasonably solid, compact rock and in such cases interest centres largely in the speed of the operation. The pilot heading method, so successfully developed in the great Canadian Rogers Pass tunnel and the more recent Moffat bore, contributed greatly to the establishment of new records. Modern organization of the tunnel forces with full attention to the health of the workers also aided in these remarkable works. The mechanization of tunneling operations in particular has been a big element in establishing new and improved standards. (See series of articles in *Engineering News-Record*, 1931, on "Equipment's Place in Tunneling Operations.")

On the other hand, recent land tunnel operations, particularly in areas of comparatively recent volcanic origin and where such disturbances are still more or less active, have brought to the fore the problems of tunneling in squeezing ground or soft rock and frequently with huge quantities of water to be handled. In these cases the fact that construction has been possible at all is the point of controlling interest. No standardized process can be used. Each operation involves many trials of various methods, or frequently the use of several methods. Japanese engineers were still contending with similar troubles in the Tanna railroad tunnel which was begun in 1918.

The conditions encountered at the north end of the Boyati tunnel for the water supply of Athens were such that a change of alignment was undertaken with the hope of avoiding an area of what was said to be the heaviest ground ever encountered in Near Eastern tunneling. In operations in America similar conditions were common. The Owyhee Project tunnels are in part in swelling ground requiring prompt and very heavy timbering. The Hetch Hetchy operations include extensive sections of heavy ground which have demanded heavy timbering and timber replacement.

**SCHLDT TUNNEL.** Bids were opened in the fall of 1930 for the construction of a vehicular

tunnel under the Scheldt at Antwerp. American engineers participated in preparing plans and planning construction methods and American practices were to be followed. The tunnel will have a maximum depth below low water of 90 ft. and will be 5800 ft. long between land portals with an under-river length of 1300 ft. A single tube with a 22-ft. roadway is to accommodate traffic in both directions. The approaches will be in sand but the bulk of the river portion will be in clay. A ventilating system similar to that of the Holland Tunnel at New York was planned.

**QUEBEC.** The Canadian Pacific R. R. was driving a tunnel under the historic highland of Quebec to reach the new steamship terminal at Wolfe's Cove. The work, 5288 ft. long, was holed through in March, 1931.

**BOSTON.** The city transit department opened bids in February for a tunnel between Boston proper and East Boston, part of which will be under Boston Harbor. This latter portion, 4800 ft. long, will be driven by the shield method. The tunnel will be of notable size, 31 ft. in diameter, and was expected to be completed in two years. See **RAPID TRANSIT**; **AQUEDUCTS**.

**TURBINES.** See **STEAM TURBINES**.

**TURBINES, WATER.** See **WATER POWER**.

**TURBO-ELECTRIC GENERATORS.** See **DYNAMO ELECTRIC MACHINERY**.

**TURCOMAN REPUBLIC.** See **SOVIET CENTRAL ASIA**.

**TURKESTAN.** See **SOVIET CENTRAL ASIA**.

**TURKEY.** A republic occupying a large part of Asia Minor and contiguous territory in the Balkan peninsula. The republic comprises also Imbros, Tenedos, and the Rabbit Islands in the *Ægean* Sea. Capital, Ankara.

**AREA AND POPULATION.** With a land area of 294,416 square miles, including 285,162 square miles in Asia and 9254 square miles in Europe, Turkey at the census of October, 1927, supported a population of 13,648,270. The estimated population Dec. 31, 1928, was 13,850,000 (12,800,000 in Asia and 1,050,000 in Europe). The population of the principal cities, with suburbs, in 1927 was: Istanbul (Constantinople), 690,857; Izmir (Smyrna), 153,924; Ankara, 74,553; Adana, 72,577; Bursa (Brusa), 61,690; Konya (Konia), 47,495. The population is mainly Turkish, with several millions Kurds in the eastern Provinces, Lazs, and Jews.

**EDUCATION.** According to Turkish statistics, the percentage of illiteracy decreased from 85 per cent in 1928 to 42 per cent in 1930. Elementary education is nominally compulsory for children between the ages of 7 and 16. In 1928-29 there were 6836 primary schools, with 333,027 male and 151,721 female pupils; 155 secondary and professional schools, with 23,213 male and 8371 female pupils; 52 special schools, with 6821 pupils (4219 males); 20 institutions of higher education, with 4349 students (3604 males); and 195 foreign and private schools, with 16,516 male and 15,665 female pupils. The University of Istanbul was transferred to Ankara in 1929. The use of the Latin in place of the Arabic alphabet became general throughout Turkey in 1930.

**PRODUCTION.** Turkey is primarily an agricultural country, with 67.7 per cent of the population engaged directly in farming at the 1927 census. Primitive methods of agriculture are gradually yielding to modern ways. The cultivated area is about 10,000,000 acres, of which nearly 90 per cent is devoted to cereals. The de-

cline in agricultural prices in 1930 and 1931 placed a severe strain upon the economic and financial structure of the country. The estimated production of the chief crops in 1930, with figures for 1929 in parentheses, was: Tobacco, 92,593,000 pounds (74,306,000); opium, 7000 cases: 165 pounds each (2700); cotton, 135,000 bales (180,000); olive oil, 13,141,000 pounds (3,679,000); figs and raisins (Izmir district only), 25,000 metric tons (39,000) and 35,000 metric tons (51,000), respectively. Silk production, which totaled 145 metric tons in 1929, was from 10 to 15 per cent larger in 1930. Exports of valonea, comprising nearly the entire crop, totaled 32,434 metric tons in 1930 (36,891). Mohair production in 1930 was estimated at 4480 metric tons (3150 in 1929); wool, 9,920,000 pounds (5,000,000). Fruits, skins, and hides, furs, licorice root, gums, linseed, and sesame are other products. Production of the principal minerals in 1930 in metric tons, was: Coal, 1,139,652; lignite, 5891; chrome, 28,325; argentiferous lead, 15,508.

**COMMERCE.** Exports in 1930 exceeded imports for the first time in 25 years, the export surplus totaling £T4,093,304, as compared with an import surplus of £T101,082,308 in 1929. The change in the balance of trade was due to a 42.5 per cent decrease in the value of imports in 1930, while imports declined by only 2.4 per cent. The value of imports was £T147,440,843 (\$69,702,000) in 1930, £T256,296,379 (123,279,000) in 1929 and £T223,531,775 (\$113,666,000) in 1928. Exports were valued at £T151,528,333 (\$71,638,000) in 1930, £T155,214,071 (\$74,658,000) in 1929, and £T173,537,489 (\$88,244,000) in 1928. In the accompanying figures, the Turkish pound was converted at the average exchange rates of \$0.47 for 1930, \$0.481 for 1929, and \$0.5085 for 1928. Preliminary 1931 figures showed imports of £T126,800,000 and exports of £T127,275,000. Imports from the United States were £T4,117,600 and exports to the United States £T12,678,300.

**FINANCE.** As approved by the Grand National Assembly July 19, 1931, the budget for the fiscal year ending May 31, 1932, showed a reduction of 16.2 per cent in revenues and expenditures, in contrast to progressive increases in previous budgets. Revenues were estimated at £T186,705,600 (\$87,751,630 converted at \$0.47) and expenditures at £T186,682,005 (\$87,693,540), as compared with estimated receipts of £T222,732,000 (\$104,684,040) and expenditures of £T222,646,523 (\$104,643,865) in 1930-31.

Turkey's share of the Ottoman debt amounted to about £T87,316,000 in 1930, not including accumulated interest of about £T21,000,000. An additional loan of \$10,000,000, bearing 6½ per cent interest, was obtained in 1930 in exchange for a 25-year match and automatic-lighter monopoly. In 1930, Turkey reduced payments on the Ottoman debt to one-third of the amounts due, because of the critical economic situation.

**COMMUNICATIONS.** Railway lines in operation at the end of 1930 totaled 3402 miles, of which 1962 miles were under state and 1440 miles under private operation. New lines placed in operation during 1930 totaled 119 miles. In the first four months of 1931, 208 miles of additional line were opened to traffic and 315 miles were under construction. A total of 8798 sea-going vessels of 18,095,327 net tons passed in transit through Istanbul in 1930, compared with 7021 vessels of 13,254,689 tons in 1929. The first unit of an automatic telephone system in Istanbul was opened

in November, 1931, by a subsidiary of the International Telephone and Telegraph Corporation.

**GOVERNMENT.** Under the Constitution as revised April 20, 1924, "the Grand National Assembly exercises the executive power through the President of the Republic elected by itself and through the council of Ministers chosen by him." The Assembly, elected for four years by the indirect suffrage of all citizens over 21, has power to dismiss the Government at any time. The National Assembly elected September, 1927, consisted of 315 deputies. Ghazi Mustapha Kemal Pasha, first President of the Turkish Republic, was reelected May 4, 1931, for his third consecutive term, which expires in 1935. The Ministry appointed by him was headed by Ismet Pasha. Two new Ministries, of Agriculture and of Customs and Monopolies, were established by act of the Grand National Assembly of Dec. 29, 1931.

**INTERNAL DEVELOPMENTS.** Events in Turkey during 1931 were featured by the election in April of a new Grand National Assembly, the reelection of Mustapha Kemal Pasha for the third time as President of the Republic, continuation of the process of westernization, and the intensification of the economic and financial crisis. Trials by court-martial of more than 100 persons arrested in connection with the Menemen revolt of December, 1930 (see 1930 YEAR BOOK), commenced at Menemen Jan. 15, 1931. Twenty-eight of the defendants were hanged on February 3 and 50 others were sentenced to imprisonment. Martial law was continued in the region for another month and there were a number of additional arrests at widely scattered points.

Meanwhile President Mustapha Kemal had returned from an extensive tour of the country somewhat disturbed by the numerous complaints he had received. In March he ordered the dissolution of the National Assembly and the holding of new elections within six weeks. In preparation for the election, the voting age for males was raised from 18 to 21 years and the election machinery was reorganized. The President renewed his effort of the previous year to create a parliamentary opposition. Instead of nominating all the candidates for the Assembly from members of the People's party, as formerly, he left 30 of the 317 seats vacant and urged that they be filled by loyal republicans not members of the party. In the elections held April 24, 20 independents and all the People's party candidates were elected. The independents joined with the majority in unanimously reelecting Mustapha Kemal Pasha as President for a third term on May 4. On the same day Premier Ismet Pasha went through the formality of resigning, but was immediately reinstated with a reconstructed Cabinet.

In his address to the Grand National Assembly on May 10, the President stressed the need of a revision of the taxation system, greater economy, and protection of agriculture. His economy plea was reflected in the budget for 1931-32 (see above under *Finance*), which showed a substantial reduction. Extensive reductions in the number of Government employees were made on June 1. The legislative session was notable chiefly for the severe censure of the Government's economic and other policies by Sirri Bey, one of the 20 independent deputies. Subsequently three newspapers in Istanbul undertook a bitter campaign against the Government without provoking Kemal Pasha's wrath. The National Assembly, however, previous to adjourning, passed a restrictive press

law (July 25), which authorized the Government to suspend any newspaper guilty of obstructing its policies. The publication of Communist propaganda was also prohibited.

The Government's nationalistic programme was reflected in a new law providing that all Turkish children in foreign schools must be taught history, geography, and civics in the Turkish language by Turkish instructors. The law seriously affected some 250 foreign schools, most of them maintained by French Roman Catholic priests and nuns. Negotiations with the Ottoman Debt Council continued during the year without agreement, and in September the Minister of Finance notified the Council that Turkey would continue to pay one-third of the annuities called for in the 1928 agreement pending a new settlement.

Unrest continued among the Kurds of eastern Turkey, who had staged a formidable revolt in 1930. Mount Ararat and the surrounding territory on May 1 was made a military area in which no civilians were permitted. In September, the Turkish Government commenced the removal of some 2000 Kurds from the disaffected region to the vicinity of Rodosto in Thrace.

The naval building programme inaugurated in 1929, much to the alarm of Greece, resulted in substantial additions to the Turkish navy in 1931. French engineers completed the refitting of the former German battle cruiser *Goeben*, giving the Turks a 22,500-ton ship with a 5350-mile cruising radius. In addition, four torpedo boats, two submarines, and three gunboats were completed in Italian shipyards. See *NAVAL PROGRESS*.

**FOREIGN RELATIONS.** So firm was the entente established between Turkey and Greece by the treaty of friendship and conciliation signed in October, 1930, that the appearance of the new Turkish naval forces aroused little comment in Balkan diplomatic circles. At the end of September, Premier Ismet Pasha and Foreign Minister Tewfik Rushdi Bey paid a formal visit to Athens to return the visit made to Ankara in October, 1930, by Premier Venizelos and Foreign Minister Michalakopoulos.

Early in the year, Turkey concluded a naval accord with the Soviet Union, in which both countries pledged themselves not to build additions to their Black Sea fleets without giving six months' notice. Before its adjournment in July, the Grand National Assembly ratified a commercial treaty with the U.S.S.R.; the Soviet Government under the treaty contracted to purchase Turkish goods to the value of \$7,500,000 annually, or about double the former Turkish exports to the U.S.S.R. Soviet commercial representatives were to be stationed at Ankara, Istanbul, and other leading cities and were to enjoy diplomatic immunity. King Feisal of Iraq was the guest of President Kemal Pasha at Ankara July 6 to 9 while en route to western Europe. The two rulers were reported to have discussed the political and economic issues affecting their two countries, particularly the exploitation of the Mosul oil fields, friction along the Turko-Iraqi border, and commercial interchange. The régime established by King Zog in Albania in 1928 was finally recognized by Turkey (Oct. 26, 1931) and it was announced that a Minister would be sent to Tirana.

Strong evidence that Turkey was turning to the United States for financial and technical aid in the modernization and reconstruction of the country was seen in the visit of an official mission headed by former Finance Minister Saracoglu

Sükrü Bey to America in October and November.

**THE BALKAN CONFERENCE.** Turkey was host to the second Balkan Conference, held in Istanbul October 20 to 26, with over 150 delegates in attendance from Albania, Bulgaria, Greece, Yugoslavia, Rumania, and Turkey. For the final plenary session, the delegates journeyed to Ankara, where they were addressed by Mustapha Kemal Pasha. The definite accomplishments of the Conference were the establishment of an Inter-Balkan Chamber of Commerce, with headquarters at Istanbul, and an Inter-Balkan Tobacco Bureau at Salonika. The delegates discussed proposals for a central bank, a common Balkan currency, the facilitation of transportation, a Balkan customs union, and the removal of legal impediments to the practice of professions by citizens of one Balkan state in another state.

Interest centred chiefly in a proposed inter-Balkan pact of arbitration and non-aggression. The minorities question obtruded during this discussion and when recriminations between Albanians and Yugoslavs reached a danger point, the arbitration pact proposal was shelved for the time being by being referred to a special committee. The committee was instructed to work out an arbitration and non-aggression compact with special reference to the rights of minorities, and to submit it to the respective Governments three months before the opening of the third conference. The Turkish Foreign Minister was requested to invite the foreign ministers of the other Balkan states to exchange views regarding the proposed pact. See **PEACE**.

**TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE.** A nonsectarian normal and industrial school for the higher education of Negro men and women in Tuskegee, Ala., founded in 1881 by Booker T. Washington. The institute gave regular and systematic instruction during the year to a total of 2701 persons. There were 271 members on the faculty. The endowment amounted to \$7,803,550, and the income for the year to \$523,259. There were 20,000 volumes in the library. President, Robert Russa Moton, LL.D.

**TUTUILA.** See **SAMOA**.

**TWINS.** See **ZOOLOGY**.

**TYNAN, KATHARINE.** An Irish poet and novelist, died in London, Apr. 2, 1931. She was born in Clondalkin, County Dublin, in 1861, and attended the Dominican convent of St. Catharine of Siena at Drogheda. In 1893, having been married to H. A. Hinkson, she took up her residence in London. She was a conspicuous figure in the so-called Irish Literary Revival of the '90s, and in her poetry captured the mystical quality that has distinguished so much of Irish verse. She wrote *Louise de la Vallière and Other Poems* (1885); *Shamrooks* (1887); *Ballads and Lyrics* (1890); *Cuckoo Songs* (1894); *The Wind in the Trees* (1898); *Collected Poems* (1901); *New Poems* (1911); and *Even-song* (1928). She also portrayed phases of Irish character in a series of pleasant novels.

**UBANGI-SHARI.** See **FRENCH EQUATORIAL AFRICA**.

**UGANDA, ō-gān'da, PROTECTORATE.** A protectorate of Great Britain in East Africa; lying north of Tanganyika and Lake Victoria and south of the Anglo-Egyptian Sudan. Area, 94,204 square miles (13,616 square miles of water); population, estimated December, 1929, at 3,410,857, including 3,390,323 natives, 12,537 Asiatics, and 1995 Europeans. Capital, Entebbe; commercial centre, Kampala.

Agriculture is the principal occupation and cotton the chief crop. Others are coffee, oil seeds, chillies, sugar, and tobacco. Tin ore, Para rubber, hides and skins, and timber are also produced. Exports in 1929 were valued at £4,274,758, of which cotton accounted for £3,312,068, and imports for consumption were £2,318,177. In the preceding year, exports totaled £3,395,270 and imports £1,988,104. Revenue (1929) amounted to £1,082,918 and expenditure to £1,315,997. The public debt stood at £1,088,498. The shilling is the unit of currency. On Jan. 14, 1931, a new railway and highway bridge across the Nile at Jinja was opened, together with an extension of the railway from Jinja to Kampala. This gave the Western Province of Uganda direct railway communication with Mombasa and the sea coast. Governor and Commander-in-Chief in 1931, Sir W. F. Gowers. For the hearings during 1931 on the proposed administrative union of Uganda, Tanganyika, and Kenya, see **KENYA**.

**U'KRAINE.** A region in southwestern Russia forming (since July 6, 1923) a constituent part of the Union of Soviet Socialist Republics; including the autonomous Moldavian Socialist Soviet Republic formed Oct. 12, 1924 (area, 3176 square miles; population, 572,000). Capital, Kharhov (population 417,186). See **UNION OF SOVIET SOCIALIST REPUBLICS**; **POLAND under History**.

**UNDERWRITING.** See **INSURANCE**.

**UNEMPLOYMENT.** ESTIMATED UNEMPLOYMENT IN THE UNITED STATES. On the basis of a special unemployment census made during January, 1931, by a process of sampling, the U. S. Department of Commerce estimated that the total unemployed persons in the United States were 6,050,000. The executive council of the American Federation of Labor estimated the average minimum unemployment during the first eight months of 1931 at 5,415,000 and reported to the annual A. F. of L. convention (October 5) that "if as large a proportion of wage earners are laid off from industrial plants as in normal years, we shall have 7,000,000 unemployed by January (1932)." Other estimates were higher. The Department of Commerce's estimate grew out of a special count taken in the following cities: Birmingham, Boston, Buffalo, Chicago, Cleveland, Dayton, Denver, Detroit, Duluth, Houston, Los Angeles, Minneapolis, New Orleans, New York City, Philadelphia, Pittsburgh, St. Louis, San Francisco, Seattle. It was significant to note that between April, 1930, when a census of employment had collected data for these same cities, and January, 1931, there was an increase of 149 per cent. Returning to the sampling estimate of January, 1931, it was stated that the total population of the areas examined was 20,638,981. The total number of persons in these areas reported as unemployed was 1,930,606, or 9.4 per cent of the total. In Chicago, the proportion of persons unemployed out of the total population was 11

per cent; in Detroit, it was 11.1 per cent; in Los Angeles, 7.9 per cent; in Manhattan borough (New York City), 9 per cent; in Bronx borough (New York City), 7.7 per cent; in Philadelphia, 10.9 per cent; in Pittsburgh, 9 per cent; in San Francisco, 6.5 per cent.

**UNEMPLOYMENT BENEFIT PLANS IN THE UNITED STATES AND IN EUROPE.** The U. S. Bureau of Labor Statistics stated that in the United States in 1931 there existed some 79 unemployment-benefit or unemployment-guaranty plans, affecting altogether but 226,000 workers. Of the 79 plans, 15 were company plans established by employers either individually or in groups, 16 were joint plans established between trade unions and employers, and 48 were trade union plans maintained entirely by labor organizations and covering only their own members in good standing.

By way of contrast this report pointed out that public unemployment insurance systems existed in 18 countries as of May, 1931. In all but two (Luxemburg and Spain) these schemes were in operation at the time of the survey. In nine countries the legislation was of a compulsory nature, and in eight it was voluntary, while in Switzerland, the cantonal legislation was in some cases compulsory and in others voluntary.

From another source, it was possible to obtain descriptions of the nature of unemployment relief being conducted under the aegis of governmental authority in the European countries. This was based on a series of studies made by the foreign correspondents of the *New York Times*, the summary statement being printed in the issue of Nov. 1, 1931. Harold Callender, in commenting on the nature of the information gathered by his fellow correspondents, pointed out that Europe had been concerning itself with the protection of the unemployed worker, on a grand scale, since 1919. There existed in the European countries three types of financial systems: (1) Those under which the workers, the employers, and the state all contributed to an insurance fund (as in Great Britain, the Irish Free State, Austria, Switzerland, Poland, Luxemburg, and Bulgaria); (2) those in which the workers and their employers alone contributed to a fund (as in Germany and Italy); and (3) those in which funds were maintained by trade unions and other organizations of workers but which received a fixed appropriation from the state (as in Holland, Belgium, France, Denmark, Czechoslovakia, Norway, and Finland).

In 1931, in Europe alone, 35,000,000 workers were under the protection of compulsory insurance schemes and almost 3,000,000 were under the protection of voluntary insurance schemes. The most important of these systems were those of Germany and Great Britain, in the first country 16,530,000 workers being affected, and in the second 12,400,000 workers. In Germany there were separate schemes for relieving unemployment distress. One was insurance; the other was a system of public relief financed by the Reich and the communes. Both were administered by the same machinery (the employment exchanges). The insurance system was supporting about 1,900,000 unemployed persons out of a total of 16,530,000 workers affected. In the past four years this fund was assisted by appropriations and loans from the Reich. The rest of the unemployed were being taken care of by the so called "dole," financed entirely from public grants. **INSURANCE** and "dole" were two separate systems.

In Great Britain, the situation was to an extent similar in view of the fact that there existed here a system of compulsory insurance. However, in view of the threatened breakdown of this scheme, based originally on compulsory contributions, the government found it necessary to bolster up the fund by grants from the public treasury, with the result that the two methods were so badly intertwined that it was difficult to separate one from the other.

It is important to appreciate that, despite the fact that the state, in Germany and Great Britain, was compelled to come to the relief of the funds, the nature of the contributions made by the insurance schemes themselves was significant. In Germany, the contributions of 16,000,000 workers supported about 1,900,000 unemployed; and in Great Britain, the insurance fund, from its own resources, could support 900,000 workers. In Germany, from the inception of the insurance scheme in 1927 to March, 1931, \$1,400,000,000 was paid out to the unemployed through the employment exchanges, \$881,000,000 coming from the normal resources of the fund itself and \$539,000,000 representing state appropriations for relief and loans to the fund. In Great Britain, in the ten fiscal years ending March, 1931, the insurance fund paid to the unemployed \$2,888,700,000, of which \$2,381,888,000 came from the fund itself and \$506,875,000 came from the state in the form of relief and loans. As Mr. Callender said: "So whether one counts the loans as 'dole' or not, it is clear that Britain's insurance system has been far more insurance than 'dole.' Indeed, the only expenditures that can be classified indisputably as 'dole' are the \$129,925,000 paid out as direct relief, and this sum forms slightly less than 4.5 per cent of the total outlay in the ten years ended last March."

The *Times* correspondents were convinced that unemployment insurance had demonstrated its value and that few Europeans would abolish the system.

**WORKERS INSURED AGAINST UNEMPLOYMENT.** According to the International Labor Office in

**NUMBER OF PERSONS INSURED UNDER COMPULSORY OR VOLUNTARY INSURANCE SYSTEMS OF SPECIFIED COUNTRIES**

<i>Country</i>	<i>Insured persons</i>

\* Estimate.

<sup>b</sup> Estimate. Since Oct. 9, 1930, the authorities have suspended all insurance benefits until further notice, owing to the situation of the labor market.

<sup>c</sup> No estimate available.

1931, a total of 47,500,000 workers were insured against unemployment in 17 countries. Of this number, 44,629,000 were under the protection of compulsory insurance systems; and 2,841,000 received the protection of voluntary insurance schemes. It is significant to note that in 1919 the number of workers similarly insured was from only 4,500,000 to 5,000,000, of whom 3,700,000 lived in Great Britain. The table on page 796 presents this interesting information for the 17 countries in question.

**PRESIDENTIAL PROGRAMME.** On Aug. 19, 1931, to coördinate all those private charitable relief programmes, in the success of which President Hoover was preparing to place all his confidence that the problem of unemployment could be met without the need of public assistance, the President announced the creation of an unofficial relief administration. Walter S. Gifford was named to direct the unemployment activities throughout the United States during the following winter and to coördinate the nation-wide effort for private relief. Five sub-committees were designated by Mr. Gifford to deal with the various aspects of the unemployment problem, as follows: (1) Committee on mobilization of relief resources, to concern itself with the raising of funds; (2) Committee on employment plans and suggestions, to concern itself with securing the maximum employment; (3) Committee on administration of relief, to concern itself with the problem of spending relief funds; (4) Committee on coöperation with national groups and associations, to concern itself with enlisting support for the entire unemployment relief plan; (5) Committee on programme of Federal public works, to concern itself with the general programme of public works.

It was made plain by this organization that no effort would be made to set up a private relief fund on a nation-wide basis, but that relief was to be considered as essentially the responsibility of the States and the local communities.

In the month of March, following the end of the Congressional session, President Hoover vetoed the Wagner bill whose purpose was to set up a nation-wide, coördinated employment service based upon Federal support of existing State agencies. This vetoed Wagner bill was one of three originally proposed by Senator Wagner. See UNITED STATES under *Congress*.

In July, 1931, a petition was drawn up by some 1200 economists, social workers, educators, labor leaders, and public officials, urging on President Hoover to call a special session of Congress to deal with the unemployment situation. The petition declared that there were in the country fully 6,000,000 persons unemployed and perhaps as many more working on such short time that their income and purchasing power had been severely reduced. Private charitable funds were inadequate to cope with the situation; many of these were on the verge of depletion; further contributions seemed hopeless to attain. Many local and State governments which had been supplementing the private charitable funds were reaching the limit of their legal capacity to borrow. This group, therefore, suggested Federal appropriations of \$3,000,000,000 for public works; \$250,000,000 to match amounts spent by States and communities on unemployment relief; and \$250,000,000 as grants in aid to State unemployment insurance systems, to be set up.

In a number of addresses and statements during the year, President Hoover showed that he

had steadfastly turned his face against public relief conducted by the Federal Government. In one of these pronouncements he declared: "With the organized coöperation of local and State and Federal authorities, and the large number of relief and charitable organizations, the problem was successfully handled last winter. We shall adapt organization methods in such manner as may be necessary for the coming winter." Against this position, increasingly, many public men as well as social workers and publicists raised their voices in dissent, insisting that charity was inadequate and that only a large scale Federal programme of relief through public works could start once again the wheels of industry going to increase income and release purchasing power.

**THE SWOPE PLAN.** One of the most widely discussed proposals for unemployment prevention and relief was that presented by Gerard Swope, President of the General Electric Co., on Sept. 16, 1931. He proposed Federal legislation requiring commercial and industrial concerns with 50 or more employees to form trade associations, whose aim would be the adjustment of production in each industry to consumption. The trade associations would each have a general administrative board of nine members, of which three would be elected by the association, three by the employees, and three appointed by a Federal supervisory body representing the public. Each company would be required to submit uniform quarterly and annual financial statements to the Federal supervisory body.

Mr. Swope's proposals for the protection of employees were similar to those placed in effect by the General Electric Company in 1929. They included group life and disability insurance, a pension system, and unemployment insurance for employees receiving \$5000 a year or less. After five years' service, employees would be required to put 1 per cent of their earnings into the pension fund and a similar amount into the unemployment insurance fund, besides contributing equally with the employers toward the cost of life and disability insurance.

**PROGRAMME OF THE A. F. of L.** The executive council of the American Federation of Labor, in its annual report submitted to the order's convention, outlined the following programme for the stabilization of business and to cope with the present depression: (1) The calling of a national conference of employers and labor on the spreading out of jobs; (2) immediate inauguration of the 5-day week and the shorter day; (3) establishment of a national economic council; (4) maintenance of wage structure and wage standards; (5) guaranty to the employed that they will keep their jobs; (6) prohibition of child labor; (7) a long range scientific plan to stabilize industry. See LABOR, AMERICAN FEDERATION OF.

**PROGRAMME OF THE U. S. CHAMBER OF COMMERCE.** In October, there appeared the report of a committee of the U. S. Chamber of Commerce on the industrial depression, with recommendations for meeting prevailing bad conditions. The following were the major suggestions of this report from the nation's most important employers' organization: (1) Limited amendment of the anti-trust laws; (2) establishment of privately sustained systems of unemployment benefits, based upon definite reserves; (3) the setting up of a national economic council; (4) local as opposed to national effort to find jobs for the em-

ployed; (5) a curb by commodity and security exchanges on manipulative speculation; (6) international disarmament; (7) the planning and execution of public works.

**NEW YORK STATE UNEMPLOYMENT RELIEF ACT.** On Sept. 23, 1931, Governor Roosevelt signed an act providing for unemployment relief by the establishment of a State fund of \$20,000,000. The purpose of this act, as stated in the preamble, was: "To relieve the people of the State from the hardships and suffering caused by unemployment, creating and organizing for such purposes a temporary emergency relief administration, prescribing its powers and duties and making an appropriation for its work." The relief fund was to be raised by a 50 per cent increase in the State income tax. This temporary state agency was to function only during the emergency period, which we defined as existing between Nov. 1, 1931, and June 1, 1932. Two forms of relief were provided for: (1) Work relief, to consist of wages paid by a municipal corporation to persons for the performance of services connected with work undertaken by such corporation, independent of work under a contract or for which an annual appropriation had been made. (2) Home relief, which was defined as meaning shelter, fuel, food, clothing, light, and so forth, by a municipal corporation to unemployed persons and their dependents in their own homes. In order to facilitate the administration of the act, each city of the State was to be considered a separate public welfare district.

**CONFERENCE ON PERMANENT PREVENTIVES OF UNEMPLOYMENT.** The Conference on Permanent Preventives of Unemployment, held under the joint auspices of the Social Action Department of the National Catholic Welfare Conference, the Social Justice Commission of the Central Conference of American Rabbis, and the Social Service Commission of the Federal Council of the Churches of Christ in America, was held in Washington on Jan. 26-27, 1931.

Not a few of the speakers pointed to the growing menace of technological unemployment in the country which, by decreasing the number of available jobs, threatened purchasing power by its inevitable diminution of the national income going to labor. Thus, John P. Frey, of the American Federation of Labor, quoting from the census of manufactures, showed that in 1927 wages in all manufacturing industries, exclusive of salaries, amounted to \$10,849,000,000, and in 1929, \$11,422,000,000, an increase of \$572,829,000. On the other hand, in 1927 the value of manufactured goods was \$62,718,000,000, and in 1929, it was \$69,418,000,000. In short, while the purchasing power of the wage earners had increased \$600,000,000, the value of manufactured products had increased ten times as much.

**UNEMPLOYMENT IN FOREIGN COUNTRIES.** The *Monthly Labor Review*, printed the following summary of the unemployment situation in foreign countries at the end of the months indicated: *Australia* (December, 1931), 118,732 trade unionists unemployed, representing 28 per cent of all the trade unionists in the country. *Austria* (December, 1931), 329,595 unemployed persons in receipt of benefits under compulsory insurance system. *Belgium* (December, 1931), 128,000 wholly unemployed persons or 17 per cent of the total receiving benefits from unemployment insurance societies; 134,799 persons or 19.2 per cent partially unemployed and receiving benefits

(in November). *Canada* (June, 1931), 32,682 trade unionists unemployed representing 16.3 per cent of the total (21.1 per cent for December, 1931). *Czechoslovakia* (December, 1931), 480,775 unemployed persons on the live register; 105,846 unemployed persons in receipt of benefits from the trade union insurance funds (in November), representing 8.3 per cent of the total. *Free City of Danzig* (December, 1931), 32,956 unemployed persons registered. *Denmark* (December, 1931), 91,216 unemployed trade unionists receiving benefits from unemployment funds, representing 30.4 per cent of the total. *Estonia* (November, 1931), 7554 unemployed persons remained on the live register. *Finland* (November, 1931), 18,095 unemployed persons registered. *France* (December, 1931), 147,009 persons in receipt of unemployment benefits. *Germany* (December, 1931), 5,668,187 unemployed persons registered; 42.2 per cent of all trade unionists wholly unemployed; 22.3 per cent of all trade unionists partially unemployed; 3,147,867 persons in receipt of unemployment benefits. *Great Britain and Northern Ireland* (December, 1931), 2,202,700 persons wholly unemployed and receiving benefits under compulsory insurance scheme, representing 17.7 per cent of total; 408,117 temporary stoppages, representing 3.2 per cent of total; 2,569,949 persons registered with employment exchanges (Great Britain only). *Hungary* (December, 1931), 31,906 members of the Social Democratic trade unions unemployed. *Irish Free State* (December, 1931), 30,865 unemployed persons in receipt of compulsory insurance benefits. *Italy* (December, 1931), 982,321 wholly unemployed persons registered; 32,949 partially unemployed persons registered. *Latvia* (December, 1931), 21,682 unemployed persons remaining on the live register. *Netherlands* (December, 1931), 157,933 unemployed persons in receipt of benefits from unemployment insurance societies, representing 29.7 per cent of total. *New Zealand* (December, 1931), 47,096 unemployed unionists. *Norway* (November, 1931), 10,577 unemployed members of 10 trade unions, representing 22.8 per cent of total; 34,789 unemployed persons remaining on the live register. *Poland* (December, 1931), 289,100 unemployed persons registered with employment offices. *Rumania* (December, 1931), 49,393 unemployed persons remaining on the live register. *Saar Territory* (November, 1931), 28,659 unemployed persons registered. *Sweden* (December, 1931), 110,149 unemployed trade unionists, representing 27.2 per cent of total. *Switzerland* (December, 1931), 41,011 wholly unemployed persons in receipt of unemployment benefits, representing 10.1 per cent of total; 51,900 partially unemployed persons in receipt of unemployment benefits; representing 14.4 per cent of total (November, 1931). *Yugoslavia* (November, 1931), 10,349 unemployed persons registered.

**GREAT BRITAIN.** Marked changes in the British unemployment system were introduced by legislation passed by Parliament in August and September, 1931. The so-called "anomalies" act of August was designed to eliminate anomalies from the system, while under the national economy act, which received the royal assent September 30, benefits were reduced, contributions increased, and a distinction established between normal and transitional benefits. The latter changes, which became effective October 5, were based on the assumption that for the year 1932-33 there would be an average of 3,000,000 persons unemployed

on the live register. The rates of weekly benefits were reduced by 10 per cent, the more important changes being as follows: Man, from 17s. 0d. to 15s. 3d. (\$3.71); woman, from 15s. 0d. to 13s. 6d. (\$3.28); adult dependent, from 9s. 0d. to 8s. 0d. (\$1.95); child dependent, to remain at 2s. (48.7 cents); young man, from 14s. 0d. to 12s. 6d. (\$3.04); young woman, from 12s. 0d. to 10s. 9d. (\$2.62). Employers, employed workers and the government were to contribute equally on behalf of each employed worker, but the rate of weekly contribution from each was increased in the following amounts: Men, 10d. (20.3 cents); women and young men, 9d. (18.3 cents); young women, 8d. (16.2 cents); boys, 5d. (10.1 cents); girls, 4½d. (9.1 cents). The amended scheme also proposed to have a sharp cleavage between the insurance benefits and the transitional benefits (the so called "dole"). The former was to be limited to 26 weeks in one year after which the applicant would have to qualify by a period of contribution before he could again draw insurance benefits. If he was unable to secure employment and make these contributions he was to apply for the transitional benefits; in other words, he was to be transferred from the insurance class to the relief class. Persons requesting such transference were to be required to submit to an examination as to their needs at the unemployment exchange. There was to be no borrowing on behalf of the insurance fund beyond the existing statutory limit. Whatever amount that was needed to balance the accounts of the unemployment fund was to be furnished in the form of grants from the current revenue and the estimated amount of this grant for the period 1932-33 was £22,200,000.

**SPAIN.** A decree of the Spanish government, issued Sept. 30, 1931, provided for the enforcement, beginning Jan. 1, 1932, of the unemployment insurance law of May 25, 1931. The decree established a National Fund for Involuntary Unemployment (*Caja Nacional Contra el Paro Forzoso*), the funds to be secured through State appropriations, gifts, contributions from assisted insurance associations, and the income from funds or property under the management of the National Fund. All workers between the ages of 16 and 65 whose annual earnings did not exceed 6000 pesetas (about \$1158) were eligible for unemployment benefits, provided they had been registered in one of the recognized associations for six months preceding the beginning of unemployment.

See **BUSINESS REVIEW; FOOD AND NUTRITION; LABOR LEGISLATION; LABOR LEGISLATION, AMERICAN ASSOCIATION FOR; SOCIAL PROGRESS; WELFARE WORK; AGRICULTURE, U. S. DEPARTMENT OF; PEACE;** and articles on **CANADA under Business Conditions, SPAIN under History, etc.**

**UNION COLLEGE.** A nonsectarian college for men in Schenectady, N. Y., founded in 1765. The 1931 enrollment of regular students totaled 842. In addition there were 20 graduate students. The faculty numbered 85. The amount of endowment and income for the year was more than \$3,000,000. During the year athletics were put on an academic basis, with three professors and one instructor in the department. The library contained 75,000 volumes. President, Frank Parker Day, LL.D.

**UNION OF SOUTH AFRICA.** See **SOUTH AFRICA, UNION OF.**

**UNION OF SOVIET SOCIALIST REPUBLICS (U.S.S.R.).** A republic comprising the greater part of the former Russian Empire. Capital, Moscow.

**AREA AND POPULATION.** According to the Soviet Union Information Bureau, which supplied much of the material used in this article, the area of the Union of Soviet Socialist Republics is 8,199,258 square miles. The population as of July 1, 1931, was estimated by the Central Statistical Board at 162,700,000. The population, according to the census of 1926-27 was 147,013,600, including 71,024,300 males and 75,989,300 females. In 1914 the population of the same territory was 138,200,000.

The Union of Soviet Socialist Republics in 1931 was composed of seven constituent republics, which in turn included 15 autonomous republics and 18 autonomous areas. The Russian Socialist Federated Soviet Republic contained 94 per cent of the area and 76 per cent of the population of the entire Soviet Union. The estimated area and population of the seven constituent republics on July 1, 1931, is shown in the accompanying table from the *Economic Review of the Soviet Union*.

AREA AND POPULATION OF THE SOVIET UNION, BY CONSTITUENT REPUBLICS, 1931

Republic	Area *	Population (thous.)	Cities	Rural Soviets
R.S.F.S.R. ....	19,662.9	112,181.0	515	50,139
White Russia ....	126.8	5,275.0	29	1,418
Ukraine ....	425.0	31,625.6	80	11,040
Uzbekistan ....	176.1	4,746.2	18	1,698
Transcaucasia ....	185.5	6,495.9	49	2,534
Turkmenistan ....	491.2	1,149.1	7	457
Tadzhikistan ....	141.6	1,186.5	5	376
	21,236.1	162,686.3	703	67,662

\* Thousands of square kilometers (1 square kilometer = 0.386 square mile).

Population of the principal cities at the census of 1926: Moscow, 2,124,500; Leningrad, 1,614,008; Kiev, 513,789; Baku, 452,808; Odessa, 420,888; Kharkov, 417,342; Rostov-on-Don, 308,284; Tashkent, 323,613; and Tiflis, 292,973. Moscow's population in 1931 was estimated at 2,800,000.

**EDUCATION.** Public education in the Soviet Union is a charge against each of the seven constituent republics and against the localities concerned. For 1931 budgetary outlays planned for education amounted to \$1,854,000,000. For previous fiscal year actual expenditures were \$1,100,000,000. The number of pupils in elementary and secondary schools (at end of each school year) are shown in the accompanying table.

ELEMENTARY AND SECONDARY SCHOOL ATTENDANCE

	Elementary schools	Secondary schools
1914 .....	7,236,000	563,500
1929 .....	10,452,200	1,444,900
1930 .....	11,775,500	1,599,200
1931 .....	17,342,300	1,980,200

Students in higher educational, trade and vocational institutions (in thousands, at end of each education year) are enumerated in the table on page 800.

In 1929-30 it was announced that 62.6 per cent of the population 10 years of age and over was literate. For 1913 the figure was 33 per cent.

**PRODUCTION, ETC.** Land and natural resources are held in trust by the government for the general population, and may not be acquired by pri-

# EDUCATIONAL, TRADE, AND VOCATIONAL SCHOOL ATTENDANCE

vate title. Every citizen is entitled to secure land for cultivation, the form of tenure being that of perpetual leasehold. Natural resources are exploited by State trusts, by mixed companies, under concession, in which the State has a participating interest; or by private companies.

The adoption by the Soviet Congress in May, 1929, of an ambitious five-year plan for economic development was considered the most important constructive step since the revolution. (For summary of the plan, see 1929 YEAR BOOK).

In view of the progress made in 1928-29, the "control figures" for 1929-30 were revised upward on the basis of completing the Five-Year Plan in four years. In the original plan the increase of the industrial output for 1929-30 was set at 21.5 per cent. It was revised to 31.5 per cent. The actual result, 24.6 per cent, while comfortably above the original plan, was well below the ambitious new goal. As a result of the first two years under the Five-Year Plan the industrial output was increased about 56 per cent. The original schedule called for an increase of 47.5 per cent. The output for 1930 was double that of 1913. The production of large-scale industry in the calendar year 1931 was valued at 27,100,000,000 rubles (\$14,000,000,000), or 21.7 per cent more than in 1930 (1 ruble = \$0.5146 in the U.S.S.R.).

Beginning Jan. 1, 1931, the fiscal year was changed to coincide with the calendar year (instead of ending September, 30), so the intervening period Oct. 1 to Dec. 31, 1930, was made a "special quarter." During this quarter the increase in industrial output was 20 per cent as compared with the same period of 1929.

The original Five-Year Plan called for an increase of 22.1 per cent in the output of industry during the fiscal year 1930-31. The "control figures" for 1931 stepped up the tempo considerably, fixing the goal for 1931 at 46 per cent above the output for 1930. In some of the heavy industries the poor transport facilities were responsible for a disappointing showing. In iron and steel production the output for the year was below the same period of 1930 owing to slow delivery of ore and fuel at the mills, and the coal output for the period showed little advance over 1930 owing to congestion at the mines.

However, the 1931 output of large-scale industry was 38 per cent above the figure set for the third year of the Five-Year Plan. Percentage increases in the value of output over 1930 were reported as follows: Heavy industry, 28.7; lumber industry, 12.6; light industry, 13; food, 26.4. Industry as a whole fell below the "control figure" for 1931. The net income of all branches of national economy was estimated at 37,800,000,000 rubles (\$19,500,000,000), in 1926-27 prices, or 25,500,000,000 rubles in pre-war prices. According to estimates of Soviet economists, the Soviet Union, which in 1928 ranked fifth in volume of industrial production, by August, 1931, ranked second to the United States, having outstripped

Germany, Great Britain, and France in output.

During 1931 Soviet industries began the production of 76 different types of machinery never produced in Russia before, for the most part agricultural machinery. Output of tractors for the 12 months was over 40,200, compared with 13,400 for the entire year 1930. During 1931, more than 225 new industrial enterprises started operations, among them the Kharkov tractor plant, with an eventual capacity of 50,000 to 60,000 tractors annually, and the reconstructed Am plant in Moscow, scheduled to turn out 10,000 motor trucks in 1932. Other giant plants approaching completion or in partial operation towards the end of the year were the Nizhni-Novgorod automobile plant, with an eventual capacity of 94,000 motor trucks and 50,000 passenger cars annually; the tractor plant at Cheliabinsk, with an eventual capacity of 40,000 caterpillar-type tractors annually, and the combine plant at Saratov. The first blast furnaces were in operation both at the Magnitogorsk steel plant, in the southern Urals, with an eventual capacity of 2,600,000 metric tons of pig iron annually, and the Kuznetsk steel plant in Siberia, with an eventual capacity of 1,100,000 tons.

The "socialized sector" in agriculture doubled in size in 1931. By autumn 60 per cent of all peasant farms were organized in collectives, as compared with 30 per cent the previous year.

Preliminary estimates fixed the total sown area for 1931 at 137,000,000 hectares, of which the grain area was approximately 110,000,000 hectares. The respective figures for 1930 were 127,700,000 hectares and 102,614,000 hectares. State grain collections up to the end of 1931 were reported to be 89.6 per cent of the total scheduled in the Five-Year Plan, although 3.1 per cent more than the 1930 total. From these figures, it was estimated that the total grain collections to Dec. 31, 1931, were about 22,370,000 metric tons, compared with 21,700,000 tons in 1930.

The grain crop of 1930 was 87,300,000 metric tons, as compared with 76,200,000 metric tons the previous year and the pre-war average of 75,000,000 to 80,000,000 metric tons. Grain exports, which were negligible in 1928 and 1929, were resumed in the summer of 1930. For the fiscal year 1929-30 they were 2,215,437 metric tons. The pre-war average was about 11,000,000 metric tons. Up to June 30, 1931, exports of wheat from the 1930 crop amounted to nearly 3,500,000 metric tons (120,000,000 bushels). See AGRICULTURE under *World Agriculture*.

The sum of \$3,847,000,000 was allotted for capital investment for industry and electrification in 1931, as compared with \$2,300,000,000 expended in 1929-30.

Production of coal by the United Coal Industry in 1931 was 56,000,000 metric tons, as compared with 40,570,000 metric tons in 1928-29; 28,356,000 tons in 1913. The U.S.S.R. ranked second among oil-producing countries, with a production of 22,334,000 metric tons during 1931, as compared with 7,200,000 during 1925 and 9,215,911 in 1913. Statistics of iron and steel production are as follows:

## IRON AND STEEL PRODUCTION [Thousands of metric tons]

	1931 *	1929-30	1928-29	1913
Pig Iron .....	4,900	4,982	4,018	4,208
Steel .....	5,800	5,552	4,723	4,247
Rolled Iron .....	4,000	4,440	4,018	8,509

\* Preliminary.

On Aug. 1, 1931, it was announced that the seven-hour day, which was being introduced gradually, applied to 70 per cent of the workers. Workers employed in industry in the Soviet Union (except small-scale plants with less than 30 operatives, or less than 15 operatives plus power) increased from 2,690,000 in 1928 to 2,921,000 in 1929 and 3,642,000 in 1930. Unemployment, which reached a peak of 1,741,000 in April, 1929, was rapidly dissipated as the construction projects under the Five-Year Plan took shape. By the fall of 1930 the Soviet authorities reported an increasing labor shortage, especially in the more skilled occupations. During 1931 it was necessary to engage several thousand skilled workers from foreign countries. Some 6500 were from the United States. Late in 1930 the government withdrew the benefits of unemployment relief from persons who habitually refused work.

COMMERCE. The foreign trade turnover for recent years is shown in the accompanying table.

#### SOVIET FOREIGN TRADE, 1925-30 \*

	Exports	Imports	Total
1924-25 . .	\$296,125,000	\$370,800,000	\$666,925,000
1925-26 . .	348,447,000	389,546,000	737,993,000
1926-27 . .	396,807,500	386,989,000	783,796,500
1927-28 . .	398,504,000	486,523,000	885,027,000

1929-30 . .	516,117,550	550,351,660	1,066,469,210
1930 <sup>b</sup> . . . .	533,700,000	545,300,000	1,079,000,000

\* The fiscal year, covering the period from November 1 to September 30, was changed on Jan. 1, 1931, to coincide with the calendar year.

<sup>b</sup> The 1930 figures (calendar year) are from the U. S. Department of Commerce.

The principal Soviet exports in 1929-30 were oil products \$80,000,000, grain \$59,000,000, lumber and plywood \$51,000,000, furs \$42,000,000. The principal imports were machinery and equipment \$215,000,000, cotton \$33,000,000, and iron and steel \$31,000,000. Soviet trade with the six principal countries is shown in the accompanying table.

#### SOVIET FOREIGN TRADE, BY COUNTRIES

[In thousands of rubles; ruble = \$0.5146]

<sup>a</sup> Including flour valued at \$20,000,000 purchased because of the poor harvest of 1924.

<sup>b</sup> Preliminary.

FINANCE. The budget for 1932 envisaged revenues of 27,500,000,000 rubles and expenditures of

27,000,000,000 rubles. Since 1923-24 each budget has produced a surplus of revenues over expenditures. Revenues in classified form in budgets of the past three years in thousands of rubles (one ruble equals \$0.5146 at par of exchange) are shown in the accompanying table.

#### SOVIET REVENUE BUDGETS

	1927-28	1928-29	1929-30
Taxes and excises . . .	3,255,663	3,995,395	5,951,000
State properties and establishments . . . .	717,870	808,940	1,882,000
Transport and communications . . . . .	2,101,574	2,277,346	3,363,000
State loans and other	875,806	955,208	1,331,000
Total . . . . .	6,950,913	8,036,889	12,527,000

Preliminary returns on 1931 budget operations, published by the Soviet Commissar for Finance Dec. 25, 1931, showed revenues and expenditures balancing at 20,450,000,000 rubles (about \$10,530,000,000), compared with estimated revenues of 21,770,000,000 rubles. Revenues included 2,954,200,000 in state loans. Of the total expenditures in 1931, 15,300 million rubles, or 75 per cent, went toward financing the national economy; 1200 millions, or over 6 per cent, for social and cultural work; and 1100 millions, or 6 per cent, for defense. The total internal state debt increased from 1,422,100,000 rubles on Oct. 1, 1928, to 3,432,200,000 rubles on Oct. 1, 1930.

Currency circulation Nov. 29, 1931, was 5200 million rubles, as compared with 4302 million rubles Jan. 1, 1931, and 2773 million rubles Jan. 1, 1930. During the year ending Sept. 30, 1931, the gold fund in the State Bank increased 39 per cent. Savings deposits Feb. 1, 1931, were 790,400,000 rubles, as compared with 597,600,000 rubles Feb. 1, 1930.

TRANSPORT. In 1930 the railway system of the Soviet Union comprised 79,934 kilometers (49,174 miles) of line as compared with 77,127 kilometers the previous year (1 kilometer equals 0.621 miles). Railway operations in 1929-30 aggregated 138.0 billion ton-kilometers of freight, as compared with 106.7 billion ton-kilometers in 1928-29. A total of 234,900,000 metric tons of freight and 510,200,000 passengers were carried in 1929-30, or increases of 34 and 50 per cent respectively, over the figures for 1928-29. Despite the great increase in operations, the railways failed to cope adequately with the tremendous demands placed on them by the expansion of industry and agriculture. In the fall of 1931 A. A. Andreyev, one of the most conspicuous of the younger Soviet executives, was made Commissar for Transportation.

SHIPPING. The Soviet mercantile marine in 1930 consisted of 317 vessels of 600,000 tons capacity, as compared with 284 vessels of 495,000 tons in 1929. In 1931, 500,000 tons of additional shipping were under construction in Soviet yards. The freight turnover in Soviet ports in 1930 was 46,500,000 tons, as against 44,500,000 tons in 1913.

ELECTRIFICATION. Under the Five-Year Plan a system of 64 regional power plants with a capacity of 5,300,000 kilowatts was to be completed. By the close of 1930, 31 regional plants with a total capacity of 1,300,000 kilowatts were in operation. The giant plant on the Dnieper River, which was to have an eventual capacity of 558,000 kilowatts (over 750,000 horse power) was nearing completion at the close of 1931. Partial operation was scheduled for the summer of 1932.

Construction of a second giant power station at Kemerovo, Siberia, was begun at the close of 1930. Its capacity was to be 560,000 kilowatts. The total Russian output of electric power in millions of kilowatt hours was: 1913, 1945; 1927-28, 5105; 1928-29, 6208; 1931, 10,600.

GOVERNMENT. A description of the constitution of the Union of Soviet Socialist Republics will be found in the YEAR BOOK for 1923. Toward the close of 1931 the Council of People's Commissars was composed as follows: Chairman of the Council, V. M. Molotov; Vice Chairmen, J. E. Rudzutak, V. V. Kuibyshev, A. A. Andreyev; Commissar for Foreign Affairs, M. M. Litvinov; for Army and Navy, K. E. Voroshilov; for Internal Supply, A. I. Mikoyan; for Foreign Trade, A. Rosenholtz; for Transportation, A. A. Andreyev; for Water Transportation, N. M. Yanson; for Posts and Telegraphs, A. I. Rykov; for Finance, G. T. Grinko; for Workers' and Peasants' Inspection, J. E. Rudzutak; Chairman Supreme Economic Council, G. K. Ordjonikidze; Chairman State Planning Commission (Gosplan), V. V. Kuibyshev; Commissar for Agriculture, Y. A. Yakovlev; for Labor, A. M. Tsikhon. The chairmen of the Central Executive Committee were: M. J. Kalinin, G. J. Petrovsky, A. G. Chervikov, Ganzanfar Mussabekov, Netyrbay Aitakov, Faizulla Khodzhaev, Maksim Nusrutulla. These chairmen of the Central Executive Committee are the presidents of the constituent republics. Josef Stalin, General Secretary of the Russian Communist party, exercised the controlling influence in government and politics.

#### HISTORY

INTERNAL DEVELOPMENTS. The third and "crucial" year of the Five-Year Plan brought the Soviet régime both striking victories and severe repulses. Three major objectives of the plan were achieved—the political socialization of peasant holdings, the laying of foundations for an independent industrial system, and the completion of primary industrial plants in the interior. Despite slackness in some industries, the general advance in industrial and agricultural production continued. Finally, Soviet diplomacy aided by the dissensions of the Western European states effectively banished the threat of an economic boycott by the capitalist powers.

On the other hand, the Soviet effort to convert Russia overnight to a highly industrialized nation encountered three great obstacles. One was the world economic depression, which, by reducing the value of Soviet exports, cut down imports of much-needed foreign machinery and technical services, and forced a general slackening in the tempo of industrial development. Secondly, adverse weather conditions reduced the amount of grain available for export and the opposition of the peasants on collectivized farms made it difficult for the Government to ship abroad even the available export surplus. Thirdly, a lack of integration or balance in the rapidly expanding socialized economic structure became painfully evident.

The cumulative effect of these adverse factors was that the scarcity of consumption goods continued, arousing dissatisfaction among the masses. Furthermore, the reduced returns from exports, reflected in an increasingly unfavorable balance of trade, aroused fears in some quarters that the Soviet government would be forced to suspend payments on its foreign commercial

debts, variously estimated at from \$150,000,000 to \$450,000,000. This in turn threatened to reduce imports of foreign machinery, purchased partly on credit, which were essential to the planned development of the Soviet industrial structure. During the first six months of 1931, Soviet exports exceeded those for the same period of 1930 by 754,000 tons, but their value was \$63,730,000 less.

With these primary factors in view, it is possible to understand the full significance of the new economic policy introduced by Josef Stalin on June 23, 1931. Stalin's announcement was compared in importance to Lenin's "New Economic Policy" of ten years earlier. It caused a far-reaching revision of socialistic labor and industrial policies and methods in the direction of greater individual responsibility and of reward in proportion to the services rendered. As summarized by the *Associated Press*, Stalin's new programme called for: (1) The readjustment of wages to make the scale commensurate with the type of labor performed and the reduction of labor turnover; (2) meeting the shortage of industrial labor by the transfer of more peasants to industry as agriculture progressed toward mechanization; (4) improvement of the labor organization within industry to allow for the better distribution of labor and the elimination of "irresponsible methods"; (5) the more rapid development of skilled workmen, engineers, and technicians from among the working class; (6) the termination of the "class war" and the welcoming of specialists of the Czarist régime into industry on a full equality with other workers; (7) greatest development of interior sources of industry and of the piece-work system.

Another change instituted following Stalin's speech of June 23 was the formal abandonment in principle of the continuous-operation five-day week, with a staggered system of rest-days for the workers and everyday operation of machinery. Two years of trial had shown that in many industries the continuous production idea put too great a test on machinery. After experiments with various rearrangements, a basic six-day week with a uniform rest-day for both men and machinery was adopted. A normal six-hour work-day was planned under this schedule. Nominally the change went into effect December 1, but it was understood that the transition would be gradual and the new law was not mandatory for all industries. A series of later decrees inaugurated campaigns for the expansion of the livestock industry, greater discipline and technical knowledge among industrial workers, and the curbing of "kulak tendencies" among the peasants of the collective farms.

The new giant enterprises, the first of which were painfully slow in reaching a respectable rate of production, were making a better showing by the latter half of 1931.

Toward the end of the year, however, there were increasing indications that in 1932, the final year of the Five-Year Plan, production quotas would have to be revised downward. An emergency committee headed by V. V. Kuibyshev, chief of the State Planning Commission, was appointed October 18 to speed the mobilization of the food crops for export. The 1932 programme was adopted at a meeting of the Central Executive Committee commencing December 20. And a meeting of the Central Committee of the Russian Communist party was called by

Stalin, as Secretary General of the party, for Jan. 30, 1932, to discuss the preliminary programme for the second Five-Year Plan. The "control figures" for 1932 presented a general programme roughly equivalent to that projected for the fiscal year ending Sept. 30, 1933, which was the final year of the original Five-Year Plan.

Factional strife within the Communist party was relatively quiescent during the year. Stalin remained in complete control and the Right and Left elements in the party apparently made little effort to revive their opposition to his policies. Indeed, Rykov, Bukharin, Tomski, and other prominent leaders of the Right opposition which was crushed in 1930, were given important posts in the Government and the party presented a more united front than for a number of years. Nor was there trustworthy evidence of popular political unrest. The results of the annual party "cleansing," made known April 23, showed that of 2,040,658 enrolled Communists on February 1, 1,273,000 were examined as to their orthodoxy before party tribunals, about 100,000 were dismissed, and 156,000 were reprimanded and placed on probation for a year. Of the total party membership, 67 per cent were said to be wage earners, 22 per cent peasants, and 11 per cent professional persons.

At the sixth biennial All-Union Congress of Soviets, held in Moscow in March, the piece-work system for agricultural labor, tested with good results on the state farms, was widely applied to the collective farms. The Congress was attended by 1570 voting delegates (including 321 women) and 883 advisory delegates. Of the total delegates, 72.8 per cent were members of the Communist party, 2.4 per cent of the Communist Youth League, and 24.8 per cent non-party members. Sixty-six different nationalities within the Soviet Union were represented.

Several additions were made to the cabinet portfolios during the year. A Commissariat for Agriculture and a Commissariat for Water Transportation were created. The Commissariat for Trade was divided into a Commissariat for Foreign Trade and a Commissariat for Internal Transport. A. I. Rykov, who was ousted from the chairmanship of the Council of Commissars in 1930 as a result of the intra-party struggle in which he opposed Stalin's plan for speeding up industrial production and collectivization, returned to the Council in 1931 as Commissar for Posts and Telegraphs.

**FOREIGN RELATIONS.** Emboldened by the steady internal progress of the Soviet Union, the Commissar for Foreign Affairs played a more important rôle in world, and particularly European, politics than had been possible before. Soviet foreign policy during the year was primarily economic in character. It aimed to promote the Five-Year Plan through the maintenance of peace, the opening up of new markets to Soviet exports, and the securing of liberal credit terms for Soviet purchases abroad. The promotion of a world communist revolution, which Lenin considered essential to the successful establishment of a communist state in Russia, was, at least temporarily, abandoned. The Third International still functioned at Moscow, with the tacit support and approval of the Soviet government. But its world activities were subordinated to the exigencies of the Soviet Union's political situation.

During the first months of the year Soviet diplomacy, aided by the dissensions of the capital-

ist powers, succeeded in banishing a major threat to the Five-Year Plan and socialist reconstruction in Russia. A movement among the Western powers headed by France for an economic boycott of the Soviet Union had reached serious proportions. It was stimulated by damage to certain foreign business interests caused by cheap Russian exports and by the widely expressed fear that the complete industrialization of Russia would enable her to drive many capitalist industries to the wall. France and Belgium had introduced a licensing system for many Soviet products. Austria, Hungary, and Rumania had imposed restrictions on Soviet exports; similar action was contemplated by Yugoslavia and other states. In the United States, the Commissioner of Customs on Feb. 10, 1931, indirectly banned lumber and pulpwood imports from the four chief exporting districts of Northern Russia on the ground that convict labor was employed in the labor camps. On February 27, Canada imposed a ban on Soviet coal, lumber, pulpwood, furs, and asbestos; the Soviet government retaliated April 19 by prohibiting the purchases of Canadian goods or use of Canadian shipping.

The boycott movement fell to the ground when it became evident that Germany, Italy, and Great Britain were reaping the benefits by increasing their trade with the Soviet Union. Both Germany and Italy in April concluded important trade agreements with Russia, advancing liberal credits in return for larger Soviet orders. More liberal credit terms were secured in Great Britain, while in the United States boycott propaganda was unsuccessful in the attempt to bar manganese and other Russian products. The Soviet-German agreement, signed at Berlin, April 14, pledged the Soviet Union to place with German firms additional orders totaling 300,000,000 marks (about \$72,000,000) by Aug. 31, 1931. In return, credit periods ranging from 13 to 28.8 months were granted by German industrialists. The agreement with Italy provided for government-guaranteed credits of 75 per cent on Soviet orders up to 350,000,000 lire (about \$18,400,000), the credits extending over 25 months after delivery. A treaty of commerce and navigation was signed with Turkey in March, and a new trade treaty with Persia on October 27.

The political foundation for the trade treaties with Italy and Germany had been laid by Foreign Commissar Litvinov when he supported the German delegation as against France at the December, 1930, session of the Preparatory Disarmament Commission in Geneva. Italy also aligned herself with Germany and the Soviet Union at Geneva, due undoubtedly to the increasing Franco-Italian tension. This trend toward an entente among the Soviet Union, Germany, and Italy aroused much alarm among students of European politics.

According to Walter Duranty, the well-informed Moscow correspondent of the *New York Times*, the Soviet policy in support of an anti-Versailles Treaty bloc changed sharply in the spring of 1931 when the influence of the British Foreign Office was exerted in Berlin and Rome to check this trend. There followed Litvinov's proposal before the European Union Commission of the League of Nations (May 18, 1931) for an "economic non-aggression pact" to allow friendly competition between communism and capitalism. See UNITED STATES OF EUROPE; LEAGUE OF NATIONS.

Meanwhile the anti-treaty bloc had been completely—although possibly only temporarily—dissolved as a result of the tightening of the economic crisis and the threatened financial collapse of Germany. With the sharp increase in French influence (see FRANCE under *History*), the Conservative trend in Great Britain, the increasing difficulty in finding markets for Soviet exports, and, later, the possibility of dangerous complications in Manchuria, Litvinov found it advisable to cultivate friendly relations with France and her allies, while striving to maintain a certain community of interest with Germany and Italy. Negotiations were inaugurated and on July 11 the French government set aside its decree of Oct. 3, 1930, placing special restrictions on Soviet imports. Reciprocally the Soviet government removed its retaliatory restrictions against imports from France. A non-aggression pact between the two countries was initiated in the autumn but aroused strong objection in the French press when published by the *Echo de Paris* Dec. 21, 1931. The pact had not been ratified by the end of the year.

The Franco-Soviet negotiations were accompanied by the resumption in August of conversations with the Polish Foreign Office looking toward a non-aggression pact. These negotiations had been carried on intermittently for nine years; their success depended largely upon the attitude of France and on the status of Polish-German relations. Russia now had similar non-aggression pacts with Germany, Turkey, Lithuania, Persia, and Afghanistan; the Afghan treaty was signed at Kabul in June, 1931, and in the same month the German-Soviet neutrality and economic non-aggression treaty of 1926 was renewed in Moscow. Toward the end of October a treaty of friendship and neutrality, concluded with Turkey in 1925, was renewed for a five-year period. The Soviet-Lithuanian treaty of 1926 was renewed in May, 1931, for five years (see LITHUANIA).

In the Far East, the strife between Japanese and Chinese forces in Manchuria caused the Soviet government grave concern, particularly when the fighting moved toward the Chinese Eastern Railway (jointly operated by Soviet and Chinese staffs) and the Japanese forces captured Tsitsihar. While this concern was reflected in the Soviet press, the Soviet Foreign Office announced during October and November that the Soviet government was observing strict noninterference in the struggle, and would maintain a policy of peace. Relations with Finland remained strained, largely as a result of the development of the anti-Communist Lapuan movement in Finland.

The Soviet Union continued its economic penetration of Chinese Turkestan, Mongolia, northern Manchuria, Afghanistan, Persia, and Turkey. Motor roads were being built into Chinese Turkestan from the Turk-Sib Railway completed in 1930, opening up a trade area largely inaccessible from China proper. The increase of Soviet influence in Mongolia is described in the article MONGOLIA. Although the negotiations with China with regard to the Khabarovsk protocol of 1929 had collapsed, the Chinese Eastern Railway was operated in accordance with the Russian terms.

An important development of Soviet relations with foreign countries during the year was a decided change in the trend of Soviet foreign trade, which was probably implicit in the changed credit situation. While credit terms on Soviet orders were improved in Germany, Italy, and

Great Britain, in the United States, in line with the general credit stringency and as a result of the uncertainty about import restrictions and proposed embargo legislation, they were markedly less favorable. As a result of these conditions Germany definitely displaced the United States in 1931 as the principal country furnishing Soviet imports. During 1931 Soviet orders placed in Germany aggregated \$219,184,000, compared with \$135,060,000 in 1930. Soviet orders placed in Great Britain aggregated \$14,973,118, against \$12,398,834 in 1930. Soviet orders placed in the United States in 1931 were valued at \$51,232,000, compared with \$149,223,000 in the year 1929-30.

UNIONS. See TRADE UNIONS.

**UNITARIAN CHURCH.** A denomination believing in one God in one person and, consequently, in the purely human personality of Jesus. The Unitarian Church in the United States developed as a modification of Congregationalism in New England, which led to the formation of the American Unitarian Association in 1825. This association is the executive organization of the Unitarian churches to-day. Each church is an independent congregation, and the denomination requires no adherence to a formal creed in its worshipers and no profession of a particular doctrine in its ministers.

The one hundred and sixth annual meeting of the American Unitarian Association was held in Tremont Temple, Boston, May 19, 1931. According to latest available statistics, the denomination had 419 churches, 376 of which were active; 127,320 members; 3170 Sunday-school officers and teachers and 20,823 pupils. The denominational publications are the *Christian Register* (weekly) and the *Unitarian News Letter*. The officers of the association in 1931 were: President, the Rev. Louis C. Cornish, D.D.; secretary, the Rev. Walter R. Hunt, D.D.; treasurer, Henry H. Fuller. Headquarters, 25 Beacon Street, Boston.

UNITAS FRATrum. See MORAVIANS.

**UNITED BRETHREN IN CHRIST.** A denomination which resulted from the religious awakening of Philip William Otterbein, Martin Boehm, and their co-workers. Its theology is Arminian, while its beliefs are those of the earlier, evangelical denominations; baptism is ad-

ministered by any mode desired by the applicant. The church is divided into 33 annual conferences, including those in China, Japan, the Philippines, Porto Rico, and West Africa. In 1931 there were 1681 charges, 2985 organized churches, 1856 active ministers, 409,407 church members, 2775 Sunday schools with an enrollment of 425,008, including teachers and officers. The amount raised by the church for all purposes in 1931 was \$5,457,388. Conference missionary appropriations amounted to \$86,766, and general home missionary appropriations to \$154,635.

The church maintains the following educational institutions: Bonebrake Theological Seminary, Dayton, Ohio; Otterbein College, Westerville, Ohio; Lebanon Valley College, Annville, Pa.; Indiana Central College, Indianapolis, Ind.; York College, York, Nebr.; and Shenandoah College, Dayton, Va. *The Religious Telescope* is the official paper of the church, and *The Watchword* the young people's paper. The United Brethren publishing house (the Otterbein Press) and the church headquarters are in Dayton, Ohio.

**UNITED CHURCH OF CANADA, THE.** See CANADA, THE UNITED CHURCH OF.

**UNITED STATES. AREA AND POPULATION.** The area of the United States, exclusive of Alaska, is 3,026,789 square miles. The area of the non-contiguous lands, which include Alaska, Guam, and certain Pacific Islands, Hawaii, the Panama Canal Zone, The Philippine Islands, Porto Rico, American Samoa, and the Virgin Islands, is 711,582 square miles. Thus, the total area of the United States and its possessions is 3,738,371 square miles. The population of the Continental United States (understood to exclude Alaska) was 122,775,046 on Apr. 1, 1930, by the Fifteenth Federal Census. According to the previous census it was 105,710,620 on Jan. 1, 1920. The populations of the several States and insular possessions in 1930 may be found in the articles on each. See also CENSUS.

According to a preliminary count made by the Bureau of the Census, the number of "families" in the United States on Apr. 1, 1930, was 29,980,146. By the term was understood any group of persons living together as one household, and each person living alone was counted as a "family." The average number in such groups was 4.1 persons in 1930; it had been 4.3 in 1920. The average varied for States, from 4.9 for North Carolina to 3.5 for California and Nevada.

As to color or race, the population of 1930 had, for its chief element, 108,864,207 whites. These did not include persons of Mexican origin, who had, however, been classed as whites in the Census of 1920. The number of whites in 1920, minus the estimated total of 700,541 Mexicans in the country at that time, was 94,120,374. On this basis the white population increased by 15.7 per cent for the decade. The Negro population, next in total number, was 11,890,498 for 1930, as against 10,463,131 for 1920; it increased in the decade by 13.6 per cent. Mexicans numbered 1,422,533 in 1930, and formed the third largest separately classed racial element; Indians numbered 332,397, Chinese 74,954, Japanese 138,834, Filipinos 45,208, Hindus 3130, Koreans 1860 and all others 780.

The proportion of males to females declined, for the whole population, to 102.5 per cent (1930), from 104.0 (1920). It varied by sections, being, in 1930, 102.2 in the North, 100.9 in the South and 109.5 in the West. It varied by origin also,

being 101.1 for native whites, 115.1 for foreign-born whites and only 97 for Negroes, among whom the females predominated.

Persons of foreign birth in the United States on Apr. 1, 1930, numbered 14,204,149, as compared with 13,920,692 in 1920. This represents an increase of 283,547 or 2.0 per cent, which was more than accounted for by the increased number of females. The number of foreign-born females showed an increase over 1920 of 5.0 per cent, while males decreased 0.4 per cent. Decreases in the number of foreign-born occurred in all geographic regions except the Middle Atlantic, East North Central, and Pacific. The farm population in the United States showed a net increase in 1930 for the first time since 1922.

**AGRICULTURE.** See AGRICULTURE; AGRICULTURE, U. S. DEPARTMENT OF; sections on *Agriculture* under the various States; and articles on CORN, WHEAT, etc.

**INDUSTRY AND COMMERCE.** The year presented on the whole a continuation of the recession in business that had marked its predecessor. With relatively few exceptions as to regions, individual industries, or general divisions of activity, the decline continued in prices, employment, the quantity of production and the amount of marketing. See BUSINESS REVIEW; FINANCIAL REVIEW. The leading manufacturing industries of the United States will be found discussed under separate articles, such as AUTOMOBILES; BOOTS AND SHOES; etc. For engineering works, see BRIDGES; CANALS; PORTS AND HARBORS; SHIPBUILDING, etc. See also CHEMISTRY, INDUSTRIAL.

**FOREIGN TRADE.** The commerce with other nations, which had been sharply affected in 1930 by the passage of the United States Revenue (tariff) Act of that year, was again severely reduced in 1931, by the world depression and other causes. One of these was the imposition of higher tariffs by Great Britain and a number of other nations. The impairment of a number of the foreign monetary systems likewise had a depressing influence.

As viewed month by month, the foreign trade of the country shrank in all but three of the successive months of 1931, as to exports, and in all but the same number, but not entirely identical months, as to imports. The balance of exports tended to diminish. For August imports were actually higher, this partly for seasonal reasons; and for December, the excess of exports was but \$30,638,000, as against \$66,220,000 for December of 1930.

FOREIGN TRADE, BY MONTHS  
[000 omitted]

	Merchandise Exports		Merchandise Imports	
	1931	1930	1931	1930
Jan.	\$ 249,598	\$ 410,849	\$ 183,148	\$ 310,968
Feb.	224,346	848,852	174,946	281,707
March	285,901	869,549	210,202	300,460
April	215,077	851,732	185,706	307,824
May	203,970	820,085	179,694	284,683
June	187,077	294,701	173,455	250,343
July	180,724	266,761	174,460	220,558
Aug.	164,808	297,765	166,679	218,417
Sept.	180,229	312,207	170,884	226,352
Oct.	204,900	326,896	168,708	247,967
Nov.	193,555	288,987	149,480	203,593
Dec.	183,578	274,856	152,940	208,686
Totals	2,423,759	8,848,181	2,089,802	3,060,908

The imports of gold in 1931 were \$612,119,000; exports totaled \$466,794,000. See GOLD.

**MINERAL PRODUCTION.** The article MINERAL PRODUCTION AND RESOURCES gives the latest avail-

able official figures for mineral production in the United States. The more important minerals mined in the United States are treated in separate articles. There are also paragraphs on mineral production in the articles on the individual States.

**RAILWAYS.** See separate article on **RAILWAYS**.

**SHIPPING.** See articles **SHIPPING** and **SHIP-BUILDING**.

**FINANCE.** See the article **PUBLIC FINANCE**.

**EDUCATION.** See the articles **EDUCATION IN THE UNITED STATES** and **UNIVERSITIES AND COLLEGES**. Separate articles on the most important universities and colleges also are given under their respective titles. Sections on education are included in the articles on the several States.

#### ADMINISTRATION

**THE PRESIDENT.** President Hoover was mainly occupied throughout the year with details of the conduct of Federal policies dealing with the economic depression through measures of public relief, of Federal and independent finance and of foreign relations. The chief of these are related elsewhere (see *Financial Policies*, below, and for his messages to Congress and his treatment of bills, *Legislation*).

President Hoover had promoted, at the close of 1930, an agreement among the chief railroad companies of the Northeast (exclusive of New England) upon a plan for their consolidation into four systems, in the interest of economical operation. But he refrained from pressing this plan upon the Interstate Commerce Commission, and the matter remained unsettled until the end of 1931. See **RAILWAYS**. On January 1 the President proclaimed the London Treaty for the Limitation of Naval Armaments to be in force, and praised it as likely "to stimulate further peaceful endeavors during the coming year." He afterward urged the need of further steps to reduce armaments, notably in an address of May 4 to visiting members of the International Chamber of Commerce. Leaving Washington on March 17, he made a brief trip to Porto Rico and the Virgin Islands on board the battleship *Arizona*.

At Valley Forge, on Memorial Day, he delivered an address in which he compared the trials of the existing time with those that Washington's troops had endured on that spot, and exhorted the Nation to steadfastness. He initiated, late in July, the suggestion that Germany purchase from the United States great quantities of the latter's surplus wheat and cotton on liberal credit, but the proposal encountered much opposition among growers of these commodities, who did not wish to see the Government's holdings exclude theirs from an important section of the export market.

In June President Hoover made a trip through West Virginia, Kentucky, and Ohio, interspersed with train-platform talks. Proceeding to Indiana, he delivered at Indianapolis an address reviewing his administration and declaring it his policy to lead the country out of economic difficulty while holding fast to the doctrine of individualism. This utterance, in view of the dissatisfaction of Progressives and others with failure to take more radical Federal steps toward renewing economic activity, was taken as offering either a bid for Presidential candidacy in 1932 or, at the least, an appeal for conservative Republican support in the time to intervene. At Marion, O., on June 16, Mr. Hoover attended

the dedicatory exercises at the tomb of Warren G. Harding and made an address in which he spoke of the late President Harding as a "kindly and gentle spirit" who had been "betrayed by a few men whom he had trusted." On June 17, at the dedication of the reconstructed tomb of Abraham Lincoln, he again spoke, giving particular emphasis to the need for a more general respect of law, a subject that had been rendered particularly conspicuous in connection with the Prohibition law.

In response to agitation against short-sellers, which had lately been stirred up by severe declines in the prices of securities and commodities, Mr. Hoover issued on July 10 a statement condemning bear speculators and declaring that "if these gentlemen have that sense of patriotism which outruns their immediate profit . . . they will desist from their manipulations." This attack on short-sellers was widely controverted on the ground that the fall in prices was natural to the time and not the result of manipulation; and in view of subsequent further declines the prices of June later appeared high by comparison.

Events forced President Hoover, despite the declaration in favor of individual salvation made in his address of June 15, to issue his memorable statement of October 7 (see *Financial Policies*, below).

In a public statement of October 27, President Hoover declared that the problem of granting independence to the Philippine Islands was "one of time." See **PHILIPPINES** under *History*.

**FINANCIAL POLICIES.** Emergencies brought on by the economic depression compelled the Administration to carry on a number of exceedingly difficult and important financial policies. It had to meet the difficulties of the Federal Treasury, of the system of intergovernmental debts and reparations, of the upset in the international monetary situation brought about by British abandonment of gold payments, of the American railroads, of the domestic banking institutions, of its own burden of aid for agriculture and the unemployed, and, not least, of the urgent demands made on the Federal Government for financial assistance to one class or another.

No single controlling rule of action to cover all these requirements was adopted, but the President in some cases and, in others, one or other of the administrative organizations dealt with matters as they arose. The most difficult period in the course of the year opened early in June, when it became apparent that Germany was unlikely to continue payments under the Young Plan.

**Intergovernmental Moratorium.** Secretary of State Stimson and Secretary of the Treasury Mellon had both gone to Europe, ostensibly for vacations, and were there early in June. President Hoover, apparently apprised that conditions in Germany required immediate action, prepared a statement proposing that all governments involved in the arrangements for intergovernmental payments consent immediately to a moratorium of a year. He obtained privately the approval of a considerable number of the leading Senators of either party for this proposal. It was then published on June 20, and took provisional effect as of July 1 through a protocol signed at London on August 11. The French government obtained certain stipulations for the protection of its particular interest in maintenance of the Young Plan.

The direct financial effect of the moratorium on the finances of the United States was to cut off for the fiscal year 1932, at its outset, receipts in repayment of principal and in payment of interest, of \$159,520,000 from Great Britain, \$50,000,000 from France, \$17,706,125 from Italy, and \$21,774,000 from others, plus all or much of a yearly payment of \$15,745,020 from Germany. The moratorium, however, remained subject to necessary validating action on the part of Congress. President Hoover determined against calling a special session for this purpose, and the required enactment accordingly awaited the attention of the long session convening on December 7.

The immediate effect of the President's proceeding on the economic situation abroad was not what had been hoped. A rush to extract short-term credits lodged in Germany was precipitated; the Darmstaedter und Nationalbank suspended on July 13, compelling the German government to close the exchanges, stop dealings in bills of exchange and declare a temporary closure of banks in general. The effect of these adverse developments on the United States was to bring about some of the very misfortunes that the moratorium had been designed to avoid. A great total in American short-term credits placed in Germany became for the time uncollectible.

*The Hoover Credit Memorandum.* It thus became necessary for the Hoover Administration to take a further step with regard to the German situation. On July 21 the so-called Hoover credit memorandum was issued by the Department of State and was presented to the London conference of the powers then discussing plans to stabilize German financial conditions. This memorandum diagnosed the supervening trouble in Germany as a flight of capital from that country, bearing on the short-term credits for which it was indebted. The memorandum recommended that the governments of the chief financial nations encourage their bankers to facilitate the "maintenance for an adequate period" of outstanding credit lines in Germany.

Steps were taken in harmony with this recommendation. They included the formation of an international committee, set up by the Bank for International Settlements and having Albert H. Wiggin as American member, to inquire into the immediate credit needs of Germany. See REPARATIONS and WAR DEBTS; GERMANY and FRANCE under *History*.

*Support for Sterling.* The collapse of the British monetary system followed close upon the German credit panic and brought domestic consequences far more trying. The Administration refrained from any public act, comparable to the moratorium proposal, for the financial succor of Great Britain. The Federal Reserve Bank of New York, however, granted a credit of \$125,000,000 on August 1 to the Bank of England, which, with other banking credit later granted, proved inadequate to prevent the Bank of England's forced suspension of gold payments on September 20. See GREAT BRITAIN under *History*.

*Assistance to American Banks.* There followed, in the American market a collapse of securities, in which issues of bonds of the character proper to bank investment became in many cases virtually unmarketable for blocks of even moderate size. The solvency of many banks had been gradually impaired during the year. The lack of a market for many bonds of strict investment character had rendered it necessary for Controller

of the Currency Pole as early as June to permit National banks to report holdings of bonds at "full" value or at partial deduction for falling price, in order that the banks might make satisfactory reports of condition. This course became no longer sufficient.

President Hoover therefore issued on October 7 through the press a reassuring statement carrying a definite proposal for the succor of embarrassed banks. This statement condemned the "foolish withdrawal of currency" from the banks and declared "apprehension wholly unjustified in view of the thousandfold resources we have for meeting any demand." The statement proposed the formation of a National Credit Corporation to rediscount "banking assets not now eligible for rediscount" (such as loans on security collateral); advances from Federal Reserve Banks on assets of closed banks; permission to the Federal Reserve Banks, through act of Congress, to increase the field of credit eligible for rediscount; the creation, "if necessity requires" of a Finance Corporation similar to the defunct War Finance Corporation, with public funds at its command; and appropriation through Congress of Federal funds for further subscription to stock of Federal Land Banks, for the promotion of additional credit accommodation to farmers.

Immediate steps were taken, through the Federal Reserve system, to bring into being the first of these proposals, that of the National Credit Corporation. This body was chartered in Delaware, with a capital of \$1200, of which \$100 was allotted to each of the Federal Reserve districts. The organization then proceeded to promote the creation of subsidiary regional groups and with the aid of these it sought subscriptions to a proposed issue of its notes, the proceeds of which were to be used to furnish the cash required for its rediscounting operations. By the middle of November the greater part of \$500,000,000 had been subscribed. The subscriptions were prorated to banks in general on the basis of 2 per cent of each institution's loans and discounts. While subscriptions were, in form, voluntary, they were stimulated by announcement that the President expected every bank to subscribe.

*Conference with Premier Laval.* Outward financial happenings in the United States and abroad promoted an outward movement of gold from the United States somewhat similar to that from London which had preceded the collapse of British currency. The exported gold went chiefly to Paris, which was already embarrassingly overstocked with the metal, and thus it became advisable for the Administration at Washington and the French Government to take steps in coöperation. A move for such action was made by Premier Laval of France. In the latter part of October he made a brief trip to the United States and spent the better part of two days in personal conference with President Hoover at the White House. The two issued on October 25 a joint statement, asserting that they had discussed the economic situation with particular reference to international relations, reduction of armaments, payment of intergovernmental debts, and the stabilization of international exchange. It was further declared that both agreed that the European powers chiefly concerned should take the initiative as to further action on postponement of intergovernmental payments and that both were convinced of the importance of maintaining monetary stability. Shortly after the conference the withdrawal of

gold from the United States to France slackened. See FRANCE under *History*.

**Home Loan Discount Banks.** Extending his efforts at the formulation of financial relief to the field of real-estate mortgages, in which the savings banks and building-loan institutions of the country faced an embarrassing situation, President Hoover, after consultation with authorities on mortgages, issued on November 13 a new public statement, declaring that he would propose to Congress the creation of a system of home-loan discount banks. The proposed banks had for their stated purpose the relief of financial strain on building-loan associations, saving banks, and other mortgage-holding institutions, and the promotion of home ownership. The total capital of twelve proposed mortgage banks was to be, initially, some \$150,000,000, and by issuing their bonds they were designed to rediscount some \$1,800,000,000 of mortgages. They were not directly to acquire mortgages, and were to rediscount those of not over \$15,000 of principal. See BANKS AND BANKING.

**President Against Cash Bonus.** A number of proposals for the use of Federal appropriations to benefit one or another particular group of persons were agitated. The most urgent of these was a campaign to organize the sentiment of the American Legion (q.v) in support of a demand for the immediate payment in cash of the face value of the Adjusted Service Compensation Certificates. President Hoover took the vigorous course of going to Detroit and addressing the annual convention of the Legion on September 21. He represented the proposed cash prepayment of the Bonus as a scheme that would put upon the Federal Treasury a burden beyond its ability to meet in a period of reduced revenue and high expenditures. The convention accordingly voted down its Bonus resolution.

**Farm Board and Crop Surplus.** The Farm Board, loaded up with wheat and cotton bought in the effort to sustain the prices for the crops of 1930, was in no position, for lack of further funds, to sustain the crops of 1931. It accordingly announced on March 23 that it would not continue its purchases into the new crop months. President Hoover did not intervene, and was reported as holding the view that the Board had full power to shape its own policy. With the advent of the new crop season there followed severe declines in the prices of wheat and cotton, both of which, losing the support of Federal purchases, fell to unprecedented levels in the course of the summer. The Board, which faced heavy carrying charges on its stocks of wheat and cotton, became a potential seller of these commodities in competition with the new-crop producers and handlers.

Pressure was then brought on the Administration to prevent the Board, by its sales, from crowding the new crops out of the market. President Hoover thereupon communicated with the Board, to suggest, in the terms of the White House statement on the subject, "a more definite policy." The Farm Board yielded to the extent of declaring in a statement of June 30 that it would not attempt the anticipated unlimited selling at home and abroad, and would restrict itself to sales of 5,000,000 bushels of wheat a month, exclusive of certain contemplated sales to foreign governments, and that it would purchase new wheat with the proceeds of sales made "for the purpose of clearing trade channels."

Wheat sank thereafter to a closing price of 48

cents at Chicago for the July option, at the end of July. President Hoover announced on July 31 that the Government was "suggesting" through Ambassador Sackett to the Government of Germany that it might purchase from the Farm Board a substantial quantity of wheat and cotton on liberal credit. The negotiation of these sales was held up by divers difficulties, but an exchange of some of the Farm Board's wheat for Brazilian coffee was arranged with Brazil and, subsequently to the Yangtse flood the Nationalist Government of China at Nanking bought a large consignment of Farm Board wheat on long credit, agreeing on September 3 to take some 15,000,000 bushels.

With regard to cotton, the Farm Board on its own initiative addressed to the governors of the cotton States on August 12 an appeal for the plowing under of one-third of the growing cotton. This suggestion proved impracticable and was strongly opposed in many of the States involved. It had no effect to prevent the gathering in the autumn of the country's second heaviest cotton crop. In November the Farm Board agreed to carry 3,300,000 bales of cotton until the following July 31, while private interests undertook to carry another 3,100,000.

**Treasury Financing.** One of the most troublesome problems of the Administration was to keep the Treasury in funds in the face of a deficit accumulating far more rapidly than the estimates had reckoned. The fiscal year 1931 ended on June 30 showing a Treasury deficit for the period of \$903,000,000 approximately, virtually the whole of which had been accumulated in the final six months. This compared with a deficit of \$331,000,000 foreshadowed by President Hoover's budget expositions of the previous December. The method for meeting this unforeseen drain on the Treasury was left to Secretary of the Treasury Mellon. His general scheme was the issue, to public subscription, of short-term Treasury notes or bills every few weeks, covered from time to time by issues of bonds of distant maturity, with which the notes or bills were ultimately taken up. The accounted deficit for the fiscal year was due in part to the statutory requirement that nearly \$400,000,000 be applied to debt reduction; but the money for this purpose had not all immediately been spent for the purchase and extinction of bonds, and part of it temporarily remained in the Treasury. Mr. Mellon's handling of the borrowing problem was successful up to September, when he floated at par an issue of 3 per cent bonds. The issue, however, was taken slowly, the time of subscription having to be extended. Subsequently the prices of Federal long-term obligations fell to such levels as increased the difficulty of further resort to borrowing at distant maturity to supply the Government's current needs. In the first half of the fiscal year 1932, moreover, the deficit accelerated, increasing at the average rate of about \$225,000,000 a month. These conditions rendered it necessary to resort more considerably to short-term indebtedness.

**Government and Railroads.** Reduced business activity in 1931 cut down heavily the traffic and revenue of the railroads. These, as a class, thus became candidates for governmental succor, along with farmers, banks, and the unemployed. President Hoover made an effort to improve their condition at the outset of 1931 by pressing upon the Interstate Commerce Commission the adoption of a plan, suitable to the chief participants in outline at least, for the consolidation of the Eastern

lines into a small number of large systems. His effort was without immediate effect, for the negotiations over details of the plan dragged out through the year, leaving actual consolidation under its terms unaccomplished. See RAILROADS.

The business of finding other means of treating the railroads' troubles was left to the companies themselves and to the Interstate Commerce Commission. The companies petitioned the Commission for a general increase of 15 per cent in their freight rates. The filing of this petition on June 17 brought the Commission a deluge of protests from shippers and allied interests. The Commission granted hearings on the petition. At these hearings the railroads were able to establish their contention that they needed more revenue. They were backed by the pleas of associations of savings institutions and other investment interests, to the effect that the maintenance of the standing of the railroads' bonds depended on their getting more revenue. But it was contended with equal force by opponents of the petition that an increase in freight rates would bear hard on business and might so greatly reduce traffic as to bring no compensating advantage to the carriers.

The Commission sought a third way out of the dilemma. It issued on October 20 a decision in which it denied the 15 per cent increase in freight rates but proposed in its stead specified increases on the rates for divers sorts of freight, conditional on the companies' consenting that proceeds of such increases should be paid to such companies as might need the money in order to cover the payments of their fixed charges. The railroad executives later discussed the proposal and favored its approval, with a condition of their own (detailed in a new petition filed November 19), this being that companies paying proceeds to other companies should rate payments not as definitive alienation of money but as advances ultimately repayable when circumstances allowed. The decision, in its effect on the market position of the railroads' securities, had but a moderate and transitory favorable effect.

*Administrative Economies.* An effect of the adverse financial position of the Federal Government was the resort of the Administration, as the year progressed, increasingly to severe measures of retrenchment. These were applied particularly to the Army and the Navy. They entailed not only cuts in estimates for the fiscal year 1933 but reductions in current-year costs of operation and maintenance. Steps were taken also to postpone pay increases among the employees of Federal departments and organizations.

The cutting of expenditure for the Navy drew bitter criticism from the Navy League, which on October 28 issued a statement accusing President Hoover of "abysmal ignorance of why navies are maintained" and of "efforts at every turn to restrict, to reduce, and to starve the United States Navy." President Hoover replied in a public statement that the League's attack was marked by "untruths and distortions." In accordance with his practice of reliance upon fact-finding bodies, he appointed a committee of his own selection "to examine the accuracy" of the Navy League's statement. The committee made a report on November 6 stating that it had found inaccuracies, false assertions, and erroneous conclusions in the statement.

*FOREIGN AFFAIRS.* Treated under *Financial Policies*, the chief development in the Government's foreign affairs was the proposal of a

moratorium of one year in payments on inter-governmental debts and reparations. (See *Congress*, below.)

*Disarmament.* With regard to international proceedings toward disarmament, the Administration took action in favor of that end. It accepted an invitation to attend the World Conference on Disarmament called to convene at Geneva on Feb. 2, 1932. A proposal from the Italian government, in September, that governments agree not to expand their armaments within a year, was accepted by the United States, and some 40 governments. See DISARMAMENT.

*Manchuria.* The military occupation of a great part of Manchuria by Japan in the autumn led to diplomatic action on the part of the United States as a signatory of the Kellogg-Briand pact for the renunciation of war. After direct diplomatic exchanges on the subject with the principal parties, Secretary of State Stimson followed the policy of letting the League of Nations take the lead in the work of composing the Sino-Japanese difference. The Department of State authorized P. B. Gilbert early in October to attend the meetings of the League Council on the subject, in a consultative capacity. Japan made objection to American participation in the League's action, but this was later withdrawn. Moved by the continuance of Japanese military operations, the United States obtained from Japan in November assurances that these would not be extended beyond certain limits. A tentative arrangement for accord between Japan and China was drawn up through the League of Nations early in December. See LEAGUE OF NATIONS; JAPAN under *History*.

*St. Lawrence River.* Secretary of State Stimson began discussions with the Canadian Minister at Washington on November 14, preparatory to the negotiation of a treaty to provide for the joint development of the St. Lawrence River as a waterway. This proceeding aroused opposition from the government of New York State, as well as from the Canadian Province of Quebec, as both of these governments claimed direct rights not subject to alienation by treaty without their consent. See CANADA under *History*.

*Nicaragua.* In Nicaragua the armed forces of the United States were maintained throughout the year, but their number was reduced according to President Hoover's statement to Congress, to the minimum needful for training the Nicaraguan constabulary and "the rendering of appropriate support for such instruction."

*Haiti.* In Haiti definite moves were made toward releasing the country from the United States' supervision. See HAITI, NICARAGUA, SALVADOR, and CUBA under *History* for developments in the Caribbean policy of the United States.

*Treaties.* A treaty of arbitration and conciliation with Switzerland was signed on February 16. One modifying the Bryan Peace Treaty with Italy was signed on September 23. An extradition treaty with Italy, on May 6. A Treaty of friendship, commerce, and consular rights with Poland, on June 15. One relating to establishment and sojourn in Turkey, on October 28.

*The Butler Incident.* Major General Smedley D. Butler, U.S.M.C., in a public address at Philadelphia, asserted that he had been told that Premier Mussolini of Italy had run over a child and made no attempt to succor the victim. This brought about a protest from the Italian government on January 26, through Ambassador de

Martino. The United States offered a formal apology on January 29. Butler was court-martialed, reprimanded, and later voluntarily retired from the Marine service.

**THE TREASURY.** Secretary Mellon's intimate knowledge of banking and finance was employed to the advantage of the Treasury throughout the year in the delicate operations attending issuance of Federal indebtedness, which was rendered inevitable by the accumulation of deficits; these ran at the rate of about \$150,000,000 a month for the latter half of the fiscal year 1931 (ending June 30) and somewhat higher thereafter. He followed the course of issuing Treasury notes or certificates at intervals of a few weeks and of refunding these in part by the issue of bonds, at intervals of a few months, so long as the obtainable interest rates remained low enough to permit of the latter course. The increasing Federal borrowings and the prostration of the prices of capital issues obliged him in December to alter this course to the extent of offering \$1,300,000,000 entirely in obligations of one year's maturity or less, chiefly for the refunding of maturing notes. Secretary Mellon made detailed recommendations as to a plan of higher taxation to cover part of the deficit. These will be found under *Congress*, below.

In accordance with an executive order of President Hoover, the Treasury Department opened on June 11 the income-tax returns in its possession to the examination of the authorities of those States which had income-tax systems of their own. See **PUBLIC FINANCE**.

**WAR DEPARTMENT.** A report on the Corps of Engineers' survey of the route for an inter-oceanic canal through Nicaragua was published, giving Colonel Dan I. Sultan's estimate of the probable cost of constructing the canal as approximately \$750,000,000. While his report represented the project as possible of execution in a physical sense, the high estimate of cost tended to remove the possibility from early practical consideration. A War Policies Commission, created by a resolution of the 71st Congress and consisting of six cabinet members and four members of either house of Congress, held hearings in May and obtained, among the views of representatives of many groups, those of the War Department, presented by Gen. Douglas MacArthur, Chief of Staff, U.S.A. He stressed the planning of defensive measures in advance, and especially of plans for mobilization and for the adequate control of industry in war.

**DEPARTMENT OF LABOR.** Secretary of Labor Doak exerted himself early in the year to combat the tendency of companies, which increased as time passed, to cut wages. He issued the warning on May 18 that in view of assurances given by large employers earlier in the depression, reductions in wages would be considered by the Administration a violation of confidence, and that organized labor might feel justified in countering with demands for higher wages. Increasing economic pressure led employers in a number of industries, particularly the railroads and copper-mining companies, to seek or effect reductions later on. Through Secretary Doak and Secretary of Commerce Lamont was arranged in July a conference of employers and workers' representatives in the soft coal industry, with a view to improving employment in that industry, but no definite change in conditions resulted.

**DEPARTMENT OF THE INTERIOR.** Secretary Wil-

bur adopted at the end of March a plan re-organizing the Indian administration. The change involved placing the activities for the Indians' health, education, agriculture, and industry under an assistant to the Commissioner, in charge of human relations. These activities were thus segregated from those concerning irrigation, forestry, and lands, which were put under an assistant in charge of property matters. Secretary Wilbur declared in his annual report a purpose to advance the time when the Indians would tend to merge with the population through the exercise of their own wish to attain that end.

The contract for the construction of the Hoover Dam on the Colorado River with power house and appurtenant works was let by Secretary Wilbur on March 11 to the Six Companies, Inc., upon their bid of \$48,890,999 (exclusive of materials and machinery). Operations were begun immediately thereafter.

The administration of the Virgin Islands (q.v.) was transferred to the Department by executive order on February 27, and a civilian Governor of the Islands, Paul M. Pearson, was appointed by the President upon the Department's recommendation. A Committee on the Conservation and Administration of the Public Domain, which had been appointed by the President under the terms of an act of Apr. 10, 1930, rendered in March, 1931, a report recommending that the United States take steps for the transfer of the remnant of the public domain (178,979,446 acres), with exception of areas essential for certain Federal purposes and, provisionally, of mineral resources, to the several States in which such land lay. Secretary Wilbur was a member of this commission; its chairman was former Secretary of the Interior James A. Garfield.

**POST OFFICE.** For the fiscal year ending June 30, 1931, the postal deficit, apparently because of shrinkage in the volume of the mails, and consequently of receipts, rose to \$146,066,190 (gross) and to \$98,018,881 (net of certain non-postal expenditures). This net deficit was more than 60 per cent in excess of the net deficit of \$58,546,269 for the fiscal year preceding. Postmaster General Brown, although acknowledging the higher deficit as the result of shrinkage in the mails, advocated in his report that Congress raise the rate of postage on non-local letter mail to 3 cents an ounce or fraction. The expenses of the rural free delivery system were included in the total producing the net deficit.

On June 30, 1931, the postal system had 1181 post offices of the first class, 3512 of the second class, 10,802 of the third class and 33,077 of the fourth. Employees in offices of the first two classes numbered 133,205, exclusive of postmasters, rural carriers, special-delivery messengers, and motor-vehicle employees. The number of the clerks decreased by 390, net, in the year; that of carriers by 375. The average salary of clerks increased to \$2166.93, from \$2156.75. That of city carriers, to \$2083.65, from \$2075.63. The rural free delivery routes numbered 42,212 on June 30, 1931, and were estimated to serve 25,528,435 individuals.

Pieces transmitted in foreign mails, parcel post excepted, numbered 447,771,288 dispatched and 388,697,146 received; a decrease, from the previous fiscal year, of 14.14 per cent in number dispatched and 4.97 in that received. The mileage of air routes increased to 23,488 on June 30, 1931, from 14,907 a year earlier. There were carried

by airplane during the year 8,579,422 pounds of mail. The air service cost \$16,995,734; there were flown 21,381,852 miles of scheduled service.

Sales of stamps during the fiscal year totaled \$524,630,179 and fell \$50,656,391 below those of the year previous. The quantity of second-class matter handled was 1,465,603,540 pounds which was 10.07 per cent less than that for the previous fiscal year. The limit of size for parcel-post packages was raised to 100 inches and that of weight to 70 pounds, from 84 inches and 50 pounds, as of August 1.

Postal savings deposits increased beyond all precedent to \$353,237,907 on June 30, 1931, from \$173,332,684 a year earlier. The increase coincided with evidence of lack of confidence in some of the banks and was reported in the press to have made some further progress later in the calendar year 1931.

NAVY DEPARTMENT. Secretary of the Navy Adams made considerable reductions in the expenditures of the Navy both as to estimates for the fiscal year 1932 and as to actual disbursement for 1931. It resulted from the latter that he reported \$140,458,451 of the \$498,264,700 available as remaining unexpended at the end of the fiscal year 1931. Reductions were reported to have been made at the repeated insistence of President Hoover. In his annual report in December Secretary Adams cited leading naval officers' opinion that costs of depreciation and replacement were not met. The issue of the report followed closely on a controversy of the Navy League with the President over allegations to the effect that he was starving the Navy.

FEDERAL FARM BOARD. Chairman Legge of the Farm Board, under whom had been undertaken its most ambitious policies, resigned in March, and was succeeded by James C. Stone of Kentucky. Under Chairman Stone no effort was made to continue the pegging of the market for wheat, cotton or any other chief crop into the new crop year.

The operations of the Farm Board, from its outset to June 30, 1931, were tabulated as follows:

Commodity	Net commitments	Amounts advanced	Repayments
Beans and soy beans .....	\$685,049	\$685,049	\$71,859
Coffee .....	50,000		
Cotton .....	144,511,117	140,525,937	95,674,997
Dairy products ..	18,299,352	13,291,662	4,235,354
Citrus fruits ..	3,300,000	3,020,882	712,818
Grapes and raisins .....	20,382,622	20,105,361	5,434,009
Other deciduous fruits .....	2,248,232	1,844,717	353,596
Miscellaneous fruits and vegetables .....	451,000	350,470	9,398
Grain .....	51,115,082	47,215,932	34,236,294
Honey .....	45,839	45,839	6,158
Livestock .....	6,979,704	4,829,704	1,661,559
Nuts .....	412,869	308,743	80,207
Potatoes .....	621,800	445,000	46,000

From a financial statement of the revolving fund submitted by Chairman Stone it appeared that the Farm Board had drawn \$400,000,000 of the total (\$500,000,000) of the fund provided for it, up to June 30, 1931. The statement is given in the accompanying table.

While this statement presented a cash balance of nearly \$60,000,000, a great part of this sum had been committed to divers purposes, though payments had not yet been made. It appeared, however, that the Grain Stabilization Corporation, in addition to using the money of the revolving fund, had borrowed some \$83,000,000 from banks up to June 30. While such loans were not stated to be a direct obligation of the Farm Board, they were of such a nature as might have a bearing on its financial position. See AGRICULTURE under *Federal Farm Board*.

\* The final \$100,000,000 of the \$500,000,000 authorized was made available on July 1, 1931.

FEDERAL POWER COMMISSION. Reorganized by statute, the Power Commission was handicapped during much of the year by the question at law raised by the Senate over the validity of the appointment of its chairman, George Otis Smith, which the Senate had first confirmed and afterward asked the President to resubmit (see *71st Congress, 2nd Session*). Justice Gordon of the Supreme Court of the District of Columbia, in first instance, denied on December 5 the motion brought before him against Smith on behalf of the Senate; the case for the Senate was to be appealed to the United States Supreme Court.

The Board rendered on April 3 a ruling widely regarded as ranking it with the thoroughgoing advocates of Federal control of water power. In this ruling it denied the long-pending application of the Appalachian Electric Power Company for a "minor part" permit to carry out a \$11,000,000 hydro-electric project at a site on the New River, near Bradford, Pa., without its having to submit to Federal supervision. The New River was represented as not navigable and therefore not within the scope of the Commission's supervision. But the Commission held that this river entered navigable waters below and that those damming its water might affect the conditions for navigation in the larger stream. A number of States had appeared at divers times before the old Commission to sustain the principle of State disposal of non-navigable waters. The decision bore on numerous similar cases.

VETERANS' ADMINISTRATION. Federal services for the relief of all veterans of the United States

who had served in any war were consolidated by executive order of July 21, 1930, pursuant to an act of July 3, 1930. The Veterans' Administration, thus created, reported on June 30, 1931, after about a year of operation, that there were on its rolls 1,349,812 beneficiaries, exclusive of services of insurance, adjusted compensation, hospital and domiciliary care and civil service retirement. Of this total, which included both living veterans and kin of deceased ones, 8 related to the War of 1812, 547 to the Mexican War, 9753 to Indian wars, 193,721 to the Civil War, 239,860 to the Spanish-American War, 22,571 to the Regular Establishment, and 883,352 to the World War.

**Hospitalization.** After the authorization in 1924 of hospital service to veterans on account of disabilities not resulting from war service, the number of those hospitalized for other than war disabilities rose rapidly and persistently until at the end of the fiscal year 1931 the latter's number exceeded that of the war disability cases and formed 54.27 per cent of the total. Of 35,139 patients at the end of the fiscal year, 33,302 were veterans of the World War. The total of cases was 4598 higher than that of a year previous and 4260 higher than the previous top number, recorded in March of 1922. There were 109,649 hospital admissions in the fiscal year 1931. Hospital deaths numbered 5209. Under an act of Mar. 4, 1931, to provide additional hospital room, the Veterans' Service undertook building operations in 20 places in divers parts of the country, to provide 3024 hospital and 350 domiciliary beds at the estimated cost of \$8,157,000. The number of beds available in 54 veterans' hospitals on June 30, 1931, was 26,307.

**Pensions.** The number of veterans receiving Civil War pensions was 39,426 on June 30, 1931, and had diminished by 9565 in the fiscal year. There were also on the rolls 153,437 widows and minor children of Civil War veterans, a decrease of 14,237. Veteran pensioners of the Spanish War numbered 193,286 and had increased during the fiscal year by 6921. Widows and minor children of veterans of this war received pensions to the number of 33,437. The total of the year's pension disbursements was \$234,419,721.

**Adjusted Compensation.** Under the act of Feb. 27, 1931, the Veterans' Service administered the work of making loans to World War veterans at the rate of 50 per cent of the face values of their certificates, at interest of 4½ per cent a year; 2,063,578 such loans were made, to the total of \$795,569,520, up to June 30. As earlier loans had been made, the total of loans on certificates was \$1,087,195,525 on June 30.

#### CONGRESS

**SEVENTY-FIRST CONGRESS, SECOND REGULAR SESSION.** The concluding session of the Congress, which had convened on December 1, 1930, reassembled after the year-end holiday. The dissension between the Administration and the predominant groups of both houses, which had sprung up in December, over the question how far to go with appropriations for Federal relief of the distressed, burst out with renewed vigor. Advocates of more extensive grants became defiant of the Administration and rejected its recommendations on a number of points. The chief of these was the proposal for a great cash distribution to the veterans of the late World War.

**Bonus Legislation.** The plan for a cash distribution to veterans did not at first take the form of a loan bill. Representative Garner of Texas introduced early in 1931 a measure for the immediate payment to veterans of the cash surrender value of their adjusted service certificates. Secretary of the Treasury Mellon, Under-Secretary Mills and General Hines, Administrator of Veterans' Affairs, all opposed this measure. Mr. Mellon appeared before the Senate Committee on Finance on January 28 and gave his opinion that the similar Senate measure to pay veterans full face value of their certificates would unduly tax Federal credit. He expressed like views before the House committee on January 29.

In the meantime the executive committee of the American Legion declared (January 25) for immediate retirement of the certificates for cash, and its spokesman presented its views at the committee hearings a few days later. The Ways and Means Committee invited divers leading citizens to appear and express their views. One of these, Owen D. Young, appearing on February 4, suggested that the Government lend up to 50 per cent of face value of certificates to needy veterans only. The loan suggestion was seized upon, but the suggested restriction of the loan to veterans in need was disregarded. The Bacharach bill was drawn and introduced; it provided for immediate loans to all veterans of the late war, in amounts, except as reduced by such loans as they might previously have received, up to 50 per cent of face value of their certificates, at 4½ per cent interest.

In short order, and despite further adverse views from Mr. Mellon, the House brought the measure to a vote. Suspending the rules, it passed the bill on February 16, after a perfunctory debate of 40 minutes, by a vote of 363 to 39. President Hoover wrote a letter opposing the loan bill to Senator Smoot of Utah, chairman of the Senate Committee on Finance, where the bill was next lodged. But the committee reported the bill out almost immediately, and the Senate passed it on February 19 by a vote of 72 to 12. President Hoover sent the measure back to Congress on February 26 with a veto message in which he stated a probability that the loan might force a rise in taxes. The House overrode the veto on the same day, by 328 votes to 79; the Senate, on the day after, by 76 to 17, thus completing the enactment of the bill.

**Additional Drought Relief.** Reports of the prevalence of want in certain drought-stricken areas, particularly in Arkansas, published about New Year, brought on a demand for further immediate measures for the relief of suffering farmers. The President had favored the plan of leaving the succor of cases of personal distress to the American Red Cross. Senator Caraway of Arkansas, opposing this plan, introduced a separate bill carrying an appropriation of \$25,000,000 for the specific purpose of furnishing food to the drought sufferers. A similar provision had been stricken from the drought relief act which the Senate had passed late in 1930 and which the House had just sent to the President. This act, which appropriated \$45,000,000 for loans to furnish funds to farmers in the drought area, for divers specified purposes, did not specify human food. President Hoover signed the act on January 15.

He opposed Federal grants to feed destitute farming folk. Instead he advocated provision for this purpose through the Red Cross and sponsored

its campaign to raise \$10,000,000 for the emergency. The Senate none the less proceeded to pass on January 19 the Robinson bill in a form appropriating \$25,000,000 to be expended by the Red Cross itself in feeding the sufferers. The measure then went to the House. There Chairman Payne of the Red Cross declared before a subcommittee of the Committee on Appropriations that the Red Cross had resolved not to accept a Federal appropriation for this purpose if it were made. See RED CROSS, AMERICAN NATIONAL.

The committee accordingly voted on the 29th against recommending the measure to the House. When this body delayed bringing the matter to a vote a group of Senators issued a statement threatening to force a special session if the bill did not go through. President Hoover replied with a statement urging that the responsibility for relief of the personally destitute be left to private charity. The Democratic and insurgent Republican Senators backing the measure then decided to alter it. A compromise acceptable to the President was reached on February 6. By this compromise the already enacted farmers' relief measure was amended to admit an appropriation of \$20,000,000 for secured loans to stricken farmers for the production of the crop of 1931 and for "further agricultural rehabilitation." The latter phrase was understood to be circumlocution for "human food," on the theory advanced by Watson of Indiana, that "You cannot rehabilitate farms with dead farmers." The measure was passed in this form by both houses on February 14, as part of the Department of the Interior's supply bill, and was immediately signed by the President.

*Bills to Aid Employment.* The bill of Senator Wagner, Democrat, of New York, which had passed the Senate in the spring of 1930 and which had subsequently remained with the House, was passed by the House on February 23, through a combination of Democrats and insurgent Republicans. It would have abolished the existing Employment Service in the Department of Labor and created in its place a bureau of the Department of Labor, to be known as the United States Employment Service, to be headed by a director general to be appointed by the President, at a salary of \$8500 a year, and to set up a system of employment offices throughout the country. The President vetoed the measure on March 7, largely on the ground that the existing Federal employment service was "finding places of employment for men and women at the rate of 1,300,000 per annum," and should be continued.

Another bill of Senator Wagner, that providing for the planning in advance of Federal public works, with a view to their execution in times of unemployment, was passed in amended form, and was signed by President Hoover on February 10. The Bacon-Davis law, requiring that the scale of wages prevalent in a community—in practice the union scale—should be paid for any public works under Federal contract, was enacted on February 28.

*Naval Appropriation.* The expenditure of \$30,000,000 for renovating the battleships *New Mexico*, *Mississippi*, and *Idaho* was authorized by an act of February 26. In order that the work might start early in the ensuing fiscal year an appropriation of \$10,000,000 toward the required amount was included in the second deficiency bill.

A bill that had been introduced in the endeavor to authorize the expenditure of \$74,000,000 toward a naval building programme with a view to bring-

ing the Navy nearer the limits allowed under the Treaty of London failed of passage. Considerable provision for construction was nevertheless made. An appropriation of \$23,800,000 for continuing the work on the existing 9-cruiser programme and another appropriation of \$10,000,000 for beginning with the construction of 11 destroyers were both included in the Naval Appropriation act. This act, the last of the departmental supply measures to pass the session, went to the President on February 27, carrying \$358,000,000, and was duly signed.

*Extra Appropriations and Financial Measures.* Containing chiefly items of appropriation that President Hoover had recommended to Congress on February 2, the Second Deficiency bill, as enacted, carried some \$84,000,000, of which \$10,000,000 as above stated was for naval construction; about \$24,000,000 was for the uses of the Veterans' Administration, in addition to other grants. The total of the appropriations for the whole session was thus brought up to \$5,178,107,522, according to an estimate published at the time of adjournment. This was the heaviest total of appropriations reported for any session subsequent to 1919.

Authority to issue additional bonds of the United States up to the further total of \$8,000,000,000 was conferred on the Secretary of the Treasury by the passage on March 2 of an act amending the Second Liberty Loan act. The amendment simply extended to \$28,000,000,000, from the original \$20,000,000,000, the total of United States bonds that might be issued by the Secretary of the Treasury under the war powers conceded by the original act. The amendment was required because more than \$18,000,000,000 of the original total had been issued either for purposes of refunding or as original debt, and because of the approach of Federal option to convert outstanding Liberty bonds; also, because heavy appropriations in combination with diminishing Federal revenue would render it necessary in the early future to increase the Federal indebtedness considerably in order to meet Treasury deficit.

The Liberty Loan amendment was recommended to Congress by Secretary Mellon in a communication of January 5. He suggested also that the original act be amended so as to exempt holders of future issues from payment of surtaxes. The resulting bill introduced in the Senate by Smoot of Utah provided for such exemption; but the Senate amended the measure by striking out surtax exemption, and the House concurred.

*Prohibition Law.* Congress passed on January 8 the Stobbs act, modifying the Jones act so as to provide lower penalties for minor offenders under the latter law. The report of the Wickersham Commission (the Law Enforcement Commission) previously created by Congress to study the state of the enforcement of law in general and of Prohibition in particular, was submitted to Congress on January 20. See PROHIBITION.

*Other Legislation.* "The Star Spangled Banner" was made the National anthem by an act of March 3. In conformity with legislation in a number of States to protect dairy interests against the competition of oleomargarine with butter, Congress enacted on March 3 the Brigham law, imposing a prohibitive Federal tax of 10 cents a pound on colored oleomargarine. The measure carried as a rider the bill of Senator George of Georgia classing turpentine as a farm commodity entitled to the benefits of the Agricultural Market-

ing act. A uniform Saturday half-holiday for all the civil service employees of the Government was created by statute; such a half-holiday had previously been granted to some 300,000 postal employees, in the Post Office Supply bill. About 400,000 other employees were covered by the Half Holiday act.

Under the terms of the Cable act, women citizens of the United States were not to forfeit their citizenship by marriage with foreigners, unless they should make a formal renunciation of American citizenship; and women who had lost citizenship by marriage with ineligible aliens might again become citizens by naturalization.

*Measures Not Enacted.* Both houses came at last to an agreement on the disposal to be made of the \$145,000,000 Federal power plant at Muscle Shoals. The House agreed to a large part of the plan for Federal operation which Senator Norris of Nebraska had supported for years. The compromise measure as adopted provided that the Government must find a lessee within a year or else itself operate a plant for the manufacture of nitrates at the Shoals; the Government was to operate the plant for the production of power in any case. The President returned the bill with his veto. On March 3 the Senate voted by 49 against 34 to override the veto, but this majority was short of the necessary two-thirds, and the measure was therefore lost.

A bill to provide Federal aid to mothers and infants, on the general plan of the defunct Sheppard-Towner Maternity act, was introduced by Senator Jones and passed by the Senate. In the House it was coupled with the Cooper measure for Federal contribution to the improvement of health in rural sections. The combined bill was accepted by a conference committee but was prevented, by congestion of business, from coming to a vote in the closing hours of the Senate.

The proposal to change the Constitutional date for the convening of the regular sessions of Congress so as to eliminate "lame duck" sessions, or sessions in which members superseded in the November elections still sat, was again before Congress, as in a number of previous sessions, but failed to pass, the session itself being of the "lame duck" category. The passage of the Vestal Copyright bill was not completed by the Senate. A treaty with Canada to permit the diversion of an additional 20,000 cubic feet a second of water at Niagara Falls to the use of power companies in exchange for improvements to be made by them at the brink of the falls to improve the flow was rejected by the Senate Committee on Foreign Relations and failed of ratification.

*Dispute Over Power Board Appointees.* Though the Senate had confirmed the nomination of George Otis Smith to be chairman of the reconstituted Power Board and likewise the nominations of Commissioners Draper and Garsaud, and though their appointments had subsequently been duly certified, the Senate voted on January 9, by 44 to 37, to request the President to recommit the nominees' names. The three commissioners had been sworn in on December 23, had convened as a quorum of the Commission, and had by their first official act discharged Charles A. Russell, solicitor to the old Commission, and William V. King, its chief accountant; they also dismissed Frank E. Bonner, its secretary. This proceeding gave insurgent Senators the impression that the new Commission intended to subserve private power interests. Walsh (Democrat) of Montana, at the

reassembling of Congress in January, reckoned that two executive-session days had not passed since the Commissioners had been confirmed. He accordingly cited a Senate rule permitting a move to reconsider confirmations within two executive-session days, moved the reconsideration, and offered the motion passed by the Senate.

A point involving constitutional powers was thus brought up. President Hoover refused to re-submit the nominations. In a special message of January 10 to the Senate he declined "to admit the power of the Senate to encroach on the Executive functions by removal of a duly appointed executive officer under guise of reconsideration of his nomination." The Senate, holding apparently to the Constitution, Art. 1, Sec. 5, Par. 2, that each House might determine the rules of its own proceedings, voted to recommit the names of its own motion, on the 23d. On February 4 it further voted not to confirm the appointment of Chairman Smith. Attorney General Mitchell had meanwhile ruled that the Smith appointment was valid. The Senate proceeded to institute proceedings of *quo warranto* against Smith, with a view of testing the contention in the Supreme Court.

*Investigations.* The Senate left in existence six investigating committees, to inquire into lobbying, campaign funds, post office leases, economic conditions, banking facilities and the condition of Indians. Of these, the committee on lobbying had before it a charge that a Senator had received \$100,000 from a domestic sugar company during the period of tariff legislation; Davis (Republican) of Pennsylvania had asked for the investigation and denied that the charge was true in regard to him. The committee on campaign funds prosecuted the investigation of the disposal of funds received by Bishop Cannon in the course of the campaign against Alfred E. Smith for President in 1928. The disposal of contributions banked personally by Cannon was traced at great length later through banking accounts.

SEVENTY-SECOND CONGRESS, FIRST SESSION. The Seventy-Second Congress convened for the first time on December 7, in regular session. It adjourned for its year-end recess a little over a fortnight later, on December 22, to reconvene on Jan. 4, 1932. In the brief time that it sat in 1931, it disposed of a single major task, that of approving the moratorium on intergovernmental payments that had been proposed and executed by the Administration and that had gone into effect provisionally on July 1.

*Constitution of the Houses.* While it had appeared at the time of the election of the House in 1930 that the Republicans might have a bare majority, the later occurrence of deaths among the body of representatives-elect and of elections to fill the vacancies thus created left the Democratic group in possession of 219 seats at the opening of the session, while Republicans held 214 seats. There were, in addition, one Farmer-Labor member and one vacancy in Vermont, to be filled by an election in January. The Democrats could thus outvote the rest of the House, actual and prospective, by three.

In the Senate the situation was different. On strict party lines and in the absence of the Democratic Senator-elect Huey P. Long of Louisiana, who had elected to remain away and continue holding the office of Governor of his State, the Republican members held the deciding vote. They could in addition, in case of an even division, rely on the deciding ballot of the Presi-

dent of the Senate, Vice President Curtis. In actuality the Republican numerical strength in the Senate was meaningless, as approximately half a dozen of the Senators listed as Republican were Progressives whose adherence to party plans of the Republican group was not reliable. Mrs. Thaddeus H. Caraway, widow of Senator Caraway of Arkansas, succeeded to his seat and became the first woman Senator of more than transitory and honorary tenure.

*Organization of the Houses.* It happened in consequence of party division that, while the House of Representatives was speedily organized, the activity of the Senate was impeded by a prolonged hitch in the matter of organization. The difficulty arose over the election of a President *pro tempore*. Senator Moses of New Hampshire was the choice of the regular Republicans for reelection to this position. He had, however given offense to some at least of the population of the more westerly States by a public allusion, made some time before, to certain respected mouthpieces of opinion in that region, in which he styled them "sons of the wild ass." His loss of popularity with his Progressive colleagues deprived him of the votes of 12 Senators, who distributed their votes, on the first ballot, among Norris of Nebraska, McNary of Oregon, and Jones of Washington. As three Republicans were paired with Democrats, there remained but 33 regular Republican votes for Moses. Pittman of Nevada received the 42 Democratic votes not paired, which did not suffice for a majority. The revolting 12 included, besides 9 recognized Progressives, the reputedly regular Republicans Capper of Kansas, Thomas of Idaho, and Jones of Washington. In many subsequent ballots the Republican dissidents refused either to accept Moses or to give their votes to Pittman. The deadlock persisted until the year-end recess. It interfered with the full organization of the Senate, but did not prevent the Republicans from voting on December 14 the reelection of the chairmen of committees (Progressives' chairmanships included), nor the making of committee selections by party conferences.

A dispute over the qualification of Senator-elect Bankhead, Democrat, of Alabama, relating to his contested election, and a like dispute over Bailey of North Carolina were left pending in the Committee on Privileges and Elections, but both men were admitted to the oath on the opening day.

The House of Representatives was promptly organized. On the opening day of the session John N. Garner of Texas, Democrat, was elected Speaker by the full party vote of 218 (he himself not voting). Snell of New York, the Republicans' choice for Speaker, received 207 votes; he was afterward chosen Republican floor leader. The Speakership settled, the committee allotments were promptly made. The House majority appointed a committee to confer with representatives of the Senate's Democratic group on matters of joint policy in legislation, and the Democrats of the Senate named a similar committee.

*The President's Message.* The annual Presidential message was read to a joint session of the Congress on December 8. It stated that upon the initiative of the United States government a year's postponement of payments on intergovernmental debts had been granted, but it left the recommendation as to legislative action to

legalize this postponement for a later message. In the consideration of the domestic economic situation, President Hoover's theory that depression had been augmented by a "continuing credit paralysis" was emphasized. It was urged that "our first step toward recovery was to reestablish confidence and thus restore the flow of credit." For the current fiscal year the indicated Federal receipts were represented as \$1,683,000,000, the deficit with inclusion of expenditure for the statutory yearly retirement of debt as \$2,123,000,000, and the net increase of debt as \$1,711,000,000. A temporary increase in taxes, to terminate two years from the following July 1, was represented as inevitable, and it was anticipated that even though it should obtain of such an increase the Government would "reach the utmost safe limit of its borrowing capacity by the expenditures for which we were already obligated and the recommendations proposed." Congress was admonished against committing the Government to other expenditures.

The President's recommendations called for considerable appropriation. He proposed that the Treasury be empowered to subscribe to further stock of Federal land banks; that a system of home-loan banks be created; that a Reconstruction Finance Corporation be created, with a "reasonable capital" to be subscribed by the Treasury and with power to issue debentures. A warning was given, however, against excessive further expansion of the schedule of Federal public works, which was estimated as contributing to the livelihood of some 10,000,000 persons, for the current year, at a Federal expenditure of \$780,000,000. Wholesale revision of the tariff was opposed. Amendment of the banking laws to meet "changed financial and commercial conditions" was recommended. Legislation to aid the consolidation of railroads in the interest of economy and to improve the method of their regulation was advocated. The transfer of the administrative functions of the Shipping Board to the Department of Commerce was sought. In the interest of economy, "insistent and determined cuts in Governmental expenditure" were proposed.

Following a recommendation in the Presidential message, the House passed, on December 19 by *viva-voce* vote, and sent to the Senate a bill to amend the Federal Farm Loan Act, thereby to provide from the Federal Treasury \$100,000,000 of additional capital for the Federal Land Banks.

*Budget Message.* The President sent to Congress on December 9 the annual budget. It provided, for the fiscal year 1933, receipts of \$2,576,530,202, as against receipts of \$2,238,878,800 for 1932. The excess in receipts, for the latter year, was set forth as "estimated" and was based on existing taxation only. The expenditures for 1933 were put at \$3,996,872,450, as against \$4,361,839,800 for 1932. Reductions were provided in the totals for almost all departments and main establishments, in annual appropriations, and in less degree, in permanent appropriations. The deficit for 1933 was represented as \$1,416,949,448, as against \$2,122,683,695 for 1932. The President advocated that Congress reduce this deficit and "balance the budget for the fiscal year 1933, except for statutory debt retirement," by increasing taxes along the lines recommended by the Secretary of the Treasury, in a manner designed to yield an additional amount aggregating approximately \$920,000,000.

**Message on Foreign Affairs.** On December 10 the President sent to Congress a third message, dealing with foreign affairs in general, but having as its particular point his advocacy of the moratorium on intergovernmental payments, which required prompt legalization by enactment. This message cited the earlier declaration of President Hoover, "I do not approve in any remote sense of the cancellation of the debts to us." It recommended as "highly desirable" that a law should be enacted before the maturity of many foreign payments to the United States coming due on December 15. Although the President recorded himself again as against cancellation, he recommended the re-creation of the World War Foreign Debt Commission, "with authority to examine such problems as may arise."

**The Mellon Tax Proposal.** Secretary of the Treasury Mellon communicated to Congress on December 9 the plan of taxation to which the President's budget message referred. This plan was substantially that Congress return to the tax system of 1924. It was advocated, further, that Congress increase postal rates sufficiently to cut the postal deficiency by \$75,000,000 in the fiscal year current and to do away with it altogether thereafter. Mr. Mellon declared for maintaining the sinking-fund arrangements on the Federal debt, as a policy in accord with the basic principles of national finances. The reversion to the taxes of 1924 was recommended on the consideration that the country "knew the burdens to be expected under such a law." The proposal thus advocated personal income taxes with lower exemptions and with higher normal tax and surtax rates; a somewhat higher rate for corporation income taxes; higher maximum rate on estate taxes and lower exemption; and restored taxes on automobiles, autotricks, and automobile accessories. It lowered the level for exemption on admittance tickets to 10 cents, from \$3.

**Enactment of the Moratorium.** The House acted with little delay to legalize the agreement negotiated by the Administration in the summer, putting off for a year the payment of debts owed by foreign governments to that of the United States. The bill to this end, as reported December 17 by the Committee on Ways and Means, contained a section declaring it to be "against the policy of Congress that any of the indebtedness of foreign countries to the United States should be in any manner canceled or reduced." The bill, with this section as part of it, was passed by the House on December 18, by a vote of 317 to 100. For the bill voted 120 Democrats and 198 Republicans; against it, 95 Democrats and 5 Republicans. The chief event of the bill's passage through the House was a bitter speech of McFadden of Pennsylvania in opposition, in which the President was asserted to have subverted banking interests in granting the moratorium and was severely blamed.

In the Senate the measure was attacked by Johnson of California and a small number of individual Senators. Johnson opposed the moratorium on the specific ground that France could still collect from Germany "non-postponable annuities on account of reparations." An effort was made to destroy the efficacy of the bill by attaching divers amendments to it, but the amendments were voted down and the bill was adopted on December 22 by a vote of 69 to 12. Six Republi-

cans and 6 Democrats voted against it. The President signed the bill on the following day.

#### JUDICIARY

**SUPREME COURT.** The resort of some States to laws taxing chain stores otherwise than as merchants in general were taxed brought before the Supreme Court questions of high importance to retail merchandising. Indiana's system of license fees for such stores, imposed at rates, for each place of business, rising according to the number of places within the State operated by the same owner, was upheld by a decision of May 18. Associate Justice Roberts, writing the decision, laid down the view that "the fact that a statute discriminates in favor of a certain class does not make it arbitrary, if the discrimination is founded on a reasonable distinction." The decision was a close one, four Justices dissenting. Nevertheless the Court declined on October 12 to review the decision. The appeal of the Great Atlantic and Pacific Tea Company against the North Carolina tax on chain stores was rejected on October 26, the Court holding that the principles laid down in the Indiana case held here also. Hearing for an appeal against the Mississippi tax on chain stores was refused on October 16.

**Interstate Motorbus Taxation.** The Court held nevertheless in a decision of April 13 that States might not impose graduated privilege taxes on motorbus companies engaged in interstate commerce except where the tax was clearly for the use of the highway.

**Other Tax Decisions.** With regard to State taxation of National banks, the Court ruled on December 7 that a tax imposed by New York State in 1923 and in part similar to the tax invalidated in 1922, on the capital and undivided surplus of National banks, was void. This later tax had been collected from 1923 to 1926, and its invalidation affected some \$26,000,000, principal and interest on amounts that had been paid by National banks in New York during that period. The Court granted a refund of part of taxes paid by certain National banks under the law of Iowa, accepting the contention that payment had been exacted from them at a higher rate than that on competing moneyed capital. On April 13 in a State tax case the rule was laid down that a State might not tax a corporation on business transacted outside its bounds.

**Federal Acts and Powers.** The constitutionality of the act authorizing the construction of the Hoover Dam in the Colorado River was upheld against the contentions of the State of Arizona in a decision of May 18. See LAW, PROGRESS AND DEVELOPMENTS. The executive order of President Hoover closing the Federal public lands to those seeking permits to prospect for oil and natural gas was sustained by the Court on May 18 against litigation to compel the issue of further permits.

**Oil Cracking Case.** In a decision of April 13, the Court found the Standard Oil Companies of Indiana, and New Jersey, the Texas Company and certain others, prosecuted under the Sherman law for having agreements as to common use of their patents for the production of gasoline from petroleum by the so-called cracking process, not to have violated that law. The decision was rendered by eight Justices and was unanimous. Justice Stone abstained from consideration of the case. As Attorney General, in

1924, he had instituted the prosecution. The decision reversed that rendered in the District Court for Northern Illinois. Justice Brandeis, in the Supreme Court decision, wrote that the special master examining the evidence had found that the defendants had not pooled their patents relating to cracking processes and that they had not monopolized or attempted to monopolize any part of the trade in gasoline. The prosecution had ranked for some years among the foremost of the Government's anti-trust activities.

*Suits of State against State.* The chief litigation of State against State concluded during the year was that of New Jersey against New York. See **WATERWORKS AND WATER PURIFICATION**.

In another action New Jersey sought a decree to prevent the dumping of garbage from New York City at sea by scows—a means of disposal which fouled the New Jersey beaches. The Court gave the decree to prevent this, but granted New York City time to construct incinerators.

*Status of Foreigners.* It was held in a decision of November 23 in a case appealed by the Italian Consul at New York, that, an alien domiciled in the United States dying intestate and without heirs, his estate should go to the Government of his country, if treaty so provided.

*Other Decisions.* A much noted decision of Federal Judge William Clark in the Sprague case in New Jersey, rendered on Dec. 10, 1930, declaring the Eighteenth (Prohibition) Amendment invalid on the ground that it delegated power inherent in the people but had not had popular ratification, was reversed by the unanimous decision of eight Justices, Justice Hughes abstaining, on February 24. An appeal of ex-Secretary of the Interior Fall from his Federal sentence to prison for bribery in the disposal of Federal oil leases was denied on June 1 and Fall subsequently was sent to prison. See **LAW, PROGRESS AND DEVELOPMENTS** under *The Supreme Court of the United States*.

**OTHER FEDERAL COURTS.** Application of the parties in the consent decree of 1920, restricting the business activities and practices of the meat packers, for a modification of that decree was granted in part in a new decree issued by Justice Jennings Bailey of the Supreme Court of the District of Columbia on January 5. They were to be allowed to extend their wholesale operations in unrelated lines and to use their means of distribution for the handling of additional products. On the other hand the Court denied them permission to sell meats and other articles at retail, holding that such proceedings would work harm to the retail dealer.

A decision rendered by a special court of three Judges of the Circuit Court of Appeals at St. Louis on February 6 was adverse to the action brought by the Department of Justice to prevent a merger of the Standard Oil Company of New York and the Vacuum Oil Company. The Government desisted from an appeal of this decision, and thus the way was made clear for the reunion of two former constituent parts of the old Standard Oil Company, which had been dissolved as a monopoly under the Sherman Act in 1911.

#### ELECTIONS

While the autumn elections, in their direct bearing on national affairs, were limited to the filling of a small number of vacancies in the House of Representatives, the closeness of the party division in the Congress shortly to convene rendered

the outcome unusually important. There was in addition the indirect national result effected by votes, in State and municipal elections, strongly adverse to the Federal Administration party.

Five Representatives were elected on November 3 in four States; three of them were Democrats and two Republicans. The Democrats were J. J. Delaney, New York, 7th District; M. L. Sweeney, Ohio, 20th District; Michael J. Hart, Michigan, 8th District. The Republicans were J. B. Hollister, Ohio, 1st (Cincinnati) District, and E. L. Stokes, Pennsylvania, 2d District. The results had been uncertain in the Ohio 1st; here the Democrats had hoped to win the seat left vacant by the death of Speaker Longworth, and were disappointed. But in the Michigan 8th they made up this disappointment by a victory that had not been expected. The Election-day results brought the composition of the House to this stage: Democrats, 217; Republican, 215; Farmer-Labor, 1; vacancies, 2.

New Jersey, where a House vacancy for the 5th District was to be filled by a specially called election on December 1, elected A. Harry Moore, Democrat, Governor on November 3 by the exceptionally high Democratic vote of 735,713 (unofficial) to 503,387 for David Baird, Jr., Republican. This result was followed by the election of a Democrat, P. H. Stewart, on December 1 to fill the vacancy, as Representative from the 5th District. In Kentucky, Ruby Laffoon, Democrat, was elected Governor to succeed a Republican. These State results as well as strong Democratic votes in numerous city elections, notably in New York State and Connecticut, were widely interpreted as implying dissatisfaction with Republican national policy.

*Partisan Politics.* In the Republican party the year was marked by a tendency of members to fall away from support of the Administration, in some directions. The Progressive Republicans were particularly restive. Under the auspices of Senator Borah of Idaho and Senator Norris of Nebraska was held, a week after the adjournment of the 71st Congress, a conference of "left-wing" Republicans and Democrats, meeting at Washington. President Hoover was severely criticized, more energetic measures to cope with distress among the destitute were demanded and the President was asked to call an extra session at an early date unless economic conditions should promptly improve. Progressive activity was renewed in November, when the members of the Wisconsin delegation held conferences with other Progressives in order to unite and enforce some of their demands. O. B. Lovette, an Independent Republican elected to the 72nd Congress, on the other hand, declared himself in August to be in favor of the Republican group in the House.

The Democratic party made some effort to settle its position on the Prohibition issue. The Democratic National Committee met at the beginning of March, but withstood an effort on the part of John J. Raskob to have it take a definite position on the subject. Later in the year an effort was started to raise a subscription to cancel the "Raskob mortgage," the indebtedness of the National organization to Chairman Raskob for advances made by him in the 1928 campaign.

See **MILITARY PROGRESS; NAVAL PROGRESS; UNEMPLOYMENT; FRANCE** under *History*.

**UNITED STATES MILITARY ACADEMY.** A government institution at West Point, N. Y., for the theoretical and practical training

of cadets for the military service of the United States, opened in 1802. On Sept. 1, 1931, the total number of cadets was 1260. There were 217 members on the faculty. The academy is a component part of the Regular Army of the United States and is maintained solely by appropriations from the War Department, which in 1931 amounted to \$3,226,127 for salaries and maintenance of public works. The library contained over 110,000 volumes. Superintendent, Maj. Gen. Wm. R. Smith, U. S. A.

**UNITED STATES NAVAL ACADEMY.** A school for the education and training of midshipmen in Annapolis, Md., founded in 1845. The total number of midshipmen at the beginning of the academic year 1931-32 was 2022. The faculty numbered 238. The library contained 73,625 volumes. Midshipmen, after graduation, are commissioned as ensigns in the U. S. Navy. Superintendent, Rear Admiral Thomas C. Hart, U. S. N.

**UNITED STATES OF EUROPE.** M. Aristide Briand's proposal of May 1, 1930, for the establishment of a European political union (see 1930 YEAR BOOK) underwent extensive modification during 1931. The political features of M. Briand's project were definitely rejected. For a European federation, with an elaborate constitution, functioning independently of the League of Nations, there was substituted an organization to serve as an adjunct of the League in promoting economic collaboration among the European states.

These developments took place at four full sessions of the Commission of Inquiry for European Union, appointed by the League Assembly Sept. 17, 1930. The Commission's meetings were held in Geneva in January, May, and September (two sessions). See LEAGUE OF NATIONS for developments at each session.

At the May session the French representatives advanced a counter-proposal to the Austro-German Customs Union project of March 21 (see GERMANY, AUSTRIA, and FRANCE under *History*). The French plan envisaged an economic federation of European states through the exchange of reciprocal trade advantages between the industrial and agricultural states. The Commission appointed an economic coördination committee, to which it referred the new French proposal, an Italian proposal for bilateral commercial agreements (see ITALY under *History*), and a draft project for economic non-aggression submitted by Maxim Litvinov, Soviet Commissar for Foreign Affairs (see UNION OF SOVIET SOCIALIST REPUBLICS under *History*). It also approved a plan for the establishment of an International Agricultural Mortgage Credit Company (see LEAGUE OF NATIONS). An international committee of economic experts met in Geneva in June and August and drew up a report outlining methods for economic rapprochement among the European nations which was studied and adopted by the committee on economic coördination Sept. 1 and 2.

The Commission of Inquiry met again September 3, drawing up a report to the League Assembly containing suggestions for further examination of various economic problems. The League's Sixth Committee, which was charged with the disposal of the Commission's report, turned the matter over to a drafting committee, which decided (1) that the Commission of Inquiry should confine itself to problems of purely European concern, (2) that the Commission should continue indefinitely in existence, and (3) that its report should be indorsed. The final session of the Commission for the year was

held September 26, at which M. Briand was elected chairman for 1932. See LEAGUE OF NATIONS; INTERPARLIAMENTARY UNION. Consult Edouard Herriot, *The United States of Europe* (New York, 1930); William Martin, "Europe As I See It Today," *International Conciliation*, May, 1931; Vera Micheles Dean, "European Efforts for Economic Collaboration," *Foreign Policy Reports*, vol. vii, No. 12, Aug. 19, 1931.

**UNITED TEXTILE WORKERS.** See LABOR, AMERICAN FEDERATION OF; STRIKES AND LOCK-OUTS.

**UNIVERSAL CHRISTIAN COUNCIL ON LIFE AND WORK.** See INTERNATIONALISM.

**UNIVERSALISTS.** A religious denomination, existing chiefly in the United States, Canada, Japan, and Korea, which holds as part of its doctrine the universal fatherhood of God and the final harmony of all souls with God. In 1931 there were 28 State conventions and two State conferences. The number of churches was 583; ministers in fellowship, including lay licensees, 523; church members, 50,139; and Sunday schools, 395. The denominational periodical, the *Christian Leader*, is published weekly. Victor A. Friend of Melrose, Mass., was president of the general convention in 1931. Headquarters, 176 Newbury Street, Boston.

**UNIVERSE, THEORIES AND STUDIES.** See ASTRONOMY; GEOLOGY; PHYSICS.

**UNIVERSITIES AND COLLEGES. ATTENDANCE.** Attention in college groups was directed toward the effect that adverse economic conditions might have on attendance. The statistics of enrollment for 1931 gathered by Dean Raymond Walters of Swarthmore College and reported in *School and Society* on Dec. 12, 1931, indicated that as a whole, enrollment as reported by 444 different universities and colleges was slightly higher than for the previous year. The increase, however, was very slight, being only six-tenths of 1 per cent. When compared with the previous year, the totals for full time enrollment showed that out of 437 institutions, 201 showed a decrease. The remaining 236 had an enrollment equal to or in advance of the preceding year. Among the 50 institutions enrolling 3000 or more, 24 reported increased attendance, 24 decreased, and one retained the same enrollment for the two years. These 50 institutions enrolled 293,193 full time students in 1930. In 1931, the enrollment was 293,084. In the institutions having an enrollment of from 1000 to 3000 full time students, 41 showed a decrease and 59 an increase, while one retained the same enrollment. This group enrolled 167,212 full time students in 1930. This had increased to 171,102 in 1931. Among the institutions enrolling from 500 to 1000 students, 48 reported decreases and 62 increases. The total increase in students, however, was very small, being only the difference between 75,066 in 1930 and 75,955 in 1931. The group enrolling less than 500 students included 182 institutions. Eighty-eight of these showed decreases; 90 increases; and 4 had the same enrollment. The total enrollment decreased from 59,332 in 1930 to 58,983 in 1931.

The total enrollment of full time students in the 444 institutions that reported was 599,124 in 1931. This was an increase of 3721 students over the previous year.

The total enrollment in these 444 institutions including full time students, part time students, and summer session students for 1931 was 926,611. This was a decrease of 5417, or one-half of

1 per cent as compared with the same total for 1930. The largest liberal arts enrollments were reported by the University of California, 10,650; Minnesota, 4473; New York University, 4403; College of the City of New York, 4238; and Michigan, 3990.

The University of California also had the largest enrollment of men with 4881; then follows the College of the City of New York, 4328; Harvard, 3266; New York University, 2962; and Minnesota, 2554. The largest enrollments of women undergraduates were in California, 5760; Minnesota, 1191; Wisconsin, 1616; Illinois, 1609; and Michigan, 1454. Hunter College, New York City, with an enrollment of 4456, was by far the largest women's college.

**EXPENDITURES.** The U. S. Office of Education reported the expenditures, public and private, for the year 1930 for all colleges and universities throughout the United States. The grand total expended was \$563,547,070. Of this amount the expenditures for publicly controlled institutions of college grade was \$225,816,044, and for privately controlled institutions \$337,731,030.

The following summary gives the expenditures for certain items:

	Public	Private
Cost of resident instruction	\$ 81,733,771	\$109,333,054
Organized research . . . .	13,511,576	4,495,971
New buildings and grounds	27,144,080	66,530,646
New equipment . . . . .	9,444,467	6,526,301
Operation and maintenance of plants . . . . .	16,834,204	29,108,896
Libraries . . . . .	3,285,051	6,336,407
Administrative and general	12,176,657	25,991,392
Other items, including un-itemized total . . . . .	\$225,816,040	\$337,731,030

**CHANGES IN ORGANIZATION.** During 1931, there were more pronounced changes in college organization than were evident in any previous year. The different institutions, through their faculty groups or alumni, began to make very thorough studies of their offerings, as well as the methods employed in their schools. This was not due to any pronounced criticisms of the institutions, but rather it seemed to be the outcome of a growing conviction on the part of the institutions themselves that important changes must be brought into higher education. The year marked the beginning of the new plan at Chicago University (q.v.). This experiment was being watched carefully by most other institutions. Brown University submitted itself to a survey conducted by a number of experts chosen from other institutions. The new college at Bennington, Vermont, completed its required endowment and began to make definite provision for its opening in September, 1932. While the plans for this college called for marked changes in the ordinary college procedure, there was no tendency on the part of other institutions to criticize it.

During the decade, 1921-31, many of the larger institutions have urged the need for limiting the number of students who enroll. In some cases they set up an arbitrary limit to their enrollment. At the same time, they made an effort to choose those who would profit most by the type of training that the institutions were best prepared to give. The efforts that had been made in this direction were beginning to be manifested. The College Entrance Examination Board passed resolutions approving "the general proposal to establish a series of validating examinations." They also

agreed to offer such special examinations as soon as the necessary funds were found.

It was believed that these examinations would give valuable supplementary information regarding the candidates. The board was also developing a series of examinations in English that were designed to test the English abilities of students from foreign lands. The purpose was to select only those who could profit by instruction that was offered in the institutions that made use of such examinations. In keeping with the general plan of selecting students who best could profit by work in the institutions, the Association of American Medical Colleges was making use of a medical aptitude test. It now consisted of six parts: (1) Scientific Vocabulary, (2) Visual Memory for Anatomical Drawing, (3) Memory for Descriptive Material, (4) Premedical Information, (5) Learning and Retention of Material and (6) Understanding of Difficult Printed Material. The total working time required for taking the test was one and a half hours.

There were many changes in college curricula. Yale abolished mid-year examinations and made changes in the general method of instruction. Dean Mendell described the plan as follows:

Each student at Yale shall select not more than five courses each year, and juniors and seniors whose work is of quality grade may, with the written approval of the class officer or dean, elect less than five courses.

A student will be admitted to the junior class in full standing only when he has completed successfully the entire work of his junior year, and the same with the senior-class entrants.

The student will be recommended for the degree only when he has completed successfully the work of all four years and has received a grade of 275, or better, in at least six courses.

Early in February each year at the call of the dean's office, each instructor shall make a report on the quality of work being done by each student in his course. All students whose work at the time is unsatisfactory in three courses will be placed on general warning; the same for students on two subjects after a review of the student's status in all subjects. Any student who at the close of the year has failed in two courses will be dropped from the college.

Any student who during freshman and sophomore years has not received a grade of 275 or higher in at least two courses shall be dropped from the college.

The Johns Hopkins University adopted a new curriculum. The announcement gives the following tentative description:

1. Students will concentrate in "subjects" rather than departments.

2. Requirements will be stated in terms of knowledge rather than hours, courses, points.

3. A student may be legitimately asked to acquire by himself information which can be profitably got out of books.

4. The part of a student's programme which concerns his specialty will be determined by the student in consultation with his departmental adviser.

5. The part of it which is general throughout the group to which his specialty belongs will be determined by the group-faculty. For instance, it now appears that every student in the social science group will be expected to know, among other things, modern European and American history whether he is specializing in economics, ethics, education, political science, or history.

6. To eliminate the danger of a student's forgetting a course once passed, and to bind a student's studies together, near the end of the year in which a man presents himself for his degree, he will take comprehensive examinations in both his specialty and his group. The former will be set by his department, the latter by his group and will cover, to repeat, subject-matter not merely courses.

There seemed to be a growing conviction that the four-year college course was not adapted to the needs of many students who were seeking admission. Dr. E. H. Wilkins, president of Oberlin College and president of the Association of American Colleges, presented to that organiza-

tion a proposal of a type of organization that would be adapted to the needs of young people who were not preparing for the professions. He urged that such young people really needed a training which would enable them to live well as members of society. He believed that this work could be completed in three years; therefore, he proposed three-year general colleges.

**FELLOWSHIPS AND SCHOLARSHIPS.** In recent years the number of important fellowships and scholarships available to worthy students had been gradually increased. Such fellowships were in addition to those offered by the various institutions for work within their own walls. Some were restricted as to subjects that were to be studied, and some specified particular countries or institutions. The stipends vary from \$250 to \$5000. The greater number were for \$1000 to \$1500. Among the fellowships and scholarships that were announced were the following: Graduate fellowships of the American Association of University Women. This association awards annually from 10 to 13 graduate fellowships "to encourage women to devote themselves to scientific work and scholarly practice." The number of fellowships awarded varies from year to year, as several are bi-annual and one tri-annual. The stipends vary from \$1000 to \$2000.

The American-Scandinavian Foundation supports six scholarships for persons who desire to study in the Scandinavian countries. The Carnegie fellowships for graduate library study for 1931 provided for nine candidates who would live in the United States and three who would live in Canada. The grants range from \$1000 to \$2500. The Charles A. Coffin Foundation, a creation of the General Electric Company, granted fellowships to nine college graduates. The fellowships were to enable promising persons to engage in technical research and postgraduate work.

The Commission for Relief in Belgium Educational Foundation awarded five scholarships to American students for study in Belgium during 1931-1932. Each fellowship carried traveling expenses and stipend sufficient for a year's advanced work at a Belgian university. In turn, 18 fellowships were awarded in Brussels to Belgian students who came to American universities.

The Commonwealth Fund granted fellowships to thirty students from Great Britain and the Dominions who entered American universities in the fall of 1931. These students were to spend two years in study and travel in the United States.

The Garvan scholarship pays tuition and \$500 annually at any college or university in the United States to six high-school students who were winners in an essay contest. Mr. and Mrs. Francis P. Garvan instituted this contest in 1923. All 48 high-school students, including the 1931 winners, received college or university tuition for four years and a substantial sum to help them in their college education. This was the eighth and final series of the scholarships.

The Oberlaender Trust founded by Gustav Oberlaender of Reading, Pa., as a part of the Carl Schurz Memorial Foundation announced the awards of money for the support of six American citizens who were actively engaged in professional and research work that would promote good will between the United States and German-speaking countries. The funds are derived from the income of a \$1,000,000 trust fund.

The Social Science Research Council granted

scholarships to 31 American scholars. The purpose was to aid mature scholars of demonstrated capacity in completing undertakings which promised significant contributions to social sciences.

The Institute of International Education announced a considerable number of grants to American students for study in foreign countries. These fellowships were arranged by the various foreign governments and universities in recognition of the opportunities offered to foreign students in America. The countries included are France, Austria, Germany, Hungary, Italy, Switzerland, and Spain.

The Rhodes scholarships were also available for students who desire to study at Oxford. The John Simon Guggenheim Foundation offered exchange fellowships for students who desired to study in Latin America and for Latin American students who desired to pursue their work in institutions within the United States.

**GIFTS AND BEQUESTS.** The year 1931 was marked by many large benefactions. For the year ending June, 1930, Harvard announced receipts of \$14,571,697. Total gifts to Yale during the year were more than \$12,000,000. For the year 1931 the gifts to Columbia amounted to \$3,083,828, New York University received about \$3,500,000, and the University of Chicago more than \$3,000,000. Bennington completed the raising of \$1,261,909 and other colleges, including Amherst, Boston College, Cornell, and Mt. Holyoke each completed endowments of \$500,000 or more. Among the gifts of \$100,000 or more, the following were announced: Bates College received a conditional gift from the Board of Education of the Northern Baptist Division of \$100,000. This was conditioned upon gifts of \$900,000 from other sources by 1930. Brown University received \$100,000 by the will of the late Lucian Sharpe. The University of California received a grant of \$175,000 for the establishment of a scholarship for poor girls and a professorship in United States History by the will of the late James William Byrne. The University of Chicago received a bequest of approximately \$1,000,000 by the will of the late Albert B. Kuppenheimer and \$500,000 from the Rockefeller Foundation.

The Catholic University of America received a legacy of \$300,000 under the will of George L. Duval. Claremont College received a gift of \$650,000 from Mr. and Mrs. A. S. Bridges. The gift is for the purpose of building a new auditorium to seat 2500. Columbia University received the money for a new library and school of library service building from Edward S. Harkness. The cost of the building was estimated at \$3,500,000. The Cleveland Schools of Art will receive \$975,000 by the will of Mrs. Elizabeth Stevenson Burk.

The Groton School was to receive \$500,000 by the will of William A. Gardner. Hamline University completed the raising of \$500,000 which was needed to claim the gift of \$250,000 from the Rockefeller Foundation. Lehigh University received the bulk of the \$500,000 estate of Dr. Charles William MacFarlane.

Middlebury College was to receive \$200,000 under the will of Charles M. Swift. Mt. Holyoke College was to receive a grant of \$375,000 from the General Education Board. The New England Conservatory of Music received \$100,000 by the will of Charles H. Ditson. New York University received a bequest of \$853,982 from the estate of William H. Nichols. Stanford University received a gift of \$2,500,000 from an anonymous

donor, for the construction of a new medical building in San Francisco. The gift was contingent upon the University raising \$1,250,000 as an endowment. The University of Pennsylvania received an unrestricted gift of \$1,000,000 from Mr. Cyrus H. K. Curtis and \$160,000 from the Rockefeller Foundation. Wells College announced the completion of an endowment fund of more than \$500,000. Yale University was to receive more than \$1,000,000 by the will of the late Chauncey M. Depew, Jr. To this was to be added a similar sum under the will of Chauncey M. Depew which made such provision in case his son left no children. The institution also received \$426,658 by the will of the late Samuel S. Betts.

**SPORTS.** The criticism of college sports continued during the year, while gate receipts for the various games were said to have shown a very decided decrease. Several institutions endeavored to improve the conditions under which sports are conducted. The University of Pennsylvania announced a complete reorganization of athletics in that institution. It created a Department of Physical Education, with a director having the title and rank of Dean.

Bulletin No. 26 of the Carnegie Foundation for the Advancement of Teaching entitled *Current Developments in American College Sports* gives a summary of the changes in the relation of sports to the educational work of institutions.

See **EDUCATION**, articles on the separate colleges and universities, and sections on *Education* in articles on the various countries.

**UPPER VOLTA.** See **FRENCH WEST AFRICA**.

**UR.** See **ARCHAEOLOGY**.

**URUGUAY.** ūru-gwā or ōrōō-gwī. A republic on the southeast coast of South America, bounded by Brazil on the north and Argentina on the west. Capital, Montevideo.

**AREA AND POPULATION.** Uruguay's area of 72,172 square miles makes it the smallest state in South America. The population on Jan. 1, 1931, was estimated at 1,903,083 (1,429,585 in 1928). For the period 1926 to 1930, annual births and deaths averaged 44,104 and 19,309, respectively. The respective rates per 1000 inhabitants were 24.6 and 10.8. A total of 230,454 persons entered Uruguay through the various ports during 1930 and 203,109 departed; entries and departures for 1929 were 201,781 and 184,514, respectively. The estimated population of the chief cities in 1930 was: Montevideo, 600,000; Salto, 35,000; Paysandú, 37,000; Mercedes, 30,000.

**EDUCATION.** Primary education is compulsory up to the age of 14. In December, 1930, a total of 162,115 pupils were enrolled in the public schools, the average attendance being 124,106. There were more than 11,000 students enrolled in the University of Uruguay at Montevideo in 1929.

**PRODUCTION.** About 60 per cent of the total area of Uruguay was devoted to stock raising, about 20 per cent to mixed stock and crop farms and ranches, and 7 per cent primarily to crop-raising farms. The value of the principal crops for the agricultural year 1928-29 was as follows: Wheat, \$14,136,000; corn, \$7,896,000; and linseed, \$3,651,000. In 1930, there were 7,098,000 cattle and 20,510,000 sheep. The 1930 census showed that since 1925 the number of cattle had decreased 15½ per cent, while the number of sheep had increased 42 per cent. Cattle slaughtered by the frigorificos in 1930 numbered 1,613,380; sheep, 3,003,172; swine, 61,455. The 1929-30 wool clip was estimated at 154,000,000 pounds. As com-

pared with 1929, exports of wool increased 53.3 per cent in volume in 1930 but declined 19.4 per cent in value. Local industries use imported coal and oil fuel almost exclusively. Meat packing is the principal industry, followed by flour milling, shoemaking, and tanning. The industrial census of 1930 showed 7400 establishments, with 94,000 employees and a total output valued at 236,000,000 pesos (about \$243,000,000 at par).

**COMMERCE.** According to preliminary reports, exports in 1931 totaled 76,000,000 pesos and imports 82,000,000 pesos, compared with exports of 89,302,000 pesos and imports of 100,864,000 pesos in 1930 (the peso exchanged at an average of \$0.8586 in 1930 and \$0.5536 in 1931). The United States in 1930 supplied 25.7 per cent of all imports and took 7.7 per cent of the total exports. Respective shares of other trading nations were: United Kingdom, 16.9 and 33 per cent; Germany, 10.2 and 12.4; Argentina, 10 and 12.3. The United States retained a diminished lead in Uruguay's import trade in 1931. Of total exports equivalent to \$86,612,000 in 1930, \$72,279,000 represented animals and animal products and \$9,083,000 agricultural products.

**FINANCE.** The Uruguayan General Accounting Office reported revenues and expenditures for the fiscal year ended June 30, 1930, at 58,916,879 pesos and 59,702,024 pesos, respectively. The resulting deficit was 785,745 pesos (1,906,319 pesos, if extra-budgetary income was deducted from revenues). A deficit of 6,005,504 pesos was anticipated for the fiscal year 1930-31. Actual receipts were 53,401,074 pesos. The 1931-32 budget estimated revenues at 58,803,962 pesos and the deficit at 1,795,953 pesos. The public debt on Oct. 31, 1931, totaled 238,841,722 pesos, compared with 219,324,000 pesos on Jan. 31, 1930. The unit of currency is the peso, with a par value of \$1.0342.

**COMMUNICATIONS.** Railway lines in 1930 aggregated 1717 miles, most of which were privately owned. Of the 22,487 miles of highway in 1930, 709 miles were macadam and 20,317 miles were unimproved. A total of 18,225 vessels, of 16,678,000 net registered tons, entered the ports in 1929. A seven-day round-trip passenger air service between Montevideo, Buenos Aires, and New York and Chicago was inaugurated Oct. 6, 1931.

**GOVERNMENT.** Under the constitution of Jan. 3, 1918, legislative power is vested in the Parliament of two houses, the Chamber of Representatives, elected by universal suffrage of males over 18 years of age, and the Senate, chosen by an electoral college which is elected by popular vote. Executive power is vested in the President elected by direct popular vote and a national administrative council of nine members. Dr. Gabriel Terra was inaugurated President on Mar. 1, 1931, succeeding Dr. Juan Campisteguy.

**HISTORY.** The inauguration of President Terra on Mar. 1, 1931, followed the announcement of the Electoral Court on January 21 that he had been elected in the voting of Nov. 30, 1930, by 105,069 votes to 131,777 votes for his closest rival, Dr. Luis Alberto Herrera, of the Blanco party (see 1930 YEAR BOOK). Dr. Terra and the National Council of Administration devoted their efforts chiefly to pressing economic and financial problems. The steady decline in the exchange value of the peso to \$0.3490 in October, 1931, the lowest point reached in many years, and an average of \$0.5536 for 1931 greatly disturbed the import trade and reduced Government revenues, although aiding the movement of export products. In order

to obtain additional peso funds to meet interest and service charges on the public debt, the Government was forced to reduce salaries, pensions, and retirements, increase land taxation, and raise the import tariff.

In its efforts to ameliorate the effects of the depression, the Government secured Congressional authorization to purchase the exportable surplus of wheat and corn, with exclusive selling rights for export. Exchange operations were placed under the control of the Bank of the Republic and when exchange continued to weaken the Government on October 10 declared a commercial moratorium, later extended to Dec. 31, 1931, on all foreign drafts and bills for collection which had been presented and accepted for payments before August 5. Congress also authorized the Administration to establish machinery for the eventual monopolistic control of the refining and distribution of petroleum products, the distillation of alcohol, and the manufacture of cement for public works. Luxury imports were temporarily curtailed. While the National government maintained interest and service payments on the foreign debt during 1931, its position at the end of the year was difficult. The City of Montevideo had been forced (December 4) to suspend the remittance of debt service payments due in New York, owing to inability to purchase dollar drafts.

At the invitation of the Uruguayan government, Argentina, and Brazil sent representatives to an economic conference at Montevideo December 15, which sought to work out methods of economic collaboration between the three countries. The proposal for a customs union was rejected, but at the close of the conference December 30 an agreement was signed recommending strict government control of the meat industry in each country and the appointment of a permanent joint commission to protect and expand foreign markets for meat exports. A bilateral trade agreement between Brazil and Uruguay was also formulated for submission to the two Governments.

Uruguay was one of the three Latin American republics which escaped a revolutionary overturn of the government during 1930 and 1931. However, the business and commercial interests in Uruguay became increasingly restive under radical and restrictive legislation enacted by Congress, voicing their discontent in a number of street demonstrations. Led by President Terra, a movement developed favoring amendment of the Constitution to abolish the National Administrative Council and other features of the cumbersome commission form of government. Congressional elections held November 29, gave the Government party a majority in Congress. A site for the construction of a United States legation in Montevideo was purchased June 18, 1931. See ARGENTINA and BOLIVIA under *History*.

**URAL AREA.** See SIBERIA.

**UREASE.** See CHEMISTRY, INDUSTRIAL.

**USHER, REAR ADMIRAL NATHANIEL REILLY,** U. S. N., RET. An American naval officer, died in Potsdam, N. Y., Jan. 9, 1931. He was born in Vincennes, Ind., Apr. 7, 1855, and was graduated from the U. S. Naval Academy in 1875, being promoted through the grades to rear admiral in 1911. He commanded the torpedo boat *Ericsson* during the Spanish-American War, and served on the General Board of the Navy Department during 1903-04 and the Bureau of Navigation during 1904-06. He was detailed in 1911, to the Navy

Department in Washington as president of the Naval Examining and Retiring Boards, and was appointed commander of the 4th division of the Atlantic fleet in 1912, of the 2d division in 1912-13, and of the 3d division in 1913. He also was made commander of the Navy Yard at Norfolk, Va., in 1913 and of that at New York in 1914, where he remained during the World War, organizing the scout patrol system and directing the transport of men and supplies to France. He was retired in 1919.

**UTAH. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 507,847, in 1920 it was 449,396. The native whites numbered 452,183 (1930), 385,446 (1920); foreign-born whites, 43,772 (1930), 50,455 (1920). Mexicans, first grouped separately from the foreign-born whites in 1930, then numbered 4012. Among other races represented in 1930 were Negroes, 1180; Indians, 2869; Chinese, 342. The urban population (dwellers in communities of at least 2500) rose to 266,264 (1930), surpassing the rural group, from 215,584 (1920). Rural dwellers increased somewhat also, to 241,583 (1930), from 233,812 (1920).

Of 170,013 persons reported in 1930 as gainful workers, 41,283 were in agriculture, chiefly as farmers; 32,456 in manufacturing and mechanical industries; 27,067 in trade; 19,128 in transportation; 14,056 in professional service; 12,521 in industries of mineral extraction. Salt Lake City, the capital, had 140,267 inhabitants (1930), 118,110 (1920); Ogden had 40,272 (1930); 32,804 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ...	1931	610,000	831,000*	\$8,892,000
	1930	636,000	1,295,000*	9,712,000
Wheat .....	1931	257,000	4,679,000	2,527,000
	1930	276,000	6,892,000	4,516,000
Sugar beets ..	1931	49,000	504,000*	...
	1930	44,000	553,000	3,874,000
Potatoes .....	1931	15,000	1,950,000	780,000
	1930	12,000	2,160,000	1,296,000
Oats .....	1931	43,000	1,290,000	516,000
	1930	46,000	1,840,000	754,000
Barley .....	1931	38,000	1,216,000	632,000
	1930	42,000	1,806,000	939,000

\* Tons.

**MINERAL PRODUCTION.** As rendered by the U. S. Bureau of Mines in 1931, the total value of the mine production of the metals gold, silver, copper, lead, and zinc for 1930 was \$48,653,464; this was slightly more than half as great as the corresponding total for 1929, which was \$95,985,201. The quantity of coal mined fell to 4,275,000 short tons for 1930, from 5,160,521 for 1929, or by value (1929), \$12,725,000. The total value of the State's mineral production was \$115,130,581 for 1929; for 1928, \$97,381,148.

The mines of Utah in 1931 produced gold, silver, copper, lead, and zinc valued at about \$26,661,600, a decrease of nearly \$22,000,000 from the output of 1930, according to estimates of the U. S. Bureau of Mines. Large decreases were recorded in the output of all metals, and serious decreases in their value figured at the average sales prices for 1931. The curtailed production, combined with distinctly declining metal prices, resulted in an output which, with the exception of 1922, had a lower value than for any year since 1908. Utah remained first in the United

States in the production of silver, but it ranked third in copper after Arizona and Montana, and third in lead after Missouri and Idaho. The dividends reported paid by mining companies in Utah in 1931 amounted to about \$10,683,800, exclusive of \$2,188,578 paid by one company which controls mines at Eureka and Bingham, as well as mines in other States. The dividend total compares with \$19,165,125 paid in 1930 and \$38,167,339 paid in 1929. Gold production decreased considerably from \$4,309,148 in 1930 to about \$3,812,100 in 1931.

The silver output decreased from 13,129,421 ounces in 1930 to about 7,894,483 ounces in 1931, and the production was about 600,000 ounces more than that of Idaho, which was second in silver production in the United States. For 11 years Utah has been the leading silver producer of the United States. The value of the silver output decreased from \$5,054,827 to about \$2,289,400, and the average price of silver declined from 38.5 cents an ounce in 1930 to 29 cents an ounce in 1931. Copper decreased from 180,526,423 pounds in 1930 to about 151,315,663 pounds in 1931, the smallest output since 1922. The value decreased from \$23,468,435 to about \$12,559,200 as a result of a decrease in the average price of copper from 13 cents a pound in 1930 to 8.3 cents a pound in 1931. From 1925 to 1929 Utah ranked second in copper production after Arizona but in 1930 and 1931 the State took third place after Arizona and Montana. The decrease in the copper production of Utah in 1931 was about 16 per cent. The lead output decreased from 230,980,780 pounds in 1930 to about 146,581,580 pounds in 1931, and the value decreased from \$11,549,489 to about \$5,570,100. The average sales price of lead declined from 5 cents a pound in 1930 to 3.8 cents a pound in 1931. The zinc, recovered chiefly from concentrates leached or smelted, decreased from 88,990,938 pounds in 1930 to about 63,068,420 pounds in 1931. The average sales price of the various grades declined from 4.8 cents a pound in 1930 to 3.8 cents a pound in 1931, and the value of the output decreased from \$4,271,565 to about \$2,430,800.

**MANUFACTURES.** Federal Census figures gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 654 (18 per cent more than that for 1927). These employed 15,650 wage earners (an excess of 15.2 per cent over the number for 1927). The wages paid them amounted to \$19,765,145 (more than had been paid in 1927 by 18 per cent). Materials for manufacture, plus fuel and purchased electricity, cost \$159,191,176 (an excess of 32 per cent over 1927). The manufactured product was valued at \$216,529,294 (exceeding that of 1927 by 32.7 per cent). Value added by manufacture was placed at \$57,338,118. Salt Lake City had 263 establishments, 5683 wage earners there employed, a wage total of \$7,339,804, and a product of \$43,255,519.

**FINANCE.** State expenditures of the year ended June 30, 1930, as reported to the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$9,513,584 (of which \$3,656,430 was for local education); for interest on debt, \$454,850; for permanent improvements, \$2,744,891; total, \$12,713,325 (of which \$3,817,546 was for highways, \$1,685,752 being for maintenance and \$2,131,794 for construction). Revenues were \$13,362,095. Of these, property and special taxes formed 43.4 per cent;

departmental earnings and remuneration to the State for officers' services, 9.3; sale of licenses, 28.7 (including gasoline sales taxes amounting to \$2,226,488). The State's funded debt outstanding on June 30, 1930, was \$10,285,000, of which \$7,260,000 was for highways. Net of sinking-fund assets, it was \$5,263,444. On a property valuation of \$723,052,970, were levied in the year State taxes of \$5,310,592.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 2196.03. There had been a small addition of 2.33 miles to total of operated line during the year preceding, and 0.8 mile was abandoned.

**EDUCATION.** The Legislature created a fund to be employed for equalization of the schools in different parts of the State. This fund was to provide a sum in the proportion of \$5 to every inhabitant of school age, and was additional to the already existing fund providing a State contribution at the rate of \$25 for every pupil.

**LEGISLATION.** The regular session of the State Legislature enacted a personal income tax in accord with a recommendation of Governor Dern. The rate of the tax was graduated from 1 to 4 per cent; exemptions allowed were \$1000 of income for the single, \$2000 for the married and \$400 on account of each dependent child. An offset up to one third of this tax was allowed for property taxes. Upon corporations was placed a so-called excise tax, based, however, on corporate income. It carried the rate of 3 per cent of such income and allowed the one-third offset for property taxes paid, thus bringing the actual rate for most corporations to 2 per cent.

In conformity with a constitutional amendment adopted in 1930 the Legislature made provision for creating a school equalization fund, for which the payments were to start at one dollar to each school child in 1932 and rise yearly, to five dollars for each child in 1936. A new bipartisan tax commission was created with power to equalize taxes not only as between counties but also within a county. The gasoline tax was raised to four cents a gallon, from three and a half, and several hundred miles of county roads were taken into the State system, for which the proceeds of the gasoline tax cared. Building projects to the total of \$250,000 were authorized for the avowed purpose of aiding unemployed persons.

The State Land Board was rendered appointive and received authority over matters of flood control. The law on juvenile courts was redrafted. Provision was made for the State's taking over, as junior colleges, two church schools. The operation of airplanes was put under regulation in conformity with the uniform law recommended by the U. S. Department of Commerce.

**POLITICAL AND OTHER EVENTS.** The State's law prohibiting the advertising of cigarettes and tobacco on billboards and in cars was declared valid on April 7 by the State Supreme Court in a decision rendered by a majority of one of the five members.

**OFFICERS.** Governor, George H. Dern; Secretary of State, Milton H. Welling; State Auditor, Ivor Ajax; State Treasurer, A. E. Christensen; Attorney-General, George P. Parker; Superintendent of Public Instruction, C. N. Jensen.

**JUDICIARY.** Supreme Court: Chief Justice, James W. Cherry; Associate Justices, Daniel N. Straup, Elias Hansen, William H. Folland, Ephriam Hansen.

**UTAH, UNIVERSITY OF.** A State institution of higher education in Salt Lake City, founded in 1850. The total enrollment for the autumn of 1931 was 3248 and for the summer session of the same year, 670. The faculty numbered 183, exclusive of 17 on leave of absence. The endowment of the university amounted to \$802,000, and the income for 1930-31 was \$911,000. The library contained 106,592 volumes and 29,903 pamphlets. The Union building, opened Nov. 25, 1931, was erected by students, alumni, and friends of the university at a cost of \$400,000. President, George Thomas, Ph.D.

**UZBEKISTAN.** See SOVIET CENTRAL ASIA; ANTHROPOLOGY.

**VACUUM TUBE.** See ELECTRICAL INDUSTRIES.

**VANDERBILT UNIVERSITY.** A nonsectarian institution of higher learning for men and women in Nashville, Tenn., founded in 1873. The enrollment for the autumn term of 1931 was 1411. The faculty numbered 252. Productive funds of the university amounted to \$19,853,819; the annual income was \$1,040,514; and the value of the property was estimated at \$6,441,807. The library contained 145,000 volumes. Chancellor, James H. Kirkland, LL.D., D.C.L., Ph.D.

**VARIATIONS.** See ZOOLOGY.

**VASSAR COLLEGE.** A nonsectarian institution for the higher education of women in Poughkeepsie, N. Y., founded in 1861. The enrollment for the autumn of 1931 was 1142. The faculty in 1930-31 had 165 members, including 13 on leave of absence. The endowment, including fellowships and scholarships, amounted to \$7,600,000; the income from funds was approximately \$425,000. Gifts received during 1930-31 were in excess of \$360,000. There were 171,000 volumes in the library. President, Henry Noble MacCracken, Ph.D., L.H.D., LL.D.

**VATICAN CITY.** A sovereign state, officially known as the State of Vatican City, established within the city of Rome as the seat of the Papacy on June 10, 1929, in accordance with the Italo-Vatican (Lateran) treaty of Feb. 11, 1929. Ruler in 1931, Pope Pius XI (Achilles Ratti).

Vatican City comprises 108.7 acres, including St. Peter's Square, and has its own coinage, import duties, railway station, postal facilities, telegraph, radio-telegraph, and radio. At the census of Dec. 31, 1930, there were 639 inhabitants, including 495 Italians and 118 Swiss. The Pope exercises full legal, judicial, and executive powers, delegating the latter to a governor and a council of state of 20 members named by the Pope. A special tribunal exercises the judicial power on behalf of the Pope, but appeals may be carried to the *Sacra Romana Rota* and to the Supreme Tribunal of the *Segnatura*. With the exception of St. Peter's Square, the territory is policed by a Papal Gendarmerie of 120 persons. The chief officials of the Vatican City at the beginning of 1931 were Commendatore C. Serafini, the Governor, and Cardinal Pacelli, Cardinal Secretary of State, who conducted the foreign relations.

**HISTORY.** Among the outstanding developments of 1931 were the quarrel between the Vatican and the Fascist government of Italy (see ITALY under *History*) and the collapse of a part of the Vatican library on December 22, with the destruction of many valuable books and other works. See ROMAN CATHOLIC CHURCH; LITHUANIA, SPAIN, MEXICO, and BOLIVIA under *History*.

**VEGETABLES.** See HORTICULTURE.

**VEHICLES, MOTOR.** See AUTOMOBILES.

**VENEZUELA**, vēn'ē-zwē'lā, *Sp. pron.* vā'nā-thwā'lā, or *Amer. Sp. pron.* vā'nā-swā'lā. A republic on the north coast of South America, bordering the Caribbean Sea. Capital, Carácas.

**AREA AND POPULATION.** Venezuela has an area of about 352,143 square miles and a population estimated in 1930 at 3,250,000, compared with 3,026,878 (including 136,147 aborigines) in 1926. From 1926 to 1930, births averaged 91,969 annually, deaths 58,538, immigrants 25,144, and emigrants 18,730. The chief cities, with their 1926 populations, are: Carácas, 135,253; Maracaibo, 74,767; Valencia, 36,804.

**EDUCATION.** Primary education is free and nominally compulsory. In 1929, pupils in Government primary schools numbered 80,788; in private schools, 10,344; in State schools, 9253; in municipal schools, 9070; in secondary schools, 462; in special schools, 1456; and in higher educational institutions, including the Central University at Carácas, 372.

**PRODUCTION.** Venezuela is primarily an agricultural country, with coffee and cacao the chief crops. Mining, livestock raising, pearl fishing, and manufacturing are important also. The coffee crop is normally about 13,200,000 pounds; cacao, about 11,000,000 pounds; sugar, 22,400 metric tons (1929-30); cotton, about 8,600,000 pounds; tobacco, about 4,500,000 pounds. Corn, beans, and wheat are other products. Livestock was estimated at 2,750,000 cattle, 550,000 swine, 125,000 sheep, 200,000 horses, 50,000 mules, and 2,250,000 goats. Mineral production in 1930 included: Petroleum, 137,675,000 barrels; gold, 58,729 troy ounces; mined copper, 3294 metric tons; asphalt, 54,332 metric tons (1929). The forests yield balata, tonka beans, divi-divi, hardwoods, and medicinal plants. Petroleum refining is the only large-scale manufacturing industry. The pearling industry was nationalized in 1931.

**COMMERCE.** In 1929, Venezuela's exports were valued at \$150,262,000 and imports at \$87,400,000. Petroleum and its products comprised about 75 per cent of the total export value. Imports were principally machinery, oil-field supplies, foodstuffs, electrical goods, textiles, cement, and iron and steel products. In 1929, the United States furnished 55 per cent of all imports and took (directly) 28 per cent of the exports, in addition to much petroleum taken indirectly. According to United States statistics, Venezuela's imports from the United States declined to \$15,600,000 in 1931 from \$32,969,000 in 1930, while exports to the United States declined to \$26,800,000 from \$36,868,000 in 1930.

**FINANCE.** The budget for the fiscal year ended June 30, 1932, calculated revenues at 150,000,000 bolivars and expenditures at 144,800,000 bolivars, compared with respective 1930-31 estimates of 202,598,500 and 201,800,000 bolivars (1 bolivar equals \$0.1930 at par). Actual revenues for 1929-30 were 243,660,000 bolivars (\$47,026,000) and actual expenditures 324,922,000 bolivars (\$62,710,000). The foreign debt was completely paid off in 1930 and on Dec. 31, 1930, the internal debt amounted to 26,487,742 bolivars.

**COMMUNICATIONS.** In 1931, there were 587 miles of railway line, including 68 miles of Government owned line; 11,160 miles of navigable waterways, 2211 miles of highway, a three-day air service from La Guaira to New York, and air lines connecting Carácas with Trinidad via

Ciudad Bolívar, and La Guaira with Maracaibo and Curaçao. Vessels with cargo entering the ports in the foreign trade in 1929 totaled 2200, of 3,894,000 net registered tons, and vessels clearing with cargo numbered 8674, of 12,040,000 tons. Shipments of petroleum accounted for the preponderance of outgoing tonnage.

**GOVERNMENT.** Under Constitutional amendments passed by Congress in 1929, the executive power is vested in the President, elected by Congress for seven years, in conjunction with the Commander-in-chief of the Army and the Cabinet Ministers. The actual ruler in 1931 was Gen. Juan Vicente Gómez, who established himself as dictator in 1908. There is a Congress of two chambers, with very limited powers.

**HISTORY.** On July 13, 1931, General Gómez reassumed the Presidency of Venezuela, which the dictator had turned over to Dr. Juan Bautista Pérez in May, 1929. The resignation of President Pérez, which took place on June 13, ostensibly at the insistence of Congress, followed disquieting developments of a political and economic nature. Rumors of revolt along the Colombian border leaked out of the country in April and May, coinciding with the intensification of the economic depression, the reduction of petroleum production by American oil companies, and the consequent decline in Government revenues. Before returning to the post of chief executive, Gómez insisted that the Constitution be revised to extend the powers of the President and his independence of Congress. The new Ministry formed July 14 included: Minister of Foreign Affairs, Dr. Pedro Rafael Tinoco; Treasury, Dr. Efraín González; War and Marine, Gen. Eleazar López Contreras; Industry, Gen. R. Cayama Martínez; Public Works, Dr. M. Centeno Grau.

Due to the elimination of the foreign debt, the Government escaped the exchange difficulties which forced many other Latin American countries to default on foreign debt payments. Business circles, however, were adversely affected by the weakening exchange value of the bolívar, which was quoted at around 5.55 to the U. S. dollar early in January, 1931, and at about 6.68 to the dollar in November and December, 1931. The Government crushed two invasions by insurrectionists during the year. In May, Gen. Juan Pablo Penabaz was captured during a foray into the country from Colombia. Another filibustering expedition, organized in Mexico under Rafael Urbina, was defeated and captured, after 48 invaders were killed. Most of the survivors were pardoned after court-martial proceedings in Venezuela and returned to Mexico.

**VERGIL.** See PHILOLOGY, CLASSICAL.

**VERMONT.** **POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 359,611; in 1920 it was 352,428. The native whites numbered 315,904 (1930), 307,291 (1920); the foreign-born whites, 43,061 (1930), 44,526 (1920); Negroes, 568 (1930), 572 (1920). The number of persons reported as gainful workers in 1930 was 138,484; of these, 20,737 were farmers, 14,803 farm workers for pay, 15,432 factory workers. Burlington, the most populous city, had 24,789 inhabitants (1930), 22,779 (1920); Rutland, 17,315 (1930), 14,954 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops raised in Vermont in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ..	1931	907,000	1,213,000*	\$11,524,000
	1930	912,000	1,084,000*	11,924,000
Potatoes ....	1931	17,000	2,550,000	1,275,000
	1930	15,000	2,475,000	2,228,000
Corn .....	1931	64,000	2,944,000	1,855,000
	1930	60,000	2,580,000	2,580,000
Oats .....	1931	61,000	1,952,000	781,000
	1930	56,000	1,848,000	979,000

\* Tons.

**MINERAL PRODUCTION.** Much the greater part of the State's mineral production of 1929 came from its marble and granite quarries. The quantity of stone produced was 307,240 short tons for 1929 and 448,060 for 1928. Though these quantities were slight in relation to the stone production of many other States, the high average price of the stone gave it a substantial aggregate value, which was \$9,435,680 for 1929 and \$9,438,790 for 1928. In the quarrying of slate the State held second place among the States of the Union. The total value of its yearly production of slate, however, fell off by about one-third to \$2,463,241 for 1930, from \$3,704,894 for 1929. The production of lime and talc amounted, for each, to more than \$500,000 in 1929. Copper and silver were mined, on a very small scale, in 1929. The total value of the State's mineral production was \$14,602,589 for 1929; for 1928, \$14,648,737.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering 1929 gave the number of the State's manufacturing establishments as 871 (about 1 per cent fewer than for 1927). These establishments employed 25,832 wage earners (fewer by 1.6 than had been employed in 1927). Their wages amounted to \$31,491,384 (2.4 per cent less than had been paid in 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$65,430,102 (6.4 per cent less than the cost for 1927). The manufactured product of 1929 attained the value of \$138,367,070 (surpassing that for 1927 by 3.2 per cent). The value added by manufacture was placed at \$72,936,968.

**FINANCE.** State expenditures of the year ended June 30, 1930, as reported to the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$6,906,414 (of which \$566,290 was for local education); for interest on debt, \$404,026; for permanent improvements, \$4,425,294; total, \$11,735,734 (of which \$7,248,748 was for highways, \$3,067,640 being for maintenance and \$4,181,108 for construction). Revenues were \$11,094,486. Of these, property and special taxes formed 28.7 per cent; departmental earnings and remuneration to the State for officers' services, 5.9; sale of licenses, 44.5 (including gasoline sales taxes amounting to \$1,874,827). The State's funded debt outstanding, both gross and net of sinking-fund assets, on June 30, 1930, was \$9,658,532. On a property valuation of \$332,064,390 were levied in the year State taxes of \$1,211,709.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 1056.19. There had been added to operation, during 1930, 5.45 miles of line, while operation of 6.14 miles had been given up.

**EDUCATION.** For the academic year 1930-31 the enrollments of pupils in the public schools of the State totaled 65,903. Of these, 54,105 were in common schools or elementary grades, and 11,798 were in high schools. The year's expenditures for public school education totaled

\$5,938,940. The yearly salaries of teachers were estimated to average \$965.

It was made obligatory in 1931 that intending teachers take two years of training beyond high School in order to qualify.

**CHARITIES AND CORRECTIONS.** The Department of Public Welfare, created in 1923, was in 1931 the branch of the State government performing the central duties with regard to institutions for the care and custody of persons. It had at its head a Commissioner (William H. Dyer). It supervised not only the State institutions but welfare institutions, agencies and activities in general. Its supervision extended over the State's parole system. The State institutions, with their populations as reported in December, were: Vermont State Hospital, 940; State Prison and House of Correction for Men, 410; State Prison and House of Correction for Women, 60; Vermont Industrial School, 252; Brandon State School, 264; Vermont Sanatorium, 74.

**LEGISLATION.** Among the measures passed by the regular biennial session of the Legislature was one to permit the sexual sterilization of idiots, imbeciles, the feeble-minded, and the insane. The use of deception in advertising was rendered a criminal offense subject to penalty. Regulations were made for eating places where oleomargarine was used. All such places were required to post placards to advise customers of the fact.

**POLITICAL AND OTHER EVENTS.** To fill the unexpired term, ending in 1935, of U. S. Senator Frank R. Greene, who had died on Dec. 17, 1930, an election was held in March. Warren R. Austin, obtaining the Republican nomination at the primary election on March 3, was duly elected on March 31, defeating Stephen M. Driscoll, Democratic candidate, in a light vote. The ancient boundary dispute with New Hampshire, in which Vermont claimed territory to the middle of the course of the Connecticut River, was submitted by the U. S. Supreme Court to a special master for the taking of evidence.

**OFFICERS.** Governor, Stanley C. Wilson; Lieutenant-Governor, Benjamin Williams; Secretary of State, Rawson C. Myrick; Treasurer, Thomas H. Cave; Auditor of Accounts, Benjamin Gates; Attorney-General, Lawrence C. Jones; Commissioner of Education, Francis Bailey.

**JUDICIARY.** Supreme Court: Chief Justice, George M. Powers; Associate Justices, Leighton P. Slack, Sherman R. Moulton, Frank D. Thompson, Warner A. Graham.

**VERMONT, UNIVERSITY OF.** An endowed institution of higher education in Burlington, Vt., receiving some State aid, founded by Ira Allen in 1791. The 1931 autumn enrollment was 1263. The registration for the 1931 summer session was 1000. The faculty numbered 200. The endowment amounted to \$2,241,000, and the income for the year was \$729,000. The library contained over 135,000 volumes. President, Guy W. Bailey, LL.D.

**VETERANS' ADMINISTRATION.** See UNITED STATES under Administration.

**VETERINARY MEDICINE.** The year saw no new invasion of the United States by any enzootic disease of livestock from abroad and was marked by a continued advance in the work of eradicating tuberculosis, the Texas fever tick and sheep scabies and by the progress of control work with bovine infectious abortion, fowl pox and pullorum disease of poultry. Of particular importance was the appearance in the San Joaquin Valley of California of a new disease of

the horse and mule with a resulting loss of some 3000 animals and its spread during the summer of 1931 into adjoining states.

**LIVESTOCK TUBERCULOSIS ERADICATION.** The work of eradicating tuberculosis from cattle proceeded rapidly and exceeded all former years in volume of business. Three States were added—Indiana on July 1, and Wisconsin and Ohio at the close of the year—to those that had completed the testing of their entire area and were officially designated as modified accredited areas, signifying the practical freedom of their cattle herds from tuberculosis. This recognition came after 13 years effort during which time more than 3,000,000 tests were made in Indiana, 10,000,000 in Wisconsin and 4,000,000 in Ohio. Altogether, 13,782,273 head of cattle in 1,162,414 herds were tested during the fiscal year ended June 30, 1931, or about 936,000 more than in any previous year. The percentage of reactors dropped from 1.7 per cent to 1.5 per cent.

The work was conducted under combined Federal, State and county appropriations aggregating nearly \$20,000,000 of which the greater part was for paying indemnity to owners for cattle condemned as a result of the test. On July 1, there were a total of 1223 tuberculosis-free counties in the United States and by December 31, 42.6 per cent of all the counties were declared to be practically free of bovine tuberculosis. At the end of December there were accredited 2,768,911 cattle in 165,345 herds and 3,428,707 herds with 31,415,805 cattle under supervision.

The retesting of cattle in modified accredited areas resulted in conclusive evidence that bovine tuberculosis could be kept at a minimum, provided attention is given to the necessary sanitary measures. Although misunderstanding regarding the work and lack of appreciation of its benefits resulted in opposition in a few localities the progress was so steady generally that most State officials estimated the time when the testing of all counties would be completed.

Several important cases were taken up in the courts of various parts of the country during the year to determine the constitutionality of the laws requiring cattle to be tuberculin tested, with results upholding the statutes in every instance. In addition to the eradication of tuberculosis under (1) the accredited herd and (2) the area plans, the work at the end of the year included (3) eradication from swine, (4) investigations relative to interstate shipments, (5) tuberculosis in fowls, and (6) the control and eradication of paratuberculosis better known as Johne's disease. The testing of cattle with johnin or avian tuberculin showed Johne's disease to exist in a slight degree in 12 States. Increased efforts made to trace the sources of infection in swine affected with tuberculosis resulted in finding tuberculous fowls responsible for a large majority of the slight cases of tuberculosis in swine.

**INFECTIOUS ABORTION.** The activity in research and the application of present knowledge in combatting infectious abortion was continued, reports of accomplishments having been made by many States. From Connecticut came the report that the disease had been eradicated from 35 breeding herds and nearly eradicated from 16 others, with 80 additional herds under observation. The practicability of maintaining a herd free from the disease was demonstrated by a herd of 178 females in that State which had been free from abortion since 1925, no precautions having

been taken other than in the introduction of animals, the barns having been open to visitors.

The agglutination testing of animals in this herd during the 4.5 years was considered to show clearly that blood positive reactions do not occur in a clean herd although some nonspecific reactions, usually slight, may occur in the lower dilutions.

It was found in work with seven experimental herds in New Hampshire that infectious abortion could be eliminated from a herd by applying the agglutination test combined with a practical plan of sanitation and isolation of each of the groups of negative, positive, and suspicious reactors—thus confirming findings in other States.

**MASTITIS.** This disease of the dairy cow commonly known as garget and from which dairymen suffer loss quite commonly was being given increased attention by investigators. Treatment by ultra-violet ray radiation applied directly to the quarter of the udder affected in 14 cows was found in Idaho to be an efficient means of eliminating clinical symptoms of the chronic form such as flaky milk, swelling and fever. Very satisfactory results were obtained in Michigan from the use of a living autogenous streptococcus vaccine, some 75 head being treated with favorable results.

**TEXAS FEVER AND CATTLE TICK ERADICATION.** That substantial progress was being made in eradicating the cattle tick from areas in the South was evidenced by the Order of Secretary of Agriculture which became effective Dec. 1, 1931, releasing 16,607 square miles of territory in Arkansas, Florida, and Texas from the tick quarantine. The Order requarantined 217 square miles in Louisiana making the net gain in territory freed from quarantine 16,390 square miles. These four States contained the only areas remaining under Federal tick quarantine in continental United States.

Of the entire area originally tick infested and quarantined 85 per cent had been freed from the pest by systematic eradication.

**ANAPLASMOSIS.** It was determined that this infectious disease of cattle occurring in many cattle raising sections of the United States and easily confused with Texas or tick fever in the tick quarantined areas may be transmitted by the common American dog tick as well as by the common cattle tick, the brown dog tick, and the tabanid or horse fly. A study of the spread of the disease indicated that mass surgical operations such as dehorning, castration, ear cropping, and bleeding may play a very important part in its transmission.

**SCABIES ERADICATION.** The eradication work with sheep scabies was continued in coöperation with State livestock sanitary officials, 21,775,139 inspections having been made and 3,788,224 dippings of sheep supervised. Those found to be infected numbered 565,448 or 33 per cent less than in the preceding year. In the control and eradication of cattle scabies 3,465,161 inspections and 843,894 dippings of cattle were made in the course of coöperative work by the State sanitary authorities and the Federal Bureau of Animal Industry and the Office of Indian Affairs. A total of 233,177 head of cattle were found to be infected, an increase of 161 per cent over the preceding year. The increase was caused by a large number of cattle found infected in Nebraska and Texas. Two outbreaks in California resulting from the introduction of infected cattle, were promptly eradicated.

**DOURINE ERADICATION.** It was believed that the Navajo Indian Reservation in Arizona and New Mexico was free from dourine no case having been reported during the year. Preliminary testing was carried on in southwestern Idaho and southeastern Oregon to determine the location and extent of infection, which with the infected area in northern Nevada where much work has been done, were held under State quarantines. Much preliminary work was done on the San Carlos Indian Reservation in Arizona where the disease is believed to exist extensively.

**HOG CHOLERA CONTROL.** The occurrence of hog cholera was unusually severe in some parts of the United States during the autumn. It at times threatened to cause losses as serious as those of the outbreak in the fall of 1926 but the prompt use of antihog-cholera serum saved herds that would otherwise have been lost. The veterinary officials in about two-thirds of the principal hog producing States reported no increase in hog cholera over 1930. In the remaining third the disease was more prevalent.

**ENCEPHALOMYELITIS OF HORSES AND MULES.** During the summer of 1930 a disease involving the brain and spinal cord of the horse and mule, later found to be caused by a filterable virus, appeared in the San Joaquin Valley of California in epizootic form. There were some 6000 cases of which 3000 succumbed within 3 to 8 days after the symptoms appeared. From the central part of the State the disease spread and in the summer of 1931 over 1200 cases were reported in the northern and southern parts of California and cases were found in four counties of Nevada and a few in Oregon and Arizona.

**FOWL POX AND AVIAN DIPHTHERIA.** Workers in Great Britain were led to conclude that fowl pox or contagious epithelioma and avian diphtheria are two distinct disease entities which may occur simultaneously or independently, there being no cross immunity between them. The practice of vaccination early in the fall against fowl pox continued to increase the so-called feather follicle and stick methods being commonly employed. In western Washington only 27 of 45,000 fowls vaccinated in the field contracted fowl pox during the fall and winter months. The results as based upon reports of poultrymen justified the use of vaccine on pullets between 3 and 4 months of age. In Oregon the vaccination of turkeys with fowl pox virus was highly successful.

Evidence was obtained in Hawaii of the transmission of fowl pox to healthy chicks by the common house mosquito, thus confirming the findings previously reported. The disease was prevented by screening the runs and houses. Positive transmission by another mosquito, *Aedes vexans*, from 2 to 27 days after the mosquitoes had fed on fowl pox comb lesions was secured in work in New York.

**PULLORUM DISEASE OF THE FOWL.** A continuation of control work with pullorum disease further demonstrated the value of the serum agglutination test in detecting infected fowls, thus making possible the freeing of flocks from the disease. Less reliable results were obtained from the use of the wattle test. Ten years of blood testing of breeding fowls for the control of the disease in California led to the conclusion that tests should be made at intervals of a month or six weeks until the flock is free from infection. Official reports from New Hampshire show that losses from the disease that were as high as 60

per cent of all chicks hatched the year before the testing was commenced have dropped to from 3 to less than 0.5 per cent in the last three years.

A new and simplified test for pullorum disease of poultry was developed which was a modification and simplification of the agglutination test. This promised to make it possible within a minute or two to determine whether or not a fowl is infected. Further evidence was obtained that brooder pneumonia is in young chicks the lung form of pullorum disease.

**COCCIDIOSIS.** Studies of coccidiosis resulted in the recognition and description during the year of many new forms in the domestic animals including two in the fowl, one in the bovine and two in the rabbit.

**LIVESTOCK POISONING.** Several important contributions were made to the knowledge of livestock poisoning on the range. A form of swell-head occurring in the western part of Texas that is the cause of heavy losses at times was found to be due to feeding on the range plant *Agave lecheguilla*. The broad-leaved milkweed was found in Texas to be poisonous to sheep and goats. Bitterweed was also found to be poisonous. Fitweed was discovered in investigations in Nevada to be dangerously poisonous to sheep and cattle. The intravenous injection of freshly defibrinated normal blood in North Dakota resulted in a large proportion of recoveries of cattle suffering from sweet clover disease and which had shown the effects of serious hemorrhage.

**STOMACH WORMS OF SHEEP AND GOATS.** Studies aimed at a more effective control of the stomach worm in lambs were continued. In Texas the use of a 1.7 per cent solution of copper sulphate plus 1 per cent Blackleaf 40 as a drench gave very encouraging results. In Michigan a 4-ounce dose of suspension of colloidal iodine containing 1 per cent of iodine and a sulphate in solution administered by the drench method readily entered the fourth stomach and was effective in killing the stomach worms in 97 of 98 lambs thus treated. The common species of stomach worm found on the Pacific coast was controlled by the administration of tetrachlorethylene.

**BIBLIOGRAPHY.** P. V. Huyen, *La Vaccination Antirabique chez les Animaux* (Paris, 1930); L. Natta-Larrier, *Traite de Microbiologie*, vol. 1 (Paris, 1931); K. Nieberle and P. Cohrs, *Lehrbuch der Speziellen Pathologischen Anatomie der Haustiere* (Jena, 1931); J. J. O'Connor, *Dollar's Veterinary Surgery* (Chicago, Ill., 1931; rew. and ext.); W. L. Williams, *Veterinary Obstetrics* (Ithaca, N. Y., 1931, 2d ed.); H. Zinsser, *Resistance to Infectious Diseases* (New York, 1931, 4th ed., rev. and reset).

**VICTORIA.** A state of the Australian Commonwealth, occupying the southeastern part of the island continent. Area, 87,884 square miles; estimated population Jan. 1, 1931, 1,790,817, as compared with 1,531,280 at the census of 1921. Melbourne, the capital and chief city, had about 1,014,600 inhabitants on Jan. 1, 1931, or more than half the entire population. The population of other towns on Jan. 1, 1930, was: Geelong, 43,580; Ballarat, 42,200; Bendigo, 33,700. The estimated increase in population in 1930 was 13,752.

The value of all production in the fiscal year ended June 30, 1929, totaled about £103,223,197, distributed as follows: Agricultural, £14,364,655; pastoral and dairying, £29,137,413; mining, £1,794,141; forest, £1,713,580; manufacturing (value added in process of), £50,840-

864; miscellaneous, £5,372,544. The final estimate of the wheat crop for 1930-31 was 53,814,369 bushels from 4,600,200 acres (25,412,587 bushels from 3,566,135 acres in 1929-30). Oats, barley, potatoes, hay, wine grapes, currants, and raisins are other leading crops.

The value of direct overseas imports in 1929-30 was £41,881,524 (£20,310,352 in 1930-31); of overseas exports, £36,499,943 (£25,854,785 in 1930-31). State revenue in 1929-30 amounted to £27,323,842 (£28,156,034 in 1928-29); expenditure, £28,496,712 (£28,104,947). Expenditure charged to the loan fund in 1929-30 was £6,034,779 and the net state debt on June 30, 1930 was £155,714,797. For the 1931-32 budget, see AUSTRALIA under *Finance*.

Executive power is vested in a governor, acting through a responsible ministry, and legislative power in a parliament of two houses—the Legislative Council of 34 members elected for six years and subject to property qualifications, and the Legislative Assembly of 65 members, elected for three years by male and female suffrage.

Governor in 1931, Lieut. Col. Lord Arthur H. T. Somers; Premier, E. J. A. Hogan (Labor).

**VILNA (WILNO).** See POLAND and LITHUANIA under *Area and Population, History*.

**VIRGINIA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,421,851; in 1920 it was 2,309,187. The native whites numbered 1,746,585 (1930), 1,587,124 (1920); the foreign-born whites, 23,820 (1930), 30,785 (1920). The Negroes decreased in number to 650,165 (1930), from 690,017 (1920). Of a scattering of 1281 (1930) of other races, the chief part, 779, were Indians. The rural population was almost stationary, being 1,636,314 (1930); 1,635,203 (1920). The urban population (dwellers in communities of 2500 or over) rose to 785,537 (1930), from 673,984 (1920).

Of 880,276 persons reported in 1930 as in gainful occupations, those in agriculture numbered 270,836, of whom 150,450 were farmers. In manufacturing and mechanical industries were 204,207; in trade, 98,720; in domestic and personal service, 92,577; in transportation, 84,985; in professional service, 50,919; in the extraction of minerals, 17,332. Richmond, the capital, had 182,929 inhabitants (1930), 171,667 (1920); Norfolk, 129,710 (1930), 115,777 (1920); Roanoke, 69,206 (1930), 50,842 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1931	1,527,000	43,061,000	\$19,808,000
	1930	1,498,000	16,478,000	17,302,000
Hay, tame	1931	904,000	993,000	11,916,000
	1930	811,000	424,000	9,498,000
Potatoes	1931	118,000	14,160,000	7,788,000
	1930	117,000	13,689,000	13,689,000
Tobacco	1931	163,000	106,276,000	7,439,000
	1930	186,000	112,530,000	9,903,000
Apples	1931	.....	21,889,000	8,756,000
	1930	.....	7,700,000	7,315,000
Wheat	1931	603,000	13,266,000	7,694,000
	1930	591,000	9,160,000	8,885,000
Peanuts	1931	153,000	165,240,000	3,140,000
	1930	139,000	100,080,000	8,102,000
Cotton	1931	71,000	43,000	.....
	1930	89,000	42,000	.....
Sweet potatoes	1931	88,000	4,750,000	1,662,000
	1930	37,000	2,960,000	2,960,000
Oats	1931	189,000	4,838,000	1,645,000
	1930	152,000	2,630,000	1,578,000

\* Tons. \* Pounds. \* Bales.

**MINERAL PRODUCTION.** More than half of the State's total mineral production of 1929 was made up of coal. Coal-mining activity diminished in 1930, in Virginia as in most other coal States. There were produced in the State's mines, in 1930, 11,115,000 short tons of coal, as against 12,748,306 tons, by value \$20,942,000, produced in 1929. Clay products attained the value of \$2,948,309 for 1929 and of \$2,940,832 for 1928. The yield of stone was 3,605,210 short tons for 1929 and 3,289,350 for 1928; in value, \$3,662,567 (1929) and \$3,358,104 (1928). The total value of the State's mineral production for 1929 was \$39,752,683; for 1928, \$38,770,281.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 3274 (about 34 per cent above the number for 1927). These establishments employed 118,399 wage earners (more than those employed in 1927 by 3 per cent). Wages paid them amounted to \$116,847,113 (exceeding the wages of 1927 by 5.6 per cent). Materials for manufacture, plus fuel and purchased electricity, cost \$358,749,349 (3.6 per cent more than these items had cost for 1927). The manufactured product was valued at \$727,606,298 (exceeding that of 1927 by 8.4 per cent). Value added by manufacture was placed at \$368,856,949. Richmond, the most active manufacturing centre, in 1929, had 302 establishments, which employed 16,429 wage earners, paid them wages of \$17,267,854, and produced goods to the value of \$217,996,635.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$27,808,044 (of which \$6,449,285 was for local education); for interest on debt, \$961,201; for permanent improvements, \$13,896,488; total, \$42,665,733 (of which \$17,098,857 was for highways, \$5,772,559 being for maintenance and \$11,326,298 for construction). Revenues were \$42,583,225. Of these, property and special taxes furnished 25.3 per cent; departmental earnings and compensation to the State for officers' services, 10.4; sale of licenses, 52.3 (in which was included a gasoline sale tax that produced \$7,251,142). Funded debt outstanding on June 30, 1930, totaled \$28,548,224, of which \$7,428,000 was for highways. Net of sinking fund assets, the debt was \$26,439,882. On an assessed valuation of \$774,143,857 the State levied in the year ad valorem taxes of \$5,438,088.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 4515.59. Additions to line under operation during the previous year had totaled 20.49 miles, while operation of 10.19 miles had been given up. In 1931 were built 33.2 additional miles of first and 5.39 of second track.

**EDUCATION.** For 1930 the number of the State's inhabitants of school age was reckoned as 724,137. There were enrolled in the public schools, in the academic year 1930-31, 578,066 pupils. Of these, 512,751 were in common schools or elementary grades, and 65,315 were in high schools. The year's expenditures for public-school education were: for operation, \$20,795,918; for capital outlay and debt service, \$4,909,055. Salaries of teachers, by the year, averaged \$909.

**CHARITIES AND CORRECTIONS.** The central agency in matters affecting the care and custody of persons, was the State Department of Public

Welfare, composed of a board of five members, a commissioner as executive head and a number of administrative bureaus covering such fields as county and city organization, activities among children, the needs of crippled children, service for veterans, mental hygiene and psychiatry.

**POLITICAL AND OTHER EVENTS.** The severe strike at the Riverside and Dan River cotton mills in Danville terminated at the end of January after a duration of some four months, by the return of the strikers without their having obtained any definite concession. About 3000 workers were involved. In Norfolk, on June 7, a fire caused by an explosion aboard an oil barge destroyed six blocks of buildings in the waterfront and wholesale section, doing damage estimated at more than \$3,000,000. In July the \$7,500,000 bridge spanning the Potomac between the Lincoln Memorial in the city of Washington and Arlington in Virginia was completed, including the steel draw at its centre. But the opening of the bridge was delayed to coincide with the Washington bicentenary celebration to take place early in 1932. The 150th anniversary of the surrender of Cornwallis at Yorktown was celebrated, at Yorktown, October 16-19, with ceremonies in which the Federal Government, the several States and representatives of the French nation took part.

**OFFICERS.** Governor, John Garland Pollard; Lieutenant-Governor, James H. Price; Secretary of the Commonwealth, Peter Saunders; State Treasurer, John M. Purcell; Auditor of Public Accounts, T. Coleman Andrews; Attorney-General, John R. Saunders; Superintendent of Public Instruction, Dr. Sidney B. Hall; Commissioner of Agriculture, George W. Koiner.

**JUDICIARY.** Supreme Court of Appeals: President, Preston W. Campbell; Associate Justices, Louis E. Epes, H. W. Holt, E. W. Hudgins, H. B. Gregory, George W. Browning, Joseph W. Chinn.

**VIRGINIA, UNIVERSITY OF.** A nonsectarian institution of higher education in Charlottesville, Va., founded in 1819. The enrollment for the autumn session of 1931 amounted to 2534. For the 1931 summer session there was an enrollment of 1831. The faculty numbered 148. The productive endowment of the university amounted to \$10,000,000; the annual State appropriation was \$400,000; and the total annual income was \$1,741,352. There were 171,899 volumes in the library. Acting President, John Lloyd Newcomb. See also PUBLIC AFFAIRS, INSTITUTE OF.

**VIRGIN ISLANDS.** A small island group about 60 miles east of Porto Rico, purchased from Denmark for \$25,000,000 by the United States Jan. 25, 1917; the name is also applied to a group of islands included in the British colony of the Leeward Islands (see LEEWARD ISLANDS). The Virgin Islands of the United States consist of the islands of St. Thomas (28 square miles), St. Croix (84 square miles), and St. John (20 square miles), together with numerous smaller islands and cays. Total area, 132 square miles. Capital, St. Thomas on the island of St. Thomas.

The population at the census of 1930 totaled 22,012, of whom 13,501 were classed as urban and 8511 as rural. Negroes comprised 78 per cent of the population, whites 9 per cent, and persons of mixed blood 12 per cent. The population of the three principal islands was: St. Croix, 11,413; St. Thomas, 9834; and St. John, 765. With slight variations the population has declined steadily since 1835, when it totaled 43,178. The 15 per cent

decline since 1917 is largely due to emigration to the mainland of the United States. St. Thomas (population 7036), the chief port and considered the best harbor in the West Indies, has coaling and oil-fueling facilities and until 1931 was a United States naval base.

**PRODUCTION, ETC.** The chief industries are sugar cane cultivation and cattle raising on the island of St. Croix and the production of bay rum on St. Thomas. There were 254 farms at the census of 1930. In 1930-31, only one of the four sugar factories was in operation; the sugar cane acreage declined from 8885 acres in 1917 to 5823 in 1929. Sugar production in 1930 was 5750 tons. The bay rum industry has been steadily expanding, the exports increasing to 124,000 gallons in 1930, as compared with an annual average of 82,000 gallons from 1921 to 1930. The islands are not self-supporting economically, and a Federal contribution of about \$500,000 annually is required to make up the deficit in the budget. Including the compensation of naval doctors and others assigned to the islands, the Federal contribution for 1931 was estimated by Secretary of the Interior Wilbur at about \$700,000, or \$32 for each inhabitant of the islands. The government in 1931 was carrying forward a programme intended to make the islands ultimately self-supporting. It included the stimulation of the tourist trade, further sub-division of the land, reforestation, diversification of agriculture, and the promotion of more scientific methods of farming.

Trade is chiefly with the United States. In 1931, imports from the United States were valued at \$1,250,406 (\$1,672,903 in 1930), and exports to the United States at \$408,932 (\$768,342).

**GOVERNMENT.** Transfer of the administration of the islands from the Navy Department to the Department of the Interior was announced by President Hoover Jan. 30, 1931, and became effective Feb. 27, 1931. Officials of the new civil administration were: Governor, Paul M. Pearson; Lieut.-Governor of St. Croix, Lawrence N. Cramer. Administratively the islands are divided into two municipalities—that of St. Croix and that of St. Thomas and St. John. Legislative function are vested in the Colonial Council of each municipality, consisting of a majority of elected members and a minority appointed by the Governor.

President Hoover made an official visit to St. Thomas on Mar. 25, 1931, in connection with his trip to Porto Rico. He called nation-wide attention to the economic condition of the islands in a subsequent statement to the effect that the United States, in purchasing them, had "acquired an effective poorhouse, comprising 90 per cent of the population." "The people," he said, "cannot be self supporting either in living or government without the discovery of new methods and resources."

**VITAL STATISTICS.** The U. S. Department of Commerce estimated the population of the world in 1931 at about 1,992,500,000 and 39.2 persons for every square mile of land. In this tabulation data for 103 countries on area, population, and density were employed, using official statistical publications of the individual nations. The United States, with a land area of 2,973,776 square miles and an estimated population of more than 124,000,000 has a density of 41.7 persons per square mile. Alaska has the smallest density of any country listed; with only 59,000 inhabitants for 586,400 square miles of land, a density of 0.1.

Females generally outnumber males throughout the world, data for 33 nations indicate. Fifty-one out of every 100 persons in the United States are males. In the United States 21.7 per cent of the inhabitants are under 10 years, 19 per cent between 10 and 19, 17.4 per cent between 20 and 29, 15 per cent between 30 and 39, 11.5 per cent between 40 and 49, 7.9 per cent between 50 and 59, and 7.5 per cent over 60. See *CENSUS*.

Preliminary statistics indicated that there were about 150,000 fewer births in the United States in 1931 than in 1930 and it was estimated that if such a decline continued further revisions downward of previous estimates of future population would be necessary.

According to Dr. O. E. Baker, economist of the U. S. Department of Agriculture, the population of the United States will reach a maximum of about 145,000,000 by 1960 unless restrictions are relaxed or the number of births increase, both of which conditions appear unlikely. In fact, Dr. Baker stated, a continuance of the sharp decline in births probably would mean a maximum population by 1955 or even by 1950. The drop of births in 1931 was estimated to be fully twice as large as the annual average decline in the decade of urban prosperity. For birth and mortality rates in other countries see *GERMANY, GREAT BRITAIN, FRANCE, etc., under Area and Population*.

Provisional figures for 1930 for the United States birth-registration area (exclusive of Utah) tabulated by States on page 831, showed that the birth rate was 18.9, the same as the rate for 1929. The highest rate (28.5) was for New Mexico, and the lowest (14.1) was for Oregon. In 1930 the birth-registration area covered all of the United States except South Dakota and Texas and included 94.7 per cent of the total population. See *MATERNITY PROTECTION*.

The infant mortality rate of 64.2 was the lowest rate since the establishment of the birth-registration area in 1915. Thirty-seven States had lower infant mortality rates in 1930 than in 1929. The highest rates for 1930 were 144.9 for New Mexico and 116.2 for Arizona; the lowest were 48.4 for Washington, 49.2 for Nebraska, and 50 for Oregon. Of the 86 cities having 100,000 or more inhabitants only 21 had higher rates in 1930 than in 1929. The highest rates were 108.8 for Chattanooga, 102.9 for Nashville, and 101.2 for Memphis, and the lowest were 37.1 for Seattle and 39.8 for San Francisco.

The death rate in 1930 for the birth registration area (exclusive of Utah) was 11.3. This was 0.6 lower than the corresponding rate for 1929. When compared with 1929, 37 States had lower rates in the later year, 6 had higher rates, while the rates for 2 States did not change. The highest death rate (15.5) was for New Mexico and the lowest (7.9) was for North Dakota.

**VITAMINS.** From a practical standpoint probably the most important vitamin event of the year was the conference held in London in June under the auspices of the Permanent Standard Commission of the Health Organization of the League of Nations to consider the possibility of setting an international standard for each of the known vitamins, together with an arbitrary unit of activity in terms of which the potency of any food of vitamin preparation might be expressed. This conference, composed of leading investigators in vitamin research from several countries, recommended standards and units for vitamins

PROVISIONAL FIGURES OF BIRTH, DEATH, AND INFANT MORTALITY IN THE BIRTH REGISTRATION AREA OF THE UNITED STATES, 1930  
 [Division of Vital Statistics, U. S. Bureau of the Census]

Area	Number—1930			Rate per 1,000 estimated population				Infant mortality (deaths under 1 year per 1,000 births)	
	Births	Deaths All ages	Deaths Under 1 year	1930	1929	1930	1929	1930	1929
Birth registration area	2,190,047	1,816,447	140,518	18.9	18.8	11.3	11.9	64.2	67.6

A, B ( $B_1$ ), C, and D, and these were adopted by the Permanent Commission.

For vitamin A carotene was adopted tentatively with a selected sample of cod-liver oil as a second provisional standard. The carotene is to be prepared in certain specified laboratories by the Willstätter method and the unit is to be the vitamin A potency of 1 $\gamma$  (= 0.001 mg.) of a mixture of these several preparations.

For the antineuritic vitamin B ( $B_1$ ) the standard is a fuller's earth adsorption product of an extract of rice polishings prepared in the Medical Laboratory, Java, and the unit the antineuritic value of 10 mg. of this adsorption product.

Since the vitamin C potency of oranges and lemons has been found to be very constant, the juice of the lemon (*Citrus limonum*) was adopted as the standard for vitamin C and the activity of 0.1 cc. of fresh juice as the unit.

The standard for vitamin D is a solution of irradiated ergosterol which has already been in use as a standard in Great Britain for over a year. The unit of vitamin D is the activity of 1 mg. of this standard.

The standard preparations are to be kept at the National Institute of Medical Research, Hampstead, England, and will be issued to suitable individuals and institutions under certain conditions.

The universal adoption of these standards for comparison should make possible accurate com-

parisons of the vitamin values of foodstuffs and from them the vitamin content, in relative values, of human diets. Equally desirable is the universal standardization of vitamin concentrates and medicinal preparations.

**Vitamin A.**—The discovery announced in the 1930 report that carotene of plant materials is the precursor of vitamin A in the animal body was confirmed in several laboratories, but the mechanism of the transformation and the chemical nature of vitamin A had not been determined at the close of the year. It was concluded by Capper and associates (*Biochem. J.*, Vol. 25, p. 265) that fowls can utilize carotene as the source of vitamin A and that their liver oils are very rich in vitamin A. Further studies on rats by Moore (*Biochem. J.*, Vol. 25, p. 275), the first to point out convincingly the relationship between carotene and vitamin A, led him to conclude that the conversion of carotene into vitamin A probably takes place in the liver, which plays an important part in regulating the concentration of the vitamin in the remainder of the body. The

mechanism governing this distribution was found by Dann and Moore (*Biochem. J.*, Vol. 25, p. 914) to be entirely different from that governing the fat reserves, for rats which had been kept for a long time on a diet rich in carotene and then placed on a vitamin B-free diet showed no indication of a diminished power of transforming the excess carotene into vitamin A, or of a decrease in the vitamin A reserve of the liver, although the liver fat was almost exhausted.

Ahmad (*Biochem. J.*, Vol. 25, p. 1195) found that carotene was absorbed from the intestinal tract of rats much more completely when the diet contained fat than when it was fat-free. His attempts to convert carotene into vitamin A by the action of intestinal bacteria or by incubation with rat liver tissue were unsuccessful. Olcott and McCann, however (*J. Biol. Chem.*, Vol. 94, p. 185), announced the conversion of carotene into vitamin A by incubation of carotene with an extract prepared from the livers of rats which had ceased to grow on a vitamin A-free ration. In their opinion the extract contained a specific enzyme, carotenase, which converts carotene into vitamin A.

Evidence continued to accumulate concerning the importance of vitamin A as an anti-infective agent. Wolfe and Salter (*J. Nutrition*, Vol. 4, p. 185) noted in mice suffering from vitamin A deficiency the same degenerative changes in the mucous membranes throughout the body that had been noted previously in rats, guinea pigs, and chickens.

Success reported by Green and associates (*Brit. Med. J.*, No. 3691, p. 595) in the use of vitamin A concentrates for the prevention as well as treatment of puerperal septicemia in clinical practice also bears out the hypothesis of lowered resistance of mucous membranes in vitamin A deficiency in that puerperal sepsis was considered to be primarily an invasion of the epithelium of the generative organs by pathogenic bacteria. So convinced were these investigators in the efficacy of vitamin A in the prevention of puerperal septicemia that they urged all concerned with antenatal welfare to see that the diets recommended to pregnant women are rich in natural sources of vitamin A, such as milk, egg yolk, green vegetables, carrots, and butter—recommending the use of cod-liver oil or concentrates of vitamin A only when dietary measures can not be followed for economic or other reasons.

All of these observations were concerned with the breaking down of the defenses of the mucous membranes. In a significant study by Boynton and Bradford (*J. Nutrition*, Vol. 4, p. 323) it was demonstrated that rats which had been no longer than four weeks on a vitamin A-deficient diet and had not begun to show the outward symptoms of vitamin A deficiency succumbed more readily than controls on a normal diet to intraperitoneal inoculation of an organism of common occurrence in the suppurative lesions of the respiratory tract in vitamin A-deficient rats. This showed that vitamin A is capable of preventing infections that enter the blood stream as well as through the broken down mucous membranes, thus leading the *Journal of the American Medical Association* (Vol. 97, p. 1229) to comment again upon vitamin A as an anti-infective agent, with the conclusion that the "newer studies pave the way for the possibility that vitamin A may after all do more than maintain the physiologic defense of the mucous membranes."

The necessity of standardizing cod-liver oils and concentrates for vitamin A potency and of knowing more definitely the value of various food sources of this vitamin has led to continued efforts to improve the biological technique (applicable to all materials) and to establish the accuracy of the more rapid colorimetric and spectrographic method for analyzing liver oils. Valuable contributions on biological technique were reported by Marcus (*J. Biol. Chem.*, Vol. 90, p. 507), Sherman and Batchelder (*J. Biol. Chem.*, Vol. 91, p. 505), and Coward and associates (*Biochem. J.*, Vol. 25, p. 551). In the Sherman method the value of any material as a source of A is expressed in units representing the amount of the material required to produce a gain in weight of the experimental rat of 3 grams a week during the test period of from 4 to 8 weeks. This method is in rather general use in the United States and a sufficient number of foods have been tested by it to make possible estimates of the vitamin A content of dietaries considered to be adequate. As the result of such estimates, Gillett and Rice (see FOOD AND NUTRITION) recommended a daily allowance of from 5000 to 10,000 units of vitamin A and stated that "the lower concentration of vitamin A can be easily provided in low cost dietaries if the weekly grocery order contains the amounts of milk, eggs, and butter usually recommended plus either carrots, escarole, or spinach among the vegetables; or cheese or liver instead of some of the meat; or bananas or prunes among the fruits."

*Vitamins B (B<sub>1</sub>) and G (B<sub>2</sub>).* Attempts at isolating vitamin B (B<sub>1</sub>) were reported by Odake (*Proc. Imp. Acad. Japan*, Vol. 7, p. 102), Seidell and Birkner (*J. Am. Chem. Soc.*, Vol. 53, p. 2288), and Guha (*Biochem. J.*, Vol. 25, p. 931), all following more or less closely the method of Jansen and Donath, one stage of which is to be used in the preparation of the international standard for vitamin B. Although it is possible to produce crystalline substances of high vitamin B potency, it is generally considered that vitamin B has not yet been isolated as a chemically pure substance.

In attempts to separate vitamin B from G as they occur in food materials, use continued to be made of the fact that vitamin B is much more soluble in alcohol of high concentration than is vitamin G. Evans and Lepkovsky (*J. Nutrition*, Vol. 3, p. 353) obtained an extract very rich in vitamin B and practically devoid of vitamin G by extracting rice polishings with 25 per cent alcohol and fractionating this extract with 80 per cent alcohol. Sherman and Sandels (*J. Nutrition*, Vol. 3, p. 395) emphasized the fact that the nature of the material extracted and the conditions under which the solvent is applied may alter the apparent solubility of the B vitamins in alcohol, and stated that in the preparation from wheat of vitamin B extracts as free as possible from vitamin G alcohol of at least 80 per cent by weight or stronger should be used.

Evidence continued to accumulate in many laboratories that vitamin G, as originally differentiated from vitamin B, is itself composed of more than one factor, and that the factor essential for growth is not identical with the one required for the prevention of the pellagra-like symptoms in rats. No satisfactory conclusion had yet been reached concerning the identity or non-identity of these symptoms with human pellagra.

Particularly striking symptoms bearing a close

resemblance to those of human pellagra were produced by Parsons (*J. Biol. Chem.*, Vol. 90, p. 351) in rats on diets supposedly adequate in vitamins but containing excessive amounts (66 per cent) of egg white, and were cured by the administration of large amounts of dried beef liver (a food rich in vitamin G). This suggests the possibility that certain foods may contain antivitamins which must be neutralized by larger amounts of the corresponding vitamin than otherwise required for protection. This theory was originally proposed by Mellanby for vitamin D to account for the decalcifying properties of oatmeal and to a less degree of other cereals. Studies by Steenbock and associates at the Wisconsin Agricultural Experiment Station (Bul. 420, p. 77) supported the theory for vitamin D and also for vitamin E (*J. Nutrition*, Vol. 4, p. 79). In the latter case earlier studies by Evans and Burr had led them to conclude that the destructive effects of certain fats in vitamin E were due to the presence in the fats of an antivitamin.

**Vitamin C.**—In *Time* of Jan. 25, 1932 (Vol. 19, p. 20) the announcement was made of a report to the Norwegian Academy of Science by O. Rygh of the isolation from the juice of unripe oranges by vacuum distillation of a crystalline vitamin C precursor identical with the alkaloid narcotine. Success in stabilizing the crystals so that they could be stored without losing their potency was said to lie in treatment with ultra-violet light. The complete scientific report of this investigation was awaited with interest.

Lemon juice was used as the starting material for attempts by King and associates (*J. Biol. Chem.*, Vol. 94, pp. 438, 491) to isolate vitamin C. The most concentrated preparations thus far obtained were active in doses containing the equivalent of from 0.3 to 0.5 mg. of total solids per cubic centimeter of the original juice. Dry ice was found by them to furnish a particularly suitable storage medium for keeping the unstable purified preparation for two or three weeks.

Oranges and grapefruit were found by Bracewell and Zilva (*Biochem. J.*, Vol. 25, p. 1081) to be so constant in their vitamin C content under varying conditions of season, storage, and variety as to lead to the conclusion that "one may safely assume that oranges and grapefruit bought casually in the open market under normal conditions ought to possess full antiscorbutic value characteristic of these fruits."

**Vitamin D.**—The isolation of vitamin D in a state of approximate purity quite overshadowed all other research of the year on this vitamin, for the evidence seems most convincing that after many years of unsuccessful attempts at isolating one or another of the vitamins success has finally been achieved with vitamin D. As was the case with the discovery that many foods with no antirachitic potency can be rendered potent by irradiation, the successful isolation of vitamin D was announced almost simultaneously by two different groups of investigators, with at least two other groups coming fairly close to success. To Bourdillon and associates at the National Institute for Medical Research, London, and Windaus and associates at the University of Göttingen, Germany, belong the credit for the first successful isolation of vitamin D.

The rapid progress during the year in both laboratories was outlined briefly by Askew, Bourdillon, and associates in a paper submitted for

publication December 10 (*Proc. Roy. Soc. [London]*, Ser. B, Vol. 109, p. 488).

The isolation of vitamin D, interesting as it is from a chemical standpoint, does not immediately solve all questions concerning the behavior of vitamin D in the body and the best means of supplying it. The feasibility of fortifying cow's milk with vitamin D by feeding cows irradiated yeast was reported on favorably by Hess and associates at the annual meeting of the American Medical Association (*J. Am. Med. Assoc.*, Vol. 97, p. 370).

With vitamin D already incorporated in certain cereals and a well-known brand of bread, with vitamin D enriched milk available in some of the larger cities, and with the value of exposure to sunlight almost universally recognized there would seem to be no reason for a serious deficiency of this vitamin provided sufficient attention is paid to an abundance of calcium and phosphorus in the diet without which vitamin D is of little avail. **WALES.** A historical division of the United Kingdom. Area, 7466 square miles; population, according to the census of 1931, 2,044,244 (including Monmouthshire), compared with 2,106,866 in 1921. See GREAT BRITAIN.

**WALKER, JOHN BRISBEN.** American editor, publisher, and manufacturer, died in Brooklyn, N. Y., July 7, 1931. He was born on the Monongahela River, Pa., Sept. 10, 1847, and attended Georgetown College and the U. S. Military Academy. He resigned his cadetship at West Point in 1868 to enter the Chinese military service, where he served for two years. In 1870 he engaged in iron manufacturing in West Virginia, but his business was seriously disrupted by the Panic of 1873. He became managing editor of the *Washington Chronicle* in 1876. In 1879 he went to Colorado and engaged in alfalfa farming in that State for the next ten years. In 1889 he returned to New York City where he purchased the *Cosmopolitan Magazine*, which he edited until the sale of the publication to William Randolph Hearst during the year 1905.

**WALLACE, HUGH CAMPBELL.** An American banker and diplomat, died in Washington, D. C., Jan. 1, 1931. He was born in Lexington, Mo., Feb. 10, 1863, and was educated privately. After acting during 1885-87 as receiver of public moneys for Utah, he removed to Tacoma, Wash., where he became prominent in real estate and banking, organizing, with his brother, the Fidelity Trust Company which was later consolidated with the Bank of California. In 1897, following the discovery of gold in the Klondike, he formed the Washington and Alaska Steamship Company. He was appointed Ambassador to France in February, 1919, by President Wilson. Previous to his resignation in July, 1921, he represented the United States on the Supreme Allied Council.

**WALLACH, val'ao, OTTO.** A German chemist, died in Göttingen Mar. 1, 1931. He was born in Königsberg, Prussia, Mar. 27, 1847, and studied chemistry at the universities of Göttingen and

Berlin. He was professor of chemistry at the University of Bonn from 1876 to 1889, and professor in and director of the Chemical Institute at the University of Göttingen from 1889 to 1915. In 1910 he received the Nobel prize in chemistry for his researches on the constitution of organic compounds, especially of camphors and related substances. His studies on the constitution of ethereal oils and perfumes also resulted in important advances in the industries concerned with their artificial production.

**WALLOONS.** See **BELGIUM.**

**WALTERS, HENRY.** An American capitalist, died in New York City, Nov. 30, 1931. He was born in Baltimore, O., Sept. 26, 1848, and attended Loyola College, Georgetown University, and the Lawrence Scientific School at Harvard. He began his railroad service in 1873 with the engineering corps of the Valley Railroad of Virginia (later part of the Baltimore & Ohio system). Two years later he became connected with the Pittsburgh & Connellsville Railroad as assistant to the operating superintendent. Then entering the service of the Atlantic Coast Line Railroad Co., of which his father, William T. Walters, was one of the organizers, he was advanced in 1884 to general manager. In 1902 he was elected chairman of the board of directors of the Atlantic Coast Line Railroad, and the following year chairman of the board of the Louisville & Nashville Railroad. In 1918-20 he was a member of the staff of the Federal director general of railroads, representing the railroad interests.

**WARD, ROBERT DE COURCY.** An American climatologist, died in Cambridge, Mass., Nov. 12, 1931. He was born in Boston, Mass., Nov. 29, 1867, and was graduated from Harvard University in 1889. He had taught at Harvard since 1890, being successively assistant in physical geography, assistant in meteorology, instructor, assistant professor, and, after 1910, professor of climatology. He was editor of the *Meteorological Journal* from 1892 to 1896, and was the author of *Practical Exercises in Elementary Meteorology* (1899); *Climate Considered Especially in Relation to Man* (1908); and *The Climates of the United States* (1925).

**WAR DEBTS.** See **REPARATIONS AND WAR DEBTS.**

**WARREN, FREDERICK MORRIS.** An American philologist, died in New Haven, Conn., Dec. 6, 1931. He was born in Durham, Me., June 9, 1859, and was graduated from Amherst College in 1880, later studying at the Sorbonne in Paris (1884-86) and at Johns Hopkins University from which he received the Ph.D. degree in 1887. After acting as associate in modern languages at Johns Hopkins until 1891 and as professor of Romance languages at Adelbert College, Western Reserve University, until 1901, he became Street professor of modern languages at Yale University, where he remained until 1926. He wrote *A History of the French Novel Previous to the Seventeenth Century* (1895); and *Ten Frenchmen of the Nineteenth Century* (1904).

**WARSHIPS.** See **NAVAL PROGRESS.**

**WARTHIN, ALFRED SCOTT.** An American pathologist, died in Ann Arbor, Mich., May 23,

1931. He was born in Greensburg, Ind., Oct. 21, 1866, and was graduated from Indiana University in 1888 and with the M.D. degree from the University of Michigan in 1891, later studying in Vienna and Freiburg. He was associated with the medical department of the University of Michigan as assistant and demonstrator in internal medicine (1891-95), demonstrator in pathology (1896), assistant professor (1899), and professor and director of the pathological laboratory (after 1903). His most important researches were on the anatomy and pathology of the hemolymph glands, the pathology of diseases of the blood and blood-forming organs, cardiac syphilis, latent syphilis, tuberculosis, goitre, and toxic action of mustard gas, fat embolism, action of X-rays, heart in diphtheria, thymus, and heredity in cancer.

In addition to more than 1000 articles in medical journals and text-books, he wrote *Practical Pathology* (1896); *Text-book of General Pathology* (1914); *Medical Aspects of Mustard Gas Poisoning* (1919); *Contributions from the Pathological Laboratory of the University of Michigan* (14 vols., 1896-1927); *Old Age—The Major Involution* (1929); *The Creed of a Biologist* (1930); *The Physician of the Dance of Death* (1931).

**WASHBURN COLLEGE.** A coeducational institution in Topeka, Kan., founded in 1865. The enrollment for the summer session of 1931 was 234 and for the autumn term, 761. There were 78 faculty members. The endowment amounted to \$1,351,957, and the income for the year was \$215,375. The library contained 37,051 volumes. President, Philip C. King, A.M., B.D.

**WASHINGTON. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,563,396; in 1920 it was 1,350,621. The native whites numbered 1,276,843 (1930), 1,069,722 (1920); the foreign-born whites, 244,256 (1930), 250,055 (1920). The chief of the other races in the population were Japanese, 17,837 (1930). There were also, in 1930, 11,253 Indians, 6840 Negroes, 3480 Filipinos, 2195 Chinese and 562 Mexicans. The urban population—those dwelling in communities of 2500 or over—rose in the decade to 884,539 (1930), from 748,735 (1920). The rural population rose to 678,587 (1930), from 607,886 (1920).

Of 664,813 persons reported in 1930 as in gainful occupations, 174,003 were in the manufacturing and mechanical industries, 40,220 of the group being in saw and planing mills and 37,541 in building. In agriculture were 104,294, including 63,336 farmers. In trade, 115,788; in transportation, 72,768; in domestic and personal service, 60,191; in professional service, 51,586; in forest industry, 30,560. Seattle, the most populous city, had 365,583 inhabitants (1930), 315,312 (1920); Spokane, 115,514 (1930), 104,437 (1920); Tacoma, 106,817 (1930), 96,965 (1920); Olympia, the capital, 11,733 (1930), 7795 (1920).

**AGRICULTURE.** The table on page 835 shows the acreage, production, and value of the principal crops in 1931 and 1930.

**MINERAL PRODUCTION.** The State's leading mineral products in 1929, named in the order of value obtained, were coal, clay products, sand and gravel, and stone. There were mined 2,300,000 short tons of coal in 1930, as against 2,521,327 tons in 1929; the total for 1929 was valued at \$8,647,000. Clay products amounted, in value, to \$2,566,891 for 1929 and to \$1,968,926 for 1928. The total value of all mineral production was \$22,435,358 for 1929; for 1928, \$22,119,541.

Crop	Year	Acreage	Prod. Bu.	Value
Wheat .....	1931	2,357,000	40,843,000	\$20,972,000
	1930	2,305,000	38,278,000	21,600,000
Apples ....	1931	.....	81,400,000	23,550,000
	1930	.....	37,850,000	35,958,000
Hay, tame ..	1931	845,000	1,788,000*	14,947,000
	1930	804,000	1,556,000*	20,695,000
Potatoes ...	1931	44,000	6,820,000	2,728,000
	1930	48,000	7,680,000	5,760,000
Oats .....	1931	158,000	7,742,000	2,477,000
	1930	156,000	7,566,000	2,724,000
Corn .....	1931	37,000	1,369,000	684,000
	1930	34,000	1,292,000	1,197,000
Barley .....	1931	59,000	1,888,000	793,000
	1930	58,000	1,827,000	859,000

\* Tons.

The value of gold, silver, copper, lead, and zinc produced from ore mined in the State of Washington in 1931 was about \$579,000 as compared with \$348,630 in 1930, according to estimates of the U. S. Bureau of Mines. There was a decided decrease in the output of copper resulting from the unusual drop in the price of the metal, and also decreases in the output of both gold and silver. Through the activity of the Pend Oreille Mines & Metals Co., operating near Metaline Falls, the production of both lead and zinc was materially increased over that of 1930 despite the decrease in the average sales prices of both metals. The production of gold decreased more than 30 per cent from \$87,748 in 1930 to about \$60,980 in 1931. The output of silver in the State decreased from 32,816 ounces in 1930 to 23,670 ounces in 1931, and the value decreased from \$12,634 to about \$6800. The output of copper decreased decidedly from 1,206,438 pounds in 1930 to about 82,000 pounds in 1931 and the value decreased from \$156,837 to about \$7520. The output of lead increased from 1,521,585 pounds, valued at \$57,629 in 1930, to about 2,822,000 pounds, valued at about \$107,160 in 1931.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 3665 (nearly 10 per cent more than their number for 1927). These establishments employed 114,591 wage earners (9.7 per cent more than the number employed in 1927). The wages paid them amounted to \$160,513,782 (exceeding the payments for 1927 by 10 per cent). Materials for manufacture, plus fuel and purchased electricity, cost \$426,842,332 (9.5 per cent more than these items had cost in 1927). The manufactured product was valued at \$794,142,726 (17.1 per cent in excess of the total for 1927). Value added by manufacture was placed at \$367,300,394. Seattle, the chief manufacturing centre accounted for roughly one-fourth of the totals. It had 1217 establishments, which employed 22,867 wage earners, paid them wages of \$33,329,630 and produced goods to the total of \$199,570,928. Tacoma had 329 establishments, 14,028 wage earners employed, a wage total of \$18,970,383, and a product of \$140,507,198.

**FINANCE.** State expenditures in the year ended Mar. 31, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$23,351,759 (of which \$9,004,404 was for local education); for interest on debt, \$732,132; for permanent improvements, \$11,655,439; total, \$35,739,330 (of which \$14,154,080 was for highways, \$3,684,399 being for maintenance and 10,469,681 for construction). Revenues were \$40,377,810. Of these, property and special taxes furnished 36.0 per cent; departmental earnings and compensation

to the State for officers' services, 6.0; sale of licenses, 41.7 (in which was included a gasoline sale tax that produced \$6,259,930). Funded debt outstanding on Mar. 31, 1930, totaled \$13,400,289. Net of sinking-fund assets, the debt was \$11,513,331. On an assessed valuation of \$1,253,051,064 the State collected in the year ad valorem taxes of \$13,873,785.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 5541.91. Additions of 44.38 miles to total under operation, made during the year preceding, had slightly exceeded withdrawals of 41.42 miles from operation.

**EDUCATION.** For the academic year ended June 30, 1931, the number of the State's inhabitants of school age was reckoned as 431,974. There were enrolled in the public schools 346,422 pupils. Of these, 3608 were in kindergartens, 252,306 in common schools or elementary grades, and 90,508 in high schools. The year's expenditures for public school education totaled \$33,546,029, of which \$28,067,304 was current expense. Salaries of teachers, by the year, averaged \$1547.

According to State Superintendent Showalter there occurred in 1931 a heavy increase of enrollment in the public secondary schools, bringing the number thus enrolled above previous record for the State. The requirement for the qualification of the elementary teacher was increased to three years of preliminary study, from two years; for the high school teacher a bachelor's degree was required, with time allowance of two years before full application.

**LEGISLATION.** The legislature in its regular biennial session enacted a measure redistricting the State in accordance with Washington's new Federal apportionment of Representatives. It submitted to popular vote, to be taken in 1932, a proposed amendment of the State constitution to alter the system of representation in the State Legislature itself; also a proposed amendment to increase the legislators' compensation. In support of the dairy interests was enacted a prohibitive tax of 15 cents a pound on butter substitutes. Among the tax measures enacted were those exempting intangibles from ad valorem taxation; reducing the rate of interest on delinquent taxes to 10 per cent, from 12; increasing the tax on sales of gasoline to 5 cents a gallon from 3 cents; setting a flat rate of \$3 for automobile licenses.

The Legislature passed a measure to create an income tax, but Governor Hartley vetoed it on the ground that it did nothing effectual to remove the burden of direct taxation on property, of which there had been much complaint. Statutes to regulate the party primaries and to establish a system of permanent registration of voters were enacted. Teachers were required to take an oath of allegiance to the United States. A uniform traffic code, closely conforming to that adopted by Oregon, California, and certain other States, was enacted. The general appropriation bill carried about \$46,000,000 for the needs of the State government for the ensuing two years.

**POLITICAL AND OTHER EVENTS.** Mayor Frank Edwards of Seattle came into disfavor by reason of the dismissal of a veteran civil service employee. He was accused of malfeasance. Upon petition for his recall a special municipal election was held on July 13. The vote was 35,637 for his recall and 21,836 in favor of his retaining office. He was thus removed. The City Council on July 14 elected its president, Robert Harlin, Mayor to

serve until the following June and restored to his position the dismissed civil servant, who had served for 25 years as employee or head of the municipal lighting department.

Late in July forest fires swept some 30,000 acres in the Pend Oreille and Kootenai forests. In March an international joint commission dealing with the claims of residents of the State for damage near the border, sustained from the sulphur fumes of the Consolidated Smelters plant at Trail, British Columbia, made award of \$350,000. The U. S. Reclamation Service announced on July 20 that the State hydraulic authorities had equalized the water rights for the different groups of holders in the Yakima Valley and that the Government would consequently proceed with the long delayed construction of the projected Cle Elum irrigation dam, to cost \$1,500,000 and furnish water to an extensive acreage.

**OFFICERS.** Governor, Roland H. Hartley; Lieutenant-Governor, John A. Gellatly; Secretary of State, J. Grant Hinkle; State Auditor, C. W. Clausen; State Treasurer, Charles W. Hinton; Attorney-General, John H. Dunbar; Superintendent of Public Instruction, N. D. Showalter.

**JUDICIARY.** Supreme Court: Chief Justice, Warren W. Tolman; Associate Justices, John R. Mitchell, John F. Main, Emmett N. Parker, Henry Herman, A. Fullerton, O. R. Holcomb, Walter B. Beals, W. J. Millard, Adam Beeler.

**WASHINGTON, STATE COLLEGE OF.** A co-educational institution for higher learning in Pullman, Wash., founded in 1890 by an act of the State Legislature. The enrollment for the autumn of 1931 was 3216. The summer session had an attendance of 905. There were 335 faculty members. The amount of income for the year, including appropriations made by the State Legislature (millage tax) and income from land grant and Federal funds, student fees, etc., was \$1,764,370. The library consisted of 200,000 volumes. President, Ernest O. Holland, Ph.D.

**WASHINGTON, UNIVERSITY OF.** A State institution of higher education in Seattle, Wash., founded in 1861. The enrollment for the autumn term of 1931 was 6924. The summer-school enrollment totaled 3686. The faculty numbered 465 members. The income from all sources for the scholastic year 1930-31 was \$3,021,718. The library contained 273,335 volumes. President, M. Lyle Spencer, Ph.D.

**WASHINGTON AND JEFFERSON COLLEGE.** A non-sectarian institution for the higher education of men in Washington, Pa., which had its origin in the Washington Academy, founded in 1787 and chartered as Washington College in 1802. Jefferson College at Canonsburg, Pa., was chartered in 1806, and in 1865 the two colleges were united to form Washington and Jefferson College. The enrollment for 1931-32 totaled 434 undergraduates and 14 graduate students. The 1931 summer session enrollment was 125. The faculty numbered 33. The productive funds of the college amounted to \$1,447,877, and the income from all sources was approximately \$208,000. The library contained 44,246 volumes. Acting President, Dean E. M. Weyer, Ph.D.

**WASHINGTON AND LEE UNIVERSITY.** A nonsectarian institution for the higher education of men in Lexington, La., founded in 1749. The enrollment for the autumn of 1931 was 864. There were 58 members on the faculty. The productive funds of the university amounted to \$1,489,536, and the income for the year was

\$338,424. The library contained 70,000 volumes. President, Francis Pendleton Gaines, Ph.D., Litt.D., LL.D.

**WASHINGTON BICENTENNIAL.** See CELEBRATIONS.

**WASHINGTON UNIVERSITY.** A nonsectarian institution of higher learning for men and women in St. Louis, Mo., founded in 1853. The enrollment on Nov. 1, 1931, was 7355, while the number enrolled in the summer session of 1931 was 1050. The faculty for 1931-32 numbered 604. The value of buildings, grounds, and equipment of the institution was estimated at \$12,870,936. The endowment amounted to \$18,697,120, while the income for the year was \$2,794,363. The library contained 318,488 volumes and 92,025 pamphlets. Chancellor, George R. Troop, Ph.D., LL.D.

**WATER POWER.** During 1931 over 900,000 horse power in hydro plants went into operation in the United States and 700,000 horse power in Canada. Construction had been initiated on most of these projects before the depression had set in. A number of projects were temporarily held up because of business conditions, and during 1931 contracts were let for only 150,000 horse power in new water wheels. Work was started on the Hoover Dam (see DAMS) which in addition to providing vast water supply and irrigation will ultimately develop about 1,000,000 horse power. Contracts for the power equipment had not been let up to the end of 1931. The Metropolitan Water Supply District of Southern California, alone, will take 1,000,000,000 gallons of water per day to supply a number of cities in Southern California and will require 400,000 horse power for pumping.

Renewed interest was being shown in development of power along the international section of the St. Lawrence River. More than a year ago New York State created a Power Authority to finance and develop the State's share of this potential power and the board appointed by Governor Roosevelt submitted a plan. Subsequently, negotiations were reopened between the Federal Government and the Dominion authorities for the purpose of formulating a treaty to permit development of the international section as a deep waterway as well as for power.

Of much importance to hydraulic engineers is the National Hydraulic Laboratory for making investigations and tests at the U. S. Bureau of Standards in Washington, D. C. which was begun in the summer of 1931. Although several American universities and water-wheel manufacturers were provided with facilities for hydraulic testing, a laboratory of this character was long needed for the purpose of carrying out fundamental studies.

Among the larger water-power projects that went into service during the year that at Safe Harbor on the Susquehanna River is outstanding. Construction was started in the spring of 1930 and the plant went into operation late in the fall of 1931. The initial installation consists of six 42,500 horse power Kaplan-type wheels operating on a comparatively low head. See POWER PLANTS for illustration.

Another important project was the Rock Island plant of the Puget Sound Power & Light Company on the Columbia River. This has an initial capacity aggregating 84,000 horse power in four propeller-type turbines each of 21,000 horse power, operating on a 50-foot head. Two units with the distinction of being the highest powered in the

United States were put into the Skagit Development for the city of Tacoma. These were Francis type wheels, each with a maximum rating of 90,000 horse power. The second unit went into the Oak Grove plant of the Portland General Electric Co. in Oregon. These were the highest head Francis type wheels operating on a head of 935 feet. They soon would be exceeded by a 56,000 horse power wheel to be installed by the Natchala Power & Light Co. in North Carolina to operate at 965 ft. head. Germany had a Francis type turbine installed at Binghousen to operate at over 1000 feet.

In Canada work was progressing on the Beauharnois development along the St. Lawrence. The 15-mile canal was about completed, the power house was ready and four of the 53,000-horse power units were being installed. The plans called for the installation of 12 units of this size, making a total of 636,000 horse power. Another Canadian project under construction was the Abitibi development of the Ontario Power Service Corp. which was to have five 66,000-horse-power units operating under a head of 150 feet. As in the United States, few new contracts for hydro equipment in Canada were let during 1931. The 700,000 horse power that went into service represented projects that had previously been started. See DYNAMO ELECTRIC MACHINERY; ELECTRIC LIGHT AND POWER; POWER PLANTS.

**WATER SUPPLY.** See AQUEDUCTS, WATERWORKS AND WATER PURIFICATION.

**WATERWAYS.** See CANALS.

**WATERWORKS AND WATER PURIFICATION.** Decisions of the U. S. Supreme Court in two important cases during the year not only cleared the way for two great metropolitan water supply developments but also established for the first time fundamental principles governing the utilization of interstate waters. The general import of the two decisions was the same: The riparian doctrine, which prevails throughout all the eastern and mid-western and some of the far western States, cannot be invoked successfully by a State so as to make its consent necessary before municipalities in another State can take water for public purposes from a stream whose waters are common to both States.

This, in effect, was a principle that the State of Connecticut sought to employ against the State of Massachusetts and specifically the Boston Metropolitan Water District to prevent the District named from diverting for its use waters from tributaries of the Connecticut river. Connecticut tried to prove that the Commonwealth and its citizens and riparian owners, would be materially injured by the diversion, and therefore were entitled to an injunction to prevent the diversion. Connecticut sought also to get a ruling to the effect that the Massachusetts communities needing water had a plentiful supply much closer at hand than the Connecticut River that could be utilized.

The court ruled against all these contentions, holding that Massachusetts was entitled to equitable division of the interstate waters of the Connecticut River; that the damages of the proposed diversion would be immaterial; and that the Massachusetts communities forming the Metropolitan Water District had a right to decide for themselves what water they prefer, especially in view of the fact that the nearby sources are subject to pollution and even though they might be made safe by treatment, yet the Massachusetts

municipalities should not be forced to take them.

In the other case the State of New Jersey sought to prevent New York City from impounding and diverting tributaries of the Delaware River for the use of New York City. In both cases the impounding reservoirs were to be located in the States for the benefit of whose municipalities the water was to be taken. In the Delaware River case the court decided as flatly as in the Connecticut River case that the riparian doctrine could not be invoked as already indicated. In the Delaware River case the court ruled against the full amount of diversion proposed by New York City. Pennsylvania was permitted to intervene in the Delaware River case to protect its own interests.

In both these proposed water supply developments, water was to be stored for use only in times of high stream flow. Interest was added to the Delaware River case through the fact that attempts had been made to obtain the adoption of treaties between New York, New Jersey, and Pennsylvania allocating the rights to the river between the three States. A proposed treaty was agreed upon by the joint commission representing each State and was subsequently modified to meet some of the objections of New Jersey. This treaty was approved by New York State only; was not acted upon by the Pennsylvania Legislature; and was bitterly opposed by New Jersey. The modifications by the Supreme Court in the Delaware River case covered some of the contentions of New Jersey as to amount of water that should be let down the river in times of low flow.

The Boston Metropolitan Commission had already built the easterly part of a tunnel for the enlargement of its water supply, this tunnel extending to one of the Connecticut tributaries. Following the decision it awarded a contract for continuing the tunnel westward to another tributary. New York City had plans ready at the close of the year for beginning the proposed development of an additional water supply from tributaries of the Delaware by building storage reservoirs and a large aqueduct. Albany completed an additional water supply from highland streams making it possible to abandon its supply taken for years from the Hudson River, a highly polluted stream. The Hudson supply, although filtered and chlorinated, no longer met standards of water supply as to quality and had to be pumped. Across the continent the voters in the Metropolitan Water District of Southern California approved a \$220,000,000 bond issue on September 29 to finance the construction of an aqueduct and accessories to bring in a water supply from the Colorado River (see earlier YEAR BOOKS). The possibilities of so treating sewage as to make its reuse for various purposes feasible is discussed under SEWERAGE AND SEWAGE TREATMENT.

**BIBLIOGRAPHY.** New books in this field are Dixey, *A Practical Handbook on Water Supply* (London); Gross, *Handbuch der Wasserversorgung* (Munich and Berlin); Wolman and Gorman, *Significance of Waterborne Typhoid Outbreaks*, 1920-30 (Baltimore). See AQUEDUCTS.

**WEATHER.** See METEOROLOGY.

**WEEVIL.** See ENTOMOLOGY, ECONOMIC.

**WEGENER**, vâgen-ër, ALFRED LOTHAR. A German meteorologist and geophysicist, died in Greenland, November, 1930. He was born in Berlin, Nov. 1, 1880, and was educated at the universities of Heidelberg, Innsbruck, and Berlin.

During 1906-08 he took part in the Danish expedition to Greenland organized by Mylius-Ericksen, and on his return was appointed lecturer at the University of Marburg. In 1912 he joined a second expedition to Greenland, conducted by Colonel Koch. He served with the German Army during the World War.

After 1919 he held a post at the Marine Meteorological Station in Hamburg, and after 1924 was professor of meteorology and geophysics at the University of Graz. He took part in a third Greenland expedition in 1929, and the following year was made chief of the German expedition exploring central Greenland. He met his death while attempting to save the lives of two members of the party who were marooned, but his body was not discovered until May, 1931. He was the originator of the provocative theory of continental drift, according to which the continents were not firmly embedded in the earth's crust but were in continuous but infinitely slow movement, floating on a semiliquid intervening layer. See POLAR RESEARCH.

**WELDING, ELECTRIC.** See ELECTRIC INDUSTRIES.

**WELFARE WORK. INADEQUACY OF PRIVATE CHARITY.** The increasing severity of the depression of 1930 and after plainly indicated the inability of private charity to cope with the extraordinary problems of relief being presented. Social workers themselves tardily confessed that the social consequences of unemployment were too great for private agencies to cope with.

**COMMUNITY CHESTS.** To cooperate with President Hoover in his programme of relief through private and local public charity, there was launched, under the direction of the Association of Community Chests and Councils, in October, a series of local welfare campaigns calling for contributions of \$170,090,000. These campaigns were to take place in 314 cities. It was estimated that of the total fund of \$170,090,000, fully 61.9 per cent had to come from city and county treasuries; 37.6 per cent from private funds; and the remaining 1.5 per cent from miscellaneous sources. The Association of Community Chests and Councils pointed out that these campaigns, however, did not include smaller towns and rural communities. Most of these campaigns were comparatively successful.

**COST OF FAMILY RELIEF IN THE UNITED STATES.** To care for families in distress during 1930, in 100 American cities, cost the American public more than \$40,000,000, on the basis of figures prepared by the U. S. Children's Bureau. This reported expenditure for the same group of cities was almost double that for the year 1929. It is important to understand that this gross figure does not represent expenditures by missions, municipal lodging houses, or other agencies providing individuals with temporary shelter or food, nor does it include relief in the form of "made work" provided by emergency committees and charitable agencies, nor mothers' pensions nor mothers' allowances.

This report, as did the one for the previous year, pointed clearly to the fact that public authority was bearing an increasing share of the burden of relief. In 1930, in the 75 out of the 100 cities in question, 72 per cent of the total expenditure for family relief came from the public treasuries. In 1929, 60 per cent was borne by public agencies.

It is significant to note, too, that not only did the figure increase proportionately but absolutely

as well, with the cities expending 150 per cent more on relief in 1930 than they had in 1929. The following figures show the per cent of total family relief given by public agencies during 1930 in 24 large cities: In Detroit, Mich., 98 per cent of the total money raised for relief came from public departments; in Springfield, Mass., the proportion was 84 per cent; in Newark, N. J., it was 84 per cent; in Grand Rapids, Mich., it was 82 per cent; in Buffalo, N. Y., it was 82 per cent; in Wichita, Kan., it was 77 per cent; in Akron, O., it was 71 per cent; in Columbus, O., it was 69 per cent; in Hartford, Conn., it was 63 per cent; in St. Paul, Minn., it was 60 per cent; in Denver, Col., it was 59 per cent; in New Haven, Conn., it was 49 per cent; in Minneapolis, Minn., it was 45 per cent; in Omaha, Neb., it was 33 per cent; in St. Louis, Mo., it was 30 per cent; in Kansas City, Mo., it was 29 per cent; in Richmond, Va., it was 28 per cent; in Canton, O., it was 19 per cent; in Cincinnati, O., it was 19 per cent; in Louisville, Ky., it was 15 per cent; in Dayton, O., it was 10 per cent; in Cleveland, O., it was 5 per cent; in New Orleans, La., it was nothing as well as in Washington, D. C.

**GIFTS TO PHILANTHROPY.** According to the John Price Jones Corporation, gifts and bequests to philanthropy in New York, Washington, Chicago, Philadelphia, and Baltimore, during the entire year 1931, totaled \$343,834,977, of which \$62,094,287 was given for organized charity. New York City headed the list with a total of \$185,331,299 for various philanthropies. Of the total amount, \$124,356,286 was given through bequests and \$63,698,788 came as a result of direct contributions. The accompanying table indicating the various purposes for which gifts were to be applied shows that organized charity and relief received the largest proportion. On the other hand, the chief beneficiaries of bequests were health and medical organizations.

	Gifts	Bequests
Education . . . . .	\$ 24,131,394	\$ 57,001,155
Organized relief . . . . .	62,094,287	8,822,854
Health . . . . .	12,044,087	57,739,621
Play and recreation . . . . .	1,397,942	614,000
Fine arts . . . . .	15,578,248	5,251,847
Miscellaneous reform . . . . .	6,733,011	49,635,405
Religious purposes . . . . .	6,115,814	36,037,212
Foreign relief . . . . .	528,100	110,000
<b>Total . . . . .</b>	<b>\$128,622,883</b>	<b>\$215,212,094</b>

**EXPENDITURES BY FOUNDATIONS.** According to a study made by the Twentieth Century Fund, organized to administer a trust provided by Edward A. Filene of Boston, there was spent during 1930, by 91 foundations, a total of \$52,500,000. The study pointed out that the foundations in question had capital resources totaling \$800,000,000. Of these, the Rockefeller organizations had \$250,700,000 and the Carnegie organizations had resources of \$237,000,000. The Rockefeller group, through the Rockefeller Foundation, the General Education Board and the Spellman Fund, in 1930, made grants of \$26,400,000; the Carnegie organizations, through the Carnegie Corporation of New York, the Carnegie Institute of Washington and the Endowment for International Peace in the same period made grants totaling \$6,600,000; the Duke Endowment gave away \$2,500,000; the Julius Rosenwald Fund, \$2,400,000; the Commonwealth Fund, \$2,000,000; the Cranbrook Foundation, \$1,900,000; the Milbank

Memorial Fund, \$1,160,000; the M. and L. Guggenheim Foundation, \$700,000; the Russell Sage Foundation, \$660,000; the Juilliard Musical Foundation, \$600,000. More than one-third of the funds given away annually by the foundations examined went for the purpose of supporting medical and public health activities.

**THE NATION'S HEALTH BILL.** According to the Committee on the Costs of Medical Care, the total annual cost of medical care in the United States was \$3,106,000,000. This sum was distributed among the following groups: physicians, \$1,000,000,000; medicines and supplies, \$700,000,000; hospitals, including out-patient departments, \$550,000,000; dentists, \$400,000,000; extra household help, \$123,000,000; nurses (except hospital) \$112,000,000; public health, \$86,000,000; optometrists and opticians, \$50,000,000; chiropractors and naturopaths, \$30,000,000; osteopaths, \$20,000,000; midwives, \$15,000,000; chiropodists, \$15,000,000; dispensaries (not hospital) \$5,000,000.

This Committee, after conducting its inquiries over a period of four years, was able to report that the principal causes of illness among Americans, in their order of occurrence, were the following: epidemic and endemic and infectious diseases, 92.5 per 1000 persons; teeth and gums, 57.5 per 1000 persons; external causes, 54; child birth, 47.2; women's disorders, 31.9; general diseases (including cancer, rheumatism, and diabetes), 21.4; heart and circulatory system, 20.2; ear and mastoid process, 15; skin diseases, 14.8; kidneys, 14.4; lumbago and kindred ailments, 11.2; eyes, 8.5; boils and carbuncles, 5.1; bones and joints, 1.8; men's disorders, 1.5.

**NATIONAL CONFERENCE OF SOCIAL WORK.** The fifty-eighth annual meeting of the National Conference of Social Work met in Minneapolis from June 14 to June 20, and the chief problem before the conferees was the inability of social work to cope with the problems arising out of the economic depression. A significant step taken by the American Association of Social Workers, which met with the conference, was a resolution calling upon its members to study local and State needs and resources in order to effect coöperation with local welfare departments and other State and local organizations for the purpose of developing comprehensive programmes including both public and private activities. The newly elected president of the National Conference of Social Workers was C. M. Bookman, executive director of the Community Chest of Cincinnati, O.

**AMERICAN ASSOCIATION OF PUBLIC WELFARE OFFICIALS.** Organized in 1930 to act as a central clearing house of information relating to special problems of public agencies in the public welfare field, this organization met for the second time in June at Minneapolis during the sessions of the National Conference of Social Work. The purposes of the American Association of Public Welfare Officials were as follows: (1) To promote fuller knowledge and better understanding among public officials and among the public in general about public welfare work in the various governmental units; (2) To develop high standards of public welfare legislation and administrative practice; (3) To standardize and define those positions in public welfare work that require professional training and to assist in the establishment of procedures that will assure the appointment of qualified personnel. As an indication of the nature of the programme of this group, may be found the

existence of three major committees, as follows: The committee on developing and protecting professional standards in public welfare work; the committee on reports and statistics; the committee on uniform settlement laws and interstate problems to develop uniform procedure throughout the country. At the 1931 meeting the following officers were elected: President, William J. Ellis, commissioner of Institutions and Agencies of the State of New Jersey; vice president, Fred K. Hoehler, director, Cincinnati Department of Public Welfare; secretary, Marietta Stevenson, U. S. Children's Bureau; treasurer, Frank Bane, commissioner, State Department of Public Welfare, Virginia. The membership of the organization included public welfare officials employed by the Federal Government, States, counties, and municipalities.

**WELLESLEY COLLEGE.** A nonsectarian institution for the higher education of women in Wellesley, Mass., chartered in 1870 and opened in 1875. The enrollment for the academic year 1931-32 was 1559, which included 51 candidates for the Master's degree. The teaching staff numbered 158. The trust funds as of June 30, 1931, amounted to \$9,389,244, and the income for the year 1930-31 was \$1,221,103 (including dormitories net and exclusive of gifts). An administration building and a zoological laboratory were completed in September, 1931. The library contained about 144,000 volumes. President, Ellen Fitz Pendleton, Litt.D. LL.D.

**WELLS COLLEGE.** An institution of higher learning for women in Aurora, N. Y., founded in 1868. The enrollment for the autumn of 1931 was 260. The faculty numbered 44 members. The endowment amounted to \$1,500,000, and the income for the year from invested funds, tuition, etc., was \$356,232. There were approximately 70,000 volumes in the library. President, Kerr Duncan Macmillan, S.T.D.

**WESLEYAN METHODIST CHURCH.** WESLEYAN REFORM UNION. See METHODISTS.

**WESLEYAN UNIVERSITY.** An institution for the higher education of men in Middletown, Conn., founded in 1831. The 1931 autumn enrollment was 637. The faculty for 1931-32 numbered 77. The productive funds of the university amounted to \$5,133,479, and the income for the year was \$588,207. The library contained more than 170,000 volumes. The centennial anniversary of Wesleyan University was observed Oct. 10-12, 1931. The alumni athletic building also was dedicated, and announcement was made of the raising of more than \$1,000,000 for the centennial fund. President, James L. McConaughy, Ph.D.

**WESTERN AUSTRALIA.** A state of the Australian Commonwealth, occupying the western third of the continent. Area, 975,920 square miles; population, estimated at 420,606 on Jan. 1, 1931, as compared with 332,732 at the census of 1921. Full-blooded aborigines were estimated at 22,898 in 1929. The capital, Perth, had 204,780 inhabitants on Jan. 1, 1931, or nearly half of the total population. The estimated population increase during 1930 was 3843, compared with 10,890 in 1929. In 1928, there were 852 state elementary schools, with an enrollment of 56,994 and 118 private schools, with 12,051 pupils.

The value of Western Australian production in 1929-30, calculated on the basis of value less cost of goods consumed in the process of production, totaled £21,801,704 (£24,003,112 in 1928-29). The 1929-30 total was distributed as

follows: Manufacturing, £7,488,060; agricultural, £5,764,345; pastoral, £4,806,531; mining, £1,506,383; forestry and fisheries, £928,291. The wheat crop for 1930-31 was estimated at 53,000,000 bushels (39,081,183 bushels in 1929-30).

The value of direct overseas imports in 1929-30 was £8,879,171 (£4,061,255 in 1930-31) and of direct overseas exports £16,004,694 (£15,543,178 in 1930-31). Revenue of the state in 1929-30 amounted to £9,750,515 and expenditure £10,268,519, as compared with £9,947,951 and £10,223,919, respectively, in the preceding year. For the 1931-32 budget, see AUSTRALIA under *Finance*. The net loan expenditure during 1929-30 was £3,693,052 and the net state debt at June 30, 1930, stood at £70,970,166. On June 30, 1930, the state had 4111 miles of state-owned and 450 miles of Commonwealth-owned railway lines.

Executive power is vested in a governor, acting through a responsible ministry, and legislative power in a parliament of two houses—the Legislative Council of 30 members elected for six years by electors with property qualifications and the Legislative Assembly of 50 members elected for three years by full male and female suffrage. Governor in 1931, Col. Sir William Robert Campion. Premier and Treasurer, Sir James Mitchell, head of a Nationalist-Country party coalition government. In August, 1931, the State Legislative Assembly passed a private member's motion calling for a referendum on secession from the Australian Commonwealth and directing the Government to introduce the necessary legislation. Cabinet action on the motion was withheld for lack of funds. See AUSTRALIA under *History* for significance of this move.

**WESTERN RESERVE UNIVERSITY.** A nonsectarian institution for the higher education of men and women in Cleveland, O., chartered in 1826. The enrollment for the autumn of 1931 in the regular day curricula was 4408, including Adelbert College, for men, 1064; Flora Stone Mather College, for women, 842; Cleveland College, 289. The enrollment in Cleveland College, the evening school of the university, was 3606, and the enrollment in the courses for teachers in service was 1024. The registration for the 1931 summer session was 1803. The faculty numbered 452. The endowment amounted to \$11,421,525, and the income for the year was \$2,438,838. President, Robert E. Vinson, D.D., LL.D., L.H.D.

**WESTINGHOUSE BRIDGE AT PITTSBURGH, PA.** See BRIDGES.

**WESTMINSTER, STATUTE OF.** See GREAT BRITAIN under *History*.

**WEST POINT.** See UNITED STATES MILITARY ACADEMY.

**WEST VIRGINIA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,729,205, in 1920 it was 1,463,701. The native whites numbered 1,562,414 (1930), 1,315,329 (1920); foreign-born whites, 51,520 (1930), 61,906 (1920); Negroes, 114,893 (1930), 86,345 (1920). Of 570,452 persons reported in 1930 as in gainful occupations, 69,862 were farmers; 29,926, workers for pay on farms; 97,521 coal-mine operatives; 15,541 retail dealers; 26,071 factory operatives. Huntington, the most populous city, had 75,572 inhabitants (1930), 50,177 (1920); Wheeling, 61,659 (1930), 56,208 (1920); Charleston, the capital, 60,408 (1930), 39,608 (1920).

**AGRICULTURE.** The accompanying table shows

the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ...	1931	648,000	650,000*	\$8,060,000
	1930	620,000	817,000*	7,891,000
Corn .....	1931	446,000	12,984,000	6,726,000
	1930	421,000	5,052,000	5,507,000
Potatoes .....	1931	40,000	8,200,000	2,560,000
	1930	38,000	2,394,000	3,112,000
Apples .....	1931	.....	12,954,000	5,182,000
	1930	.....	4,306,000	4,737,000
Oats .....	1931	148,000	8,552,000	1,243,000
	1930	140,000	2,660,000	1,569,000
Wheat .....	1931	113,000	2,373,000	1,448,000
	1930	105,000	1,838,000	1,875,000

\* Tons.

**MINERAL PRODUCTION.** Coal mines, which had furnished some 60 per cent of the State's mineral production, by value, in 1929, were less active in 1930. There were mined, in 1930, 121,472,638 net tons of coal; in 1929, 131,518,855. The value of coal mined was \$181,722,000 for 1930 and \$215,110,000 for 1929. More miners were employed in 1930, and their work averaged a fraction of a ton a day more to the man; but they worked an average of but 204 days in 1930, as against 247 in 1929. The State's output of coke, 1,901,161 short tons, chiefly from by-product ovens, in 1930, as against 1,928,583 in 1929, was fairly maintained as to quantity; it declined slightly in value to \$5,061,759 (1930), from \$5,286,427 (1929). Natural-gas production for 1929 (the latest reported year) was 167,333,000 M cubic feet; for 1928, 163,018,000 M; in value it was \$73,793,000 for 1929 and \$72,265,000 for 1928. There were extracted from natural gas 63,000,000 gallons of gasoline in 1930 and 72,994,000 in 1929; in value, \$3,900,000 (1930, estimated), and \$6,285,000 (1929). The yield of petroleum fell to 5,092,000 barrels for 1930, from 5,574,000 for 1929; and to \$11,700,000 (1930), from \$20,070,000 (1929). Clay products attained a value of \$20,490,255 for 1929; for 1928, of \$19,027,545. Stone, mostly of the cheaper grades, and sand and gravel were each obtained in 1929 to the total value of about \$3,000,000. The total value of the State's mineral production, with allowance for duplications, was \$346,564,746 for 1929; for 1928, \$336,930,948.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments at 1487 (13 per cent more than the number for 1927). These establishments employed 84,460 wage earners (more by 8.8 per cent than had been employed in 1927). The wages paid these earners amounted to \$114,130,578 (an excess over the total for 1927 of 10.4 per cent). Materials for manufacture, plus fuel and purchased electricity, cost \$253,609,031 (exceeding only slightly the total of 1927). The manufactured product attained the value of \$500,393,174 (9.9 per cent in excess of that of 1927). Value added by manufacture was placed at \$246,784,143. Wheeling, the most important manufacturing centre, had in 1929, 112 establishments, which employed 7472 wage earners, paid them wages of \$10,100,213 and produced goods to the total of \$53,389,126.

**FINANCE.** State expenditures of the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$15,288,902 (of which \$2,167,021 was for local educa-

tion); for interest on debt, \$3,043,071; for permanent improvements, \$14,134,128; total \$32,466,101 (of which \$16,242,210 was for highways, \$3,475,399 being for maintenance and \$12,766,811 for construction). Revenues were \$24,700,064. Of these, property and special taxes formed 20.8 per cent; departmental earnings and remuneration to the State for officers' services, 7.8; sale of licenses, 62.3 (including gasoline sale taxes amounting to \$5,408,984). The State's funded debt outstanding on June 30, 1930, was \$74,561,600, of which \$69,078,000 was for highways. Net of sinking-fund assets, it was \$72,537,000. On a property valuation of \$2,033,992,789 were levied in the year taxes of \$2,847,590.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 4045.91. Additions of 42.97 miles had been made during the year preceding to total under operation, and 2.83 miles had been abandoned. In 1931 were built 20.49 miles of new first track.

**EDUCATION.** For the academic year 1930-31 the number of the State's inhabitants of school age was reckoned as 537,408. There were enrolled in the public schools 417,535 pupils. Of these, 355,671 were in common schools or elementary grades, and 59,864 were in high schools. The year's expenditures for public-school education totaled \$26,857,280. Salaries of teachers, by the year, averaged \$918 in the elementary and \$1540 in the high school branch.

**LEGISLATION.** The regular session of the Legislature, which would have terminated on March 14, was repeatedly extended by proclamations of Governor Conley, because of failure to pass the budget bill, carrying the required State appropriations. The two houses were unable to agree on the budget. Behind this disagreement lay an opposition on the subject of the general fiscal policy. The House sought to set up an income tax and other revenue measures that were to lighten direct property taxation and increase the contributions of public utilities. The Senate opposed this plan on the ground that there would result no general reduction of the tax burden, but only a shift. In order to protect the credit of all State subdivisions, the Legislature inserted in the budget bill a provision allowing the State Sinking Fund Commission, the State organization administering the bond service of State subdivisions, to obtain from the Board of Public Works such sums as it might need for payments on local bonds when these were not forthcoming from the debtors. See **OLD AGE PENSIONS.**

**OFFICERS.** Governor, William G. Conley; Secretary of State, George W. Sharp; Treasurer, W. S. Johnson; Auditor, Edgar C. Lawson; Attorney-General, Howard B. Lee; State Superintendent of Free Schools, W. C. Cook; Commissioner of Agriculture, Howard M. Gore.

**JUDICIARY.** Supreme Court: President, Frank Lively; Associate Judges, John H. Hatcher, Homer B. Woods, Raymond Maxwell.

**WEST VIRGINIA UNIVERSITY.** An institution for the higher education of men and women in Morgantown, W. Va., founded in 1867. In the autumn of 1931 the enrollment was 2600. There were 1700 registered in the summer school of the same year. The faculty numbered more than 300. The libraries contained 120,000 volumes. President, John Roscoe Turner, Ph.D.

**WETTERLE, ABBÉ EMILE.** An Alsatian political leader and journalist, died in Ouchy, Switzerland, July 24, 1931. He was born in Colmar Apr.

2, 1861, and in 1889 was ordained a priest in the Roman Catholic Church. Entering on his political career in 1893 as one of the leaders of the pro-French movement, he founded the *Alsatian Courier*, and from 1898 to 1914 was a member of the Reichstag for Alsace. In 1910 he founded the Alsatian National Party, although he had been previously condemned to imprisonment by the German authorities for his political activities. On the outbreak of the World War he entered the service of France, and from 1919 to 1924 was a member of the Chamber of Deputies, representing the Upper Rhine. After 1924 he served as canonie counselor to the French Embassy at the Vatican.

**WHEAT.** As in the preceding year the world's wheat situation in 1931 was characterized by large supplies and generally low prices. The U. S. Department of Agriculture pointed out that on July 1, 1931 the surplus producing countries generally had on hand larger stocks than they had July 1, 1930. Stocks in importing countries were regarded as smaller than the year before. Nearly all European importing countries restricted imports and France, Germany, and Italy advanced their domestic wheat milling requirements to improve the home market for the 1931 crop. A reduced rye crop in Europe, it was thought, would affect wheat requirements to some extent. The International Institute of Agriculture placed the world wheat supplies available for export during the commercial year 1931-1932 at 1,260,000,000 bushels and the import demands at 880,000,000 bushels.

The total production in 1931 of 39 countries reporting to the International Institute of Agriculture was estimated at 3,575,912,000 bushels as compared with 3,657,783,000 bushels in 1930 and 3,487,449,000 bushels the annual average for the five years 1925-1929. The 1931 area, 236,022,000 acres, was 4.4 per cent below the area of the preceding year and 2.4 per cent above the average area for the five-year period. The yields for the leading countries other than the United States were reported as follows: India, 347,275,000 bushels; Canada, 298,000,000 bushels; Italy, 247,933,000 bushels; Germany, 155,545,000 bushels; Spain, 134,426,000 bushels; Rumania, 127,866,000 bushels and Yugoslavia, 98,789,000 bushels. The total production in 1931 of 22 European countries not including France and the Soviet Republics was given as 1,405,789,000 bushels, and the area as 73,833,000 acres.

The French yield was estimated provisionally at 269,630,000 bushels and the area at 12,494,000 acres. The yield of the Soviet Republics in 1930 was reported as 1,083,921,000 bushels on an area of 83,795,000 acres and the area for 1931 as 92,369,000 acres. The data on the world's production given above include an estimate of 170,000,000 bushels as the Australian production in the crop year 1931-1932. The yield of Argentina, the leading wheat producing country south of the equator, in the crop year 1930-1931 was reported as 235,958,000 bushels and the estimate for 1931-1932 as 218,621,000 bushels.

The total wheat production of the United States in 1931 as estimated by the Department of Agriculture was 892,271,000 bushels which was 34,111,000 bushels or 4 per cent greater than the 1930 crop and 79,698,000 bushels or 9.8 per cent greater than the crop of 1929. The total area harvested in 1931 was placed at 54,949,000 acres, or 6,189,000 acres less than in 1930 and 7,722,000 acres less than in 1929. The

average yield per acre in 1931 was 16.2 bushels. The average farm price on Dec. 1, 1931, 44.3 cents per bushel or the lowest on record, gave the crop a total value of only \$395,600,000, the lowest since 1900.

During the fiscal year ended June 30, 1931, the United States exported 76,365,000 bushels of wheat, 11,728,000 barrels of flour, and 2,019,000 pounds of wheat products for table use. The imports for the year were 19,053,000 bushels of wheat and 228,000 pounds of flour. **WILEY, ANDREW J.** An American engineer, died in Monrovia, Calif., Oct. 8, 1931. He was born in New Castle Co., Del., July 15, 1862, and was graduated from Delaware University, Newark, in 1882.

He designed the Don Pedro dam and power plant for the Turlock and Modesto irrigation districts in California during 1918-23 and was consulting engineer for a number of other water and power projects in California. After 1925 he was engaged as construction engineer on dam design to the U. S. Department of the Interior, being a consultant on the Hoover Dam project, and in 1927-28 was employed by the British Government on bridge and irrigation work in India. At the time of his death he was a consultant on the Colorado River aqueduct project of the Metropolitan Water District of Southern California.

**WILKINS' POLAR EXPEDITION.** See *POLAR RESEARCH*.

**WILLIAM AND MARY, COLLEGE OF.** An institution for the higher education of men and women in Williamsburg, Va., founded in 1693. The enrollment for the autumn of 1931 was 1612; there was also an enrollment of 1732 students in extension classes in Norfolk, Richmond, and Newport News. The registration for the 1931 summer session was 772. There were 75 members on the faculty. The endowment amounted to \$659,733, and the income for the year was \$1,383,259. The library contained 75,000 volumes. In 1931 three new departments were added: Aviation, library science, and secretarial science. In connection with the Williamsburg restoration, the main building and President's home had been restored and the Brafferton building was in process of restoration, thus completing the three original college buildings. President, Julian A. C. Chandler, Ph.D.

**WILLIAMS, GARDNER STEWART.** An American hydraulic engineer, died in Ann Arbor, Mich., Dec. 12, 1931. Born in Saginaw, Mich., in 1866, he was graduated from the University of Michigan in 1889. After acting as engineer of water-works construction at several cities, he became in 1893 civil engineer to the board of water commissioners of Detroit. From 1899 to 1904 he was professor of experimental hydraulics at Cornell University, where he also was engineer in charge of the hydraulic laboratory. He was then called to

the University of Michigan as professor of civil, hydraulic, and sanitary engineering, and in 1911 became a consulting engineer, specializing in hydraulics and water power. He was an early advocate of the development of the St. Lawrence waterway and was a member of the International Waterways Commission during 1903-05.

**WILLIAMS COLLEGE.** A nonsectarian college for men in Williamstown, Mass., founded in 1793. The enrollment for the autumn of 1931 totaled 809. There were 85 members on the faculty, of whom 16 were new appointees. The productive funds of the college amounted to \$7,610,986, and the income for the year ending June 30, 1931, was \$832,540. The library contained approximately 135,000 volumes. President, Harry Augustus Garfield, LL.D. See *POLITICS*, *INSTITUTE OF*.

**WILLY.** See *GAUTHIER-VILLARS, HENRY*.

**WINDWARD ISLANDS.** A group of British-owned islands in the West Indies, comprising Grenada, St. Vincent, and St. Lucia, together with the Grenadines (which are one-half under Grenada and one-half under St. Vincent); forming the eastern limit of the Caribbean Sea between Martinique and Trinidad. (See articles on the islands mentioned above.) Each of the islands is under its own government, but they are united for certain common purposes and have a court of appeals. Governor in 1931, Sir Thomas Vans Best. See *BRITISH WEST INDIES*.

**WIRELESS TELEGRAPHY AND TELEPHONY.** See *RADIO COMMUNICATION*.

**WISCONSIN. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,939,006, in 1920 it was 2,632,067; native whites numbered 2,527,646 (1930), 2,156,810 (1920); foreign-born whites, 386,213 (1930), 460,128 (1920). Among those of other races in the population were Negroes, 10,739 (1930), 5201 (1920); Indians, 11,548 (1930); Mexicans, 2396 (1930). The urban population—dwellers in communities of at least 2500—rose to 1,553,843 (1930), from 1,244,568 (1920). The rural population diminished to 1,385,163 (1930), from 1,387,499 (1920).

Of 1,129,546 persons reported in 1930 as having gainful occupations, 290,134 were in agriculture, 177,287 of them being farmers; in manufacturing and mechanical industries were 375,852, including 59,460 in the building industry; in trade were 157,478; in transportation, 87,576; in domestic or personal service, 81,360; in professional service, 77,160. Milwaukee, the most populous city, had 578,249 inhabitants (1930), 457,147 (1920); Racine, 67,542 (1930), 58,593 (1920); Madison, the capital, 57,892 (1930), 38,378 (1920); Kenosha, 50,262 (1930), 40,472 (1920).

**AGRICULTURE.** The table on page 843 shows the acreage, production, and value of the principal crops in 1931 and 1930.

**MINERAL PRODUCTION.** The most substantial single element of the State's mineral industry was the production of stone, which amounted to 4,004,200 short tons for 1929 and 3,313,740 tons for 1928; in value to \$6,166,708 (1929) and \$5,516,017 (1928). The iron mines sold 1,148,277 long tons of iron ore in 1930 and 1,789,721 tons in 1929; in value these quantities came to \$3,179,175 (1930) and \$4,848,978 (1929). Clay products amounted in value to \$2,801,309 for 1929 and \$1,007,826 (exclusive of pottery) for 1928. Sand and gravel were dug to the value of \$4,574,182 in 1929 and formed a considerable

Crop	Year	Acreage	Prod. Bu.	Value

	1930	99,000	2,063,000	1,499,000

\* Tons.    \* Pounds.

part of the year's mineral total. The total value of the State's native mineral production was \$24,222,229 for 1929; for 1928, \$20,938,179.

MANUFACTURES. Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 7430 (slightly below the number for 1927). These establishments employed 264,061 wage earners (some 6.6 per cent more than the number employed in 1927). The wages paid these earners amounted to \$352,813,581 (9.4 per cent more than the wage payments of 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$1,205,139,221 (nearly 5 per cent more than these had cost for 1927). The year's product was valued at \$2,158,400,172 (an excess over 1927 of 9.4 per cent). Value added by manufacture was placed at \$953,260,951. More than one-third of the manufacturing activity was concentrated in Milwaukee, which had, in 1929, 1767 establishments, employing 94,868 wage earners, to whom were paid wages of \$136,768,016, while the manufactured product attained \$700,730,158. Racine had 184 establishments, 12,893 wage earners, a wage total of \$19,000,885, and a product of \$132,739,836.

FINANCE. State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$35,672,622 (of which \$7,824,100 was for local education); for interest on debt \$102,459; for permanent improvements, \$17,479,989; total, \$53,255,070 (of which \$20,500,657 was for highways, \$4,648,931 being for maintenance and \$15,851,726 for construction). Revenues were \$61,093,819. Of these, property and special taxes furnished 40.5 per cent; departmental earnings and compensation to the State for officers' services, 9.8; sale of licenses, 38.7 (in which was included a gasoline sale tax that produced \$7,979,235). Funded debt outstanding on June 30, 1930, totaled \$1,363,700, both gross and net. On an assessed valuation of \$6,688,448,315 the State levied in the year ad valorem taxes of \$12,668,821.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1931, was 7288.13. Only 0.06 mile had been added to total under operation during 1930 while operation of 45.08 miles had been given up.

EDUCATION. For the academic year 1929-30, the number of the State's inhabitants of school age (from 4 to 20 years) was reckoned as 880,661. There were enrolled in the public schools 528,130 pupils. Of these, 409,879 were in common schools or elementary grades, and 118,251 were in high schools. The year's expenditures for education totaled \$56,050,376. Salaries of teachers, by the year, amounted to an average of \$1450.

CHARITIES AND CORRECTIONS. Under the laws applying in 1931 the State Board of Control, the central body dealing with persons in institutional care or custody, exercised fairly full administrative powers. It was composed of three members and had charge of 17 institutions, with 8628 persons registered as inmates. Their aggregate rated capacity was 6848. About half of the excess over this capacity was in the State prison.

LEGISLATION. One of the chief enactments of the year's regular session of the Legislature was a labor code characterized in Wisconsin as the most advanced ever enacted in any State Legislature. This code gave legal standing to strikes, forbade "yellow dog" or strike-renouncing contracts of employee with employer, and severely restricted the resort to injunctions in the course of labor disputes. Another measure designed to benefit social groups at the disadvantage of capital was that enabling municipalities, subject to necessary amendment of the State constitution, to enter unhindered into the power industry, save for observing regulations applying to private companies. These regulations were extensively revised.

The State tax on the sale of gasoline was increased to the rate of 4 cents a gallon, from 2 cents, and part of the expected proceeds was assigned to the elimination of some 90 grade crossings. The remainder of a programme of public works for the relief of unemployment was left to a possible later session. Provision was made for more thorough protection of the State forests from fire and for the purchase of additional land for forestation by the State. Taxes on motor trucks, telephone companies, and insurance companies were increased, and the State income tax was raised to a point where it was to bring in an additional \$800,000 a year. The three-year average as the base of income for taxation was abolished and provision was made for basing tax on one year's income. Despite the opposition of Governor LaFollette, resident fishermen were required to have a license, to cost 50 cents a year; the Governor later vetoed the fishing license. Per contra, property and millage taxes yielding some \$4,400,000 a year were repealed. While the State's direct taxation of property was not absolutely abolished, the administration announced its intention not to collect any such tax for the two years to follow.

The regular session failed to redistrict the State for the election of Federal Representatives and to reapportion representation in the Legislature itself. It did not pass a measure recommended by Governor LaFollette for the special taxation of dividends. In common with a number of other dairy States, Wisconsin put almost prohibitive restrictions on commerce in oleomargarine. A system of licenses was enacted, exacting \$50 a year from boarding houses and lumber camps using oleomargarine, \$100 from restaurants and small retailers handling it, and so on up to \$500 from wholesalers and \$1000 from manufacturers; infractions were made punishable by heavy fines and by jail sentences.

POLITICAL AND OTHER EVENTS. At his inauguration as Governor in January, Philip F. LaFollette enunciated policies that were regarded by the conservative opinion in the State as highly radical. Much of his programme, which would have obligated the State to substantial increase of expenditure, was killed in the Legislature. He somewhat curtailed his own power by supporting and signing a bill creating a Governor's Council

of 20 members. This council, which came into being in May, was designed to investigate and to render advisory reports on any matters submitted to it either by the Governor or by the Legislature. Its membership was designed to include representatives of both labor and capital, as well as of other groups. The theory was that it would on the one hand furnish non-political consideration of public problems and, on the other, would afford the Governor the means, if he so desired, of escaping plenary responsibility for his acts.

**OFFICERS.** Governor, Philip F. La Follette; Lieutenant-Governor, Henry A. Huber; Secretary of State, Theodore Dammann; State Treasurer, Scott Levitan; Attorney-General, John W. Reynolds; State Superintendent of Schools, John Callahan.

**JUDICIARY.** Supreme Court: Justices, Marvin B. Rosenberry, Walter C. Owen, Chester A. Fowler, Oscar M. Fritz, John D. Wickhem, George B. Nelson, Edward T. Fairchild.

**WISCONSIN, THE UNIVERSITY OF.** A State institution of higher education in Madison, Wis., founded in 1848. The enrollment for the autumn of 1931 was reported at 8765. For the 1931 summer session the enrollment totaled 5088. The faculty numbered 1401, including 254 new members. The endowment as of June 30, 1931, was \$1,341,660, while the income for 1930-31 was \$9,669,299. The library contained approximately 874,000 volumes and 415,000 pamphlets. President, Glenn Frank, Litt.D., L.H.D., LL.D.

**WOMAN'S CHRISTIAN TEMPERANCE UNION, NATIONAL.** An all-partisan and all-sectarian movement which has as its purpose the protection of the home through the abolition of the liquor traffic. It is comprised of 10,000 local unions with an approximate membership of 600,000, and is organized in every State, territory, and dependency of the United States. The Young People's Branch for both young men and women who are united for total abstinence and law observance, and the Loyal Temperance Legion for children are under its supervision. The official organ is the *Union Signal*. The *Young Crusader* is published for boys and girls.

In June, 1931, an international gathering was held in Toronto, Canada, by the World's W. C. T. U., with an attendance of about 1400 delegates representing 50 nations, more than 1000 of whom were from the United States. At this convention Mrs. Ella A. Boole, president of the United States organization, was elected president. During the closing months of 1931 the National W. C. T. U. launched a series of 25 regional conferences in the interest of law observance, beginning at Washington, D. C., and covering all sections of the United States. The officers for 1931-32 were: President, Mrs. Ella A. Boole; vice-president-at-large, Mrs. Ida B. Wise Smith; corresponding secretary, Mrs. Anna Marden DeYo; treasurer, Mrs. Margaret C. Munns; recording secretary, Mrs. Sara H. Hoge; assistant recording secretary, Mrs. Nelle G. Burger. A legislative headquarters is maintained at the Hotel Driscoll, Washington, D. C.; national headquarters and administrative offices are in Evanston, Ill. See **PROHIBITION**.

**WOMAN SUFFRAGE.** See **SPAIN, JAPAN, TURKEY, and SOUTH AFRICA** under *History*.

**WOMEN, NATIONALITY OF.** See **INTERNATIONAL LAW**.

**WOMEN IN INDUSTRY.** The Women's Bureau of the U. S. Department of Labor, headed by Miss Mary Anderson, continued its policy of

not only agitating in the interests of women employed in industry for the improvement of their industrial conditions, but also seeking to secure and publish on a scientific basis information on the wage, hours, and conditions of labor of America's working women. Two studies completed during the year throw interesting light on the status of women in the modern mechanical age, the first relating to women in the cigar and cigarette industries where the introduction of machinery has led definitely to technological unemployment, and the second a study of the fluctuation of employment in the radio industry.

The study of women employed in the cigar and cigarette industries was made during 1929 and 1930 and was conducted with a view toward ascertaining the effects of the change from hand to machine labor. In the cigar study, 11 States and 96 plants came under consideration. To determine whether the women who had lost their jobs in cigar factories were reemployed in the same industry or were being absorbed into others, visits were made to the homes of 1150 such dispossessed workers. One-half of the women reporting on the length of time on their employment in the cigar industry indicated that they had been associated with it for 10 years or longer; one-fifth had been associated with it for 20 years or more. Of the 1150 dispossessed workers, one-eighth had found no other employment. Of the seven-eighths who obtained subsequent jobs, almost all reported loss of time, one-third declaring a loss of 50 per cent.

As regards the employment of women in cigarette factories, data were obtained for 5798 of whom three-fifths were white and two-fifths Negro. Concerning the dispossessed workers, it was found that one-fifth had not been employed in any work at all since their separation from the industry; while three-fourths of the total number who had been employed had worked only part time since the separation. Of those who reported the time lost due to industrial reasons, more than two-fifths had lost 50 per cent or more of the time that had elapsed since they were dispossessed from their jobs.

Another important study was concerned with the employment of women in slaughtering and meat packing, where fluctuations in employment were very marked. Data were collected for 34 plants in 13 cities in 9 States, involving 5101 women. The median of an actual week's earnings taken from the payrolls of 5093 women was \$16.85. One in three of the women was paid less than \$15 and one-tenth received less than \$12. The median of the year's earnings of 2003 women was \$899. In two large cities, over 80 per cent of the women reported that they had some break in employment during the year, more than 30 per cent being off the payroll for 27 weeks or more. In both cities, one-half of the women were off the payroll because of layoffs.

Another study completed by the Bureau was the investigation of women in the power laundry industry made with the cooperation of the Laundry Owners National Association. The survey covered 20,000 women working in 290 laundries. More than four-fifths of the women whose nativity was reported were native born; Negroes made up one-fourth of the total. Women who were or who had been married constituted about two-thirds of the white and seven-tenths of the Negro employees. Less than 9 per cent of the women worked a 10-hour day while three-tenths worked 8 hours or less. About one-half of these workers were em-

played for 48 hours or less a week. For the white women reported as working full time, the median of the weekly earnings was \$17.80; for the Negro women it was \$10.25.

The Women's Bureau reported that while State legislatures met in all but four States in 1931, little positive action resulted. The most important legislative achievements to be noted were the following: In North Carolina, a new law was enacted establishing a 11-hour day but reducing weekly hours to a maximum of 55. Seasonal industries and agriculture were exempted. In New York, an amendment to the overtime provision of the law applying to women's hours in mercantile establishments was passed. The amount of overtime allowed was reduced and flexibility was introduced in permitting one 10-hour day in the 48-hour week and by allowing a limited amount of overtime with the 48-hour week, providing an equal amount of time off was given. In Louisiana, a law was passed reducing women's hours from a 10-hour day, 60-hour week, to a 9-hour day, 54-hour week. In Massachusetts, an act was carried authorizing the appointment of an unpaid commission to investigate the operation of the minimum wage law.

**WOMEN'S CLUBS, GENERAL FEDERATION OF.** An organization founded in 1889 and chartered by act of Congress in 1901 for "the promotion of movements looking toward the betterment of life." In 1931 the general federation was composed of approximately 14,500 clubs in the United States and 70 clubs outside the United States; affiliated with it were 15 national and international organizations. The work, as outlined by the general federation, is conducted through State federations which, in turn, are composed of district and county federations made up of individual clubs. The official publication is *The Clubwoman*. A convention was held in Denver, Colo., June, 1930, at which Mrs. John F. Sippel was re-elected president for the ensuing biennial period. Headquarters are at 1734 N Street, N. W., Washington, D.C.

**WOOD, WOOD PULP.** See **FORESTRY.**

**WOOL.** Despite the low prices prevailing during the past few years the world's wool production continues to be large. The combined 1931 clips of seven countries, which usually produce about four-fifths of the total wool, was about 5 per cent larger than in 1930. Exclusive of Russia and China, the 1931 total was almost as large as the record clip of 1928. In the United States the wool clip was 368,000,000 pounds in 1931, an increase of 7 per cent over the preceding year.

Heavy production and reduced demands during the last few years had created a large surplus of wool. It was estimated that the stocks of foreign and colonial wool in the United Kingdom were about 130,000,000 pounds larger at the end of September, 1931, than they were a year before. Foreign wool prices continued the decline begun in 1928, but in February, 1931, recovered and moved upward until the middle of March, after which they declined again. However, following the October sales in London, prices in the markets of Australia and the Union of South Africa improved and the year closed with stronger markets. In the United States the price of domestic wool declined more slowly than foreign prices.

Wool consumption in the United States increased markedly during 1931 and in July con-

sumption by manufacturers was highest for any month since May, 1923.

The imports of wool into the United States continued to decline during 1931. The amount of carpet wool brought in increased from 93,494,521 pounds during the calendar year 1930 to 120,501,682 pounds for the same period in 1931. On the other hand clothing wool decreased from 14,702,891 in 1930 to 6,343,838 pounds in 1931, and combing wool imports decreased from 54,363,170 pounds to 30,954,314 in the respective years. See **AGRICULTURE** under *Coöperative Marketing*; **TEXTILE INDUSTRY.**

**WORCESTER POLYTECHNIC INSTITUTE.** A nonsectarian institution for the technical education of men in Worcester, Mass., founded in 1865. The enrollment for the autumn semester of 1931 totaled 704. The faculty numbered 74. The productive funds of the institute amounted to \$3,145,651, and the income for the year was \$333,485. There were 23,500 volumes in the library. President, Ralph Earle, D.Sc., D.Eng., LL.D., Rear Admiral, U. S. N., ret.

**WORKERS IN THE UNITED STATES.** See **STATISTICS.**

**WORKMEN'S COMPENSATION.** ACCIDENTS IN SELECTED MANUFACTURING INDUSTRIES, 1926-29. Figures gathered by the Federal Bureau of Labor Statistics indicated that for the combined group in 29 industries during 1929, for every 1,000,000 man-hours worked there occurred 26.94 accidents. In 1928, the rate was 26.13; in 1927, it was 25.92; in 1926, it was 31.17. The severity rate in 1929, was 2.42; in 1928, it was 2.52; in 1927, it was 2.70; in 1926, it was 3.31. The severity rate was defined as the number of days lost per 1000 man-hours worked, including allowances for death and permanent disabilities. In the 29 manufacturing industries covered by this survey in 1929, in which 1,276,103 workers were included, there occurred 610 deaths, 4801 cases of permanent disability, and 92,733 cases of temporary disability.

**ACCIDENT EXPERIENCE OF ESTABLISHMENTS REPORTING TO THE NATIONAL SAFETY COUNCIL, 1929.** The accident experience in 1929 of 3603 industrial establishments is shown in the table on page 846, published by the Council.

**QUARRY ACCIDENTS IN THE UNITED STATES IN 1929.** A report made by the U. S. Bureau of Mines on quarry accidents in the United States during the calendar year 1929 showed an increase of 13 per cent in the fatality rate, as compared with 1928, but a decrease of 1.4 per cent in the non-fatal injury rate. The average number of men employed in and around quarries in 1929 was 85,561, for an aggregate volume of employment equal to 22,967,579 man-days. Accidents during the year resulted in 126 fatalities and 9810 non-fatal injuries.

**DEPENDENTS OF VICTIMS OF FATAL INDUSTRIAL ACCIDENTS IN PENNSYLVANIA IN 1929.** In order to ascertain the number of persons directly affected by industrial fatalities in this State, the director of the Bureau of Statistics of the Pennsylvania Department of Labor and Industry analyzed the dependency involved in 1798 fatalities for which compensation was paid in 1929. Only 6 of the 1798 persons killed were women and 5 of these had no dependents. Of the 1792 male wage earners killed, 434 or 24.2 per cent were single, 1233 or 68.8 per cent were married, 76 or 4.3 per cent were widowed, and 49 or 2.7 per cent were divorced. Only 275 out of the 559 single, widowed,

## ESTABLISHMENTS, EXPOSURE, AND ACCIDENT RATES, BY INDUSTRIES, 1929

[Arranged in order of frequency rates, from high to low]

Industry	Number of establishments	Hours of exposure	Accident frequency rates (per 1,000,000 hours' exposure)	Accident severity rates (per 1,000 hours' exposure)
Mining .....	162	82,095,942	74.48	9.99
Meat packing .....	18	102,832,500	55.94	1.47
Construction .....	397	127,344,489	50.41	4.62
Refrigeration .....	44	20,255,495	43.85	3.04
Woodworking and lumbering .....	222	160,257,172	42.83	3.59

Total * .....	3,603	5,058,942,837	25.53	2.23

\* Includes also miscellaneous industries.

and divorced male wage earners had dependents. For the total of 1233 married men, there were left 3762 dependent persons. In addition, the deaths of 64 widowers left 122 children under 16 orphaned. In all, in the 1798 fatal cases, 284 of the victims had no dependents while 1514 left 4213 persons who had been dependent upon them. According to this analysis, for every 2 of the 1798 persons killed in industrial accidents, 5 persons became dependent on the State compensation system.

**OCCUPATIONAL DISEASES IN MASSACHUSETTS IN 1930.** In Massachusetts, the State Department of Labor for the year 1930 found that there had occurred 389 cases of industrial disease, including 4 fatalities, divided as follows: dermatitis, 223; gas and fume poisoning, 77; lead poisoning, 46; anthrax, 9; pneumoconiosis, 8; other dust poisoning, 8; tuberculosis, 6; chrome poisoning, 5; all other, 7. One fatality each occurred among the anthrax, pneumoconiosis, tuberculosis, and "all other" groups.

**PENNSYLVANIA.** The annual report of the Pennsylvania Bureau of Workmen's Compensation showed a decided decrease in the number of industrial accidents in 1930 as compared with 1929. The total number of accidents, causing a time loss of two days or more for 1930, was 144,679, including 1762 fatalities. This represented a reduction of 11.9 per cent in fatal accidents and 13.2 per cent in non-fatal accidents in 1929. Undoubtedly, the continued depression of 1930 was to a considerable extent responsible for this reduction, though an intensive safety campaign conducted by the Department of Labor and Industry played an important part.

**FRANCE.** In January, 1931, a law was passed amending the law of 1919 for the purpose of extending the provisions of the workmen's compensation law to certain occupational diseases. The earlier law made provision for the payment of compensation only for cases of poisoning from lead or mercury. The 1931 law adds to the com-

pensable diseases, cases of occupational poisoning from tetrachlorethane, white phosphorus, and benzol, and the toxic conditions resulting from the action of X-rays or the following radio-active substances: Uranium and its salts, uranium X, ionium, radium and its salts, radon, polonium, thorium, mesothorium, radiothorium, thorium X, thoron, and actinium.

**GREAT BRITAIN.** In 1929, in the seven great industrial groups of shipping, factories, railways, docks, mines, quarries, and construction work, a total of £6,570,000 was paid out in compensation during the year. In the industries in question there were employed 7,450,112 workers. Among these in 1929 there occurred a total of 481,421 compensation cases of which 2819 were fatal and 478,602 non-fatal. Ten years earlier in 1920 in the same industries there were 8,348,150 workers among whom there had occurred 385,517 compensation cases, of which 3531 were fatal and 381,986 were non-fatal. In brief, while in 1929 the average number of workers, as compared with the earlier year, had decreased by almost 900,000, and the number of fatal cases by one-fifth, the number of non-fatal cases had increased by one-fourth.

In regard to cases of industrial accidents, it was reported that compensation was paid in 50 fatal cases to the amount of £11,520 and 18,611 disablement cases to the amount of £562,203. The 50 fatal cases included 19 of lead poisoning, 6 of anthrax, and 18 of epitheliomatous cancer and scrotal epithelioma.

**WORLD ALLIANCE FOR INTERNATIONAL FRIENDSHIP THROUGH THE CHURCHES.** See INTERNATIONALISM.

**WORLD COURT.** AUSTRO-GERMAN CUSTOMS UNION DECISION. Under pressure of her financial troubles and the need of placating France, Austria on Sept. 3, 1931, announced at Geneva her

abandonment of the proposal for a Customs Union with Germany, which had been made public on March 21 and which had given rise to much acrimonious discussion in the European press. Austria did not wait for the publication of the advisory opinion of the World Court, issued two days later. Germany likewise abandoned the proposal. (See GERMANY, AUSTRIA, and FRANCE under *History*).

The World Court rendered its decision on the issue September 5. It held, by a vote of eight to seven, that the proposed Customs Union was incompatible with the First Geneva Protocol of 1922, under which Austria was given a loan under the auspices of the League of Nations. Seven of the 15 judges also held that it was incompatible as well with Article 88 of the Treaty of St. Germain. As the loan conditions expire in 1942, Germany and Austria might conceivably then be free, as a result of the Court's decision, to go ahead with their plan. The manner in which the court divided was by some considered significant. With the exception of the Belgian vote, the judges appeared to have followed the political attitude of the countries which they represented. The eight judges giving the majority opinion were: Fromageot (France), Rostworowski (Poland), Negulesco (Rumania), Altamira (Spain), Anzilotti (Italy), Urrutia (Colombia), Bustamante (Cuba), and Guerrero (Salvador). The dissenting minority were: Kellogg (United States), Hurst (Great Britain), Schücking (Germany), Van Eysinga (Holland), Chung-Hui (China), Adachi (Japan), and Rolin-Jaquemyns (Belgium). Some papers suggested that the decision would have been different if the votes had been "weighed" instead of counted. For an authoritative discussion of the legal questions involved, consult John W. Davis, "The World Court Settles the Question," *Atlantic Monthly*, January, 1932 (reprinted in *International Conciliation*, No. 277, February, 1932).

**ADVISORY OPINION ON MINORITIES.** At a public sitting held on May 15, 1931, the Court gave the advisory opinion for which it had been asked on the question: "Can the children who were excluded from the German minority schools (in Poland) on the basis of the language tests provided for in the Council's resolution of Mar. 12, 1927, be now, by reason of this circumstance, refused access to these schools." By eleven votes to one the Court answered this question in the negative.

Article 69 of the convention of May 15, 1922, between Germany and Poland concerning Upper Silesia, granted to the German minority in Polish Upper Silesia adequate facilities for insuring that in the primary schools instruction should be given to their children through the medium of their own language. Under Article 74 of the same convention, the question whether a person does or does not belong to a minority may not be verified or disputed by the authorities. Article 131 added that in order to determine the language of a child, account should be taken of the verbal or written declaration of the person legally responsible for the education of such child.

In 1926 difficulties arose between the *Deutscher Volksbund*, representing the German minority, and the Polish authorities, following numerous applications for the admission of children to German schools for the school year 1926-27, and as the result of an administrative inquiry held by the Polish authorities into the regularity of

these applications and the rejection of a large number of them by those authorities on the ground that they were irregular or that the children did not belong to the German minority. On Apr. 26, 1928, the Court held that declarations must be in accordance with the facts, but any verification or dispute on the part of the authorities with reference to membership of the minority was prohibited.

In May, 1928, requests for admission to German schools were submitted on behalf of 172 children who, at the time when entries for the minority schools were being made for the year 1928-29, had just undergone the language test provided for by the Council's resolutions and had been found not to possess an adequate knowledge of German. These applications, like the preceding ones, were rejected by the Polish authorities. Once more, in November-December, 1929, the same question arose with regard to 60 children who had been excluded as a result of the language tests undertaken in 1927-28. Accordingly the *Deutscher Volksbund* once more appealed to the Council, which, by a resolution of Jan. 24, 1931, decided to submit the question to the Court for an advisory opinion.

The Court held that to admit that the result of the tests made in 1927 could subsequently be invoked to invalidate a declaration made under the convention, would be to admit the possibility of adducing evidence against such a declaration; but this is prohibited by the convention. To attach such an effect to the language tests would modify both the convention and the Council resolution itself, and the resolution expressly disavowed any idea of doing this.

**DANZIG-POLAND CASE.** On Dec. 11, 1931, the Court, by a vote of 11 to 3, rendered an advisory opinion to the effect that neither the Treaty of Versailles, the Danzig-Polish treaty of 1920, nor relevant decisions of the Council of the League of Nations, authorized access to the port of the Free City of Danzig by Polish war vessels.

**EAST GREENLAND CONTROVERSY SUBMITTED.** The controversy between Denmark and Norway involving their rival claims to a part of the eastern coast of Greenland was formally submitted to the World Court by Denmark on July 13, 1931. No decision had been issued by the end of the year. For the background of the dispute, in which Iceland also intervened, see GREENLAND.

**OTHER DEVELOPMENTS.** Mineitiro Adachi of Japan, on Jan. 16, 1931, was elected president of the Permanent Court of International Justice for a period expiring Dec. 31, 1933. On the following day Gustavo Guerrero of Salvador was elected vice president. Both were among the new members elected to the panel of World Court judges by the Council and Assembly in September, 1930. The Court divides into a number of special groups known as "Chambers" for the consideration of technical subjects on its agenda. As part of the organization of the new Court, Frank B. Kellogg, the American judge, was elected a member of the Chamber for Labor Cases.

A vigorous campaign in behalf of American adherence to the World Court was carried forward during 1931, largely under the auspices of The American Foundation. A delegation representing the National World Court Committee visited President Hoover in the autumn to urge a special session of the Senate in November to take action before the opening of the regular session. This was not successful. At the beginning of the regular

session in December, the Foreign Affairs Committee decided to postpone consideration of the resolution of adherence until important domestic issues were out of the way.

The American Bar Association placed itself on record as believing that the Permanent Court of International Justice is the greatest of international instrumentalities for the preservation of peace and of justice between nations. Consult Edward Lindsey, *The International Court* (New York, 1931).

**WORLD FAIRS.** See EXPOSITIONS.

**WORLD FEDERATION OF EDUCATION ASSOCIATIONS.** See INTERNATIONALISM.

**WORLD LEAGUE AGAINST ALCOHOLISM.** An organization originated in a conference of the Anti-Saloon League of America in Columbus, O., in 1916 and formally launched in a joint conference of the Canadian Temperance Alliance and the Anti-Saloon League in Washington in 1919.

The official league membership in 1931 comprised 60 national temperance organizations in 34 of the leading countries of the world. The work is carried on by executive, legal, publicity, and service departments, with offices in Westerville, O.; the research department in New York City; the Scientific Temperance Federation in Boston; and the Intercollegiate Prohibition Association in Washington. A branch office is maintained in London, England. In 1931 the presidents of the league were: Miss Anna A. Gordon (q.v.), Evanston, Ill.; Dr. Robert Herod, Lausanne, Switzerland; the Rt. Hon. Lief Jones, London, England; and Dr. Howard H. Russell, Westerville, O. The general secretary was Dr. Ernest H. Cherrington.

**WORMS.** See ZOOLOGY.

**WORTHINGTON-EVANS, SIR LAMING.** A British public official, died Feb. 14, 1931, in London where he was born Aug. 23, 1868. He attended Eastbourne College, and in 1890 was article as a solicitor's clerk, ultimately becoming head of the firm of Worthington-Evans, Dauney & Co. In 1910 he entered Parliament as a Conservative for Colchester; from 1918 to 1929 he represented the Colchester division of Essex and after 1929, St. George's division of Westminster. He became Controller of the Foreign Trade Department of the Foreign Office (1916), Parliamentary Secretary to the Ministry of Munitions (1916-18), Minister of Blockade (1918), Minister of Pensions (1919-20), Minister without Portfolio (1920-21), and Postmaster General (1923-24). His greatest service was rendered as Secretary of State for War during 1921-22 and again during 1924-29, when as an economy measure he effected important changes in army organization.

**WRECKS.** See SAFETY AT SEA.

**WRESTLING.** Professional wrestling reached a climax in 1931, and at the end of the year three men were recognized as world's heavyweight champion—by different boards of bodies. Jim Londos, the champion according to the New York State Commission, was probably the most popular. Londos, a native of Greece, conquered all rivals, and wrestled three times a week in defense of his title. He broke all records for indoor attendance when he wrestled Ferenc Holuban, Jim McMillen, and Ray Steele in Madison Square Garden, New York City, and attracted a crowd of 30,000 persons when he grappled with Steele at the Yankee Stadium, in June, for the Milk Fund. Strangler Lewis, veteran, was also recognized as champion of the world by the Illinois Commission, and

the National Boxing Association considered Henri de Glane, French Canadian, champion. De Glane won whatever honors he holds in Montreal when Lewis bit him and was disqualified. This happened in February.

As professional wrestling drew huge crowds in every part of the country, so did amateur and collegiate wrestling gain favor. In the Eastern Intercollegiate Association, Lehigh won first honors, for the third time since 1927. Individual laurels were distributed as follows: 118-pound, Davis Bigwood, Yale; 126-pounds, Powell Begland, Cornell; 135-pounds, Frank Shaw, Lehigh; 155-pounds, Orrin Clark, Columbia; 165-pounds, Peter Peck, Lehigh; 175-pounds, Wilford Penny, Cornell; Unlimited, Ed Rotan, Yale.

The Oklahoma A. and M. wrestlers captured the National Collegiate A. A. honors for the fourth consecutive year, when they won at Providence. The title was fictitious, however, as the team championship was abolished in order to foster greater individual efforts. Winners in the classes were: 118-pounds, John A. Engle, Lehigh; 126-pounds, Robert Pearce, Oklahoma A. and M.; 135-pounds, Richard Cole, Iowa State; 145-pounds, William Doyle, Kansas College of Agriculture and Applied Science; 155-pounds, Leroy McGuirk, Oklahoma A. and M.; 165-pounds, Jack Van Bebber, Oklahoma A. and M.; 175-pounds, Conrad Caldwell, Oklahoma A. and M.; Unlimited, Jack Riley, Northwestern University. Riley was a star tackle on the Northwestern football team.

Pearce, Caldwell and Van Bebber of Oklahoma A. and M. also captured National A. A. U. championships. The winners of the national titles were: 115-pound class, Joseph Sepora, New York Athletic Club; 125-pound class, Robert Pearce, Oklahoma A. and M.; 135-pound class, Lyle Morford, Cornell College, Iowa; 145-pound class, Arlie Tomlinson, Oklahoma A. and M.; 155-pound class, Oswald Kapp, New York Athletic Club; 165-pound class, Jack Van Bebber, Oklahoma A. and M.; 175-pound class, Conrad Caldwell, Oklahoma A. and M.; Unlimited, Robert Jones, University of Indiana.

**WÜRTEMBERG**, wurt'tēm-bĕrk. A constituent state of the German Reich. See GERMANY.

**WYLLIE, WILLIAM LIONEL.** A British watercolor painter and etcher, died Apr. 6, 1931, in London where he was born July 6, 1851. He attended the Royal Academy Schools, gaining fame as a marine painter in 1869 when "After a Storm: Time, Dawn" won the Turner medal. He was elected an associate of the Royal Academy in 1889 and an academician in 1907. His principal works through which he proved that there is still beauty and poetry in shipping despite the advent of steam and iron, include "The Winding Midway"; "Barry Dock"; "The Liner's Escort"; "Port of Scarborough"; "Towing Past the City"; "London's Water Gate"; "Commerce and Sea Power"; "London Bridge"; "The Port of London"; "The Spanish Armada"; "Trafalgar"; "Crippled but Unconquered"; "The Battle of the Nile"; and "Toil, Glitter, Grime, and Wealth on a Flowing Tide," the latter two hung in the Tate Gallery.

**WYOMING.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 225,565; in 1920 it was 194,402. The native whites numbered 194,409 (1930), 164,891 (1920); foreign-born whites, 19,658 (1930), 25,255 (1920). Mexicans numbered 7174 in 1930; they had previously been classed with foreign-born

whites. There were also, in 1930, 1250 Negroes, 1845 Indians, 1020 Japanese and others of divers Pacific origins. The urban population—those living in communities of at least 2500—rose to 70,097 (1930), from 57,848 (1920). The rural, to 155,468 (1920), from 137,054 (1920).

Of 92,451 persons reported in 1930 to have gainful occupations, 30,827 were in agriculture; 11,099 in manufacturing and mechanical industries; 12,161, in transportation; 8916, in trade; 7947 in coal mines, gas and petroleum extraction and other mines or quarries. Cheyenne, the capital, had 17,361 inhabitants in 1930; in 1920, 13,829; Casper had 16,619 (1930), 11,447 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ...	1931	789,000	775,000*	\$7,130,000
	1930	756,000	936,000*	8,518,000
Sugar beets ..	1931	49,000	556,000*	.....

\* Tons.

**MINERAL PRODUCTION.** Nearly one-half of the State's total mineral production of 1929, by value, was derived from petroleum and about one-third from coal. Petroleum production fell thereafter, by quantity, to 17,846,000 barrels for 1930, from 19,314,000 for 1929; and by value, to \$21,200,000 (1930, estimated) from \$24,700,000 (1929). Coal production, 5,631,000 short tons for 1930, was not at the same level as the 6,704,790 tons of 1929; the total for 1929, by value, was \$17,052,000. The output of natural gas was, in quantity, 44,648,000 M cubic feet for 1929 and 47,490,000 M for 1928; in value, \$3,850,000 for 1929 and \$3,527,000 for 1928. Extraction of gasoline from natural gas yielded 51,100,000 gallons in 1930 and 44,544,000 in 1929; by value \$3,300,000 (1930, estimated) and \$3,241,000 (1929). The total value of the State's mineral production was \$51,237,407 for 1929; for 1928, \$52,950,875.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 251 (about 9 per cent more than the number for 1927). These establishments employed 6288 wage earners (more by 12.7 per cent than had been employed in 1927). Wages paid to these earners amounted to \$10,306,294 (exceeding those of 1927 by about 11.4 per cent). Materials for manufacture, plus fuel and purchased electricity, cost \$63,516,935 (falling slightly below the corresponding cost for 1927). The manufactured product of 1929 totaled \$96,466,461 (exceeding that of 1927 by 13 per cent). Value added by manufacture was placed at \$32,949,526.

**FINANCE.** State expenditures of the year ended Sept. 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$5,959,965 (of which \$1,943,252 was for local education); for interest on debt, \$78,616; for permanent improvements, \$2,506,226; total \$8,544,807 (of which \$3,518,835 was for highways, \$1,297,634

being for maintenance and \$2,221,201 for construction). Revenues were \$9,000,741. Of these, property and special taxes formed 21.4 per cent; departmental earnings and remuneration to the State for officers' services, 7.3; sale of licenses, 22.9 (including gasoline sale taxes amounting to \$1,066,245). The State's funded debt outstanding on Sept. 30, 1930, was \$1,790,000, all for highways. Net of sinking-fund assets, it was \$1,587,005. On a property valuation of \$436,828,811 were levied in the year taxes of \$1,613,558.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 2035.74. No additional line had been put in operation during the year preceding; the operation of 7.75 miles had been given up. In 1931 were built 3.17 miles of new first track.

**EDUCATION.** For the academic year 1930-31, the number of the State's inhabitants of school age was reckoned as 69,238, of whom 49,002 were between the ages of 7 and 16 years. Of the school population, 1753 were listed as attending other than public schools. Those enrolled in the public schools numbered 55,412. Of these, 12,193 were in high schools, and 14,272 in rural schools. School districts owned or, in some cases, rented, 1474 school buildings; ungraded one-teacher schools numbered 1038; accredited high schools, 117. The year's expenditure for public-school education was \$6,338,792.

**LEGISLATION.** The Legislature in its regular biennial session enacted a law defining motor trucks and motor busses operating for hire on main highways thrice a week or more as common carriers; it subjected such carriers to a tax of 2 mills on every ton-mile for trucks and of ½ mill on every passenger-seat-mile for busses. A series of ten statutes relating to insurance law were passed; the jurisdiction of the Insurance Commissioner was extended over companies as well as agents, and life insurance companies were prohibited from offering or issuing certificates or agreements promising returns as an inducement to the insurer. The Legislature adopted a resolution calling for a State-wide referendum, to be held at the general election in November of 1932, on the question: "Do you favor repeal of the Eighteenth Amendment?" A measure to render it lawful to wager on horse races under the pari-mutuel system was passed but was vetoed by Acting Governor Clark.

**POLITICAL AND OTHER EVENTS.** Governor Frank C. Emerson died February 18. Secretary of State A. M. Clark, became Acting Governor on February 19, to serve until the regular State election of 1932. A boundary dispute with Idaho was submitted to negotiators of the two States and to Robert Follansbee of the U. S. Geological Survey as Federal representative. A plan was broached, on behalf of John D. Rockefeller, Jr., to purchase and donate to the Federal Government for a National park, many thousand acres in the Jackson Hole country. But the scheme was locally opposed as likely to wreck Teton County by withdrawal of property from the tax list.

**OFFICERS.** Governor, Frank C. Emerson (died February 18); Secretary of State and Acting Governor, A. M. Clark; Treasurer, H. R. Weston; Auditor, Roscoe Alcorn; Attorney-General, James A. Greenwood; Superintendent of Public Instruction, Katharine A. Morton.

**JUDICIARY.** Supreme Court: Chief Justice, Ralph Kimball; Associate Justices, Fred H. Blume and W. A. Riner.

**WYOMING, UNIVERSITY OF.** A State institution of higher education in Laramie, founded in 1886. The enrollment for the summer session of 1931 was 1060 and for the autumn term was 1247. The faculty numbered 150. The income for the year from State and local funds was \$1,437,929, and from Federal and State grants for agricultural extension, \$132,659. The library contained 77,098 volumes. President, Arthur Griswold Crane, Ph.D.

**X-RAY DIAGNOSIS.** See SURGERY, PROGRESS OF.

**X-RAYS.** See CHEMISTRY; PHYSICS.

**YACHTING.** When *Dorade* dropped anchor at Plymouth, England, July 21, the biggest event of the 1931 yachting season had come to pass. The little yawl out of Larchmont, N. Y., sailed by her designer, Olin J. Stephens, Jr., and his father and brother, had beaten yachts three and four times her tonnage across the Atlantic in the international ocean race that started July 4 from Newport, R. I. She arrived at Plymouth, England, two full days ahead of the first of her rivals and made the dangerous passage across the North Atlantic in 17 days. The young skipper took the Great Circle course, steering north from Newport, while most of the rival boats were taken over the less dangerous southern Gulf Stream route. The voyage of *Dorade* constituted a record for small boat crossing of the Atlantic and is very liable to withstand assault for many years. *Skal*, owned by Richard F. Lawrence, took second place in the race, with the aid of her time allowance, and Dudley Wolf's *Highland Light* was third.

To show that the victory in the long sail across the Western ocean was not lucky, *Dorade* then won the 600-mile Fastnet race from England to the Irish coast and back.

The deciding factor that made 1931 the greatest year on record for American ocean racing was the placing of two other United States boats in this Fastnet race. W. B. McMillan's *Water Gypsy* finished second and George E. Roosevelt's *Mistress* completed the rout of the British. Both *Water Gypsy* and *Mistress* also trailed *Dorade* in the Atlantic Ocean race.

In the North Atlantic Fisherman's Schooner Championship race, sailed off Halifax, N. S., Oct. 19 and 20, 1931, the defending schooner *Bluenose* of Lunenburg, N. S., retained its title by defeating the challenger *Gertrude Thebaud*, of Gloucester, Mass., in two straight races. The *Achilles*, sailed by Eldon Trimmingham, won the Royal Bermuda Yacht Club trophy on April 17, retaining the cup in home waters.

In another important ocean race, in June, Charles W. Atwater's *Duckling*, beat a fleet of 40 yachts on the New London to Cape May run and captured the Cape May Trophy as well as the Class B prize. George W. Mixer's *Teragram*, a schooner, made the best time among the larger boats and won the Class A prize, and Alfred F. Loomis's little sloop, *Hotspur*, and Russell Grinnell's *Rugosa*, a yawl, garnered the smallest boat and racing boat class prizes respectively.

The International Star Class races, sailed on Long Island Sound in September under the auspices of the Manhasset Bay Yacht Club, also resulted in a triumph for American boats. A record number of yachts (26) turned out for the races, representing England, Hawaii, France, Venezuela, Cuba, and all parts of the United States. After five races, studded by arguments,

disqualifications, and wrangling, *Colleen*, from Southport, Conn., sailed by J. F. Watkins and William J. McHugh, won.

**YAKUTSK REPUBLIC.** See SIBERIA.

**YALE UNIVERSITY.** A nonsectarian institution of higher education in New Haven, Conn., founded in 1701. The enrollment for the autumn of 1931 was 5815, including 552 who were not candidates for degrees or certificates. Of those working for degrees or certificates, 888 were in the graduate school, 1658 in Yale College, 630 in the Sheffield Scientific School. The faculty numbered 1470.

The total endowment amounted to \$93,795,551, and the income for the year was \$8,532,824. The permanent endowment funds were increased by \$10,938,710 during the year, and \$12,088,878 was received for buildings and income for special purposes. Gifts received during the year included: \$1,500,000 for the Sterling Memorial Professorship Funds, establishing five additional professorships; \$1,750,321 as a bequest of Mary F. Hawley; and an additional \$1,021,022 from the estate of the late Chauncey M. Depew. The university completed and occupied during the year the Sterling Law Buildings, the dormitory sections of Pierson College and Davenport College, and the addition to the Sterling Hall of Medicine. Buildings which were under construction at the close of 1931 included residential quadrangles, Payne Whitney Gymnasium, Graduate School Sterling Quadrangle, and Sterling Divinity Quadrangle. The library, including departmental libraries, contained more than 1,900,000 volumes and pamphlets. President, James Rowland Angell, Ph.D., Litt.D., LL.D.

**YANSON.** See FRENCH INDIA.

**YAP.** See CAROLINE ISLANDS.

**YEMEN.** See ARABIA.

**YESHIVA COLLEGE.** The first and only college of liberal arts and science in the United States under Jewish auspices, for men only, founded in New York City in 1896. The enrollment in 1931 was 789. The faculty numbered 54. The income for the year was \$176,000. The library contained 25,000 volumes and a collection of manuscripts. President of the faculty, Bernard Revel.

**YORKTOWN ANNIVERSARY.** See CELEBRATIONS; PARKS, NATIONAL.

**YOUNG MEN'S CHRISTIAN ASSOCIATION.** An educational, social, physical, and spiritual movement for men and boys, which originated in London in 1844 under the leadership of George Williams. In 1931, there were 10,266 local associations, unions, or fellowships with a membership of 1,581,291 young men and boys in 54 countries of the world. Thirty-six national movements of federated local associations are formally brought together in a World Alliance of Young Men's Christian Associations, with headquarters at 2 Rue de Montchoisy, Geneva, Switzerland. Dr. John R. Mott of New York City is the president of this alliance and W. W. Gethman of Geneva, Switzerland, its general secretary.

These associations own and occupy 2074 buildings, the net property value of which is \$1,354,347,501, and are supervised by 7179 employed officers. The largest number of Y. M. C. A.'s are found in Germany where there were in 1931 over 3500 associations, but the largest number of Y. M. C. A. members are in the United States where there were in the same year 1,011,144 members. There are also in the United States the largest number of Y. M. C. A. buildings, with the

highest net property value of \$239,114,000. The local associations in the United States in 1931 numbered 1435, with 4530 employed officers and 76,478 directors and committeemen.

The headquarters of the associations in the United States is The National Council of the Young Men's Christian Associations of the United States of America, at 347 Madison Avenue, New York City. The officers in 1931 were: President, Dr. George B. Cutten; chairman of the general board, Adrian Lyon; and general secretary, Fred W. Ramsey.

**YOUNG PLAN.** See GERMANY under *History*; REPARATIONS AND WAR DEBTS.

**YOUNG WOMEN'S CHRISTIAN ASSOCIATION.** An organization and movement of which the purpose is to advance the physical, social, intellectual, and spiritual interests of young women. The national executive organization is known as the National Board of the Young Women's Christian Associations.

In 1930 there were 1109 associations in the United States. There were also 65 branches for colored girls and women and 56 International Institutes, centres for foreign-born girls and women. The total Y. W. C. A. membership in the United States was 518,892. This figure does not include an approximate number of 100,000 student members. The largest single membership was 290,280 Girl Reserves, the junior organization. There were listed 65,414 members in business and the professions and 57,556 in industrial ranks or employed in domestic service, while 116,290 individual contacts were made through the International Institutes. There were in January, 1931, 3788 professional workers employed in the movement; 3490 were in local work, 205 were on the national staff, and 93 were in foreign countries.

The value of real estate owned by the Y. W. C. A. in the United States was \$70,081,395; 167 Associations reported a total endowment of \$12,168,576. The National Board received in 1930, from contribution sources and quota payments, \$962,072; from income on endowment, \$243,446; and from income-producing sources, \$949,960. Gross expenditures were \$2,284,402. The endowment fund as of Dec. 31, 1930, amounted to \$4,521,911; the approximate value of the National Board's property was given as \$4,317,320.

The officers of the National Board in 1931 were: Mrs. Robert E. Speer, New York City, president; Miss Katharine Lambert, New York City, secretary; Mrs. Samuel Murland, New York City, treasurer. Headquarters are at 600 Lexington Avenue, New York City.

**YSAYE, ézà'ye, EUGÈNE.** A Belgian violinist, died in Brussels May 12, 1931. Born in Liège July 16, 1858, he received his early instruction from his father, a successful conductor and violinist, and later studied at the Liège Conservatory and under Wieniawski in Brussels and Vieuxtemps in Paris. His first important engagement was as leader of Bille's orchestra in Berlin, which appointment he resigned in 1881 so as to tour Europe in concert. In 1886 he became professor and director of the violin department at the Brussels Conservatory, where he also organized the celebrated Ysaye quartet and Société de Concerts Ysaye. After his retirement from the conservatory in 1898, he devoted most of his time to extensive tours in Europe and America, and occasionally conducted orchestras, including the Cincinnati Symphony Orchestra during 1918-22. He composed six violin concertos, variations on

a theme by Paganini, three mazurkas for violin, *Poème élégiaque*, *Chant d'Hiver*, *Estase*, and *Divertimento* for violin with orchestra, and *Exit* for a string trio. In 1931 his opera, *Peter the Miner*, was produced in Liège.

**YUGOSLAVIA.** The official name attached by royal decree on Oct. 3, 1929, to the Balkan state formerly known as the Kingdom of the Serbs, Croats, and Slovenes. Capital, Belgrade; reigning King in 1931, Alexander I.

**AREA AND POPULATION.** According to the preliminary census of 1931, the kingdom had an area of 96,737 square miles and a population of 13,929,988, compared with 12,017,323 at the census of 1921. Serbian and Croatian are the principal languages, the minor linguistic groups comprising Slovenes, Germans, Rumanians, Hungarians, and Albanians. The chief cities, with the estimated 1930 populations, are: Belgrade (Beograd), 242,000 (111,740 in 1921); Zagreb (Agram), 185,000 (108,338); Subotica, 100,000 (101,857); Sarajevo, 72,800 (66,317); Skoplje, 65,000 (41,006); Novi Sad, 63,900 (39,147); and Ljubljana, 60,000 (53,306).

**EDUCATION.** Elementary education is compulsory and those primary schools under the Ministry of Education are free. During 1929-30 there were about 1,066,767 pupils in elementary schools, 113,587 in secondary schools, and 13,544 in the universities at Belgrade, Zagreb, and Ljubljana.

**PRODUCTION.** About 85 per cent of the population are engaged in agriculture; lumbering and cattle raising are the other chief occupations. The chief crops in 1930, in bushels except as indicated, were: Wheat, 80,353,000; rye, 7,825,000; barley, 18,574,000; oats, 19,634,000; corn, 136,395,000; potatoes, 53,466,000; sugar beets, 745,000 metric tons; beet sugar, 91,000 metric tons; tobacco, 31,390,000 pounds; wine, 105,668,000 gallons; hemp fibre, 72,983,000 pounds; flax fibre, 24,275,000 pounds. A continued agricultural depression resulted in an estimated decrease in the farmers' annual purchasing power from about \$317,000,000 in 1925 to about \$264,000,000 in 1931.

The value of mineral production was 1,073,843,000 dinars (\$34,740,000) in 1929 and 1,596,017,000 dinars (\$28,090,000) in 1928. Output, in metric tons, of the chief minerals in 1930 was: Lignite, 5,292,000; copper (smelter), 24,463; lead (smelter), 10,050; zinc (smelter), 5441; bauxite, 93,706; and iron ore, 430,658. Textiles, cement, paper, leather, flour, sugar, pottery, and carpets are leading manufactured products.

**COMMERCE.** Imports for consumption were valued at \$123,194,000 in 1930 (\$133,668,000 in 1929) and exports of Yugoslav products at \$120,007,000 (\$139,422,000 in 1929). Imports in 1930 declined 7.8 per cent and exports 14 per cent, as compared with 1929. Czechoslovakia, Germany, Austria, Italy, and the United Kingdom were the chief sources of imports, while exports went principally to Italy, Austria, Germany, and Czechoslovakia, in the order named. Imports from the United States in 1930 were \$5,052,000 and exports to that country \$1,023,000. Cotton manufactures, iron and steel, wool manufactures, and machinery were the leading imports, in order of value; wood for building, corn, eggs, crude copper, and wheat were the principal exports. Exports (preliminary) for 1931 were valued at 4,800,964,000 dinars; imports, 4,780,280,000 dinars (1 dinar equaled \$0.0176).

**FINANCE.** Budget estimates for the fiscal years ended Mar. 31, 1931, and Mar. 31, 1932, balanced

at 13,348,000,000 dinars (\$235,000,000) and 13,210,000,000 dinars (\$232,000,000), respectively. A surplus was indicated for 1930-31. Declining revenues in 1931-32 were offset by increased taxation, salary cuts, and the curtailment of public works, calculated to save more than 1,000,000,000 dinars. The public debt on July 1, 1930, was estimated at 41,921,511,500 dinars (about \$737,818,800), compared with 31,289,382,000 dinars (\$550,693,100) on July 1, 1929. On May 8, 1931, the Yugoslav government secured a 7 per cent 40-year loan of 1,025,000,000 French francs (\$40,180,000) from a foreign banking group in which French interests predominated. The loan was employed in part to stabilize the dinar at \$0.01761, effective June 28, 1931.

**COMMUNICATIONS.** In 1930 there were 6431 miles of railway line, practically all under state administration; in 1931 an additional 195 miles were under construction. The new Pančevo bridge over the Sava connecting Belgrade with the Banat was completed late in 1931. Highways in 1930 extended 24,314 miles, of which about half were reported passable for motor cars. There were four main air lines, aggregating 1153 miles, and connecting Belgrade, Zagreb, Saloniki, Skopje, Sarajevo, Pedgoritza, Susak, and Split (Spalato).

**GOVERNMENT.** Under the Constitution adopted June 28, 1921, executive power was vested in the King and a Cabinet responsible to a single legislative chamber, called Narodna Skupština (National Assembly). By an executive decree issued Jan. 6, 1929, the King abolished the Constitution, dissolved the Skupština, and assumed all executive powers, which he exercised through a cabinet appointed the following day. On Feb. 17, 1929, another royal decree established a supreme legislative council of 17 nominated members (11 Serbs, 4 Croats, and 2 Slovenes). The administrative structure of the country was completely reorganized in October, 1929 (see 1929 YEAR BOOK). The Cabinet appointed Jan. 7, 1929, included: Premier and Minister of the Interior, Gen. Pera Zivkovich; Foreign Affairs, Dr. Voyislav Marinkovich; Defense, General Stevan Hajitch; Finance, Stanko Shverljuga. Gen. Dragomir Stojanovich succeeded General Hajitch as Minister of War Apr. 6, 1931.

**HISTORY.** The dictatorship proclaimed by King Alexander on Jan. 6, 1929, was ostensibly ended in 1931. On September 3, King Alexander promulgated a new constitution, under which elections for a new bicameral Parliament were held November 8, and the new Parliament convened in Belgrade December 7. However, provisions of the Constitution and the regulations governing the elections gave rise to widespread charges that the new parliamentary régime was merely a screen for the continuation of the dictatorship.

The Constitution was based on King Alexander's concept of a unified nation forged from the diverse and mutually hostile elements in his kingdom. It recognized three official languages—Serb, Croat, and Slovene—and guaranteed individual liberty, freedom of religion, of association, and of the press. However, it prohibited political parties based on racial rather than national interests, such as the Croat Peasant party, and sports organizations like the *sokols*, which had encouraged political antagonism between Serbs and Croats. The new Parliament consisted of a senate, half of whose members were elected for six years and half appointed by the King for the same period, and a chamber of deputies

elected for four years by universal direct suffrage. The Constitution empowered the King to dissolve Parliament at will and to issue emergency decrees without parliamentary sanction.

The electoral law, promulgated September 12, insured the victory of the Government candidates. It was designed primarily to promote the establishment of a national Yugoslav party, corresponding somewhat to the Italian Fascist party. Voting was made public and the voter, if unknown to the local electoral committee, was first to be photographed, and his finger-prints taken. He was then required to state the party he wished to support, the party leader, and his local candidate, before his vote was recorded. Moreover only national lists were submitted to the voters, and lists failing to secure 50,000 votes received no mandates. The party securing the largest number of votes automatically secured two-thirds of the seats in the Chamber of Deputies. Opposition to these provisions and to the Government's restrictions on political meetings and election propaganda caused the opposition parties in Croatia and Serbia to boycott the elections. The Government, on the other hand, sought to force all those eligible to vote.

Except for rioting by university students in Belgrade, the elections were fairly orderly. The Government parties won the election by default, but according to the Central Electoral Board a total of 2,324,645 votes were cast, comprising 42 per cent of the electorate in Zagreb, 50 per cent in Dalmatia, and 70 per cent in Bosnia and Slovenia. The assembling of the new Parliament on December 7 was marked by a demonstration of homage to King Alexander. Among its members were many leading figures in the old parties banned by the dictatorship. However, the development of a parliamentary opposition seemed precluded by a provision of the electoral law providing for the expulsion of any deputy who failed to support the party on whose list he had been elected.

In a statement published in Paris May 5 by the League for the Rights of Man, Prof. Albert Einstein and Heinrich Mann, German novelist, charged the Yugoslav government with responsibility for the murder in Zagreb February 18 of Prof. Milan Suflyay, a professor of history in Zagreb University and a leader of the Croatian autonomist movement. The Yugoslav delegation to the International Chamber of Commerce meeting in Washington on May 9 issued a blanket denial of the charge.

Like its neighboring countries, Yugoslavia experienced difficulty in acquiring foreign exchange to meet its external obligations following the crisis in Great Britain, Germany, and Austria, and on October 8 all foreign-exchange transactions were placed under the control of the National Bank. Up to the end of 1931, the Yugoslav government had not accepted the Hoover moratorium proposal (see REPARATIONS AND WAR DEBTS). For Yugoslav participation in the second Balkan Conference, see TURKEY under *History*; see NAVAL PROGRESS, *LITTLE ENTENTE*, *UNEMPLOYMENT*.

**YUKON**, yook'ón. A territory of the Dominion of Canada; bounded on the west by Alaska and stretching from British Columbia to the Arctic Ocean; constituted a separate political unit in 1898. Area, 207,076 square miles; the population at the 1931 census was 4230 (preliminary), compared with 4157 in 1921, or an increase of 1.35 per cent. Dawson, the capital and largest

town, had 817 inhabitants at the 1931 census. Mining is the principal occupation, and the chief minerals are gold, copper, silver, lead, and coal. The output of gold in the year ending Mar. 31, 1930, was \$660,229. Silver production for the calendar year 1929 totaled \$2,250,000. Revenue for 1930 amounted to \$257,615; expenditure to \$256,004. At the head of the government is a gold commissioner and a territorial council of three elected members. Gold Commissioner in 1931, G. I. MacLean.

**ZANZIBAR PROTECTORATE.** A British protectorate off the coast of Tanganyika in East Africa, comprising the islands of Zanzibar, Pemba, and adjacent small islands. The area of the island of Zanzibar is 640 square miles and of Pemba, 380 square miles; their respective populations, at the census of 1924, were 128,099 and 88,691. In 1921 the protectorate contained 270 Europeans, mostly English, and 12,000 British Indian subjects, who controlled most of the trade of East Africa. Zanzibar, the capital, had 38,700 inhabitants. The protectorate is the world's chief source of cloves, the annual production approximating 19,343,000 lbs. Preliminary figures for 1930 placed imports at \$6,049,000 and exports at \$9,069,000.

Government revenue for the year 1929 totaled £494,000 and expenditure £507,000. The public debt at the beginning of 1930 stood at £100,000; the sinking fund at £107,998. The nominal ruler in 1931 was Sultan Seyyid Khalifa bin Harub. Actual control rested with the British Resident. Resident in 1931, R. S. D. Rankine.

**ZINC.** The world's production of zinc in 1931 was estimated at 1,131,000 short tons, an average daily output of 3096 tons, as compared with 1,563,049 tons, an average daily output of 4282 tons in 1930. The United States, as usual, led in production in 1931 with an estimated output of 300,000 tons, followed by Poland with 155,000 tons; Belgium, 153,000 tons; Canada, 120,000 tons; France, 69,000 tons; Australia, 60,000 tons; Germany, 51,500 tons; Mexico, 38,000 tons; Great Britain, 22,000 tons; and Rhodesia, 7700 tons.

According to the U. S. Bureau of Mines, the output of primary metallic zinc from domestic ores in the United States was 40 per cent lower than in 1930 and was the lowest production on record since 1921, following a decline of 20 per cent in output in 1930.

The average monthly price of prime western zinc at St. Louis was 4.03 cents a pound in January. From this figure the average declined steadily to 3.31 cents a pound in May, rose to 3.90 cents in July, held fairly well in July and August and dropped steadily again to a low for the year of 3.15 cents in December. The average quoted price for 1930 was 4.56 cents a pound. The average selling price of all grades of zinc in 1930, as reported to the U. S. Bureau of Mines, was 4.8 cents a pound. See METALLURGY.

**ZIONISM.** See JEWS; PALESTINE.

**ZOG I.** King of Albania. See ALBANIA.

**ZONING.** See CITY AND REGIONAL PLANNING.

**ZOOLOGY, GENERAL.** The American Society of Zoologists under the presidency of Fernandus Payne, met at New Orleans during Convocation week of 1931-32 with the American Association for the Advancement of Science. Meetings were held in cooperation with Section F (Zoology) of the A. A. A. S., of which R. W. Hegner as Vice President, was Chairman. In September the British Association for the Advancement of

Science held its centennial celebration in London. E. B. Poulton as President of the Zoology section gave, as his presidential address, "One Hundred Years of Evolution" in which he reiterated his well known views on the subject of mimicry and natural selection. Instead of the reading of general papers, symposia on special topics were held each day by the Zoology section. Two popularly written but authoritative works covering the greater part of the field of Biology are *The Science of Life* by H. G. and G. P. Wells, and J. Huxley; and *Life* by P. Geddes and J. A. Thomson. The latter attempts to cover less ground than the former, but goes rather more deeply into each subject treated.

As a direct continuation of the Bermuda Biological Station which had been in operation for a long time, the Bermuda Biological Station for Research was incorporated a few years ago and in 1931, with the cooperation of the Bermuda Government and the Rockefeller Institute purchased for a permanent laboratory the property formerly known as the Shore Hills Hotel at St. Georges, Bermuda. This insures the Corporation an adequate laboratory for all-the-year-round research. The laboratory was open for a part of the summer of 1931. In the early fall the Trustees announced that Dr. J. F. G. Wheeler of London, England, had been elected Director of the Station.

The Daniel Giraud Elliot medal for the most meritorious work of the year in Zoology or Paleontology was awarded by the National Academy of Sciences to Professor H. F. Osborn for his researches on "Titanotheres of Ancient Wyoming, Dakota, and Nebraska."

No biologist would claim that with our present knowledge we could produce living matter in the laboratory. In this connection, however, some experiments by Crile are of interest (*Science Suppl.*). Lipoids from brain tissue, proteins and mineral salts were brought together on glass slides and in a few minutes masses of material formed which gave startling resemblances to the appearance and behavior of living matter. These resemblances lay along the lines of electric potential, stainability, movement, etc. In appearance these bodies were so similar to protozoa that in many cases it would not have seemed impossible to arrange them in their appropriate taxonomic position. A much debated question is whether the central bodies or centrosomes are really permanent cell organs or are artifacts of only temporary interest and existence. Wilson and Huettnner (*Science*, 73, p. 447), reported on a study of the cells of *Drosophila* and found that their centrosomes are permanent cell organs, responsible for the formation of the asters and continuous from generation to generation. They considered that this is not limited to this particular insect but applies to all animals.

It is generally believed that "vestigial" organs represent structures which once were functional but have degenerated in correlation with loss of function. Brommann (*Anat. Anz.*, 72, p. 330), with especial reference to a vestigial marsupium in the human embryo, argued that this is not a degenerated organ but is due to the presence in the germ plasm of genes which are not strong enough to bring it to full development and hence is small and soon disappears in the developing embryo. It is generally held that sex in animals is determined by the chromosomal condition of the fertilized egg. Geddes and Thomson (*Life*, see above), adhere to the position taken by them

over 40 years ago (*Evolution of Sex*, 1889), that sex is determined by the metabolic condition of the embryo. If this metabolism is preponderantly constructive (anabolic), the individual will be female, if destructive (katabolic), it will be male. Sex determination is therefore physiological rather than cytological, and it might be reasonable to expect eventually to be able to determine in advance the sex of any given embryo.

**GENETICS.** In genetics the usual amount of research was carried on, though as is natural, the problems now being attacked are so technical that it is difficult to summarize their results in any popular fashion. None have in any way modified the general principles involved in earlier statements concerning Mendelism. In these experiments it is customary to isolate a mutation and to breed this with other mutations or with the original race. Since in either case the two are recognizably different it is possible to determine the laws of transmission of these characters through later generations. A mutation may be defined as a variation from the original form which has suddenly appeared, which is heritable in later generations and which breeds true when inbred.

In crossbreeding the hybrid of the first generation may or may not resemble one parent, but in later generations a definite proportion of each will resemble each of the original ancestors. Exceptionally a "permanent hybrid" appears which breeds completely true to its hybrid character for an indefinite number of generations, but may, under exceptional conditions break up into one or the other of the ancestral forms. It is obvious that if the history of the race were unknown, this might appear to be a mutation but that it really would be something quite different and not good material for experimentation. In a number of publications Jeffries has asserted that *Drosophila* is really a hybrid and therefore conclusions drawn from experiments with it are inaccurate. According to Jeffries who is a botanist, plant hybrids may easily be differentiated from pure bred by the peculiar behavior of certain chromosomes during the reducing divisions and he asserted (*Am. Nat.*, 65, p. 19), that since precisely similar phenomena appear in *Drosophila* the latter must also be hybrid. He found further support for this belief (*Am. Nat.*, 65, p. 481), in a study of reduction in the Liver Fluke *Fasciola*.

In human society it has been thought that lead poisoning of the parent as happens to workers in certain industries, produces abnormal or diseased conditions in the offspring. Experimentally determined evidence along this line was reported by Colin (*Jour. Exp. Zool.*, 60, p. 427), who fed weighed amounts of lead acetate to 58 male and 5 female guinea pigs, the experiments extending over a period of four years. In none of these cases was there any evidence of transmission of the effects of the poison to the offspring of the treated individuals. Identical twins (i.e., twins resembling one another so closely that it is difficult to tell them apart and always of the same sex), have been shown to arise from the division of a single egg, this mode of origin being responsible for their resemblances since they arise from the same combination of parental germ plasma. It is obvious that "Siamese" twins must have come from the division of an egg, but a puzzling feature from the standpoint of the above theory is that they generally are more or less different from one another in most characteristics.

Newman, who has made an especial study of twinning, explains the discrepancy (*Jour. Hered.*, 22, p. 201) on the ground that identical twins arose at an early stage of the developing egg, when bilateral symmetry had not appeared and each half of the egg had not begun to form its appropriate portion of the embryo, while in the case of the Siamese twins this division came much later, at a time when the two halves had differentiated much farther and become more unlike.

Among insects a condition known as gynandromorphism sometimes occurs in which one side of the body has the appearance of one sex, the other side of the other. Here this condition is explained by the assumption that the chromosomes which determine sex are separated during the early development so that one side gets those for one, the other for the opposite, sex. Lillie (*Science*, 74, p. 387) described similar gynandromorphs in birds in which, because the sex is determined by hormones, the above explanation would not hold. If a female determining hormone is present, the bird will be a female, if absent, a male, and the former would be true even if one side of the animal had the male determining chromosomes. Basing his conclusions on the results obtained after injecting this female hormone into birds, Lillie concluded that the gynandromorphs were due to a combination of ovarian deficiency resulting in feeble hormones and a rapid growth of one side which because of this rapid growth was not affected by the hormone. The more rapidly growing portion which in the birds under discussion resulted in an hypertrophy of that side, became male, the other female.

Goldschmidt, who had worked for years on the problem of intersexuality in insects, summarized his results in *Quarterly Review of Biology* 6, p. 125.

**EVOLUTION.** The question as to the validity of the Lamarckian factor in evolution has been called a "perennial problem" in earlier YEAR BOOKS. McBride, an English zoologist, in 1931 was one of the leading advocates of Lamarckism. In an address (*Nature Supplement*, June, 1931) he discussed some of the generally accepted "proofs" of evolution and argued that all of these indicate that "habit is the driving force in evolution." In his opinion to say that species survive through selection is merely to state a truism, the real problem being hidden in the word "variation" or "change," and the way these changes arise. He cited several cases in insects to sustain his position that habit is the cause of change, the most striking one being experiments by Metalnikoff on *Galleria*, a moth whose caterpillars feed on beeswax. This insect is susceptible to cholera attacks but may be made immune by the use of serum. Metalnikoff treated one-half of a brood with serum and infected all with the cholera germ. None of the unprotected members survived, but in subsequent generations treated in this same fashion there was an increase in the number of survivors of the unprotected forms from 30 per cent in the third filial generation to 42 per cent in the sixth and 75 per cent in the ninth.

McBride assumed that every action has an effect on some nuclei, and made the further assertion that any cell of the embryo may become a germ cell. Thus the affected cell may be in a position to pass its acquired characters on to its descendants. If an activity is continued over many generations the new influences will be exerted on all of the cells until eventually the new-

character appears without needing an external stimulus.

Basing his conclusions on his researches on Titanotheres and Proboscideans (see above), Osborn (*Science*, 73, p. 548 and 74, p. 557) declared that evolution could never have progressed through the agencies of sudden changes in genes as is assumed by the modern mutationists, but that both "biochemical and biophysical evolution is along continuously adaptive and creative lines." Continuous hard work along the lines of maximum resistance is essential to setting an organism in evolutionary motion or acceleration. It becomes static when resistance diminishes and retrogressive when resistance disappears.

The study of fossils which cover millions of years reveals which organs are static and which are dynamic and only by this sort of study can we get evidence as to the methods of evolution. Mutations in such animals as the fruit fly are too evanescent to be of any value in explaining the process. An important part of Osborn's theory is the concept of a creational force not to be confused with "entelechy," "holism," or any of the other internal perfecting principles which are metaphysical anticipations of the order of nature, but is purely inductive or post-observational. The word "aistogenesis" is suggested for use as the designation of this principle until a better single term signifying "the creative origin of the adaptive" can be found.

**CeLENTERATES.** On the assumption that reef building corals cannot grow at greater depths than about 20 fathoms, theories of the mode of formation of coral reefs have had difficulty in explaining how these reefs could have been built in deep water. Setchell (See YEAR BOOK for 1928), from the standpoint of a botanist, claimed that the limestone-depositing algae which grow at greater depths than corals, are responsible for the necessary building up of the reef base. A similar position was taken by Gardiner (*Nature*, 127, p. 857) who considered that limestone-depositing sea weeds and algae are of most importance in reef formation. The greatest depth at which this formation of reefs can start is that at which photosynthesis ceases, which is 60 fathoms for plants and 40 for animals. The zooxanthellae or algae which live in the tissues of corals absorb  $\text{CO}_2$  and N and give off O, though Gardiner considers the  $\text{CO}_2$  absorption is negligible in amount. On the other hand, boring algae are important agents in the disintegration of coral reefs.

**FLATWORMS.** *Paragonimus*, a lung fluke, has been known since 1894 to infest cats, dogs, and pigs in North America but its life history has been unknown. The finding of it in a mink led to the assumption that the intermediate host is an aquatic animal and Wallace (*Science*, 73, p. 481) found what were suspected to be intermediate stages in the crayfish *Cambarus imitator spinirostris* from a small creek near Minneapolis, Minn. The suspicion was verified by feeding cysts of the fluke to cats in which the characteristic *Paragonimus* later developed.

**NEMATODES.** Students of the hookworm have been puzzled to account for the amount of anemia which appears in patients attacked by this disease for while the worms suck the blood of the host, it was not thought that the amount drawn in this fashion could be enough to account for the serious anemic condition. Wells (*Science*, 73, p. 16), first by a chance observa-

tion and later by experiments on anesthetized dogs, demonstrated that when feeding, blood is passed through the alimentary canal of the worm and discharged as blood from its intestine. Under the conditions of the experiment it was estimated that if there were 1000 worms present in the dog's intestine, as much as 360 mm of blood per day might be drawn off in this fashion, in addition to what was digested by the worm. While this does not prove that a similar condition exists in man, it does indicate that this possibility should be considered in dealing with this disease.

**ANNELIDS.** Lieber. (*Zool. Anz.*, 96, p. 255) described a polychaetous annelid of the genus *Lycastopsis* living in the crevices of bark and in the soil underneath coconut trees in Ambonia in the Malay Archipelago. These occur at a distance of over 2 kilometers from salt water and will live in fresh water but die very quickly in salt.

**INSECTS.** L. O. Howard, the eminent entomologist and former Head of the U. S. Bureau of Entomology, stated in *The Insect Menace*, the reasons for the pessimistic stand taken by most entomologists concerning the relation of insects to human welfare. He estimated that in the United States alone, the annual loss to agriculture to be \$2,200,000,000, with large additions to be made to this sum from other injurious activities especially as related to the transmission of diseases. Like most entomologists he was not inclined to give as much credit to birds as defense agents against insects as the ornithologists demand, largely because it is generally recognized that the most efficient control of injurious insects is by means of other insects which prey upon them and insect-feeding birds do not discriminate between the two.

An interesting solution of an insect problem was worked out in Fiji and reported in a government publication. (*Coconut Moth in Fiji*. Tothill, Taylor, and Paine.) A moth, *Levuana iridescens* was eating the leaves of the coconut to such an extent as to kill the trees and no enemy was known for the insect. It was discovered that a related moth, *Artora catorantha* was parasitized by a fly *Ptychomia remota* and experiments showed that the fly would attack the *Levuana* with equal success. The importation and acclimatization of the parasite was followed by a very complete control of the pest.

While it would seem the most reasonable assumption to suppose that sense organs of insects are located on the antennae, various observers have placed them on the bases of the wings or on the legs. Minnich (*Jour. Exp. Zool.*, 60, p. 121) decided that in the blowfly *Calliphora*, the outer marginal hairs of the oral lobes are gustatory in function. As compared with other sense organs located on the legs, these are less sensitive to saccharose and more sensitive to lactose. Valentine (*Jour. Exp. Zool.*, 58, p. 165) decided that the organs for sex discrimination in the meal worm *Tenebrio*, are located on the antennae. In this insect the males react very decidedly to the sex odor of the female and this reaction follows after the removal of sense organs located on the legs but will not do so if the antennae are cut away. The organs in question lie in the terminal four segments of the antenna. If these segments are removed from the antenna the male will react by circus movements toward the female.

Clark (*Sci. Mon.*, Aug., p. 178) stated that in the vicinity of Washington, D. C. the western orange clover-butterfly *Colias philodice* is driving out the local yellow clover-butterfly *O. eurytheme*. This is accomplished by the aggressiveness of the former species which annoys both sexes of the latter and drives the males away from the breeding places. Schmucker (*Biol. Zent.*, 51, p. 15) described a peculiar asymmetry in the punctures made by bumble bees in the flowers of *Salvia*, when gathering nectar. All of the individuals of one colony will puncture either the right or left side of the flower and apparently rarely or never attack both sides. A relationship between butterflies and rabbits similar to the one described many years ago by Darwin and Huxley between bees and old maids in England was described by Harrison (*Vasculum*, May, p. 68). The small copper butterflies depend for their food on sorrels which thrive best among the scrapings and burrows of rabbits. Thus the insects are most abundant where there are rabbits. Hertweck (*Zeit. f. Wiss. Zool.*, 139, p. 559) noted that in spite of the amount of attention given to the genetics of the fruit fly *Drosophila* little is known of its internal anatomy. In this publication he gave an account of its nervous system and sense organs.

**ARACHNIDS.** Gudger (*Nat. Hist.*, Jan.-Feb., p. 58) recorded further cases where spiders caught and ate fish, in the case of the one photographed in this article, the fish being much longer than the spider. In one case cited the disappearance of some pigmy sun-fish from an aquarium was explained by the presence of spiders on a plant leaf which overhung the aquarium. Bonnet (*Bull. Soc. Nat. Hist. Toulouse*, 59, p. 237) found that in spiders there are from four to twenty-two moults, the number depending on the size of the spiders. The time between moults depends on the temperature and food supply. Spiders have a complex mechanism for autotomy.

**FISHERIES.** An important innovation in the technique of fisheries investigation has been inaugurated by the University College of Hull, England, whose Department of Zoology has been expanded to cover Oceanography (*Nature*, 127, p. 911). Instead of sending out a single vessel to cruise for the collection of data relating to fisheries it is proposed to equip commercial vessels with the apparatus necessary to secure plankton and other measurements and thus to secure data more or less contemporaneously over a wide range of sea.

Fish in a brook where there is a definite current orient themselves so as to head upstream, keeping up enough of a fin movement to counteract the effect of the current; thus holding their position with reference to the bed of the stream. That this is a response to visual stimuli has been claimed and was corroborated by Clausen (*Ecology*, 12, p. 541), who moved a paper painted in alternate black and white stripes, along the bottom and back of a glass aquarium in which the fish were kept. Although there could be no current in the aquarium, the fish oriented themselves with reference to the movement of the stripes and moved with them, definitely prov-

ing that this is a case of orientation through optical stimulation.

**BIRDS.** Muller (*Univ. of California Pub. in Zoology*, 38, p. 2) gave a revision of the shrikes of the genus *Lanius*, with accounts of their natural history. Earlier students of birds have reported that at the approach of the breeding season the male bird preëmpts a "territory" within which he will tolerate no other bird and into which he will attract the female for nest building and care of the young. Muller stated that in the shrike this attempt at control of a territory does not cease after the young birds are reared but that each bird tries to control a definite area for its own feeding ground. The female is the more active in courtship and apparently does all of the work of building a nest as well as of incubating. In the latter process she is fed by the male, though she may take short flights for food collecting.

In the matter of food, shrikes will follow the line of least resistance, taking whatever they can find that is most abundant and will show more interest in moving objects than in quiet ones. The habit of impaling food on thorns arose because the claws of the bird are too weak to hold food while eating and the thorns give it proper support. No element of "cruelty" is involved in catching and impaling food that the bird does not want, but simply an uncompleted instinctive action started by the sight of food, but not finished because the bird is not hungry. Neu (*Biol. Zent.*, 51, p. 18) discussed whether birds who swim under water make any use of their wings in swimming. His own observations on two species of *Podiceps* failed to show any use of the wings in this process.

The subject of bird migrations was discussed by Grinnell (*Auk*, 48, p. 22) in which he called attention to the constant activities of even the most sedentary birds and compared the Arctic tern with Foster's tern, two rather closely related species. The former in its migrations makes an annual circuit of 22,000 miles while the latter does not migrate.

**MAMMALS.** The American Gray Squirrel has been introduced into England with the same result that has followed introduction of new species in other places. Middleton (*Proc. Zool. Soc.*, London, 1930, p. 3) recorded that it had become a great pest in the localities where it has become acclimated and bids fair to spread to the whole country. It robs birds nests and does much damage in woodlands by biting plant shoots and by girdling limbs. Whitney (*Jour. Mammal.*, 12, p. 29) corrected the popular notion that raccoons wash their food before eating it, with the definite statement that this does not happen. They will catch fish at the water's edge, but will not carry other food there.

**ZUIDER ZEE.** See NETHERLANDS, THE.

**ZULULAND**, zoʊ-lʊ-land. A portion of the Province of Natal in the Union of South Africa, to which it was annexed Dec. 30, 1897. Area, 10,427 square miles; population in 1911, 219,606; in 1921, 3985 Europeans and 254,371 non-Europeans; in 1926, 5214 Europeans. There are extensive sugar and tea plantations. See SOUTH AFRICA, UNION OF, for statistics on Natal.
